INDUSTRIAL CANADA

Issued monthly as the official publication of the Canadian Manufacturers Association (Incorporated), and devoted to the advancement of the industrial and commercial prosperity of Canada.

PRESIDENT OF THE ASSOCIATION
T. P. Howard, Phoenix Bridge & Iron Works, Ltd. Montreal

VICE-PRESIDENTS
J. S. McKinnon, S. F. McKinnon & Co., Limited, Toronto
W. S. Fisher, Enterprise Foundry Co. ..... St. John, N.B.

TREASURER
John F. Ellis, Barber-Ellis, Limited ..... Toronto

PUBLISHING COMMITTEE
J F. MacKay (Chairman), Willys-Overland Limited, Toronto
W. J. Bulman, Bulman Bros., Limited ..... Winnipeg
F. P. Megan, Wm. Davies Co., Limited ..... Toronto
I. H. Weldon, Provincial Paper Mills Co., Limited Toronto
J. F. M. Stewart, Pointe Anne Quarries, Limited ... Toronto
C. Howard Smith, Howard Smith Paper Mills, Ltd., Montreal

INDUSTRIAL CANADA DEPARTMENT
Advertising Manager ..... D. B. Gillies
Editor ..... W. A. Craick

OTTAWA OFFICE (217 Booth Building)
Representative ..... E. Blake Robertson

C.M.A. OFFICIALS
Head Office, Toronto

General Manager ..... J. E. Walsh
General Secretary ..... J. T. Stirrett
Manager, Transportation Department ..... J. E. Walsh
Assistant Manager, Transportation Department .. S. B. Brown
Managers, Insurance Department .. Willis, Faber & Co., Limited
Manager, Tariff Department ..... J. R. K. Bristol
Manager, Commercial Intelligence Department .. Alex. Marshall
Secretary, Legal Department ..... H. Macdonald
Manager, Trade Sections Department ..... J. M. McIntosh
Office Manager and Accountant ..... J. Winfield

SECRETARIES OF DIVISIONS

Quebec, R. W. Gould, 113 Board of Trade Bldg., Montreal
Ontario H. Macdonald, 1404 Bk. of Hamilton Bldg., Toronto
Prairie, G. E. Carpenter, 503 Northern Crown Bank Bldg. Winnipeg, Man.
Pacific, H. Dalton, 705 Board of Trade Bldg., Vancouver, B.C

CONTENTS OF THIS ISSUE

Editorial Comment 55
The Changes of a Decade—Not Good for Canada—Not a Fair Analogy—A New Type of Bank—The Development of Raw Materials.

Situation at Ottawa Reviewed 59
Introduction of the Budget the Outstanding Event of the Session—Condemnation of Business Profits Tax—Return of Sir Robert Borden.

News and Views of the Association 61
Activities of Montreal Branch—Australian Tariff Explained and Discussed—Manitoba Employers' Organization—Maritime Province Legislation.

The 1920 Convention City 68
An illustrated description of Vancouver from the Scenic and Tourist Standpoint—City and district possess great asset in scenic attractions.

Arrangements for Entertainment at Convention 70
Plans that have been made by the membership in Vancouver and Victoria for the entertainment of delegates to the convention next month.

Protest Workmen's Compensation Changes 71
Delegation representing C.M.A. and other organizations present brief to Ontario Government pointing out objection to amendments.

Excessive Labor Turnover and its Remedies 74
How immense sums of money are lost through the unceasing shifting of factory workers from place to place—Few Canadian plants cope with the problem.

The Further Development of Export Trade 75
Desirability of working out a system of preferential tariffs between various parts of the British Empire and negotiating treaties with friendly foreign countries.

A New Census of Canada's Water Power 76
Figures that have just been compiled by the Dominion Water Power Branch which show that 2,215,000 horse power is regularly employed in useful work.

Recreational Opportunities for Workers 78
The Big Four Industries in Brantford have inaugurated successful scheme for promoting healthy recreation among their employees—Playing fields are provided for their use.

What London did for Made-in-Canada 81
Story of the big Made-in-Canada Week, which was successfully staged in the Forest City last month—Merchants and manufacturers co-operated.

Necessaries of Life are Defined by Court 83
Supreme Court of Canada deals with appeal against authority of Board of Commerce to control price and distribution of newsprint paper in Canada.

Made-in-Canada Endorsed by Municipalities 85
Large number of urban centres throughout Canada are lending support to the Movement—Ten Commandments for Canadian Trade.

Barrett Roofings, Cements Industrial Paints etc.

YOU don't experiment when you use Barrett products. They are the result of many years' successful manufacturing experience and their worth has been proved by thousands of users throughout the Dominion.

Everjet Industrial Paints

This is the age of specialists. "Jack of all trades and master of none" is out of place in the modern industrial world.

Barrett Industrial Paints are *all* "specialists." Each of them has been developed by our chemists to fill the requirements of some *particular use*. Their immense popularity is proof that they fill the bill, for although they have been on the market less than ten years, probably no other protective paints are now used so extensively by the railroads and by large and small manufacturers all over the Dominion.

Barrett Industrial Paints include:

Everjet Boiler Paint	Everjet Smokestack Paint
Everjet Penstock Paint	Everjet Dip Paint
Everjet Bridge Paint	Everjet Machinery Paint

All of these paints are moderate in price, extremely durable, and absolutely impervious to water, acids, alkalies, and fumes of all kinds.

If you desire a protective carbon paint for a use not included in the above list, our Service Department will furnish samples of paints especially prepared to meet your needs.

Barrett Industrial Paints are put up in 1, 5 and 10 gallon cans, ½ barrels (about 20 gallons) and barrels of about 40 gallons.

Nox - Aer - Leek Boiler Setting Cement

A leaky boiler-setting is fatal to fuel economy, and *every* brick boiler setting is more or less leaky.

Barrett Nox-Aer-Leek overcomes this condition. It is a plastic cement of elastic bitumen, fused with non-drying oils and asbestos fiber. Applied to the exterior walls, it renders boiler-settings absolutely air-tight and moisture-proof.

You will find it sound economy to use Nox-Aer-Leek. Its small cost is repaid many times over by the saving in fuel expense.

Put up in ½ barrels (about 300 lbs.) and barrels (about 550 lbs.)

Everlastic "Rubber" Roofing

A popular-priced roll roofing of unusually high quality. Wears stubbornly under all conditions. Is giving uniform satisfaction on thousands of factories, and other steep-roofed buildings all over Canada.

Easy to lay and makes a roof that is durable and economical under hard service.

Comes in light (1-ply), medium (2-ply), heavy (3-ply), weights in rolls of 108 sq. ft. Nails and cement with each roll.

Everlastic Liquid Roofing Cement

When your old felt and "Rubber" roofs become leaky and show signs of going to pieces, a coat of Everlastic Liquid Roofing Cement will add several more years of service at slight cost.

This cement comes ready for use. It has the consistency of thick molasses, is easy to apply, dries quickly and forms a durable, watertight surface, that is equal to a new roof.

Packages of all sizes, from 1-pint cans to 40-gallon barrels.

Elastigum Plastic Patching Cement

Elastigum is a handy cement for which you'll find a new use every day in the year. It's for patching holes and leaks in all kinds of roofs; repairing flashings, re-lining gutters, etc.

Easy to use and very inexpensive. Tough, elastic, waterproof and acid-proof.

Put up in 1, 5, 25 and 100 lb. Packages, ½ barrels of about 300 lbs., and barrels of about 600 lbs.

If your dealer cannot supply you with these ***"Proven Products"*** *write us and we will*

Editorial Comment

The Changes of a Decade.

TEN years have elapsed since members of the Canadian Manufacturers' Association last crossed the prairies and held their annual convention in British Columbia. The interval has witnessed great changes, and those who have not taken the trip to the Coast since 1910 will see a wonderful metamorphosis. Villages have expanded into towns and towns into cities. Lines of transportation have multiplied. Much vacant land has been broken for cultivation. Many new industries have sprung into existence. On all sides there has been progress. The comparison of present-day conditions with those of a decade ago will afford 1920 excursionists opportunity for much interesting observation.

As for the Canadian Manufacturers' Association itself the ten years have meant great development. The membership committee of 1910 reported a total membership of approximately 2,600; this year's membership committee will be proud to show that the total has reached and exceeded 4,100. The Association's services have been very considerably extended; its staff has been doubled. The whole scheme of organization has been radically altered and new offices have been opened in several cities. Progress has taken place all along the line.

A note of sadness will, however, attach to the event when it is recalled that quite a number of the familiar figures of the earlier excursion will not be with the party. The president, whose genial personality added so much to the pleasure of the 1910 gathering—Mr. John Hendry, of Vancouver—is no more. His immediate successor in office, who took a prominent part in the convention of that year—Mr. H. H. Rowley, president of the E. B. Eddy Co., Ottawa—has also passed beyond. So, too, has that eloquent son of the coast province, Sir Richard McBride, whose speech on the occasion of the annual banquet was the outstanding feature of that memorable affair.

In other respects, this year's excursion bids fair to be a close replica of its predecessor. There was then entertainment all along the line in the cities traversed by the excursion train and pleasant stops in the mountains. In Vancouver and Victoria the hospitality of the excursionists' hosts was unbounded. On the return a diversion was made when the party travelled down to St. Paul and Minneapolis, where they were guests of the Commercial Club. This feature, of course, does not figure in this year's itinerary, but instead there will be the trip to Edmonton and thence over the Canadian National route to the Coast.

Not Good for Canada.

THE proposal recently made by the Post Office Department to introduce the zone system in Canada is a step which should not be taken without most careful consideration. Superficially it may seem reasonable that the distance to which an article is carried should have some bearing on the cost of carriage and that the charge for conveying magazines or newspapers to the Pacific Coast should be greater than that for carrying them but a few miles from the place of publication. But this is only one aspect of the case. The effect which the establishment of a zone system would have on the circulation of our newspapers, magazines and other periodicals must not be overlooked.

Canada, or at least the populated portion of Canada, comprises a long, narrow band stretching from coast to coast and adjoining the broad and prosperous expanse of the United States. The country is anything but compact, nor is it the easiest thing to maintain and promote common interests. Quite obviously national unity demands the freest possible intercourse from end to end of the country and the most frequent interchange of thought and opinion.

The newspaper and the magazine are important agencies in welding together the widely separated portions of the Dominion. Their national circulation is of the utmost value in bringing Canadians of the East and West together. To interfere with this circulation by establishing a zone system is a most serious matter. It may not involve a complete cutting off of circulation, but it will at least lessen the flow of printed matter and divert sub-

scriptions to the south—thereby helping to build up north and south trade at the expense of east and west traffic.

Canada cannot afford to take chances, and it will be just as well for the sake of national unity and our common interests to refrain from any steps which will tend even in the remotest degree towards separation.

A Made-in-Canada Week.

THE experiment of the London Advertising Club in instituting a Made-in-Canada week appears to have been a wonderful success. The account of the week's events and the results accruing therefrom, which we publish in this issue, leaves little doubt on that score. There is every reason to believe that the people of Canada are now in a most receptive mood for any suggestion that the best interests of the country will be served by buying goods made in Canadian factories by Canadian workmen, and campaigns such as that launched in London should be held in other places. They can undoubtedly be made equally successful if the same degree of enthusiasm is interjected into the preparation and carrying out of the arrangements.

Not a Fair Analogy.

THE retention of the Business Profits Tax, announced by Mr. Austen Chamberlain, Chancellor of the Exchequer of Great Britain, is being used as an argument that the Business Profits War Tax Act should be re-enacted in Canada. This argument does not take into account the difference between the English Act and the Canadian Act.

The Tax under the Canadian Act, is levied on the profits of each year taken by itself. Thus, if a firm shows a loss for five years and a profit for the sixth year, it is taxed, under the Act, for the sixth year but no account is taken of the losses of the preceding five years.

Under the English Act, the profits to be taxed are determined by comparison of the profits earned in the year in question with the pre-war profits. The pre-war profits are arrived at in the following way:

(*a*) The average of any two of the last three pre-war trade years, the tax bearer to have the privilege of choosing which two,—or

(*b*) If (*a*) is less than 6% on the capital at the end of the last pre-war trade year, then 6% on the capital is taken as the pre-war standard,—or

(*c*) If the three last pre-war years were years of abnormal depression (i.e. where the average profits of the three last pre-war years were at least 25% lower than the average profits of the three preceding years) then any four of the last six pre-war years may be substituted for any two of the three last pre-war trade years as above.

The profits to be taxed having been arrived at as explained above, the percentage taken is at present 40%, though the present Budget proposes to increase it to 60%.

It is important to observe that, in the course of his budget speech, delivered in the House of Commons on April 19th, Mr. Austen Chamberlain, Chancellor of the Exchequer, according to the Associated Press dispatch, dated London, April 19th, and published in the Toronto *Mail & Empire* on April 20th, is reported as follows:—

"Mr. Chamberlain said the result of the visit of the Commissioner sent to Canada, and the United States, to investigate the method of profits taxation, was the discovery that the methods adopted there were not suited to Great Britain."

Company Publications.

THE steadily increasing number of company publications being issued by industrial corporations in Canada is an interesting and significant development. It is a recognition that human nature dearly loves publicity, and that the affairs of the group of people associated together in a factory has a real and vital interest to each member of the industrial family. Some of the Canadian publications are indeed wonderfully complete in their record of what is going on in the shop, the office, the home, and the community. All this helps to maintain good feeling, to inspire loyalty, and to bring about the most effective co-operation. The investment in a company newspaper or periodical is well worth while if it has these results, and judging from the way in which new ones are appearing from time to time, it would appear as if they were proving effective instruments.

A New Type of Bank.

IT is announced in New York that the first charter for a foreign banking association formed under the provisions of the Edge bill and intended to enable American manufacturers to compete in foreign markets on a credit basis, has been granted by the Federal Reserve Board to the First Federal Banking Association, of New York, capitalized at $2,100,000.

As the purpose of the bank is to build up an expert organization to study foreign credit problems, it was decided, the announcement says, to limit its shareholders to banks, manufacturers, and others interested in foreign trade. Manufacturers participating as stockholders will have first call on the bank's facilities. The entire stock of the association, consisting of 20,000 shares of $100 par value and 1,000 founders' shares, has been underwritten at $105 a share.

"The commercial banks of this country are deposit banks, obtaining their working capital from their depositors," explains Chairman Kies. "The principles of sound banking require that their funds be kept liquid and that

credits issued by them be for a short term only. The Edge bill in effect provides for the establishment of a new kind of bank which shall obtain this working capital from the investors of the country through the sale of the bank's obligations or through the use of its guarantee in connection with the paper of American manufacturers and exporters, based in turn upon the credit of their foreign customers.

"While at the moment the great majority of manufacturers have more domestic business than they can handle, nevertheless the time will come when markets for our surplus capacity will be a necessity, and when this time comes our manufacturers will find themselves without foreign markets, unless continued efforts are made to maintain, so far as possible, their present position in these markets."

This development will have considerable interest for all Canadian manufacturers who have foreign trade ambitions.

A Timely Publication.

VALUABLE service has been rendered by the Department of the Interior, Ottawa, in compiling and publishing a resource map of the Dominion. This is a time, if ever there was one, when knowledge of our resources is greatly needed. With a world shortage in many lines, there is urgent need for production and anything that can be done to help on the movement towards greater production will be of value.

On the map, which measures 35 x 19 inches, giving a scale of 100 miles to the inch, varieties of mineral, agricultural and fishery resources and timber and fur in general are printed in red lettering in their proper locations. The sites of important water powers, developed and undeveloped, are indicated, and the lines of all railroads completed up to date are clearly defined.

The resources shown on the map extend from "whales" near Herschel Island in the Arctic to "salt" at the southern toe of the Ontario peninsula, and from the "white whales" of Ungava Bay to the fruit lands near Victoria, B.C. An important inset contains five circular diagrams, showing the comparative contributions of each province to field crops, commercial timber, developed water power, fisheries and minerals. A sixth diagram displays the proportion of the total exports filled in 1918 by manufactures and by the five great classes of natural resources severally.

This is a publication which should have a wide distribution, for there is no telling where the seed may not fall that will ripen into important developments in various parts of the country.

The Fallacy of Wage Increases.

IN a recent editorial, the *Saskatoon Phoenix* comments very sensibly on the folly of supposing that wage increases are going to relieve the pressure of increasing living costs, unless the increases go hand in hand with a greater output of commodities.

"We have on previous occasions," says the *Phoenix*, "pointed out that the demands that are being made to-day for heavy wage increases, ostensibly because of the increasing cost of living, are themselves a factor in that increasing cost, and as there is no real increase in wealth production out of which the increases can come, such increases must of necessity be made at the cost of the community. It is one thing to urge an increase of wages; it is quite another to secure that increase without affecting adversely some other section of the earning classes. Only when there is a general increase in the wealth production of the community is it possible to improve the condition of the community as a whole, and even if there were a complete transformation of the economic structure and all wealth went to the producers of it, there could be no progressive improvement of the condition of the community except by a progressive increase of production, and even then the increase of population would provide a problem which few reformers to-day deign to notice. The industrial world of to-day is but a battling of sectional interests and as long as one gains, it cares little how the others fare. Bootmakers, for example, demand and get an increase of wages and the employers simply advance the price of boots and other working men help to pay the increase, suffering thereby a decrease in their real wages, that is the purchasing power of their money wages. And the same thing applies in other trades, the workers apparently failing to realize that every rise in prices is equivalent to a fall in wages. Assuredly the solution of what is undoubtedly a grave problem will never be reached by the way of class or sectional individual selfishness, and a clear recognition of that truth is a necessary preliminary to discovering the real way."

The Development of Raw Materials.

UNDER the caption "Precept and Practice," the *Regina Leader* comments rather caustically on the item appearing in these columns recently about the use by Canadian manufacturers of envelopes made in the United States. The *Leader* claims that the manufacturers of Canada are the worst offenders when it comes to buying American raw materials and products when equally good or better supplies can be secured in Canada or their production developed here.

"Our manufacturers," declares the *Leader* accordingly, "have continued to import materials from across the line, because it was easier than to organize companies and employ their capital in the development of the national resources of Canada and thereby provide supplies of needed raw materials at home.

"Many an Ontario and Quebec manufacturer is living in a fool's paradise, by relying to an altogether too great extent upon the importation of raw and semi-manufactured materials from the United States. During the war, when the United States Government found it necessary to impose an embargo on exports, many Eastern manufacturers would have found themselves in desperate straits but for

the fact that Canada was generally exempted from the operation of such embargoes. Nevertheless, we did have the spectacle of numerous appeals to Washington to help Canada out in regard to various lines of raw materials, some of which could have been obtained in Canada had the manufacturers displayed a little foresight and employed some of their surplus wealth acquired under the so-called National Policy of protection to the development for use of our own natural resources. Had the United States not displayed a friendly attitude towards Canada, many an Ontario and Quebec manufacturing industry would have collapsed like a house of cards.

"It was to develop these resources that a protective tariff was inaugurated; protection was not meant merely for the finished products of manufacture, but to encourage the production within Canada of everything entering into such finished products. Protection so operated in the United States, Germany, and other countries, but in Canada the development of our own resources has not been undertaken in the same systematic way by the men engaged in the manufacturing industry. Much of the development that has taken place stands to the credit of American and British capital and enterprise.

"It is high time that Canadian manufacturers, individually and collectively, awaken to the necessity of securing a larger proportion of their raw materials in Canada, and abandoned the easy-going policy of depending on imports, developed from natural resources by the energy and capital of other countries and men than themselves."

The *Leader* means well and we are in full accord with its desire to see this country become more self-contained, but it is perhaps a little unfair not to give greater credit for the work already done. Practically every issue of this publication records the manufacture in Canada of products not hitherto made in the Dominion, while the record of progress disclosed in the 1920 edition of the Canadian Trade Index is most impressive. Industrially, Canada is still young and time must be allowed to get the new industries started.

Three Labor Declarations.

AN effort is being made to introduce into the constitution of the State of Illinois three declarations with regard to the powers of labor that may prove far-reaching in their effect and should be watched closely.

The first postulates that "the labor of a human being is an attribute of life and is not property."

The second declares that "the right of workmen to organize into trade and labor unions and to deal and speak through representatives chosen by themselves is declared and it shall not be abridged."

The third states that "no court, tribunal, judge nor any officer or official shall by any process, order, injunction, restraining order, decree or proclamation abridge the right of any workman to quit any employment either singly or in concert, nor the right of by peaceful persuasion, picketing, assemblage or the payment of strike benefits inducing others so to quit or refrain from working, nor shall any such acts be made or held to be unlawful, or to constitute an unlawful conspiracy. Nor shall any such process, order, injunction, restraining order, decree or proclamation interfere with the exercise of the legitimate functions of any organization formed for the purpose of advancing the interests of those who labor."

Mr. Charles Piez, president of the Link-Belt Company, Chicago, speaking before the Illinois Constitutional Convention, comments on these proposals from the economic and industrial standpoint. Respecting the first his view is that the state should not single out any group or class for special treatment, but should guarantee to each and every citizen equal rights, protection and participation in the Government. Without such a declaration, the State of Illinois has been a leader in the recognition of human rights in industry and to-day, beyond a few insignificant amendments to existing acts, there exist substantially no demands for any basic remedial industrial legislation.

With regard to the second declaration, Mr. Piez sees no reason for the first part of the section, because the right of workmen to associate in a lawful manner for lawful purposes has already been generally acknowledged and has not, within his memory, been questioned. To the second part of the section, however, he does object. It means compulsory collective bargaining. Its objectionable feature is that "the provision carries with it no restrictions of any kind, prescribes no fair method for determining the choice of the representative and calls for no collective responsibility to observe the agreements arrived at. It does, however, open up the opportunity to every agitator, to every professional trouble-maker, by false promises, by lies and treachery, to organize a raid against any industry whose profits hold out the hope of rich booty. And it denies to every workman or employer who wishes to retain his freedom of action, the right to work or conduct his business."

Mr. Piez believes that the tendency of the future will be towards greater control, greater restriction and the imposition of greater accountability, not the granting of greater power; or as he forcibly puts it, "The right of the worker to strike can certainly not be declared superior to the right of the public to live."

So far as the third declaration is concerned, Mr. Piez says that in his thirty years' experience as an employer, he has failed to meet any cases of peaceful picketing or peaceful persuasion. A strike, he adds, is not exactly an afternoon tea in which conversation is plentiful, but harmless. It is not as a rule conducted through persuasion or peaceful picketing; but it involves the absolute denial of the right of the employer to conduct his business and a denial of the right of other men to remain at work or to seek work. A just cause will win through public support, in the face of an unfair employer, and an unjust cause should not be permitted to prevail through intimidation and violence.

The Situation at Ottawa Reviewed

Introduction of the Budget the Outstanding Event of the Session—Much Condemnation of Business Profits Tax has been Voiced—Sir Robert Borden Expected Back Before Prorogation Which Takes Place Early in June

By Industrial Canada's Parliamentary Correspondent

OTTAWA.—The Budget is the soul of a session. Until it comes affairs falter and drag. After it has been delivered discussion dates from it and chiefly concerns its contents. From the beginning of the present session the eyes of members and Senators have been turned in the direction of the Budget with more than ordinary eagerness. It is recognized that the first Budget of the new Finance Minister is a difficult task. Demands on the treasury are so heavy that Sir Henry Drayton has had to regard, as his first consideration, the problem of increasing revenue. Part of that problem has been some plan for the distribution of taxation, so that the industrial life of the country may not be injured and the tax-paying capacity of the country thereby reduced as a whole.

Never since Confederation has a measure been so protested against as has the excess profits tax. From every part of the country have come declarations that in its operation this tax was strangling the business life of the community; blockading industrial expansion; preventing the investment of new and foreign capital; and weakening the standing of the strongest industrial concerns of the Dominion. The condemnation has not been entirely from the outside, nor this year alone. When he introduced the excess profits tax, Sir Thomas White frankly stated that it was an emergency war measure that peace conditions would never justify. He promised that it should not be inflicted upon the country for more than three years; in fact, he intimated that the country could not stand more than the three years' application of this form of taxation.

Sir Henry Drayton

Minister of Finance in the Union Government who is introducing his first budget at the present session of parliament

Necessity extended the life of the measure beyond the promised period. It was not wanted by the Finance Minister who originated the plan; it was not commended by Hon. A. K. McLean, when he was forced to ask Parliament to extend its term; it is not liked by the present Finance Minister. This child of necessity has never had popularity, and now it is losing its sole virtue-earning power. When it goes it will depart forever, and will only be remembered as one of the noxious developments of war, the outcome of unavoidable conditions.

The income-tax, which was regarded as an impossibility, is proving on trial better than expected. The Commissioner of Taxation, Mr. Breadner, has succeeded in making a surprisingly extensive list of income-tax contributors. It is well known that the list is by no means complete, and that there are a good many tax-dodgers in the country, but they are being rounded up, and not a small part of the income taxation returns is gathered in the form of fines imposed upon knowing delinquents. The making of an income-tax list is a very great task. Britain has had income-tax for many years as its chief form of taxation, and even in that country, after an experience of almost a century, the list of contributors is not regarded as complete. The success of the plan in Canada assures its continuance. For all time in the future Finance Ministers will have statements of income-tax returns as a principal feature of their Budgets.

There has been a good deal of investigation by the Finance Department officials into a plan for a sales tax. The experience of the United States, where there has been a sales tax on luxuries, has been examined by Canadian officials. The chief factor which has led to hesitance in adopting this form of taxation is the absence of any statistics indicating the gross sales over Canadian counters. It has been found impossible to estimate what a one per cent. tax on all the sales of the country would yield in a single year. If this form of tax is applied in Canada to meet the needs of the Treasury, it is likely to be limited in the first instance, so that experience may give a measure of its burden on the people and of its worth as a revenue producer.

Campaign contributions have been condemned from time immemorial. The party system was subjected to its most severe condemnation for the collections that it was alleged to make from those who benefited from tariff and other legislation. Efforts have been made to abolish campaign funds by proposals that there should be publicity required

as well as by direct legislation. The campaign fund has been one of the grievances that the organized farmers have held against the manufacturers, whom they charged with making heavy payments to keep their friends in power so that those friends could continue to legislate for the benefit of the contributors.

There has been a good deal of amusement in Parliament over the attitude of the farmer representatives in protesting against a section in the new franchise law providing that no contributions for political purposes may be made except by political organizations. Representatives of the organized farmers of the country protested most vigorously against their associations being barred from entering the political struggle with their money. They were not satisfied even when it was shown them that the provision was not new, but has been a part of the law of the land since 1908. From the protest that was made to Parliament it was made clear that the farmer organizations are prepared to go into the next general election battle prepared to finance the campaigns of their candidates. Criticism of campaign funds has given place to condemnation of legislation to abolish them. The affair is taken as another revelation of how men's minds change when they cease to be spectators and become participants in affairs.

Grand Trunk Legislation.

Heavy deficits in the operation of Government railways spiced up a debate on the Government's bill by which the taking the Grand Trunk will be completed. Omissions from the act of last session made it necessary for the Government to bring in a bill accepting a couple of branch lines that had been forgotten when the Grand Trunk system was taken over. It was also found desirable to ratify the action of the Grand Trunk shareholders. The bill of this session puts Canada into full possession of the system, and will enable the management of the Canadian Government railways to amalgamate the Grand Trunk in the fullest way, so that the utmost may be realized by the other Government lines from this system.

A recent feature of Parliament, in which there was considerable interest shown, was a statement of his war work by Hon. Mackenzie King, the Liberal leader. Mr. King stated that much of his work had been the promotion of industrial peace among the producers of war materials, and he believed that he had accomplished more useful work there than if he had been able to go to the front.

A surprising volume of opposition developed in Parliament, largely among Government supporters, to a proposal by the Government that the War Purchasing Commission should be continued and given charge of all the buying for all the departments of the Government. Critics of the bill stated that the Commission has not shown an effectiveness that justifies the enlargement of its scope, or even its further existence. From both sides of the chamber members declared that buying by departments would be better than one central buying body. The Government, although it brought in the bill, is not particularly warm for it. Withdrawal has been hinted at in high quarters. It is regarded as not unlikely that the measure may go to the dust heap with other unfinished legislation when prorogation comes.

Sir Robert Borden's Return.

Word from Sir Robert Borden is that he will reach Parliament shortly before prorogation, assume the management of Canadian affairs, and commence the work of organizing a political party to bring the Government through the next general election. The news from the south is that Sir Robert appears to enjoy greatly improved health. His friends are beginning to feel some confidence in statements that his long rest has so recruited his health that he will be able to give the country the benefit of his leadership for many years.

The Canadian navy is to be reorganized on a modest basis. Hon. Mr. Ballantyne, minister for Naval Affairs, adopted the drastic and effective method of abolishing the organization that had been developed during the war and making a fresh start. This enables him to retain factors of the service that proved effective and drop those which failed to make good. The Naval College is continued; a cruiser and two destroyers have been accepted from Britain as craft on which a naval militia can begin training operations. Until the finances of the country and its naval needs warrant, the force of Canada on blue water is likely to be in commerce, in the form of a merchant marine, rather than in war-like preparations afloat.

The Militia and Military Flying.

Canada is not going out of war preparations altogether. The militia is being reorganized and there is to be, for the first time, an air force in connection with it. Canadians did so well in the air during the war, and the wide spaces of the country lend themselves to speedy spanning, that there is a feeling that the country is justified in giving aid to military flying.

The session is expected to end about the first of June.

A Great Pacific Coast Shipyard

This is a General View of the Big Shipbuilding Plant of J. Coughlan & Sons, Vancouver, Showing a Number of Large Steel Ships in Various Stages of Construction

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Executive Council Meeting

The last Executive Council meeting of the Association's year was held in the King Edward Hotel, Toronto, on Thursday, April 22. The president, Mr. T. P. Howard, was present, and occupied the chair. There was a good representation of members and business was transacted smoothly and with expedition, reports being presented by the Treasurer, Executive Committee, Tariff, Transportation, Insurance and Legislation Committees, and the Secretary of the Ottawa office.

Food and Drugs Act

A drastic bill giving to the Governor-in-Council power to prescribe the shape and size of all packages containing food and drugs, and the color, size and contents of all labels on such articles was introduced at the present session of Parliament. It provided that the weight, measure and number should be correctly stated on the outside of all sealed packages carrying the manufacturer's name and address. No provision was made for the postponement of the enforcement of the Act until stocks on hand had been disposed of.

In order to secure the withdrawal of objectionable features, a delegation of manufacturers visited Ottawa and interviewed Hon. N. W. Rowell, who had the bill in hand. Much other work was done, and as a result of the efforts of the Association the measure was amended practically along the lines suggested.

Western Delegation at Toronto

Prior to the holding of the Executive Council meeting on April 22, a luncheon took place in the King Edward Hotel, at which an influential delegation of Westerners were guests of honor. The party included Mayor M. A. Brown, Medicine Hat; James Ramsay, M.P.P., Edmonton; Brigadier-General H. J. McDonald, C.M.G., D.S.O., Lethbridge; Col. J. Y. Reid, Winnipeg, and A. E. McKenzie, Brandon. The purpose of the visit of these gentlemen to the East was to work up interest in the Alberta Industrial Congress and the new Western Colonization Association.

Mayor Brown, who was the first speaker, dealt with the general principles underlying the work of the two organizations. He explained that they were endeavoring to bring about a better feeling between the East and West, which would be fostered by the co-operation of Eastern manufacturers in the development of Western resources, and by their assistance in solving the problems of colonization and settlement.

Mr. Ramsay's theme was the natural resources of Alberta. He presented some interesting figures, showing the extent of the manufacturing industries in the province, referred to the immense coal deposits awaiting development, and devoted some attention to the subject of oil.

General McDonald, who is secretary of the Alberta Industrial Congress, outlined the plans which had been prepared for the meetings and entertainment to be undertaken during the visit of the C.M.A. to the cities of Alberta in June. Colonel Reid, representing the Winnipeg Board of Trade, and Mr. McKenzie, representing the Brandon Board of Trade, were present to endorse the proposals of the Western Canada Colonization Association, under which a large sum of money will be raised to co-ordinate colonization efforts.

The speeches of all these gentlemen were listened to with much attention, and at their conclusion a vote of thanks, moved by Mr. J. H. Sherrard and seconded by Mr. R. L. McIntyre, was carried unanimously.

Manitoba Workmen's Compensation

The Legislation Committee reports that a Workmen's Compensation Act has been passed by the Manitoba Legislature, providing for the administration of compensation to workmen through a State fund, to be collected and administered by a Commission. This Act increases the compensation paid to injured workmen from 55 per cent. to 66⅔ per cent. It reduces the waiting period from six to three days. It increases the pensions paid to widows and children from $20.00 and $5 per month, respectively, to $30.00 and $7.50 per month. The allowance for funeral expense is increased from $75.00 to $100.00. Labor's request was for 100 per cent. compensation. While the Government did not grant this request, it has provided greater benefits for workmen than apply elsewhere in Canada.

Presentation to Mr. Parsons

A pleasing feature of the luncheon given by the Association on April 22 in Toronto was the presentation to Mr. S. R. Parsons of an illuminated address, expressing the appreciation of his fellow-members of the C.M.A. of the work done by him as Canadian employers' representative at the International Labor Conference in Washington, D.C., last fall. The presentation was made in a few appropriate words by Mr. T. P. Howard, the president, after which Mr. Parsons returned thanks to the donors, and gave a few impressions of developments since the Conference in regard to 8-hour day legislation.

Board of Commerce Special Case

The Supreme Court of Canada adjourned on March 25th, without handing down judgment in the Board of Commerce case, and it is understood that the Court desire to hear counsel again. The judgment will decide the status of the Board of Commerce as a price fixing tribunal, and its power to compel the marketing of commodities and to fix prices and fix penalties for the infringement of its orders. It will

also decide whether Parliament has power to create the Board of Commerce, vesting in it such powers as it claims to possess. The question of provincial rights is vitally affected in the decision. Mr. W. N. Tilley, K.C., appeared as special counsel for the Association.

Chemical Research in Manitoba

The Executive Committee of the Winnipeg Branch has been advised through one of its members, Mr. W. G. Fraser, that the chemists of Manitoba have formed an association, known as the Manitoba Society of Chemistry, for study and research work. Dr. J. W. Shipley, B.A., assistant Professor of Chemistry, University of Manitoba, is secretary. The Society is prepared to place any member of the Canadian Manufacturers Association desiring the services of an expert chemist in touch with a qualified man, who will be in a position to assist in chemical research.

Ontario Assessment Act

The City of Toronto, having intimated that it proposed to submit an amendment to the Ontario Assessment Act, having in view the assessing of income represented by dividends derived upon stocks in industrial and commercial companies, which enactment has hitherto been refused by the Legislature, the Ontario Legislation Committee, having considered the matter very carefully, invited the co-operation of the Canadian Credit Men's Association, and instructed Mr. A. C. McMaster, K.C., as joint special counsel, to oppose this legislation, on the ground that such companies already pay the business assessment; and that the proposed amendment would infer marked discrimination as between partnerships, individual concerns and incorporated companies.

Patent Act

A bill having been introduced in the Dominion House to amend and consolidate the Acts relating to Patents of Invention, the legal secretary submitted copies of the bill to various manufacturers believed to be interested, and also consulted with several patent attorneys. With this information, the Legal Department prepared a brief which was submitted personally by the legal secretary to Mr. Geo. F. O'Halloran, Commissioner of Patents, Ottawa, on April 13th. After discussion, the Commissioner intimated that the suggested amendments would be adopted. It is believed that the new bill will be a great advance on any previous legislation on the subject in Canada.

Meeting of the Brantford Branch

A special meeting of the Brantford Branch was held in the Canadian Club, Brantford, on Thursday, April 8th, 1920. Mr. C. A. Waterous, of the Waterous Engine Works, chairman, presided, and Messrs. J. E. Walsh, general manager; J. R. K. Bristol, manager tariff department, and H. Macdonald, legal secretary, were present as guests of the branch. There was a large attendance.

Mr. Walsh gave an outline of the services of the association, describing plans for the extension of the work in all departments. Mr. Bristol explained the necessity of a protective tariff, pointing out that all civilized countries are obliged to resort to this method for the protection of national trade.

Mr. Macdonald referred to the important functions to be performed by local branches, subsidiary to the divisional organization, which was finally responsible to the Executive Council and to the association, as a whole. He explained the organization of the legal department, which was responsible for checking all legislation and for amendments, in the interests of industry, to new enactments, as introduced from time to time. He gave instances of substantial monetary benefits obtained for members by skilful and vigilant treatment of manufacturers' problems.

The visitors were unanimously accorded the thanks of the branch for their attendance and information.

Mr. George Hately, the efficient secretary of the Brantford Board of Trade, is acting secretary of the branch.

It was stated by the chairman that a local campaign for one hundred per cent. membership would be arranged on an early date.

Bankruptcy Act

The Dominion Bankruptcy Act will become effective on July 1st next, by proclamation of the Governor-General. Meantime, an amending bill has been introduced in the Dominion House by Mr. S. W. Jacobs, K.C., Montreal, providing: (1) That a trustee must deposit, in a separate bank account, the respective proceeds of each estate; (2) for the payment of remuneration to inspectors for services to bankrupt estates; (3) and rescinding the provision in the original Act against unwarranted petitions in bankruptcy. There is no apparent objection to these amendments, which have been suggested by mercantile and financial interests.

Committees for Next Year

An appeal is being made to the membership of the Association for volunteers to man the various standing committees next year. It is regarded as most important that the members constituting the committees should represent all parts of Canada and all kinds of industry. At the present time the problems confronting industry are as important as they are varied, and it is essential that members offer their services in order to make the committees as representative as possible.

Activities of the Montreal Branch

By R. W. GOULD

Secretary, Quebec Division, C.M.A.

The annual meeting of the Montreal Branch will be held on May 12. The date was fixed at a meeting of the Executive of the Branch, held in the Engineers' Club on April 15. The date is somewhat earlier than last year, but the Executive desires to have the local Branch matters cleaned up early, so that they may not clash in any way with plans for the annual convention.

A strong delegation from the Montreal Branch went to Ottawa last month, to place its objections before Hon. N. W. Rowell, to Bill No. 27. The Foods and Drugs Act was viewed by the manufacturers affected with considerable apprehension, and, after three local meetings, gathering data on the subject, a delegation, headed by T. H. Wardleworth, of the National Drug Company, went to Ottawa. Others who accompanied him were Colonel Lumm, of S. H. Ewing & Sons; G. F. Benson, of the Canada Starch Company; a representative of the Atlantic Sugar Refineries, and other large interests involved. The delegation returned highly pleased with the result of the interview, receiving assurances from the minister that certain objectionable features of the bill would be cut out entirely and other clauses so amended as to meet the views of the purveyors of foods and drugs.

Quebec Province, by reason of its fortunate labor conditions, is attracting American industries all the time. Subsidiary plants of the Kenworthy Brothers, Jencks Spinning Company, and the Locomotive Superheater Company, have

located in the province during the past few weeks. Two of these have already applied for membership, and the application of the third is promised during the course of the next few days. Kenworthy Bros. have gone to Drummondville, the Jencks Spinning Company to St. Johns, and the Locomotive Superheater Company to Sherbrooke. Other firms in the United States are making enquiries for factory sites within the province.

Up to the present time about a dozen members of the Montreal Branch are planning to take the trip to Vancouver during the first days of June, in order to be present at the annual convention of the Association. There are hopes that a sufficient number may be recruited in Montreal during the coming fortnight to have a Montreal car on the special train.

A well attended luncheon meeting of the Branch was held in the Rose Room of the Windsor Hotel on Tuesday, April 27th, when the members heard splendid addresses from officials of the Alberta Industrial Development Association. The speakers were His Worship Mayor Brown, of Medicine Hat, president of the Association; James Ramsay, M.P.P., of Edmonton, and Brig.-General H. J. McDonald, C.M.G., D.S.O., the general manager of the Association. The Western viewpoint was placed before those present, and the meeting promises to have done a considerable amount of good in the propagation of a condition of better understanding between the East and the West.

Further steps have been taken toward the establishment of a branch at Three Rivers, in the autumn of this year, and a comprehensive programme of organization will soon be fully mapped out. The Sherbrooke Branch has been keenly alive to the activities and problems of its members, while the Quebec Branch is tackling its problems with that zest and enthusiasm which is peculiar of the French race.

F. W. Stewart, the vice-chairman of the Montreal Branch, who has been spending a few weeks at Pinehurst, N.J., has returned to the city, and is throwing himself into the work of the division with his accustomed enthusiasm and energy. C. Howard Smith, who is at present on a holiday trip to the West Indies, is expected home early in May, and his effectiveness as vice-chairman of the Quebec Division will again be felt.

The decision of the Executive of the Branch some time ago to have cards printed bearing a brief summary of the services of the Association, to be hung in the offices of members, are now out, and being distributed. They have been printed in two sets, one in French and the other in English.

The Graphic Arts section has held several meetings during the month with respect to the new demands by the printers. Negotiations have gone along smoothly, and difficulties which were at first threatening have been amicably surmounted. W. A. Desbarats, who for two years has been chairman of the section, has closed his tenure of office, and left on April 22nd for a two months' holiday trip to the United Kingdom and on the Continent.

Annual Meeting Itinerary

FOR the benefit of those who may have overlooked the previous publication of this itinerary, the schedule of dates and stopping-places is again reprinted as follows:—

Via Canadian Pacific Railway

Lv. Toronto	10.00 p.m.	Saturday	May 29
Ar. Winnipeg	1.30 p.m.	Monday	May 31
Lv. Winnipeg	11.59 p.m.	Monday	May 31
Ar. Brandon	3.50 a.m.	Tuesday	June 1
Lv. Brandon	10.00 a.m.	Tuesday	June 1
Ar. Regina	4.30 p.m.	Tuesday	June 1
Lv. Regina	6.45 p.m.	Tuesday	June 1
Ar. Moose Jaw	7.55 p.m.	Tuesday	June 1

Industrial Meeting at Niagara

Programme Announced

The municipalities comprising the Niagara District Industrial Association will hold a three days' congress on August 2, 3 and 4. To it will be invited United Kingdom and United States manufacturers, who have in prospect the establishment of Canadian branches of their industries, with a view to showing them the advantages of the district as a location for manufacturing plants. The programme of entertainment is as follows:

Monday, August 2nd

Noon.—Luncheon at the Refectory, Queen Victoria Niagara Falls Park, as guests of Queen Victoria Niagara Falls Park Commissioners.

Afternoon.—The Falls of Niagara, the world-famed power plants, and the Chippawa-Queenston Power Development, now under construction by the Hydro-Electric Power Commission of Ontario.

Evening.—Banquet at the Clifton Hotel, Niagara Falls, addressed by the Dominion Ministers of Trade and Commerce, Railways and Canals, and Labor.

Tuesday, August 3rd

Morning.—Motor trip on the Niagara Boulevard (skirting the majestic Niagara River) to Bridgeburg and old Fort Erie, thence to Crystal Beach for luncheon.

Afternoon.—By boat to Port Colborne. Two hours for inspection of the largest flour mill in the British Empire,

the largest nickel plant in the world, and the Canadian Government elevators. Then by boat down the Canal to Welland.

Evening.—Banquet at Welland, followed by motor trip to St. Catharines.

Wednesday, August 4th

With St. Catharines as Headquarters.—An inspection of the Welland Ship Canal; and a visit to Port Dalhousie, Merritton and Thorold.

The municipalities comprised in the Niagara District Industrial Association are the cities of St. Catharines, Niagara Falls and Welland; the towns of Merritton, Thorold, Port Colborne and Bridgeburg; the villages of Port Dalhousie, Humberstone and Fort Erie, and the townships of Grantham, Thorold, Crowland, Humberstone and Bertie.

W. M. German, K.C., Welland, is president; H. P. Stephens, Mayor of Niagara Falls, 1st vice-president; E. J. Lovelace, Mayor of St. Catharines, 2nd vice-president; G. W. Sutherland, Mayor of Welland, 3rd vice-president; Louis Blake Duff, Welland, secretary.

Australian Tariff Explained and Discussed

Mr. Mark Sheldon Speaks

A meeting at which a number of members of the Association were given an opportunity to learn something about the new Australian tariff was held in the Association rooms, Toronto, on April 8. The guest of the Association on this occasion was Mr. Mark Sheldon, Commissioner in the United States for the Commonwealth of Australia. Mr. G. W. Watts occupied the chair and introduced the speaker.

Mr. Sheldon explained that the new Australian tariff, which became effective on March 25, was highly protective and that, while still giving a preference to the United Kingdom, it at the same time provided for an increase in the rates of duty on importations from the United Kingdom.

Canada had in the past quite a trade with Australia in cotton piece goods, haberdashery, etc., and Mr. Sheldon stated that he thought the new tariff would seriously affect such exports. He mentioned that among Canada's chief exports to Australia were lumber, newsprint paper, canned salmon and agricultural machinery, but pointed out that only 2 per cent. of the imports into Australia are from Canada, while 25 per cent. are from the United States.

Importations from Canada are dutiable under the general tariff. There is also an intermediate tariff, which might be called a bargaining tariff. As to the possibility of Canada being placed under the preferential tariff, this would be a matter for bargaining between the two countries. Mr. Sheldon stated that he would be pleased to place before his Government any views which might be expressed by the manufacturers, and he felt that there would be a strong sentiment in Australia for trade as between the two countries.

Referring to the progress of Australian industry, Mr. Sheldon said that there were about 15,000 manufacturers in the country. The key industry is steel and Australia has now started to produce steel. There are large deposits of ore, and coal lies along the seaboard of the east coast. Under the new tariff the steel industry is given protection. Requirements of steel rails and girders, which have been standardized and the number of grades reduced to about forty, will be supplied from the steel industry at Broken Hill.

Australia is also going into the tin plate industry, the Lysaght firm being interested in the establishment of a plant to manufacture galvanized iron and tin plate. Another industry to be developed was the wool top industry and latterly all domestic requirements in woollen hosiery have been produced in Australia. The glass industry is also widening out and window glass is now being manufactured.

Following Mr. Sheldon's address, several members present participated in a discussion of Canadian-Australian tariff relations. Mr. S. R. Parsons expressed the opinion that there was nothing more desirable that could be worked out than some sort of a preferential tariff between the two countries and urged manufacturers to make a thorough study of the situation. Mr. Lloyd Harris followed with a review of what had been done by the Canadian Mission in London to promote closer trade relations between the different parts of the Empire. He stated that while in England both Mr. Jones and himself had become impressed with the view that the best fields to cultivate for the extension of Canadian trade lay within the empire. He felt that the question of preferential trade with Australia would carry the judgment of the Canadian people. He did not know whether Canada would derive the most advantage or Australia; neither country should enter into the agreement with the idea that they would get all the advantage. The thing must be mutual.

In answer to certain questions, Mr. Sheldon stated that there was no possible chance of the Australian method of valuation ever being altered. To do so would mean placing Canada on an altogether different footing to the United Kingdom and other parts of the Empire.

In considering the new tariff it must be remembered that Australia was becoming a manufacturing country. She had been isolated during the war and was determined that she would not be isolated again. The iron and steel industry would be a success and shipbuilding was already being carried on successfully. During the war plates were imported from the United States; they are now being made in Australia. The country possessed large deposits of salt and would be able to produce all the by-products of the alkaloid industry. Rubber was not produced in Australia but was grown in New Guinea and the Australian rubber industry was growing. In the matter of confectionery, Australia is now producing all its own requirements.

Manitoba Employers Form New Organization

Employers' Association Launched

At a meeting attended by some 220 employers, representing twenty-five different groups of trade and industry, an employers' association for Manitoba was organized in Winnipeg on March 30. Following the meeting, Mr. Chas. F. Roland, acting secretary, issued a report dealing with the proceedings and plans of the organization. This reads, in part, as follows:—

"Reports on membership, finance, collective bargaining and state insurance were presented, sanely discussed, and adopted. The report showed a founder membership that had enrolled voluntarily since January 20, 243 firms, which were employing, outside of executive officers, 13,817 hands, of which 10,386 were male employees and 3,431 female, and a total annual wage of $11,368,105. Nothing like a full canvass of the field had been made previous to organizing permanently, but steps will be taken immediately by the directors appointed last night to extend the organization until it has covered every town of importance in the province.

All Trades are on the Executive.

"Every trade group is represented in the fifty-one directors elected last night, and include representatives from the cities of Brandon, Portage and St. Boniface. The election of officers will be dealt with at a later meeting of directors.

Apostles of Western Development

Five Members of the Party of Westerners Who Have Been Addressing Gatherings of Manufacturers in Eastern Canada in the interests of the Alberta Industrial Congress and Western Canada Colonization Association. From left to right they are:—Major F. J. James, President Regina Board of Trade; Col. J. Y. Reid, Winnipeg Board of Trade; Mayor M. A. Brown, of Medicine Hat, President Alberta Industrial Development Association; A. E. MacKenzie, Brandon Board of Trade; and Brig-General H. F. McDonald, C.M.G., D.S.O., General Manager, Alberta Industrial Development Association

The draft constitution and by-laws which had been prepared by the provincial executive, which has had charge of the organization work during the past few months, were confirmed at the meeting.

"The chairman at this point outlined that since the provisional committee had been appointed in January, they had had representatives of Employers' Associations of Toronto, Minneapolis, British Columbia, and other points, visit Winnipeg, and had gathered by letter and telegraphic correspondence much information that had convinced the committee that existing conditions here called for immediate steps to be taken in the formation of the association.

"Briefly, the constitution, policy and principles are set forth as follows:—

"1. To promote a fair and equitable basis, industrial peace, and commercial prosperity, in the community, and the steady employment of labor.

"2. To discourage lockouts, strikes and unfair demands by either employer or employee.

"3. To secure for employer and employee, freedom of contract in the manner of employment.

"4. To disseminate a knowledge of the fundamental economic laws and conditions upon which a successful and desirable community life depends.

New Organization is Necessary.

"Recognizing that present financial conditions make it wise and imperative for business men to establish and maintain in Manitoba the most favorable conditions obtainable, in order to take advantage of the future opportunities this province offers for its agricultural, industrial and commercial development, employers assembled last night took a positive and absolute stand for the open shop principles in all lines of business, and, further, that as citizens with large sums of capital invested, they will urge upon Provincial and Dominion Governments in establishing and maintaining such principles, and will lend the association's moral and active support to maintain these principles in the future working out of the Provincial Industrial Conditions Act and other Canadian-wide uniform legislation, with a view of stimulating greater production and turnover in all lines of industrial trade and commerce.

"On this point, Mr. Roland emphasized what one of the leading speakers at last night's meeting said—that so long as production lags, the cost of living will not reduce, that increased production would solve many of the big economic problems of to-day; that while the cost of living was important, in proportion to other countries, Canada was lower in those increases, while, on the other hand, the increases in wages in almost all trades was among the highest of any country. It was pointed out that there was no reason for any worker in any line being idle to-day, and with these conditions existing there was no reason for delaying production, but every reason for increasing output to the limit. Small production meant big overhead; greater production meant lower overhead, and the outstanding problem in the high cost of living was the present high cost of production.

"Not only was it pointed out in the constitution, but it was emphasized in many of the speeches made, that employers were not organized to combat unionized labor, but, that as long as labor organized for the purpose of assisting their members by honest effort to improve conditions in general, the association would work with them in every possible way."

New Proposed Maritime Province Legislation

By H. R. THOMPSON

Secretary, Maritime Division, C.M.A.

The three Maritime Province Legislatures were still in session at the end of April. The Nova Scotia and New Brunswick Legislatures opened on March 4 and 12 respectively and the Prince Edward Island Legislature on April 6. Quite a number of bills affecting industry have already been introduced and others may be expected.

Workmen's Compensation.—A bill has been introduced in the Nova Scotia Legislature amending the Workmen's Compensation Act, providing for an increase in the amount of compensation from 55 to 66⅔ per cent., also increases in the pensions payable to the dependents in the case of a death. Representations will probably be made opposing the general increase from 55 to 66⅔ per cent.

Minimum Wage for Women.—An act has been passed at the present session of the Nova Scotia Legislature, providing for the appointment of a board of five members, to establish minimum wages and hours of work for women employed in factories and shops.

Development of Power.—A bill is now before the New Brunswick Legislature, which, if passed, will give the Government the right to take over and develop any water power site. There are a number of valuable sites from which power can be obtained, some of which it seems are being held for

speculative purposes, and it is anticipated that the passing of the proposed bill will assist toward the early development of some cheaper power in New Brunswick.

Factories Act.—A bill to amend and consolidate the New Brunswick Factories Act has been presented to the House. The chief new feature is that the Workmen's Compensation Board is given authority to make rules and regulations, governing the conditions in the factories, and to take action towards the enforcement of same.

Taxation of Unlicensed Insurance.—A bill entitled "An Act respecting the Taxation of Certain Companies and Associations" has been presented to the New Brunswick Legislature. If the bill passes as it now reads, certain clauses dealing with the taxation of insurance companies will prohibit the unlicensed insurance companies from doing business within the province. Opposition is now being worked up with the hope that certain amendments will be made.

Programme N.B. Federation of Labor.—The New Brunswick Federation of Labor presented a very comprehensive programme at the present session of the New Brunswick Legislature. The Association procured a copy a few days later, which afforded the employers the opportunity to prepare and present a brief dealing with the separate items, before any action was taken by the Government. As far as we can ascertain, it has not yet been decided just what features may be brought up in the form of bills for the House to consider.

Collective Bargaining in Manitoba

By G. E. CARPENTER

Secretary, Prairie Division, C.M.A.

While the representatives of workers and employers meeting in joint conference with a committee of members of the Manitoba Legislature at its recent session could not agree upon any definition of Collective Bargaining, members of the House made a recommendation to the Government resulting in the introduction by the Premier of an amendment to the Industrial Conditions Act. As this is the first legislation in any Canadian province which recognizes Collective Bargaining, it will be interesting to quote the amendment in full.

AN ACT TO AMEND "THE INDUSTRIAL CONDITIONS ACT."

His Majestty, by and with the advice and consent of the Legislative Assembly of Manitoba, enacts as follows:

1. "The Industrial Conditions Act," being chapter 43 of the Statutes of Manitoba, 9 George V, is hereby amended by adding thereto the following:

(*a*) The right of employers and employees to organize for any lawful purpose is hereby recognized;

(*b*) Employers and employees shall have the right to bargain with one another individually, or collectively, through their organizations or its representatives, provided that in case of any dispute between employers and any such organization of employees or its representatives as to the manner or the terms and conditions of such bargaining such disputes shall be submitted to the Joint Council of Industry, and dealt with by it in the manner prescribed by this Act.

2. The Joint Council of Industry shall proceed to investigate forthwith after such dispute has arisen and not more than five days thereafter. And such investigation shall be carried on with all reasonable despatch, with no postponement or adjournments except such as are absolutely necessary to render the enquiry complete, or are otherwise unavoidable, and the report of the said Joint Council of Industry shall be made within ten days of the completion of such investigation.

3. Section 11 of the said Act is hereby amended by adding after the word "such" in the third line thereof, "or that any agreement or arrangement between employers and employees injuriously affects the public."

4. Schedule "A" of the said Act is hereby repealed.

5. This Act shall come into force on the day it is assented to.

Labor has continually refused to nominate representatives for appointment by the Government on the Industrial Tribunal under the original Industrial Conditions Act, although the Winnipeg branch complied with the Government's request for nominations immediately such request was received after passage of the last Session of the Legislature. When the above amendment was introduced the Committee appeared before the Law Amendments Committee and urged that labor should nominate its representatives and try out the original Act for a year, when it would be ascertained whether or not any amendments were required. In other words they urged that any amendment dealing with such a controversial subject as Collective Bargaining should be based upon experience rather than an attempt being made to deal with the matter without knowledge. Employers' representatives also objected strongly to that part of the amendment dealing with the manner in which Collective Bargaining should be practised, contending that more disputes would arise in connection therewith then as to the differences between the workmen and their employers. They pointed out that had they been tied down to any procedure in the past many differences which had been adjusted satisfactorily to both parties would have been impossible of achievement.

Labor's representative stated that while the amendment was not satisfactory to labor in that it did not go far enough in its definition of Collective Bargaining, and further, that the Government did not intend to pass an Anti-Injunction Law, labor was prepared to accept the amendment, nominate representatives for appointment on the Industrial Tribunal and try the Act out with a view to arriving at some way of adjusting industrial disputes. Notwithstanding the objections of both sides the amendment was passed as introduced.

Accident Prevention in Nova Scotia

By H. R. THOMPSON

Secretary, Maritime Division, C.M.A.

The Maritime Division has been successful in promoting an Accident Prevention Association in Nova Scotia, under the provisions of Section 80 of the Workmen's Compensation Act, the constitution of which is considered very favorable from the employers' standpoint, and has been approved by the Compensation Board. The chief features of the constitution are:—

1. *Objects and Powers.*—The principal sections of which read as follows:—

(*a*) To promote and carry on the work of the prevention of accidents and of industrial diseases in all industries now within, or which hereafter may be, brought within the scope or operation of Part 1 of the Workmen's Compensation Act of Nova Scotia.

(*b*) To make rules for the prevention of such accidents and diseases in such industries.

(*c*) To apply for and obtain approval by the Workmen's Compensation Board of such rules and of the constitution of the Association, with object of having such rules made binding upon and enforceable against the employers in the said industries, whether or not such employers are members of this Association.

(*d*) To represent employers within the scope or operation of the Workmen's Compensation Act in connection with the administration of said act.

(*g*) To employ inspectors, engineers, experts, accountants, secretaries, and other officers and persons.

(*h*) Generally to do all matters and things that may be authorized at any general or special meeting of the association.

2. The Compensation Board has been furnishing the necessary funds to carry on the work. No membership fee has been provided. Every employer, assessed under the Act, is considered a member and receives a notice of all general meetings and has a voice in the proceedings. It is strictly an "Open Shop."

3. Provision has been made in the constitution for the formation of "Sections" to deal with matters peculiar to particular classes or groups of industries.

4. It is generally recognized that the association is a purely employers' organization, and in order to illustrate this fact, the secretary of the Maritime Division, C.M.A., is acting as the secretary for the Accident Prevention Association.

5. Thus far full co-operation has been received from the Workmen's Compensation Board and the portion of its records which are of assistance in the work of the association are made available for its use. The office of the association is located in the same building as the Compensation Board and on the next floor above. The work, of necessity, keeps the association in constant touch with the board and the location of the office facilitates matters.

Safety Work

Sections have been organized for the metal trades and the lumbering and woodworking industries. A code of "Rules and Regulations" for the metal trades was considered and adopted at a late meeting of the section. This code has since been approved by the Workmen's Compensation Board and is now enforceable on all the industries in the metal trades. A meeting of the employers engaged in the lumbering and woodworking industries is to be held on May 12th in an endeavor to devise ways and means of reducing the hazard in these industries. It is anticipated that meetings will be held in the near future in an endeavor to organize "sections" for the other classes under the Act.

A "field organizer" has been engaged to devote his whole time to visiting all sections of the Province, to explain the organization and work of the association to the individual employers, and in an endeavor to impress them with the necessity for actively co-operating towards the prevention of accidents. Success in accident prevention work depends entirely upon the interest displayed by the individual employer. If he is not a real convert as to what can be accomplished, a whole army of inspectors and safety engineers cannot attain satisfactory results. In Nova Scotia we are first going to aim our campaign at the individual plant managers. When we get his support we are confident that something tangible can be done.

Annual Meeting at Halifax

The annual meeting of the Nova Scotia Accident Prevention Association took place in Halifax on March 25. The president, Mr. C. D. Dennis, of Rhodes, Curry, Limited, Amherst, was in the chair, and all the large industries of the province had representatives present. In his address Mr. Dennis reviewed the work of the organization since its inception in April, 1919, and outlined some of the difficulties that had been encountered. Addresses were then delivered by Messrs. F. E. Lucas, Dominion Steel Corporation, chairman of the Metal Trades Section; F. W. Armstrong, vice-chairman of the Workmen's Compensation Board, and John McKeigan, chief auditor of that body. Several members present took advantage of the opportunity to ask questions regarding various phases of the application of the Compensation Act.

The election of the officers and general executive committee resulted as follows:

President—G. D. Macdougall, N. S. Steel & Coal Co.
1st Vice-Pres.—F. E. Lucas, Dominion Steel Corporation.
2nd Vice-Pres.—J. E. McLurg, Halifax Shipyards, Limited.
Secretary-Treas.—H. R. Thompson, Canadian Manufacturers Association.

Executive Committee

Class 1—Mining, A. J. Tonge, Dominion Coal Co., Limited.
Class 3—Lumbering, Woodworking, R. E. Dickie.
Class 5—Metal Trades, R. B. Stewart, Maritime Bridge Co., Limited.
Class 6—Miscellaneous, C. V. Monaghan, Moirs Limited.
Class 7—Building Construction, A. S. Curry, Rhodes Curry, Limited.
Class 8—Public Utilities, J. H. Windfield, Mar. Tel. & Tel. Co., Limited.
Class 9—Transportation and Navigation, G. W. C. Hensley, Pickford & Black, Limited

---

Ontario Division and Toronto Branch Annuals

Held in Toronto, April 29th

Both the Ontario Division and the Toronto Branch held their annual meetings on Thursday, April 29, at the King Edward Hotel, Toronto. A good attendance of members was present in both cases. Reports from the various standing committees were presented.

Mr. J. R. Shaw, Canada Furniture Manufacturers, Limited, Woodstock, was elected chairman of the Ontario Division, with Mr. W. C. Coulter, Booth-Coulter Copper & Brass Co., Limited, vice-chairman. The following were elected to the Executive Committee: H. Barrett, Paris; W. R. Breyfogle, Peterboro; G. C. Cockshutt, Brantford; W. Cowan, Galt; G. H. Douglas, Hamilton; R. H. Easson, Toronto; H. W. Fleury, Aurora; E. H. Gurney, Toronto; Fred Hatch, Whitby; T. A. Hollinrake, Toronto; J. G. Hossack, Toronto; Wm. Inglis, Toronto; J. G. Kent, Toronto; G. M. McGregor, Ford; Thos. Roden, Toronto; H. J. Waddie, Hamilton; C. R. H. Warnock, Galt; S. J. Williams, Kitchener; A. W. White, London; F. H. Whitton, Hamilton.

The new chairman of the Toronto Branch is Mr. T. A. Hollinrake, A. R. Williams Machinery Co., Limited, and the vice-chairman, R. H. Easson, Otto Higel Co., Limited. Following are the members of the Executive Council: C. H. Carlisle, Goodyear Tire and Rubber Co. of Canada, Ltd.; F. S. Corrigan, Sheet Metal Products Co. of Canada, Ltd.; E. J. Freyseng, Freyseng Cork Co., Ltd.; W. R. Gibson, Gurney Foundry Co., Ltd.; A. H. Gourlay, Gourlay, Winter & Leeming, Ltd.; A. E. King, Dunlop Tire & Rubber Goods Co., Ltd.; Walter Laidlaw, R. Laidlaw Lumber Co., Ltd.; R. L. McIntyre, McGregor & McIntyre, Ltd.; T. F. Monypenny, Imperial Varnish and Color Co., Ltd.; Chas. Morrison, the Jas. Morrison Brass Mfg. Co., Ltd.; J. Allan Ross, The Wm. Wrigley Jr. Co., Ltd.; J. A. Scythes, Scythes & Co., Ltd.; W. H. Shapley, Sterling Action and Keys, Ltd.; H. D. Scully, Willys-Overland, Ltd.; E. G. Staunton, Stauntons, Ltd.; J. F. M. Stewart, Point Anne Quarries, Ltd.; H. A. Telfer, Telfer Bros., Ltd.; Geo. Valentine, Massey-Harris Co., Ltd.; Geo. W. Watts, Canadian General Electric Co., Ltd.

A full report of the two meetings will be published in the June issue of INDUSTRIAL CANADA.

At the annual meeting of the Maritime Division, C.M.A., held in Moncton, N.B., on April 28, Mr. R. H. MacKay, of MacKay & Fraser, New Glasgow, was elected chairman for 1920-21. An account of this meeting will appear in the June issue.

The annual meeting of the Prairie Division is scheduled to take place in Winnipeg on May 20.

Our 1920 Convention City from the Scenic and Tourist Standpoint

By J. REGINALD DAVISON
Industrial Commissioner, Vancouver

IN VANCOUVER we realize that tourist travel and tourist entertaining is a great big industry, with all sorts of money in it. Capital, office space, working staff, advertising and all other instruments for business-getting have to be used, exactly as is the case with all other industries, but with this difference: Vancouver's stock-in-trade is always being sold, yet it is never depleted. Care has to be taken of it, of course, in the building and repairing of roads, maintaining of parks and mountain ways, and attending constantly to the details of scenery-keeping, just as the trained housewife gives daily care to her home in order that her family may the more enjoy it and that it may be of pleasure to her guests.

Vancouver has some big things for sale in a scenic way. People who came first to Vancouver took them for granted; gazed upon them in wonder, and wrote to their friends about them, but did not dream that they were a money-making asset of Vancouver and for Vancouver and that all other people who wanted to see them must come to Vancouver to look.

Pauline Johnson, the Iroquois Princess of Ontario's Brant County, was among those who heard and wished to see. When she saw she longed to stay, and her last earthly resting place is here.

Not only did she see the great things that are Vancouver's, but being of Indian blood, she found friends here other than the white folk. One Chief Capilano, whom she had met at Buckingham Palace, in Queen Victoria's days, told her of the whys and wherefores of the wonderful physical features—stories that had been handed down from generation to generation in Indian tradition, and these legends Pauline Johnson gathered into written words and spread abroad for all to read.

Overlooking Vancouver City from the north are twin mountain peaks known locally as "The Lions." The legend of their being is so well known and so truly believed on the Pacific Coast that Vancouver is called "The Lion Guarded City."

There is a forest playground of one thousand acres within three-quarters of a mile of the big retail shops of Vancouver, and of it are many tales told, one of them with the mysticism of a weird lure attached. On the west shore of this Stanley Park is the famed Siwash Rock, the form of an Indian brave blessed by the good luck of a growing tree springing out of the bare rock. So great was Pauline Johnson's love for Siwash Rock that she asked permission of the Canadian Government "to be buried as near to it as the sea waters would permit," and within a stone's throw of it her ashes now mingle with the dust.

Through Stanley Park are many wonders: To the south, on the eastern side, are great salt water bathing beaches, three of them around the sides of English Bay, where people from the many Pacific Islands, from South America, and from other lands bordering upon the Pacific Ocean, play during the greater part of the long summer days.

There are many miles of paved roadways, one, locally known as the Marine Drive, that skirts the sea, passes through the farms and gardens along the fresh-water Fraser delta, crosses Burrard Inlet (a vast land-locked harbor of which only one is said to be bigger) and climbs the mountains to Capilano Canyon, the Lynn Valley Retreat, the beauteous crevices of Seymour Creek and comes down to the long curves by the sea again.

These wonders are sold to tourists, for they are written and talked about, and tourists spend money to come and see and enjoy. From the States, to the south of British Columbia, people come by the thousands each week the whole year through, for Vancouver roads are always open, their fringes are ever green, the natural beauties are as great during the winter months as through the summer (springtime is a paradise) and the attractions never wane, for they differ with each month of the year.

There is a five hundred mile loop of perfect roadway from Olympia, State of Washington, up through Vancouver, across the Gulf of Georgia to Vancouver Island, south to Victoria, the capital of British Columbia, and across the Straits of Juan de Fuca to Washington State again. This loop is the Georgian Circuit Highway, and the naming of it is a story.

"In 1792 Captain Vancouver named the entire country through which this circuit passes 'New Georgia,' in honor of the then reigning King of England. With the division of the land between Great Britain and the United States the northern British part was re-named 'British Columbia,' and the southern, United States, part was called 'Washington,' so that the original name was retained only by the body of water directly west of the northern part, known as the Gulf of Georgia. During February, 1915, when the Georgian Circuit was opened, the One Hundred Years' Peace was being celebrated by the people of Canada and the people of the United States. Both Washington, the first President of the United States, and the present King of England were named 'George,' so, crossing the span of America's Beginning to the To-day of Great Britain, was the same Christian name, and it was a happy thought that united the 'Georges' in the naming of this wonderful highway, already recognized among the finest of the famous tours of the Pacific Coast."

A Peace portal is to be erected on the boundary line of Canada and the United States (British Columbia and the State of Washington) during the fall of 1920 to further commemorate the One Hundred Years' Peace—the first Peace Memorial to be erected in the world, so it is said.

Siwash Rock

Famed in Indian Legend marking the burial place of an Iroquois Princess.

All these fine roads; all the tradition and history; all the scenery and fishing, hunting, ball sports and seagoing; the island camping, the mountain climbing; the wonderful climate, the unlimited drinking water—so pure that neither filtering nor boiling is ever needed; the wild flowers, and those ferns that are fresh and green all the year 'round; the big trees that tower 300 feet and more skyward, nad the little trees that bloom and shelter and are covered with fruits and filled with nesting birds; the rocks that may show precious metals when they are tapped by the prospector's pick, and the earth that may yield coal or oil; heavy clay for pottery or fine silt for peach-growing when a spade is sunk into it; the sunsets that make for silence with their loveliness; the salt and fresh waters that teem with fish and fern; the roads that lead upwards and over the mountains into the far north countries, eastward to the fertile fruit valleys of the Fraser, the Nicola, the Okanagan, and the Kootenays—where gold is embedded in the rocks and cascades of power fall over them, and south, into the Republic below us—all these are desirable wares for sale. Hundreds of thousands come to buy and carry the pleasure of seeing them away. They come again to renew their pleasure, and many remain to make their homes. The money they bring and leave in Vancouver during one year is more than the money made by most other single industries in the city.

Australia and New Zealand, France and other European countries—before 1914—long recognized the advantages of the tourist trade, and special departments of their governments were set aside to look after it.

Such a department pays. It should be a department of every government, for the government has authority to attend to matters that are outside the jurisdiction of any particular city publicity bureau. For instance, speaking locally, a part of the highway between Vancouver and New Westminster may be out of repair. Autoists from California motoring into Vancouver may say, "A bit of work needed on the road a little way out; nearly had an accident." What can Vancouver or New Westminster do? Both are powerless. Tell the same story to the Government. Before the autoist goes back the road is ready for him and for all others who may travel over it. Multiply this one instance by thousands, and before you is the reason for Departments of Tourist Industry in the governments of the Provinces of Canada.

In a measure, the Government of British Columbia does take a hand in the tourist business. It is this way: The Province of British Columbia and the States of Washington and Oregon, on the Pacific Coast, have formed a club known as the Pacific North-West Tourist Association. Each government pays a sum into the treasury of the association and the moneys are pooled for the promotion of tourist traffic and trade on the Pacific Coast. The three immense tracts of country rub shoulder to shoulder.

Entertainment Arrangements for Convention

The Programme Outlined

By HUGH DALTON

Secretary, British Columbia Division

SUBJECT to final adjustments which may be made during the interval between now and the annual meeting, the following is the programme of entertainment that has been laid out for the Convention week in Vancouver and Victoria:

Monday, June 7th—Delegates to the Convention will be the guests of the Vancouver Board of Trade at a luncheon in the ball room of the Hotel Vancouver. Premier Oliver will deliver the principal address at this luncheon. The first session of the Convention, which convenes immediately after the luncheon, will then be opened by the Mayor of Vancouver.

Illustrated Lecture on Japan.

It is expected that Monday evening will be occupied by a semi-official session of the Convention, at which an illustrated lecture on Japan will be given by the Canadian Trade Commissioner at Yokohama, and possibly other similar business.

Tuesday, June 8th—The Rotary Club of this city will act as hosts to those attending our Convention at a luncheon at the Hotel Vancouver. In the evening a boat trip to points of interest in this district is being arranged.

Wednesday, June 9th—The Kiwanis Club will be hosts to visiting members of our Association at a luncheon at the Hotel Vancouver. As it is assumed that the business sessions will terminate with the one on June 9th, morning, a motor drive around Burrard Peninsula, via Barnet, Port Moody, Coquitlam, Fraser Mills and New Westminster, is being arranged, to include inspection of industries at the different points named, and an official reception at New Westminster. Wednesday evening has been set for the annual dinner at the Hotel Vancouver.

Thursday, June 10th—The party will leave here for Victoria in the morning and on arrival there will motor to Mr. Butchart's gardens at Tod Inlet, where tea will be served, and on Thursday evening a special performance will be given at the Royal Victoria Theatre in honor of the visiting manufacturers.

Friday, June 11th—In the morning the party will be taken to Esquimalt for inspection of Yarrow's shipbuilding and dry dock plant, and, if time permits, a visit will also be made to Gordon Head, the famous strawberry producing section of this Province. The programme will conclude with a luncheon on the 11th in the ball room of the Empress Hotel, tendered by the Victoria Rotary Club to visiting manufacturers and their ladies, and on Friday afternoon the party will leave for Vancouver and the East.

In regard to the entertainment of the visiting ladies, it has been arranged that the Vancouver Women's Canadian Club will be the hostesses at a luncheon in honor of these ladies on Monday, June 7th, at "The Lodge." Monday afternoon has been left open, as the local Ladies' Committee in charge of arrangements felt that visiting ladies would no doubt wish to do some shopping, and probably rest up after their trip across the continent. As visiting ladies will probably be in attendance at Monday evening's informal session of the Convention, no programme has been fixed for that evening, although this may possibly be changed.

Entertainment for the Ladies.

On Tuesday afternoon, June 8th, it is proposed to take the visiting ladies for a motor drive to Capilano Canyon; tea to be served at the hotel at the Canyon. Tuesday evening the ladies will, of course, be accompanying the balance of the party on the steamer trip referred to above.

On Wednesday afternoon, June 9th, it is proposed to take the visiting ladies for a steamer trip to Wigwam Inn, and on the return journey to stop off for tea or dinner at the residence of Mrs. J. J. Banfield, on the North Arm of Burrard Inlet, returning to the city about 8 or 9 o'clock.

At Victoria the ladies will, of course, participate in the various arrangements outlined above for June 10th and 11th.

Protest Workmen's Compensation Changes

Delegation Representing C.M.A. and Other Organizations Present Brief to Ontario Government Pointing Out Objection to Certain Proposed Amendments to the Workmen's Compensation Act—Increases will Encourage Malingering

ON April 27 a deputation representing the Canadian Manufacturers Association, the Ontario Miners' Association, the Canada Furniture Manufacturers' Association, the Canadian Stove Manufacturers' Association, and the Canadian Lumbermen's Association, waited on Premier E. C. Drury and members of the Ontario Government, and presented a brief, outlining the position of these bodies with respect to proposed amendments to the Ontario Workmen's Compensation Act.

Vancouverites Enjoying life at English Bay

Mr. J. E. Walsh, general manager of the Association, headed the deputation, and presented the memorial, after which several members supplemented the written statement with verbal comments. Mr. Walsh pointed out that the C.M.A. represented 2,100 industries in Ontario, employing about 400,000 workers, with a total invested capital of over a billion dollars. The brief read as follows:—

General Outline.

1. The Ontario Workmen's Compensation Act provides compensation, in case of injury by accident, for all the workmen of every industry within its scope. If the accident occurs during employment the compensation is automatically payable, except where it is caused by the serious and wilful misconduct of the workman, and even then it is payable, if the accident results in death or serious disablement. The money to pay this compensation is raised by a yearly tax on the industries concerned. Nothing is contributed by the Province or from any other source. The industries named in the Act have no choice as to whether they will come under the Act, nor have they any appeal from the decisions of the Board which administers the Act. The selection of industries to be governed by the Act has been based on the degree of hazard involved, but, while most of the hazardous employments have been included, there are a number of striking exceptions, the chief one, of course, being the farming industry. This omission was specially remarked on by the framer of the Act, Chief Justice Sir William Meredith, in his final report, his explanation being simply that he doubted whether public opinion was ready for it. It may be remarked, however, that in these days of an increasing drift from the country into the town—a drift which is obviously intensified by every improvement of the lot of the urban as compared with the country worker—public opinion may have undergone some change.

Scale of Compensation—A Comparison

2. Under the present Ontario Act, the scale of compensation is 55% of earnings, payable during the entire period of disability (in some cases, therefore, for life), or, in case of death, until the death or remarriage of the widow. A comparison of this scale with that provided by other Canadian and American Compensation Acts shows that, with the

exception of Manitoba (which is not a manufacturing province), Ontario has been more liberal than any other province or state.

Proposed Amendments

3. This, then, is the Act which it is now proposed to amend by increasing the scale from 55% to 75%. Such a change would create the following situation:

(1) 55% scale raised to 75%.

	Highest American Act (California).	Present Ontario Act.	Proposed Amendment.
Scale.....	65% for 240 weeks. Then drop to 40%.	55% for life.	75% for life.
Weekly maximum	$20.83	$21.15	$28.84
Medical aid.....	Limited in all but 5 States.	Unlimited.	Unlimited.

(2) Minimum Weekly Compensation, $12.50.

In addition to the increase from 55% to 75%, a minimum weekly payment of $12.50 is proposed. This means, among other things, that all workers whose wages are less than that amount, will receive full wages while absent from work.

(3) Widows' Compensation raised to $40.00.

The scale of compensation to widows and children is proposed to be increased, from $30.00 and $7.50 to $40.00 and $10.00. Also the maximum of $60.00 is struck out, and, instead, a maximum of 75% of the husband's wages is fixed. The employers represented by the Canadian Manufacturers Association do not object to any reasonable increase being made in the scale of compensation to widows and children.

Increases Made Retroactive

(4) A further and very considerable addition to the burden on those who are to pay the compensation is constituted by the proposed retroactive feature. If this principle is adopted, the industries now in operation will be obliged to provide not merely for their own pensioners, but for the trail of pensioners left behind by the munition works and other concerns which have done business from time to time since the 1st of January, 1915, but have now been wound up or have left the country. And this, it is to be noted, is on top of the proposed increases in the rate of tax on manufacturers of 36.3%, due to the rise in the scale of compensation from 55% to 75%.

Proposed Amendments Wrong in Principle

(5) But the serious increase in cost is not the only objection to these amendments. There is also the danger of increasing the tendency to malinger. An analysis of the working of the present Ontario Act shows that even with a 55% scale there is a tendency toward malingering, and it is obvious that an increase from 55% to 75% will inevitably intensify this tendency. This is particularly important when we remember that the overwhelming majority of cases dealt with are short period disability cases, and therefore it is in these cases that the bulk of the money is paid. The figures for 18,468 in 1918 were:—

37% terminate in 2 weeks or less;
74% " 4 " "
91% " 7 " "
(Table 21, page 40, W. C. Board's Report).

The figures for 1919 are:—
47% terminate in 2 weeks or less;
68% " 3 " "
90% " 6 " "

These are the cases where there is the greatest danger of malingering and they constitute 90% of all the cases dealt with. A further analysis of the short period disability class shows that a large percentage are unmarried persons, in whose case there is no question but that the proposed increase would operate as a direct inducement to malinger. Boys and girls earning less than $12.50 per week get full wages, whether they work or not. The single man receiving 75% of his earnings will, in most cases, be quite comfortable, and even the married man, provided his wages were fairly high, will not feel any great keenness to return to work. It should not be forgotten that this Act is one for the compensation of workmen, i.e., of men who work. It is not an Old Age Pensions Act, neither is it an Unemployment Insurance Act. At least, that was not the intention of the man who framed it or of the legislature that passed it. The proposed changes, it is submitted, are conceived, to a large extent, in the spirit of old age and unemployment insurance measures. However desirable these features may be, it is submitted they should be furnished at the expense of the State in the first instance, and should not lightly be incorporated in a measure of industrial insurance which is for the compensation of workmen injured through accident during their employment.

The Proper Principle—Adequate Maintenance

(6) The ideal scale of compensation, it is admitted, is one high enough to provide adequate medical attendance and adequate maintenance during disability, but not so high as to induce malingering. The question of maintenance, of course, raises the question of the increased cost of living. If, however, this is the ground for the present demand, the answer is that the rise in wages has at least kept pace with the general rise in prices, and we are, as it has been recently expressed, running around the uneconomic circle like a squirrel in its cage. Thus the Board's Report for 1919 shows that there has been a marked increase in the average weekly wage from $13.27 in 1915 to $24.80 in 1919. If the principle to be applied is that of adequate maintenance, it is unsound to fix a scale so high that the highly-paid worker—and who is not highly paid at present?—is receiving much more than is required for such maintenance. It must not be forgotten that the cost of maintenance is no greater for the highly-paid man than for his less fortunate comrade. Why, then, should any distinction be made? To make a distinction is, it is submitted, to abandon the principle of maintenance during disability, and to create the "Profiteer Pensioner," i.e., the malingerer.

No Reason Shown for Change in Present Act

(7) A final point is that a survey of 250 cases (out of the 2,516 disability cases at present receiving pensions), has shown that, to quote the Board's report for 1919.

"The pensions awarded by the Board have equalled 55% of the difference between the average weekly earnings before the accident and the average amount earned after the accident. That is, pensions awarded have, on the whole, made up the wage loss resulting from injury, and there is an opportunity for every disabled worker (provided he is willing to seize it) to earn wages which, with his pension, will bring his earnings to a parity with what he was earning at the time of the injury."

There is every reason for believing that, if this survey were extended to include the entire 2,516 cases, it would be found that the present Act was fulfilling satisfactorily the purpose for which it was enacted, and it is submitted that the survey ought to be so extended, and a conclusion reached, one way or the other, before such far-reaching changes in the present Act are even considered—much less made.

All of which is respectfully submitted.

Statement of the Number of Cases in which Pensions are now (April 26, 1920) Being Paid Under the Workmen's Compensation Act.

Death Pensions (to widows, widows and children, children only, and parents).

	Schedule 1 Industries.	Schedule 2 Industries.
Cases under old scale	507	228
Cases under 1919 scale	100	96
Total Death Pension Cases	607	324

Workmen's Pensions (no change in scale).

Permanent Total Disability	45	15
Permanent Partial Disability	1,268	241
Total Workmen's Pensions ..	1,313	256

There are also 33 Crown cases (Provincial and Dominion) in which pensions are being paid, making the total number of pension cases of all kinds at present standing 2,533.

It is impossible without going through the cases in detail to make anything like an accurate estimate of the amount

required to take care of the increase in compensation provided for in the draft amendments, but a very rough approximation would be as follows:—

	Schedule 1.	Schedule 2.
Death Pensions	$1,100,000	$650,000
Workmen's Pensions	1,000,000	300,000

Subsequent to the visit of the deputation to the Government, the following additional information has been supplied to the Premier, Attorney-General and Minister of Labor:—

"With regard to the question of the additional cost involved in making the increase retroactive, we are informed that it would be something over $3,000,000.

"Another question asked on Tuesday was as to the number of pensioners left behind by industries that have done business from time to time since January, 1915, but have now been wound up. Our information is that the figure of 27 mentioned on Tuesday last is the figure for munitions works only. In addition to these, there are the other industries of various kinds that have ceased operations, and also the many cases of individual employers who have withdrawn from business. The exact figures could no doubt be secured from the Board.

"Without going over again the ground covered on Tuesday, I should like to urge that the concluding paragraph of the memorandum submitted should, as I feel it will, be given your serious consideration. While the Government has, in a sense, heard both sides of the question, neither the workers nor the manufacturers can be said to be entirely disinterested. But there is available a body of evidence which is not a matter of opinion or inference by one side or the other, but simply a matter of fact; namely, the history of the 2,516 cases now on the Board's pension list. Unless and until the survey of these cases is completed, the most valuable, and, indeed, the conclusive evidence has, I submit, not been heard."

Visit Campbellford

Box Manufacturers from Toronto and other points Inspect Board Mills

A party of Toronto and Ontario manufacturers interested in the production of paper boxes and cartons paid a visit on April 20 to the mills of the Northumberland Paper & Electric Co., Limited, at Campbellford, Ont., where they were shown the different processes of manufacturing pulp and board, under the guidance of David F. Robertson, general manager of the company. Those who took the trip were:—

From Toronto: Mr. Bennett, Rudd Paper Box, Limited; Mr. Fielder, The Fielder Paper Box Co.; Mr. Fisher, F. W. Fisher & Co.; Mr. Harvey, Lawrason-Doughty Co.; Mr. Lawrence, Dominion Envelope & Carton Co., Ltd.; Mr. Smith, A. D. Shoup Co., Ltd.; Messrs. McKay and Owen, York Paper Box Co., Limited; Messrs. Adams and Gutland, Adams Manufacturing Co., Limited; Mr. Prescott, A. E. Long & Co.; Messrs. Collett and Sproule, Collett-Sproule, Limited; Mr. Morrison, Automatic Paper Box Co., Limited; Mr. Young, Regal Paper Box Co., Limited; Mr. S. J. Frame, Secretary-Treasurer Canadian Paper Box Manufacturers' Association.

From Hamilton: Mr. C. T. Reid, Chas. Reid & Company; Mr. Tresidder, Tresidder Bros.; Mr. Morley Eager, Hamilton Paper Box Company; Mr. Slater, Paper Boxes of Canada, Limited.

From Guelph: Mr. Small, Guelph Paper Box Company.

From Kitchener: Mr. Boehmer, A. & C. Boehmer, Limited.

From Stratford: Mr. Whitesides, Stratford Paper Box Company.

From Galt: Messrs. Turnbull and Hancock, Galt Paper Box Company.

From Brantford: Mr. Hampel, Hampel Paper Box Company.

From Montreal: Mr. Art. Harries, Canada Paper Box Company, Limited.

Victoria Branch's Annual

Mr. N. A. Yarrow Elected Chairman, and Mr. R. W. Mayhew, Vice-Chairman

The annual meeting of the Victoria, B.C., Branch, C.M.A., was held in the Winch Building, Victoria, on April 13. The secretary, T. J. Goodlake, reported an excellent increase in the number of members during the year. Ways and means of entertaining the members attending the annual convention of the Association in June were discussed and a committee consisting of Messrs. R. W. Mayhew, E. A. Harris, J. D. Pendray, E. Tomlin and T. J. Goodlake was appointed to make arrangements. The following officers were elected:—

Mr. N. A. Yarrow, chairman, to replace Mr. Edwin Tomlin; Mr. R. W. Mayhew, vice-chairman, to replace Mr. G. A. Kirk; Messrs. M. W. Graham, J. L. Tait and E. Tomlin, executive committee; Messrs. N. A. Yarrow, J. L. Tait and T. Tomlin, representatives on the provincial executive.

Co-Ordination of Labor Laws

Representatives of Employers on the Commission for Labor Law Co-Ordination

On April 26 a conference was opened at Ottawa for the purpose of seeing whether the labor laws of the various provinces could not be co-ordinated and unified. The conference is composed of a representative of each of the Canadian Governments—Dominion and Provincial; representatives of employers and representatives of labor. The Dominion representatives are F. A. Acland, Deputy Minister of Labor, for the Government; J. G. Merrick, Secretary Employers' Association of Toronto, for employers, and Tom Moore, President Trades and Labor Council, for the employees.

The provincial representatives of the employers are:—Nova Scotia, Fulton J. Logan, Musquodoboit Harbor; New Brunswick, Angus McLean, Bathurst; Quebec, John Lowe, Valleyfield; Ontario, Sam Harris, Toronto; Manitoba, H. B. Lyall, Winnipeg; Saskatchewan, James Priel, Saskatoon; Alberta, Walter F. McNeill, Calgary; British Columbia, John J. Coughlan, Vancouver.

Buy Welland Plant

Ontario Smelters and Refiners Will Operate Plant of Metals Chemical, Limited

The Ontario Smelters & Refiners, Limited, importers and manufacturers of mineral colors and materials, including oxides and chemicals for potters, glass-makers and enamelers, Chippawa, Ont., have purchased the plant of the Metals Chemical, Limited, Welland, and will use it for the recovery of cobalt oxide, nickel, arsenic, silver, copper and antimony from cobalt ores. The plant is quite complete, and the only changes that will be made will be in the nature of alterations, except for the addition of tanks. When changes are complete, it will have a capacity of 400,000 lbs. of cobalt oxide, 250,000 lbs. nickel, and 600 tons of arsenic. The company will employ 125 men, besides their office and technical staff, when operating at full capacity. The plant at Chippawa will be used for the manufacture of the chemicals required in the smelting process.

Excessive Labor Turnover and Its Remedies

Immense Sums of Money Are Lost Through the Unceasing Shifting of Factory Workers from Place to Place—Few Canadian Plants Have Adequate Methods to Cope with Problem — What May Be Done to Lessen the Evil

By G. W. AUSTEN

IN at least the larger cities of Canada and the United States, manufacturers will tell you that one of their biggest problems now is labor turnover. The unceasing shifting of factory workers from place to place, the constant hiring and firing, the loss and disorganization of output, are costing many individual Canadian companies hundreds of thousands of dollars per year. For the whole Dominion the cost must be very many millions.

Knowing some of the difficulties employment managers and broad-gauged executives in Canadian factories have been meeting in regard to labor turnover, the writer queried a score or more of the larger Canadian firms. The facts revealed show interesting contrasts. In the year ending September 30, 1919, a large agricultural implement industry in Hamilton had a turnover of 100.7 per cent., on an average of 2,111 men on its roll for that period. A rubber manufacturing company in Toronto had a turnover for 1919 of 224 per cent. on an average payroll of 1,494. A Brantford engine company has had a turnover of 90 per cent. Some large Toronto companies have had turnovers of 70 per cent., 134 per cent., and 180 per cent. respectively. Contrasting with these, a Galt metal manufactory has a turnover of only 15 per cent. A Dundas tool company had a turnover of 25 per cent. in 1919, about 20 per cent. of this being unskilled men. A Hamilton steel company employing about 60 hands reports a turnover of about 5 per cent. a month. A Galt machinery firm had a turnover of less than 7 per cent., of which 5 per cent. was unskilled. The Pedlar People of Oshawa had to have 690 men on their payroll at various times in 1919 to maintain an average staff of about 265 employees.

Few Companies Keep Records

Only a few of the larger companies have personnel statistics covering the coming and going of employees and showing details of their personal conditions, or use modern methods of handling this vexing question of labor turnover. Some of the larger companies have no statistics at all on the subject. They do not know what shifting takes place in their labor, why the men leave, what it costs them in time, waste and breakage to replace men who leave. The Ford Company reduced its labor turnover of 416 per cent., which had been costing it $2,000,000 a year, to about 80 per cent. by a special attack on the evil. Each of these large manufactories is suffering heavy loss, much of it preventable, by inattention to this problem, but until competition becomes closer, can charge it up to general cost, and add it on to the selling price.

The usual method of figuring labor turnover is to find out how many employees have been hired in a week or month, to replace those who have left, through avoidable causes. That is, if any employee dies, or a female employee is married, and leaves, the item is not recorded among the leavings for turnover record purposes. A sample calculation would be this: Hired in week ending —— 29, transferred to other departments 10, left 34, discharged 5, laid off 7, died 1, number on payroll end of previous week 2,701, number on payroll end of week, of record 2,685. The number of employees leaving is, therefore, 46, and the number hired 29, replaces only 29. The average payroll is 2,694, which, on a yearly basis gives a percentage of 56 for turnover. This does not, it should be noted, include in the reduction of the staff any allowance for turnover. If employees are released, and not replaced, there is no turnover. If more employees are hired than leave, the excess is not turnover. Turnover is, therefore, replacements that should be avoided.

Reasons for Large Turnover

The facts of the existence of an enormous turnover are generally admitted. Every factory executive needs to be interested in the reasons and remedies. Some of the causes are out of control of the management—housing difficulties, for instance, or family reasons for moving. The Russell Sage Foundation ascertained that of 22,000 men in 78 United States cities, only 16 per cent. were living in the place in which they were born. Modern industrial methods compel workers to move, at times, to get desired change. But insofar as the factory is concerned, the causes of labor turnover may be summarized thus:

1. Poor methods of employment and discharge. Men are hired en masse and fired summarily if they do not make good at the job on which they are put. Foremen often have too much individual authority over personnel under them.
2. Poor methods of promotion. Workmen who are ambitious find they have to move to better their position.
3. The seasonal nature of many industries.
4. Juvenile labor.
5. The monotony of modern factory labor, with its specialized and routine work.
6. Insufficient wages.

Comparatively few Canadian factories have "personnel departments." This department should have access to the individual employee, to overcome difficulties arising out of foremen's mistakes or injudiciousness. It should do the hiring, according to specifications of workers needed, and bring a measure of scientific understanding into play. It should analyze the turnover monthly, by departments, to discover if any department has an exceptionally high mortality, and ascertain the reason therefor. It should check up experience or other recommendations, and look behind the applicant into his personal conditions. By this method the Saxon Motor Company reduced labor turnover by 140 per cent. The Dodge Company has a "blue envelope" committee for considering recommended discharges, to which any worker "on the carpet" may state fully his case. This removes the objectionable possibilities of "too much foreman." Considering the immense possibilities for harmonizing the work of an establishment, by proper supervision and encouragement of employees, the "personnel department" may be made a great saver of money, amounting to hundreds of thousands of dollars annually in factories of several thousand men.

The losses sustained by excessive labor turnover, which is that above 75 per cent., may be enumerated:

1. Clerical cost of hiring and discharging—Time of officials in discharging old and hiring new, plus time on additional records.
2. Cost of instruction given the new employee by foremen and assistants, time on details peculiar to plant, even in the case of experienced men. If training is for skilled labor, cost is relatively larger.
3. Decreased production by new worker before warming up.

4. Breakage and damage by new men, includes actual breakage of machine or tool, stoppage of machine or delay of work, accidents to workers for which employer is liable, and waste and destruction of material.

5. Cost of idle machinery and equipment if the vacant positions are not immediately filled.

It is conservatively estimated that the cash cost of every new employee to a manufacturing firm is $40. It may run as high as $200. A classification drawn for the American Association of Employment Managers put the cost of a highly skilled mechanic at $48, of a mechanic of lesser skill, with a year or two of training at $58.50, of operatives with two or three months' training at $73.50, of unskilled workers at $8.50, and of clerical workers at $29. The average per capita is $40. If a factory has a turnover of 1,500 men in a year, and the cost of each man is $40, all told, there is $60,000 gone. If that can be reduced by one-half, by adequate factory methods removing internal grievances, and attaching the workers, the saving represents a dividend of ten per cent. on $300,000 of capital.

The corrective system has been proven to be the centralizing of hiring and discharging, instead of the department foreman system. Physical and, if possible, mental and experience tests, in hiring, are desirable. Training should be by special instructors, not foremen, the factory conditions should be fully modern. The promotion system should be well designed to encourage the good workman. The Ford Company allows employees to file applications for transfer to another department, and this permits transferring of workers to more congenial tasks, instead of compelling them to leave. Transfer is nearly always tried before discharge, in the expectation that perhaps a change may bring out better effort. Very few Canadian factories have adopted this modern method of handling employees. Some plants have training schools. The Goodyear school cost $42 per month per employee trained. There is no question whatever that there is immense room for improvement in all the conditions under which factory staffs are maintained, and that this question is one of the leading ones that Canadian factory managers must handle in the future.

The Further Development of Export Trade

What Is Needed

FOR reasons that have been frequently emphasized in the press and on the platform, it is essential to the well-being of the country that Canada's export trade should be vigorously prosecuted. Not alone from the standpoint of world needs which require the products of Canadian industry, but for financial reasons, the development of the nation's trade with other countries is alike necessary and urgent.

How may results be best achieved?

Export trade may be viewed from many angles, and its problems are by no means limited to one or two considerations. The tariff question, for instance, has an important bearing on the whole case. It may be enunciated at the outset that two conditions are needed for the promotion of maximum Canadian export trade. These are:—

1. Preferential tariffs with other British countries;

2. Treaty rates with friendly foreign countries by which exclusive markets may be opened for our products.

Valuation of Goods Hampers

Exports from Canada to most of the British Overseas Dominions are hampered by the fact that those countries, as a rule, levy their customs duties on goods from Canada, upon higher values than apply on like goods from the United States. For example, the tariff of Australia consists largely of percentage duties. These duties are assessed upon the value of imported goods as sold for home consumption at the time and place whence shipment is made directly to Australia, plus freight thence to the part of exit from the exporting country, and the whole plus 10 per cent. New Zealand appraises importations similarly for duty purposes. South Africa appraises importations on the same basis, but without adding the 10 per cent. The home selling price in Canada is higher on a very large number of groups of commodities than the United States home selling price on like goods. This is caused very largely by our higher manufacturing costs owing to revenue duties on imported materials, equipment and supplies of a kind not obtainable in Canada. Thus, such goods shipped from Canada into Australia and these other countries are assessed duty on a higher valuation than would apply on like goods shipped thereto from the United States. This results in a larger sum in duties being paid on the same goods shipped from Canada than would be paid on the same goods shipped from the United States. Therefore, purchasers of such commodities in British Overseas Dominions will buy in the United States rather than in Canada.

The same remarks apply to importations into Newfoundland, and most of the other British Overseas Dominions.

It is believed that tariff preferences would overcome the handicaps referred to, while effectually helping to strengthen, develop and consolidate trade and sentiment between the various portions of the British Overseas Dominions.

In Cuba and Brazil the United States enjoys exclusive preferential tariff arrangements which enable her to dominate those markets. By this means last year, the United States controlled over 75 per cent of the total outside trade of Cuba. In the same way she controlled about 70 per cent. of the outside trade of the Philippines, and she absolutely controls the trade of Alaska, Hawaii, Porto Rico, and the recently acquired Danish West Indies.

A policy similar to that followed by the United States toward her overseas dominions is followed by France and Italy, and was followed by Germany when she had overseas dominions.

Canada was the pioneer in inaugurating British preferential tariffs, and it is to be hoped that other portions of the Empire will extend the movement so that all may benefit through the completion of reciprocal arrangements throughout the whole Empire.

France and Italy Denounce Conventions

As regards tariff treaties with friendly foreign countries, by which markets may be opened for Canadian products, France and Italy have denounced their conventions with Canada, as well as with other countries, in order that they may be able to negotiate fresh conventions, and these conventions will be revised, no doubt, in the near future. France

has announced her intention to inaugurate fresh conventions on the basis of exclusive tariff arrangements with each country with which she negotiates.

New and valuable markets for Canada will undoubtedly be opened up by means of British preferential tariffs and treaties with friendly foreign countries, while on the other hand Canada will be in a position to offer growing markets at home for the products of all these countries. Thus, while the British West Indies need Canada's agricultural and factory products, Canada needs their tropical products. France and Italy require our agricultural products, and many of our factory products, and there are numerous commodities produced in these countries in a large way, which are required in Canada.

There are many other factors which bear on the development of export trade. There would likely be considerable development, provided some system of finance was developed to carry such trade. The desirability of a credit organization under the auspices of the Government is apparent. It would put the exporter in touch with the distributor or consumer in the foreign country. Under the present system (speaking for the small exporter) of doing business through export houses, the Canadian manufacturer acquires very little knowledge of the development of export trade, as in many cases the export merchants buy the goods outright in Canada. In some markets there is no doubt but that conditions of this kind are bound to prevail for years, since the business is built up on the special knowledge gained by experienced export houses of local conditions and requirements. Then again, the export house is not very anxious to put the manufacturer in touch with his customers. It would be in the best interests of Canadian manufacturers, and in the development of industry generally, to put them in direct touch with the markets of foreign countries. This, however, cannot be done unless some financial system is devised which has the recognition and support of the Government, and which will be participated in by the financial institutions and business men of Canada.

Such an organization would provide itself with general information essential to the development of export trade, as well as with a list of prospective customers to all manufacturers dealing through such an organization. Furthermore, it would be a stabilizing influence, which is vitally needed at the present time, to stimulate manufacturers to further effort and provide an incentive for the formation of groups of manufacturers making similar lines of goods for export, and finally, since large production is the chief factor in cheapness of production, the effect would be reflected in lower costs for goods made for the domestic market, with the resulting benefit to the Canadian consumer, and Canadian manufacturers could attain for themselves their proper position in the industrial world.

A New Census of Canada's Developed Water Power

Compiled by Dominion Water Power Branch

THE Dominion Water Power Branch Department of the Interior, and the Dominion Bureau of Statistics, Department of Trade and Commerce, have, through co-operation, just completed an exhaustive census and analysis of the developed water power in Canada. The figures, which are complete to January 1st, 1920, are exceptionally interesting, and are indicative of the marked manner in which the water power resources of the Dominion are being put to advantageous use. Practically every great industrial centre in Canada is now served with hydro-electrical energy, and has within easy transmission distance ample reserves of water power. Active construction in hydro-electrical enterprise is fast linking up the few centres which are still unserved, and which have water-power resources in their vicinity. In those localities where water power is not available, nature has bountifully supplied fuel reserves of coal, gas or oil.

According to a recent computation, the water power resources of the British Empire have been placed at from 50 to 70 million horse power. This does not include such territories, formerly under control of the Central Powers, as will fall in future under British influence. To this total Canada contributes in the neighborhood of 20 million horse power. This figure represents the power available at sites at which more or less definite information is to hand. Continued investigation will undoubtedly add to this figure.

According to the statistics just compiled, there is installed throughout the Dominion some 2,418,000 turbine or water wheel horse power (Table 1), of which 2,215,000 horse power is actually and regularly employed in useful work. The larger figure includes the total installed capacity at full gate, including reserve units. It does not, however, include hydraulic excited units. A large number of the plants now operating are designed for the addition of further units as the market demands. The ultimate capacity of such plants, together with that of new plants now under construction, total some 3,385,000 horse power.

Of the total power installed, 1,756,791 h.p., or 72.7 per cent. is installed in central electric stations. By central electric stations are meant stations which are engaged in the development of electrical energy for sale and distribution. Central station power is sold for lighting, mining, electro-chemical and electro-metallurgical industry, milling and general manufacturing. It is, apparent, therefore, that the central station total listed in column 3 includes a portion of the totals listed in columns 4 and 5 as used in other industries. In the pulp and paper industry 473,265 h.p. is utilized, of which 381,631 h.p. is generated directly from water in pulp and paper establishments, while 91,634 h.p. is purchased from hydro central electric stations.

Hydro power used for other purposes and other industries may be listed as follows: For lighting purposes, 434,613 h.p.; in mining industry, 177,728 h.p.; in flour and grist mills, 42,736 h.p.; in lumber and saw mills, 37,918 h.p.; in other manufacturing industries, 172,955 h.p. These figures are evidence of the widespread manner in which the Dominion's water power resources are being applied to the furtherance of its industrial development. In further reference to the foregoing total of water power developed in Canada, it might be noted that during the fiscal year ending March 31st, 1919, there were exported from plants included in tabulation, 175,000 h.p. years.

The total installed water wheel and turbine horse power in hydro central electric stations is 1,756,791 h.p. Fuel auxiliaries installed as stand-bys to these hydro stations bring the total installed primary capacity up to 1,873,989

h.p., connected to 1,449,180 k.v.a. dynamo capactiy. The total capital invested in these central stations, inclusive of transmission and distribution systems, is $369,464,961, or an average of $210 per installed primary horse power.

Of special interest to engineers is the actual cost of construction of hydro-electric power stations, exclusive of transmission and distribution systems. The figures of 70 representative hydro-electric stations throughout the Dominion, with an aggregate turbine installation of 745,797 horse power, show a total construction cost of $50,740,468 (pre-[illegible]gures), or an average of $69.11 per installed horse power. This cost includes the capital invested in construction of dams, flumes, penstocks, and all hydraulic works, and of power stations and equipment. It excludes real estate and transmission and distribution equipment. The figure in brief represents the capital cost of construction at the power site.

With a water power development of 274 h.p. per thousand population, Canada stands well in the forefront in respect to availability and utilization of hydro power resources, being only surpassed in this respect by Norway. The enormous water power reserves still untouched form a substantial basis for the progressive exploitation and development of other natural resources, and, if properly co-ordinated with the development and utilization of the enormous fuel resources of the Dominion, are an assurance of continued industrial expansion and prosperity.

Erecting New Plant

Hayward Lumber Co., Limited, Edmonton, Have Outgrown Their Old Factory

The manufacturing business of the Hayward Lumber Co., Limited, Edmonton, has grown so rapidly since its inception in 1916 that they have outgrown their plant and are now erecting a new plant. The main building will be 65 x 162 feet, two full storeys, of concrete and brick, and as nearly fireproof as possible. They are also erecting a power-house and dry kiln, the latter being one of the most modern in Western Canada. It is hoped to have the new plant completed and operating by midsummer or early autumn. The product of the company is windows, doors, special mill work, interior finish of all kinds, mouldings, turnings, etc. Approximately from 65 to 75 hands will be employed, while the investment is about $100,000.

The Hayward Lumber Co. started operations in 1905 at Vermilion, Alta., at which time G. E. Hayward was sole owner. In 1911 incorporation with an authorized capital of $100,000 was secured. In 1916 the capital was increased to $250,000. During this year the head office was moved to Edmonton, and a factory was acquired. In addition to the manufacturing plant, eighteen lumber yards throughout Alberta are operated. Mr. Hayward is president, holding practically all the stock. John Hening is secretary-treasurer.

NOTE.—The central station power listed in Col. 3 is developed for sale. Part is sold to Pulp and Paper and other industries, and such part is included in Cols. 4 and 5, along with the power that is directly installed in these industries.

There were exported from plants included in the tabulation, 175,000 horsepower years in the year ending March 31st, 1919.

Two Jolly Groups at the Massey-Harris Plant, Brantford

On the left is shown one of the teams in the inter-departmental league; on the right, one of the girl employees' soft ball teams

Recreational Opportunities for Workers

The Big Four Group of Industries in Brantford Have Inaugurated Successful Scheme for Promoting Healthy Recreation Among Their Employees—Playing Fields Are Provided and an Organizing Industrial Secretary is Employed

By WELFARE WORKER

FOUR of the largest industries in Brantford, known locally as the "Big Four," have, during the past year, gone in actively for the promotion of recreational activities among their employees, under the direction of an industrial secretary. The four are the Cockshutt Plow Company, the Massey-Harris Co., the Verity Plow Co., and the Waterous Engine Works. So successful has been their effort to provide recreational opportunities for their employees that other local industries are making provision for similar activities, while the industrial secretary, Harry Fleming, who inaugurated this particular line of work in Brantford, has had numerous calls from other cities to go and explain the system.

How the Work Started

The experience of the Brantford "Big Four" will be of interest to all who have the welfare of their employees at heart, and a brief description of what is being done should prove of value at the present moment, when organization for the outdoor recreations of the summer season is under consideration.

Early last summer, Mr. Fleming, who was then the industrial secretary of the local Y.M.C.A., inaugurated recreation fields in connection with three of the plants mentioned, and promoted recreation for the employees. Tennis courts, indoor baseball diamonds, quoit drives and shop picnics were featured, also shop talks at the noon hour. This work grew to such a large extent in a few months' time that four of the plants decided to employ the industrial secretary to devote his entire time to this feature.

During the summer soft ball leagues were organized in the different plants which were inter-departmental, and quoit and tennis tournaments were held. The employees entered into the spirit of these games in a very enthusiastic way. In promoting the inter-departmental activities, it was the intention to persuade every man in the shops as far as possible to take part. When the whistle blew at 5 o'clock recreation fields were at times crowded to capacity. Soft ball games were scheduled every afternoon in the week at this time, when the men, clad in their working clothes and overalls, were glad to have the opportunity for organized recreation. The departmental spirit was cultivated and in this way co-operation was promoted amongst the employees in the various departments. The various departments had their own teams, and when their games were played would turn out in large numbers to witness their mates perform.

The work during the summer months got so extensive that it was decided to organize a service committee in each plant to handle the varied activities. It was found that this work could best be promoted by a trained man, who had a keen knowledge of athletics and organizing ability, and was tactful in handling men.

This work has proved to be very successful and necessary in the shops, as it helps to break down barriers which often arise between employees of different departments. Then, when these men meet in organized games, they very soon get over their difficulties and a great spirit of good fellowship results.

Fall and Winter Activities

During the fall and winter months bowling leagues in each shop have been featured. Two of the factories have their own skating rinks. Hockey leagues have been organized. Foremen's clubs have been inaugurated.

A new feature has been the Industrial Boys' Club, which has rooms in a central location, for the four factories. The industrial secretary handles these boys on Sunday afternoon in Bible class work and one night a week there is a varied programme put on for their entertainment—sometimes boxing, wrestling, moving pictures, banquets, and

popular talks. In this way the boys of the factories are reached and recreation promoted for them.

At least once a month each one of the factories has a big social night, when all the employees and their families and lady friends gather together and a big programme is put on, consisting of music, games and refreshments. This provides an opportunity for the employees to get better acquainted with each other and their families, and promotes a great spirit of helpfulness and friendship.

Held Baby Contest

Spanish River Pulp Employees Vote on Best Looking Babies in Spanish River Families

A recent issue of the *Spanish River News*, the weekly paper issued by the Spanish River Pulp & Paper Mills in the interests of their employees and the community, contains photographs of over a hundred children entered in a baby contest held by the company. Three $15 prizes were awarded by the company, following a vote taken among the employees. Speaking of the contest, the *News* says:

"The future of Spanish River depends upon the babies. They are growing so fast now, you can hardly believe your eyes. Soon they will be going to school. Tell them about the paper business. If you start your boy early enough, and give him a good education, the company will help him to learn the paper business and he can get to be a superintendent, an assistant superintendent, a foreman or a manager. You can't keep a good man down. If he's got the brains, and shows that he has; if he works and can be 'shown' without pretending 'to know it all,' he's got a good future ahead of him. Give these babies a chance and Canada will be a better nation, Spanish River a finer company, and you and your wife prouder and happier folks."

It is scarcely necessary to say that this is the kind of attention from the company to its employees which is going to help to maintain friendly relations.

Works Council Adopted in Winnipeg

Manitoba Bridge and Iron Works, Limited, Have the Plan Now in Operation—Some of the Regulations Governing the System

Among recent Canadian companies to introduce the Works Council plan are the Manitoba Bridge and Iron Works, Limited. Employees voted favorably on the adoption of the plan on November 29, 1919, and councils have subsequently been established in the company's works at Winnipeg and Selkirk. Up to the present time, the scheme promises well.

The plan follows the general idea of Works Councils established within the past few years. It provides that employee representatives shall have an equal voice and voting power with management representatives, while the basis of representation shall generally be one employee for each department, with a minimum of six employee representatives on the council. Foremen, or other employees having the power of employment or discharge, are not eligible for nomination, and only employees who are citizens of Canada, twenty-one years old or over, and who have been at least a year in the employ of the company, are eligible.

Provision is made so that the election of employee representatives may be carried out by secret ballot, and it is also provided that an employee representative may be recalled, a special election by secret ballot being arranged for the purpose.

An executive officer of the company, or someone designated by the management, shall act as chairman of the Works Council, and a secretary shall be appointed by the superintendent of the works, but neither shall have a vote. A majority of the employee representatives, together with a majority of the management representatives, shall constitute a quorum.

Meetings are to be held monthly, while provision is made

Recreational opportunities for employees during the noon hour and after working hours are provided, as shown in the illustration, by the Packard Motor Car Co., Detroit.

Photo by courtesy of "Michigan Manufacturer."

A soft ball game being played after 5 p.m. at the works of the Verity Plow Co., Brantford. The different departments each back their own teams and some exciting contests are staged. It is the idea to have every man take part and make the sport of general benefit to the entire working force.

for the calling of special meetings and the appointment of sub-committees.

The duties and powers of the Works Council are thus set forth:

1. The Works Council may consider and make recommendations on all questions relating to working conditions, protection of health, safety, wages, hours of labor, recreation, education and other similar matters of mutual interest to the employees and the management. It shall afford full opportunity for the presentation and discussion of these matters.

2. The Works Council may, on its own motion, investigate matters of mutual interest and make recommendations thereon to the works management, and the management may refer matters to the Works Council for investigation and report.

3. The Works Council may confer with the superintendent, or other person designated by him, in regard to all matters of mutual interest, and shall receive from the management regular reports in regard to accident prevention, sanitation, restaurants, medical service, employment, educational programmes and recreational activities, including information as to the cost, efficiency and results obtained.

4. The Works Council shall be concerned solely with shaping the policies of the company relating to the matters heretofore mentioned. When the policy of the Council as to any of these matters has been settled, its execution shall remain with the management, but the manner of that execution may at any time be a subject for the consideration of the Works Council.

The constitution of the Works Council makes the necessary provision for procedure and provides for the settlement of cases where no agreement can be reached in the Works Council itself, first through an appeal to the president of the company and, failing that, by arbitration. Any discrimination against any employee is expressly forbidden.

Prizes for Suggestions

Massey-Harris Co., Limited, Offer $295 for Division Among Their Employees

Following a proposal from the employees' representatives on the industrial councils of the Toronto and Brantford plants of the Massey-Harris Co., Limited, a committee was appointed to investigate and recommend some plan whereby the making of suggestions for improvement in the operation of the industry might be encouraged. In view of the favorable report of this committee, directors of the company are offering 54 prizes, aggregating $295, for competition among employees. These will be awarded on the basis of merit to those who, during the period of January 1 to June 30, 1920, submit the most valuable suggestions of plans resulting in more efficient or economical methods of operating the factories of the company. A number of regulations governing the competition are provided.

Award Service Stars

Laurentide Co., Limited, Gives Distinguishing Mark to its Older Employees

The Laurentide Co., Limited, Grand Mere, P.Q., pay a graceful tribute to the older members of their staff by placing a red star opposite the name of each employee who has served the company for five years, these being affixed to the employment office records. A list of employees who have served five years or more has recently been compiled by the company. It shows one man with a record of thirty-six years who receives seven stars. Eleven men get six stars and 108 four stars. This tribute to length of service is appreciated and the attention inspires greater loyalty to the institution. It is a little plan that might be adopted to advantage by other companies.

Long Service Buttons

Spanish River Pulp and Paper Mills Do Honor to the Old Employees in Their Plants

Long service buttons in recognition of faithful service over a period of years were given to employees of the Spanish River Pulp & Paper Mills at mass meetings held recently at Sault Ste. Marie, Espanola and Sturgeon Falls. Officials of the company were present in each instance and the employees were represented in the proceedings by union officials, who spoke appreciatively of the good relations existing between management and men. Advantage was also taken of the occasion to explain the group insurance scheme and the new arrangement by which employees will have holidays with pay varying in length according to term of service.

The long service button is of gold, centred with a maple leaf, on which is affixed a pearl, and surrounded with a band on which appears the name of the company. This was given to all employees who had served the company for five years. At the completion of ten years, the pearl is to be replaced by a ruby; at fifteen years by a sapphire and at twenty years by a mind. It is hoped by this means to encourage men to stay with the company and thus reduce the labor turnover.

What London Did for Made-in-Canada

Story of the Big Made-in-Canada Week Which Was Successfully Staged in the Forest City Last Month—Merchants and Manufacturers Co-operated Whole-heartedly—All Sorts of Functions Were Held

By THOS. E. WALSH

"LET'S show Canada what London can do," said one of the advertisements appearing in local newspapers announcing the big "Made-in-Canada" week, held in London April 19 to 26, and London did!

After the demonstration there is not a bit of doubt in the minds of Londoners and thousands of residents of Western Ontario that they should demand, insist upon and otherwise tell their respective dealers that they want only goods made in Canada, because they have seen or heard of those goods during the week and are firmly convinced that Canada's productions are equal and, in many instances, superior to those of any other country in the world.

Mass meetings at which prominent speakers talked, carnivals where "Made-in-Canada" costumes predominated, and a parade so full of "Made-in-Canada" floats and suggestions that the old threadbare simile of the "meat in the egg" is the only one that can be aptly used for descriptive purposes, were some of the excellent publicity stunts employed by the London Advertising Club to put across the idea and make the week a success. And it certainly was a success! If you have any doubt, ask the hundreds of small boys and girls—young Canadians—future buyers of Canadian-made goods, what they think of the samples of cakes, candies, ice cream, and, in fact, everything that is good to eat, that were given to them during the week; ask any of the hundreds of women of London and district who won prizes donated by Canadian manufacturers for the best answers to a questionnaire prepared by the London Advertising Club; ask any of the manufacturers who took an active part in the week's activities, or see for yourself the moving picture of the giant parade which was held under threatening weather conditions and which was "filmed" by several companies and will be shown throughout the different cities of Canada and the United States.

"Let us hold a 'Made-in-Canada' week," suggested one of the members of the London Advertising Club at a meeting one night, and to suggest anything that looks good for London or Canada to that live organization is like applying a spark to a charge of gasoline—you get action immediately. Committees were appointed, a date was set, and to T. H. Yull, president of the Federal Advertising Agency, London, and secretary of the London Advertising Club, was entrusted the task of "putting the idea across." Tom Yull is known in Canada from coast to coast as a "live wire," and when he puts his shoulder to the wheel something moves. Under his direction a canvass was made of every merchant in London. This canvass secured the names of five or ten Canadian manufacturers with whom the merchant did business. Then a letter was sent out to these manufacturers. Tom Yull knows how to write letters, too, because the letters that he sent to those manufacturers pulled like mustard plasters. Most of them brought a reply and in the majority of instances the reply consisted in part of a cash donation to be used in making the week a success. London manufacturers were canvassed personally, and they did nobly, too. Then it was up to the club to arrange for window displays. Practically every retailer in the city agreed to give up his store windows during the week for a display of Canadian-made goods and to use the standard pennants, price tickets and display cards prepared by the Advertising Club. The pennants were in the national colors, while the price tickets and display cards were green, in the shape of a maple leaf.

Prizes were offered for the best window displays, the best floats and for the best costumes in the parade and carnival descriptive of "Made-in-Canada" goods.

Canadian manufacturers from the Atlantic to the Pacific responded nobly to the request for co-operation. Letters by the dozens containing checks large and small were sent in to be used as the club saw fit, and with the checks came words of encouragement and commendation. Following the checks, articles to be used as prizes to be distributed amongst the women of London and district began to pour in. First came a kitchen cabinet valued at $75, then a taupe fox stole, same value. These were just fine for prizes for women; so were the dozens of pairs of silk hose, boxes of candy, the hats, corsets, sugar and tea, soap and cleaning powder, butter, bread, milk and ice tickets, quarters of meat, laundry service, wash tubs and boards, garden seeds, face powders, perfumes, polish mops, mattresses, and many other articles, all dear to the heart of femininity, but too numerous to mention; but when it came to handing out a spraying machine, a concrete bumper, an auto jack, men's overcoats, men's suits, shoes, hats and caps, in many instances to unmarried women, it required some tact and diplomacy.

These prizes were awarded in order of value to the women sending in the best answers to the questionnaire on advertising and merchandising problems, prepared by the club and distributed to the women of the city and district through the stores displaying "Made-in-Canada" goods during the week.

Following are the questions answered by hundreds of women and answered very intelligently, too:

Do You Buy Made-in-Canada Goods? (Say why.)
Do You Buy Nationally Advertised Goods? (Say why.)
Do You Read Advertisements? (Say why.)
Do You Always Find Advertised Goods Easily in Stores?
Do You Like to See Pictures of Advertised Articles? (Say why.)
Do You Purchase Much by Mail? (Say Why.)
Have You Greater Confidence in Advertised Lines Than Those Not Advertised? (Say Why.)
Why Should You Save Canadian Money *Now?*
Which is the Best Dressed Window This Week? (Say why.)
Give Five Common Complaints Against Store Methods.
Name Five Things You Like Best About London Stores.

IMPORTANT DIRECTIONS.

The following points have a direct bearing on the awarding of prizes:

1. Write in ink; neatness will count.
2. All questions must be answered.
3. You must say WHY you do not favor.
4. Do not deal in generalities, such as saying "poor service." Say WHY it is poor service.
5. No person to receive more than one prize.
6. All questionnaires to be handed into the *Free Press* or *Advertiser* by Saturday, April 24.

Name and Address.....

And now for a brief description of the doings during the nine days that "Made-in-Canada" goods were talked and displayed in London. Monday morning, April 19, when the shades of darkness rolled away, disclosed practically every store window in the city ornamented with some kind of "Made-in-Canada" display. Some of the windows were works of art and their creators certainly entitled to the dandy prizes, cash and merchandise, given by the club.

Tuesday was held the long-awaited event—the big parade, with floats, bands and free samples. The weatherman must have been in league with foreign firms and products, because he frowned upon London all day and wept at intervals, when he thought of what the success of the week would mean. In spite of his work, however, the parade was a success, and a huge success, at that. It was over two miles long and took nearly an hour to pass a given point. First prizes of silver cups each were awarded to Beatty Bros., Fergus, Ont., in the manufacturers' class; Small & Ingram, Ltd., London, in the retail merchants' class; Ford Motor Company, Ford, Ont., in the decorated "Made-in-Canada" automobile class, and the I.O.D.E. in the women's organization class.

Thursday, the night set aside for the big street carnival and costume dance in the armouries, the old weatherman worked overtime again to such an extent that the street carnival had to be cancelled, but "on with the dance" was the watchword for the armouries, and hundreds in costume gathered in the big buildings for a night of fun. Club House Brand Catsup danced with Old Dutch Cleanser and quite frequently tried to bump Lawrason's Snowflake Ammonia off the floor, but was frustrated by a box of Cornflakes, who, in spite of the squareness of his makeup, was able to draw his trusty sword in defence of his lady love. Other costumes descriptive of well-known Canadian products were: Black Watch Chewing Tobacco, Perrin's Biscuits, Gaste's Cigars, Miss "Maiden Canada" McCormick's Jersey Cream Sodas, Jeffress Olive Butter, Sweetheart Brand Peanut Butter, Jap Cigars, Mazola, O-Pee-Chee Chewing Gum, Mintees, together with a number portraying Canadian events and people.

Monday night, April 26, was set for the big close. Prof. J. N. Robertson, of Toronto; F. W. Stewart, Montreal, vice-president of the Associated Advertising Clubs of the World; Miss Storey and Miss G. E. Kennedy, of the *Women's Century Magazine*, and local speakers told of the Made-in-Canada movement, its inception and what it meant to Canada in general, and asked the hundreds of men and women present to give Canadian manufacturers a fair chance. After the programme of speeches, singing and musical numbers, the names of winners of prizes in the questionnaire contest were read out.

Altogether it was a wonderful week for Canada. Londoners responded nobly to the request of the advertisement to "Let Us Show Canada How" and the other advertisements that followed, and once again established a precedent in Canada, and started a movement that is likely to spread from coast to coast, benefiting manufacturers, merchants and individuals alike. In the words of Mr. Stewart:

"Canada is great in industry, as well as in agriculture. The goods produced in this land are not only as good, but superior to those of other countries. Canadian goods can take a place with those from any country. All Canadian manufacturers wanted was a fair chance. They did not want to be given a preference, but they did not want their own people to give foreign goods the preference."

The Steel Merger and Canada's Export Trade

What It Means to Canada

UNQUESTIONABLY the chief significance of the merger of the Dominion Steel Corporation, the Nova Scotia Steel & Coal Company, the Canada Steamship Lines, Limited, and the various other companies involved in the formation of the new British Empire Steel Corporation rests in the possibilities that are unfolded for the building up of an immense export trade in coal, pig iron and steel billets. The known resources of the constituent companies in coal and iron ore, and their close proximity to the seaboard, have all along been reckoned as advantages that would in time redound to their profit, but hitherto there have existed obstacles which have hindered their greatest possible development. Now, with the powerful combination of British and Canadian capital behind these industries, and the more efficient and economical operation which will be possible, their progress should be unhampered and continuous.

The province of Nova Scotia, in which the principal constituent industries are located, is destined for great expansion as a result of the merger. Already a good start has been made, and the Atlantic seaboard province will feel the effects of the new development in increased population and greater all round prosperity. For not only should existing industries expand, but a plentiful supply of fuel and raw materials should attract other industries as well. In this connection there should be no delay in carrying through the provincial programme of hydro-electric development, under which it is proposed to gird the province with one continuous power line. The good roads programme should also be pushed, for with the industrial development in prospect, there will be every incentive for further agricultural development.

Potentialities in the way of exports of coal, pig iron and steel are immense, and in some quarters have been estimated at half the value of the Western wheat crop. This will be practically new business for Canada, swelling the Dominion exports with amazing rapidity. But, in addition, the new Corporation will have the output of its shipyards, car shops and factories, which will be using the raw material of its steel works. So far as shipbuilding operations are concerned, there is every reason for prophesying great developments. With plants at Halifax, Quebec, Kingston, Collingwood and Port Arthur, there will be a large capacity, which it is expected to operate to the full. Then, too, the inclusion of the Canada Steamships System takes care of one very important feature—the provision of water transporta-

Up to May 1, the companies definitely included in the consolidation were the Dominion Steel Corporation and its subsidiaries; Nova Scotia Steel & Coal Co., Limited, and its subsidiaries; Canada Steamship Lines, Limited, and its subsidiaries; Canada Foundries & Forgings, Limited, and its subsidiaries; Maritime Nail Co. and its subsidiaries; Collingwood Shipbuilding Co., Limited; Port Arthur Shipbuilding Co., Limited; Halifax Shipyards, Limited; Davie Shipbuilding & Repairing Co., Limited. (With the exception of Canada Steamship Lines, Limited, all the foregoing are members of the Canadian Manufacturers Association.) It is possible that several other enterprises will also be in-

The authorized capital of the British Empire Steel Corporation is $500,000,000, of which $50,000,000 is in 7 per cent. cumulative preferred stock; $100,000,000 in 8 per cent. participating preferred stock; $150,000,000 in 7 per cent. non-participating preferred stock, and $200,000,000 in common stock. Of the four classes there will at present be issued $37,000,000, $25,000,000, $68,000,000, $77,000,000, respectively.

Necessaries of Life Are Defined by Court

Supreme Court of Canada Deals With Appeal Against Authority of Board of Commerce to Control Price and Distribution of Newsprint paper—Claim That it is a Necessary of Life is Not Admitted—Justices Give Their Views

DURING the past month an exceedingly important judgment was given by the Supreme Court of Canada, in the case of an appeal of Price Bros., Limited, pulp and paper manufacturers, who disputed the power vested in the Board of Commerce to control the price and distribution of newsprint paper. The case is clearly set forth in the review and findings of Mr. Justice Anglin, who says:—

"Price Bros. & Co., Limited, appeal from an order of the Board of Commerce, dated the 6th of February, 1920, by leave of a judge of this court, granted under s. 41 (2) of the Board of Commerce Act, 9 & 10 Geo. V., c. 37. The order purports to have been made by the Board in the exercise of jurisdiction conferred on it by the Board of Commerce Act and the Combines and Fair Prices Act (9 & 10 Geo. V., c. 45) and also of jurisdiction formerly exercised by Mr. R. A. Pringle, K.C., as Paper Controller, which His Excellency the Governor-in-Council purported to vest, in a modified and extended form, in the Board of Commerce, by order-in-council dated the 29th of January, 1920.

Questions Resolved Into One

"While several questions are formulated in the petition on which leave to appeal was obtained, they all seem to resolve themselves into one—the power of the Board to make the impugned order. Three clauses of it—Nos. 1, 2 and 4—are specially challenged. Clause No. 1 prohibits the appellant from taking any price exceeding $80 per ton for newsprint, declaring that any price in excess of that sum "shall be deemed to include unfair profit." Clause No. 2 forbids the appellant accumulating and withholding from sale any quantity of newsprint beyond an amount reasonably required for the ordinary purposes of its business. These two clauses are upheld by counsel representing the Attorney-General of Canada on the ground that newsprint was rightly declared by the Board to be "a necessary of life" within s. 16 of the Combines and Fair Prices Act, and that as such the Board was empowered to deal with it as it did in those clauses.

"The argument covered a wide field, the constitutionality of both statutes involved being challenged and various questions discussed as to the construction and sufficiency of the findings of fact in the order. In the view I take of the matter, however, it seems necessary only to consider on this branch of the case whether the finding or declaration that newsprint is a necessity of life within s. 16 of the Combines and Fair Prices Act can be upheld. If it cannot, the jurisdiction of the Board to make clauses 1 and 2 of its order cannot be maintained under that Act and the Board of Commerce Act. So far as they may be supported under any powers vested in the Board as Paper Controller, they may be more conveniently considered with clause 4, which, it is common ground, can be supported only under the latter powers."

Judge Anglin's Conclusions.

So far as the constitutionality of the Board's action is concerned, Mr. Justice Anglin's summing up was that, "I am, therefore, of the opinion that the order appealed from exceeds any powers which it was competent for the Governor-in-Council on the 20th of January, 1920, to confer on the Paper Controller, and cannot be supported under the Board's jurisdiction to discharge the duties of that office." Continuing, Mr. Justice Anglin says:—

"On the other branch of the case, I am of the opinion that the Board erred in declaring newsprint to be a "necessary of life," under sec. 16 of the Combines and Fair Prices Act, and that it therefore exceeded its jurisdiction as administrator of that Act in making the order appealed from. Sec. 16 is as follows:

" '16. For the purposes of this part of this Act, the expression "Necessary of life" means a staple and ordinary article of food (whether fresh, preserved, canned or otherwise treated), clothing and (sic) fuel, including the products, materials and ingredients from or of which any thereof are in whole or in part manufactured, composed, derived or made, and such other articles of any description as the Board may from time to time by special regulation prescribe.'

"The following three rules of construction are so well known that it seems almost pedantic to restate them; but their co-ordination and relations *inter se* are perhaps not always equally well understood.

"Lord Wensleydale's golden rule, that the grammatical and ordinary sense of words is to be adhered to unless that would lead to some absurdity, repugnance or inconsistency so great as to convince the Court that the intention could not have been to use them in that ordinary signification, applies to general words, as to other words. *Generalia verba sunt generaliter intelligenda.* 3 Inst. c. 21, p. 76; Attorney-General v. Mercer, 8 A. C., 767, 778.

"On the other hand, general words must be restricted to the fitness of the subject matter (Bacon's Maxims, No. 10), and to the actual apparent objects of the Act (River Wear Commissioners v. Addison, 1 Q. B. D., 546; 2 A. C., 743, 750-1, 757-8), following the intent of the Legislature to be 'gathered from the necessity of the matter and according to that which is consonant to reason and good discretion.' Stradling v. Morgan, Plowden, 199; Cox v. Hakes, 15 A. C., 506, 517-8.

Where Statements Are General

"Where general words are found, especially in a statute, following an enumeration of persons or things all susceptible of being regarded as specimens of a single genus or category, but not exhaustive thereof, their construction should be restricted to things of that class or category (Reg. v. Edmondson, 28 L. J. M. C. 213), unless it is reasonably clear from the context or the general scope and purview of the Act that Parliament intended that they should be given a broader signification.

"Recent applications of the rule last stated, and usually known as the *ejusdem generis* rule, are to be found in the judgments in the House of Lords in Stott (Baltic) Steamers, Ltd., v. Marten, 1916 A. C., 304, and the judgment of Sankey, J., in Attorney-General v. Brown, 36 T. L. R. 165.

"At first blush the words 'of any description' appended to the general words 'other articles' would almost seem to have been inserted to indicate an intention to exclude the application to this section of the *ejusdem generis* rule, and to require that the general words 'other articles' should here be given their ordinary general construction. Yet, although no authority has been cited where that rule has

been applied, notwithstanding the addition of the words 'of any description' to such general words as 'other articles,' it has frequently been acted on where the equally comprehensive word 'whatsoever' (See Stroud's Judicial Dictionary, 2 ed. p. 223), has been appended to similar general words, such as 'other persons.' Thus, in construing the phrase, 'no tradesman, artificer, workman, laborer, or other person whatsoever' of the Sunday Observance Act of 1677, it has been held that a farmer (Reg. v. Cleworth, 4 B. and S., 927) a barber (Palmer v. Snow, 1900, 1 Q. B. 725), and a coach proprietor (Sandiman v. Beach, 7 B. and C., 96) are not within its purview. In Fish v. Jesson, 2 Vern, 114, a devise of 'all debts, accounts, reckonings, and demands whatsoever,' made to a servant was held not to include a trunk belonging to the testator in his hands at the date of the will and at the death of the testator, which contained jewels, medals, etc. Again, in Harrison v. Blackburn, 34 L. J. C. P., 109, the description in a Bill of Sale:

"'all the household goods, furniture, stock in trade, and other household effects. . . . in and about the dwelling house and all other personal estate whatsoever' of the assignor—was held not to carry his term or interest in the house. In Ystradyfodwig and Pontypridd Main Sewerage Board v. Bensted, 1907 A. C., 264, at p. 268, Lord Halsbury referred to

"'A very familiar canon of construction that, where you have a word which may have a general meaning wider than that which was intended by the legislature, when you find it associated with other words which show the category within which it is to come, it is cut down and over-ridden according to the general proposition which is familiarly described as the *ejusdem generis* principle.'

What Did Parliament Intend

"In the present case, far from indicating that an application of the restrictive rule would probably defeat the object of the statute, or that there is good reason for believing that the legislature intended the general words it has used, to bear a more extended meaning than if restricted to things similar in kind to those by the numeration of which they are preceded, consideration of the character of the Act and of the context as a whole, rather leads to the contrary view—that Parliament cannot have meant that the words 'other articles' should bear their ordinary broad signification. In the first place, if they did, the enumeration of articles of food, clothing and fuel was quite unnecessary, and the restriction to articles 'staple and ordinary,' the careful particularization of 'the products, materials and ingredients from or of which any thereof are in whole or in part manufactured, composed, derived or made,' and the specification, in the case of food, 'whether fresh, preserved, canned or otherwise treated,' serve no purpose. If the words 'other articles of any description' mean 'anything whatsoever,' the section may be paraphrased thus: '"Necessary of life" means any article of any description which the Board of Commerce may from time to time by special regulation declare to be such.' Can it be that that is what Parliament intended? *Re* Stockport Ragged, Industrial and Reformatory Schools, 1898, 2 Ch. 687, 696.

"Moreover, if s. 17, taken with s. 22, should be regarded as an enactment in the nature of criminal law—as counsel representing the Attorney-General contended, and I incline to think rightly—the Board would thus be enabled by its mere declaration to render criminal the accumulation or withholding from sale, to the extent stated in s. 17, of 'any article whatever,' however little likely to be regarded as a necessary of life as that term is ordinarily understood. It is to me inconceivable that Parliament meant to confer such wide and unheard-of powers. I rather think that no one would be more surprised and shocked than the legislators themselves were they informed that they had done so. I am, therefore, satisfied that Parliament must have intended that the words 'other articles of any description,' in s. 16, notwithstanding their obvious and emphasized generality, should receive a much more restricted construction; and no other restriction that can be put upon them occurs to me which has so much to commend it, as being probably that which Parliament had in mind, as that embodied in the well-known maxim, *noscunter a sociis*. Parliament was dealing with articles of food, clothing and fuel. It had these present to its mind. It must be taken to have been fully cognizant of the legal maxim just quoted and of its embodiment in the *ejusdem generis* rule of construction so frequently acted on by the courts. What more natural than that it should have meant 'other articles' to comprise only things which, like food, clothing and fuel, are requisite to maintain the physical health and vitality of the human body? Medicines have been suggested as falling within such a category; and there are, no doubt, some few other things essential to the life, health and sustenance of the body, which are not strictly articles of food, clothing or fuel, for which Parliament thought it well to provide. I cannot conceive of any genus or category that would include newsprint with articles of food, clothing and fuel. Nor, in my opinion, had there been no definition whatever of the term 'necessary of life,' would the Board have been justified in treating newsprint as such.

"Even restricted as I think it should be, the discretion vested in the Board by its mere declaration to constitute criminal offences in regard to matters not specified by Parliament, may seem open to some objection. But it is certainly much less objectionable than the unlimited and unqualified power for which counsel representing the Attorney-General contended.

"I am for these reasons of the opinion that the order appealed from cannot be sustained either under the jurisdiction of the Board of Commerce as administrator of the Combines and Fair Prices Act, or under that which it may lawfully exercise as Paper Controller."

Judge Idington's Summary

In the review of the case given by Mr. Justice Idington occur these remarks anent the claim that newsprint paper is a necessity of life:—

"In the last desperate resort, as it were, the justification for the order is rested upon the Combines and Fair Prices Act, and the powers of the Board of Commerce thereunder. Section 16 of said Act reads as follows (quoting).

"I am unable to understand how newsprint can under such a definition, 'necessaries of life,' fall thereunder; or anything the Board of Commerce by any due observance of the *ejusdem generis* rule which must be adhered to in the interpretation and construction thereof, may see fit to include within the definition, can be held as falling thereunder. I am, therefore, of the opinion that the order-in-council now in question cannot be properly maintained, and hence that this appeal should be allowed with costs."

Mr. Justice Duff says, in his statement: "As to the last and second paragraphs of the order of the Board of Commerce, I adhere without any doubt whatever to the opinion expressed in the course of the argument that necessaries of life within the meaning of the 'Fair Prices Act' do not comprehend articles which are not necessary by reason of their being required for some purposes connected with the physical life of the individual."

Mr. Justice Mignault, in the course of a long review of the case, refers to the definition of necessaries of life as

given in section 16 of the Combines and Fair Prices Act. He says:

"It is obvious from this definition that in the contemplation of Parliament necessaries of life are primarily articles necessary to sustain life, as distinguished from luxuries. Being necessaries of life, and the requirements of human life being of infinite variety, they cannot be confined to staple and ordinary articles of food, clothing and fuel, and as it was impossible to enumerate them, the Board was given the power from time to time to declare 'such other articles of any description' as it might from time to time by special regulation prescribe, to be necessaries of life. It is argued that the *ejusdem generis* rule should be applied here and that the defining power of the Board should be restricted to articles of the same kind as staple and ordinary articles of food, clothing and fuel. But to so hold would defeat the will of Parliament, for, as I have said, the requirements of human life vary *ad infinitum*, and it would not be difficult to enumerate articles useful or necessary for the purposes of human life which are neither food, nor clothing, nor fuel, such as medicine for the sick, crutches for the lame and eyeglasses for persons with defective eyesight. I think the intention of Parliament to exclude the *ejusdem generis*, or *noscitur a sociis*, rules, is sufficiently shown here by the words "such other articles of any description" (see Larsen v. Sylvester, 1908 A. C. 295, where the House of Lords held that the *ejusdem generis* rule was excluded by the words, "frosts, floods, strikes, and any other unavoidable accidents or hindrances of what kind soever"), and the general scheme of the Act is to entrust to the Board of Commerce the power of defining what articles, other than food, clothing and fuel are necessaries of life, any complete or exclusive enumeration being impossible. I would not, therefore, cut down the generality of the terms of section 16 by resorting to the rule, undoubtedly very useful in many cases, that general terms following special ones are to be restricted to the kind of things specially enumerated. Moreover, if the *ejusdem generis* or *noscitur a sociis* rules apply, the powers of definition conferred upon the Board are entirely meaningless, for the enumerated article alone could be considered necessaries of life.

"This does not mean, however, that this power of definition must not be exercised reasonably; in other words, that the articles which the Board declares to be necessaries of life should not have some relation to the requirements of human life, varied and difficult to define *a priori* though they may be. And I must say that I fail to discover any possible connection between the requirements of human life and newsprint paper. It even appears almost an abuse of language to call it a necessity of life.

"Whatever place newspapers may occupy in modern society, and it is no doubt a very important one, and however indispensable newsprint may be, for educational and other like purposes, it certainly does not proximately or even remotely come within the class of things that can be used for the requirements of human life. I, therefore, am of opinion that the Board acted without jurisdiction in declaring it a necessity of life.

"This conclusion shows that paragraphs 1 and 2 of the order complained of cannot be supported under the authority of The Board of Commerce Act or The Combines and Fair Prices Act, 1919, and these paragraphs therefore were not authorized by Parliament. This being so, it is unnecessary to determine in this case whether Parliament could validly pass these two Acts."

Made-in-Canada Endorsed by Municipalities

Large Number of Urban Centres Throughout Canada Lend Support to the Movement

By SIR JOHN WILLISON
President, Canadian Reconstruction Association

MUNICIPALITIES all over the Dominion have adopted resolutions endorsing the principle that public supplies should be purchased in Canada whenever they can be secured from Canadian factories at reasonable prices. Early in the year the President of the Canadian Reconstruction Association wrote to the clerks of cities, towns, and villages urging that the heavy discount an Canadian exchange was a symptom of an unhealthy national condition and contending that "apparently the only permanently effective remedies are an increase in production in the Dominion, development of export trade, curtailment of unnecessary imports, and substitution to the largest possible extent of Canadian products for commodities."

"In the national interest," the Reconstruction Association argued, "Canada must attain a larger measure of economic independence. It can do so by developing the home market. A pronounced demand for Made in Canada goods would constitute a guarantee of sales which would encourage factory expansion. By such expansion, new wealth would be created through increased production, and steady and profitable employment would be provided for new industrial populations. Any substantial increase in industrial workers would create bigger and better markets for all kinds of farm produce. New factories, expansion of old factories, greater production, more workers, and better agricultural markets mean national progress."

Returns now received by the Reconstruction Association show that the following urban municipalities are giving support to the Made in Canada campaign:—

ONTARIO: Belleville, Chatham, Fort William,, Guelph, Hamilton, Kitchener, London, Niagara Falls, Peterborough, Port Arthur, Sarnia, Stratford, Toronto, Woodstock, Bala, Bracebridge, Brockville, Cache Bay, Campbellford, Capreol, Cochrane, Cornwall, Deseronto, Dundas, Goderich, Kingsville, Midland, Mitchell, Niagara, North Bay, Orangeville, Paris, Picton, Simcoe, Strathroy, Thornbury, Trout Creek, Walkerville, Waterloo, Acton, Beaverton, Belle River, Brighton, Deloro, Havelock, Lucknow, Madoc, Maxville, Newbury, Richmond, Shelburne, Stirling, Tiverton, Wheatley.

BRITISH COLUMBIA: Alberni, Courtenay, Cranbrook, Kamloops, Nanaimo, New Westminster, Port Coquitlam, Prince Rupert, Revelstoke, Trail, Vancouver, Vernon, Victoria, Cloverdale, North Cowichan, North Vancouver, Peachland, Penticton, South Vancouver.

ALBERTA: Calgary, Lethbridge, Medicine Hat, Wetaskiwin, Bassano, Coleman, Tofield, Peace River.

SASKATCHEWAN: North Battleford, Regina, Weyburn, Alameda, Gravelburg, Humboldt, Kamsack, Moosomin, Radville, Yorkton.

MANITOBA: Boissevain, Brandon, East Kildonan, Killarney, St. Boniface.

NOVA SCOTIA: Dartmouth, Lockport, Lunenburg, Mahone Bay, North Sydney, Sydney Mines, Truro.

NEW BRUNSWICK: Newcastle, Sackville, St. Andrews, St. John, Sussex, Woodstock.

PRINCE EDWARD ISLAND: Summerside.

While the Association to date has no complete returns from Quebec, its Made in Canada proposals were particularly well received in Montreal. Mayor Martin strongly endorsed the Made in Canada campaign, and the Montreal City Council unanimously passed a resolution endorsing the purchase of Made in Canada supplies. Similar resolutions have been passed by other Quebec municipalities.

With a view to further development of the home market, the Reconstruction Association in March issued the following "Ten Commandments for Canadian Trade," which were sent broadcast throughout the country to Members of the Federal and Provincial parliaments, newspapers and periodicals, secretaries of labor organizations, manufacturers, clergymen, university professors, officers and directors of steam railways, presidents, vice-presidents, and general managers of Canadian banks, and the head offices and branches of Canadian insurance companies:—

1. BUY CANADIAN PRODUCTS: In doing so, you develop the home market, encourage factory expansion, provide employment for new populations, and create bigger and better markets for all kinds of farm produce. New factories, expansion of old factories, greater production, more workers, and better agricultural markets mean national progress.

2. IMPORT ONLY NECESSITIES, and then only if similar Canadian articles or substitutes are not available. With Canadian money at a discount of from 10 to 15 per cent, exchange with the United States is costing Canadian consumers between $75,000,000 and $100,000,000 a year.

3. PRODUCE TO THE LIMIT IN FIELD AND FACTORY. Increased production means new wealth and is essential to the success of any effort to reduce imports and promote export trade.

4. CO-OPERATE, CONSERVE, SPECIALIZE, STANDARDIZE. These are the means to maximum production of high quality goods at minimum cost.

5. DEVELOP EXPORT MARKETS. Foreign business gives stability to trade. It reduces unit costs, benefits domestic consumers, affords employment to factories and workers in times of depression, and corrects adverse exchange by improving the trade balance.

6. UTILIZE CANADIAN SERVICES. Ship by Canadian carriers through Canadian ports. Patronize Canadian railways, Canadian steamships, and Canadian banks. Place insurance in Canadian companies. Employ Canadian architects, engineers, scientists, and other experts. Spend vacations in Canada.

7. MANUFACTURE RAW MATERIALS TO FINAL STAGES in Canada. Hundreds of millions of dollars are lost annually to the Dominion, and especially to Canadian wage earners, by the exportation of raw materials and semi-manufactured products.

8. USE SCIENCE FOR THE DETERMINATION AND DEVELOPMENT OF NATURAL RESOURCES. Industrial research will reveal new wealth, improve industrial processes, and help to relieve our economic dependence upon outside sources for fuel, iron, and other essentials.

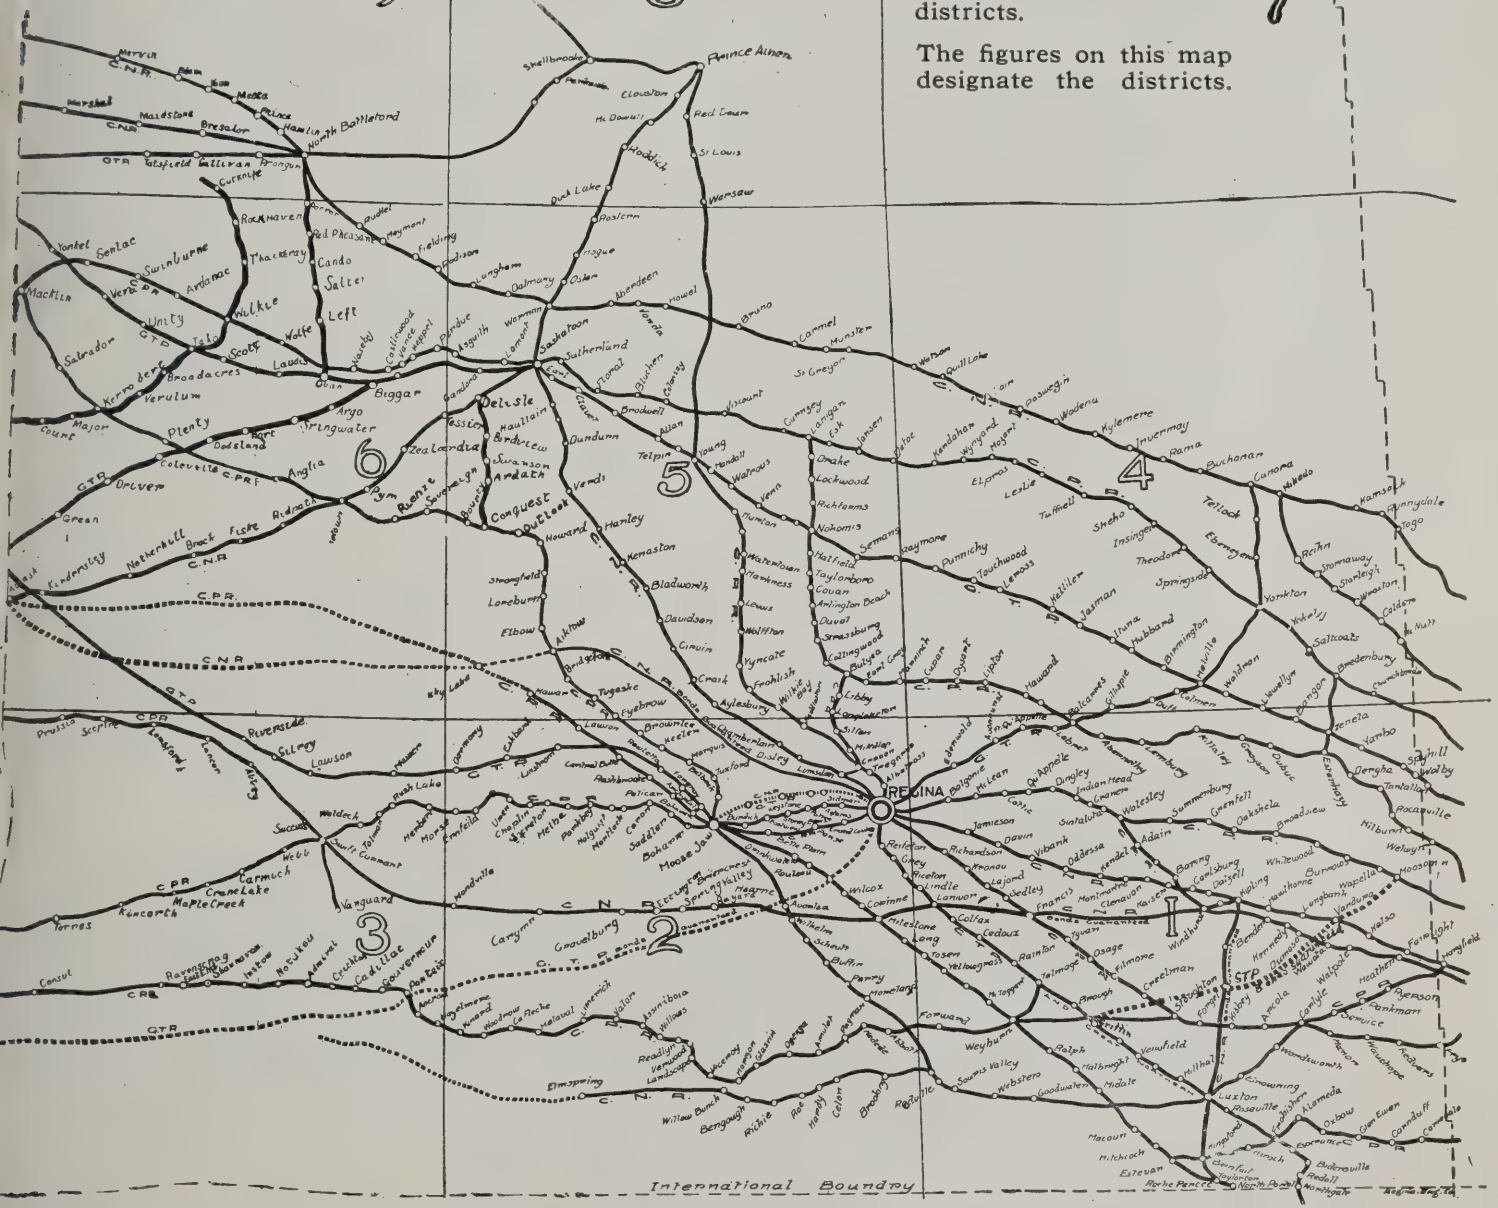
9. MAKE QUALITY THE HALL-MARK OF CANADIAN PRODUCTS. In return for public support of the home market Canadian manufacturers should provide products that compare favorably with imported goods and Canadian workers should recognize good workmanship and maximum production as their standards.

10. BE FAIR TO CAPITAL. Canadian money should be encouraged to invest at home, and foreign capital attracted to promote Canadian industrial expansion.

These Commandments have been so well received that twice the initial order has been exhausted. A revised edition in leaflet form to fit a No. 8 envelope has been printed upon request, and copies may be secured free of charge from the Editorial Department of the Association, Royal Bank Building, Toronto.

An Opportunity to Interest Thousands

A vast crowd of people filling and overflowing the big grand stand at the Calgary Industrial Exhibition. Manufacturers would do well to give careful consideration to the more extensive display of their goods at such exhibitions and fairs



REGINA
Saskatchewan
Canada

1920

Regina serves 2,255 miles of Railway and 250 towns and villages. Population of District 466,666.

In districts Nos. 1, 2, 4 and 5 are two-thirds of the population of the Province, and over two-thirds of the grain of the Province is raised in these four districts. Of the 1,870,123 head of stock in the Province, three-quarters of the total are raised in the above four districts.

The figures on this map designate the districts.

REGINA, the capital city of Saskatchewan is situated on the main line of the Canadian Pacific Railway, Grand Trunk Pacific Railway and Canadian National Railway. It is the principal city between Winnipeg and Calgary, lying 357 miles west of Winnipeg and 483 miles east of Calgary.

REGINA is the largest distributing centre of Western Canada and, as a distributor of farm implements, the greatest in the world, business in this line in one year having reached a total of over $25,000,000.

REGINA is the distributing centre, the commercial centre and the educational centre of this part of Western Canada. Building construction already arranged for, in 1920, amounts to $4,500,000. Every lot in the wholesale area is served with railway tracks; a large portion of the area is still available for building purposes and may be obtained from the City.

For further information apply to L. T. McDONALD, Board of Trade, Regina or Commissioner L. A. THORNTON, City Hall, Regina

New Building Planned

North West Biscuit Company, of Edmonton, Will Increase Its Capacity Largely

The North West Biscuit Company, Edmonton, have had plans prepared for a new building to be erected in the northern section of the city near the Edmonton Metal Works. The company are reported to be finding their present building cramped for space and the idea is now to put up a building which will include all the best equipment available for biscuit-making and be so arranged as to admit of enlargement as required. During the short time they have been in business the North West Biscuit Co. have made rapid progress, and their products are to be found as far west as Prince Rupert.

Locate in Cobourg

The Langslow, Fowler Company, of Rochester, are to Establish Canadian Subsidiary

Ratepayers of Cobourg have passed favorably upon a by-law, under the terms of which a loan of $50,000 will be made to the Langslow, Fowler Co., of Rochester, N.Y., to assist in the establishment of a branch factory. The company is occupied in the manufacture of household and school furniture, and employs in its Rochester plant, when at capacity, close to 600 hands, principally men; cuts and converts into furniture (in 1920) approximately five million feet of lumber, largely hardwoods, and will handle a volume of business in 1920 closely approximating $2,000,000 worth.

The new Canadian company, which will be called Langslow Limited, will occupy the premises formerly owned by the Crossen Car Works. They will manufacture household, school and office furniture, and other wood and steel products. The authorized capital is to be $300,000, and $200,000 will be paid in at the time of beginning operations, which will probably be in October next. The first year will probably see the employment of 100 hands, including both men and women, and expansion from that point will no doubt be rapid.

The controlling interest in the Canadian company will be owned by the Rochester company, and the officers will probably be: President, Stratton C. Langslow; vice-president and managing director, H. R. Langslow; treasurer, Paul Knox; secretary, Raymond C. Van Doorn, all of Rochester.

Acadia Sugar Co.

New Bond Issue of Two Million Dollars Being Put Out by This Company

An issue of $2,000,000 of 7 per cent. first mortgage serial gold bonds is being made by the Acadia Sugar Refining Co., Limited, Halifax. The company have been in operation since 1893. The refinery is situated at Halifax, the property comprising 170 acres, with a water frontage of 1,465 feet. The bonds have been offered at par, with a bonus of 10 per cent. of common stock.

Canadian Consolidated Rubber

Sales of the Company's Products Heaviest in History of the Consolidation

Sales of the various products of the Canadian Consolidated Rubber Co., Limited, in 1919 amounted to $22,162,977, being the largest in the history of the company. After all deductions, including depreciation of $562,300, bond and other interest and dividends on the preferred stock, there remained applicable to the common stock a balance of $1,541,512, equal to almost 55 per cent. on the stock outstanding.

The Canadian Consolidated Felt Co., Limited, subsidiary of the Rubber Co., had sales of $1,234,029, as compared with $1,155,192 in 1918, and $763,481 in 1917. Net profits amounted to $71,977, as against $69,804 in 1918. The balance at credit of profit and loss now amounts to $321,916 and if business continues as favorable in 1920, the directors may be in a position to consider dividends either before the end of 1920 or early next year.

New Toronto Industry

The Arco Company, of Cleveland, Ohio, Are Establishing a Canadian Plant

The Arco Company of Cleveland, Ohio, have secured incorporation in Canada under the name of the Arco Company, Limited, with Canadian capital interested. They have taken a lease of one of the buildings which formerly comprised the gaol group on Strachan Ave., Toronto. For the present, they propose to confine their activities to the manufacture of roofing paints and roofing cements, as they have already built up a considerable trade in these items in Canada. As soon as conditions become more normal, they intend to go into the business more extensively, and undoubtedly will erect a plant somewhere in Canada for the manufacture of paints, varnishes and enamels.

They anticipate beginning manufacture within a month or so, and at the outset will employ only a few men, probably not more than five or six, as the manufacture of their product is a machine proposition. Eventually, they will require the services of from 50 to 100 men skilled in the manufacture of their lines.

Price, Bros & Co.

Last Year's Showing by this Company Was Particularly Satisfactory

Profits of Price Bros. & Co., Limited, for the year ended February 28, amounted to $2,055,782, an increase of $561,821 over the previous year's showing. After the payment of bond and note interest charges, there remained a balance of $1,621,806, against $1,053,984 in 1919.

Shareholders participated in the prosperity of the company during the year to the extent of $690,684, in the form of dividends and bonus, compare with $400,000 in the two former periods. An employees' pension fund was also inaugurated during the period, the sum of $150,000 being set aside out of earnings for this purpose. In addition to the advantages shareholders received, a special distribution of $1,540,000 out of the surplus earnings of the company accumulated prior to the first of January, 1917. After all deductions there remained a surplus in profit and loss account at the end of the year amounting to $2,115,346, compared with $2,874,234 in 1918, and $2,220,239 at the end of the preceding year.

Fine Color Printing

Rous & Mann, Limited, designers and printers, Toronto, send out a remarkable example of four-color printing as an indication of the ability of their organization to do high-class work. It is a reproduction of a painting by Herbert S. Palmer, A.R.C.A., one of Canada's distinguished young painters of animal and rural subjects. The work has been done so effectively that the result is an exact facsimile of the original, with all its subtle delicacy and fine technique. Messrs. Rous & Mann point out that there are numerous ways in which color printing may be utilized in business publicity, and express their willingness to discuss proposals for such work with those interested.

Canada's Industrial Congress

A tour of Alberta and British Columbia under the direction of THE ALBERTA INDUSTRIAL DEVELOPMENT ASSOCIATION and in conjunction with the tour of the Canadian Manufacturers Association.

Medicine Hat	*June 2*
Lethbridge	*June 2*
Calgary	*June 3*
Edmonton	*June 4-5*
Vancouver	*June 7*
Victoria	*June 10*

A Prairie-Pacific tour with addresses in the various cities by authorities on the resources of the West. An invitation to gather first-hand information on the industrial opportunities of Western Canada.

For further information write BRIGADIER-GENERAL H. F. McDONALD, C.M.G., D.S.O.
Congress General Manager, 400 Lougheed Building, Calgary, Alberta.

FOR SALE

Situated in City of Peterborough. Site about nine acres. Building is modern, heavy brick and steel construction, with saw-tooth roof, containing about 35,000 square feet. Served with water, sewers, electric power, railway siding, etc.

Box printing machine wanted. Must be in good condition and available for immediate delivery. State all particulars and price. Canadian Box & Shook Mills, Ltd., Sherbrooke, Que.

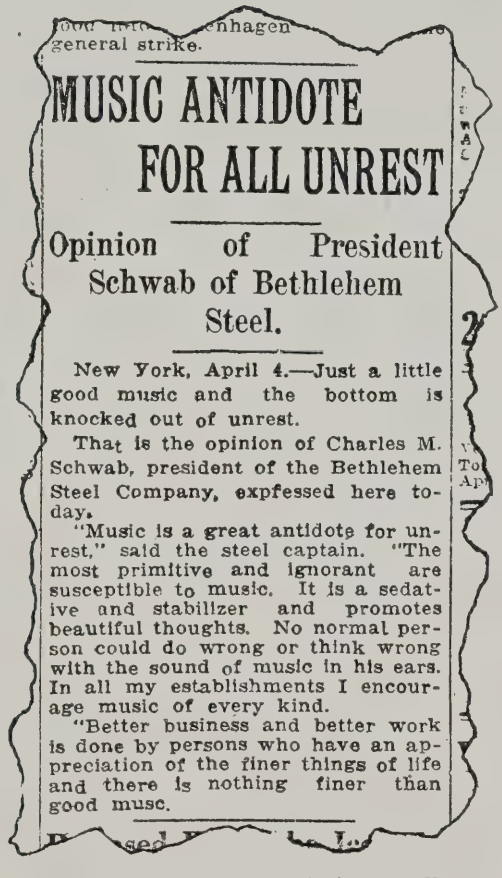
Death of Frank Robson

Vice-President of the Robson Leather Co., Oshawa, Passes Away Quite Suddenly

The death occurred suddenly at Oshawa, on May 2, of Frank Robson, vice-president of the Robson Leather Co., Limited. Mr. Robson was the eldest son of the late James Robson, founder of the industry, and spent his life in the tannery and leather business in Oshawa. For years this business was conducted under the name of James Robson & Sons. Later it was enlarged and reorganized under its present name, being managed by Mr. Robson and his surviving brother, Charles. The late Mr. Robson was a member of the C.M.A.

Thomas Waterhouse Dead

Ingersoll Manufacturer, with Long Experience in Woollen Industry, Passes Away



One of the Association's members in Ingersoll, Thomas Waterhouse, president of the Thomas Waterhouse Knitting Co., passed away in that town on April 5, after an illness extending over two years. The late Mr. Waterhouse was born in Puthey, Yorkshire, England, and came to Canada when a small boy. He was engaged in manufacturing for forty years, having conducted woollen mills at Palmerston until twenty-two years ago, when he went to Ingersoll. The woollen mill there was for some time conducted by Waterhouse and Bradbury. Fourteen years ago the present Thomas Waterhouse Knitting Company was organized, which has grown rapidly ever since.

Doubling Size of Plant

Holmes Foundry Co., Sarnia, Are Putting Up Big Addition to Their Plant

The Holmes Foundry Co., Limited, are doubling the size of their plant at Sarnia by adding a structure 96 x 200 feet. The completed plant is to be delivered July 1, 1920, while partial operations were commenced on May 3. The product will be gray iron automobile castings, principally cylinders and heads. Approximately 225 men will be employed, and the investment is about $650,000. The company are also putting in the footings, foundations and underground work for half of an additional unit, 200 x 96 feet, and this unit will eventually be 405 x 96 feet. The Holmes Foundry Co. operate three plants in Port Huron in addition to the Sarnia plant.

A Message to Employers from Charles M. Schwab

general strike.

MUSIC ANTIDOTE FOR ALL UNREST

Opinion of President Schwab of Bethlehem Steel.

New York, April 4.—Just a little good music and the bottom is knocked out of unrest.

That is the opinion of Charles M. Schwab, president of the Bethlehem Steel Company, expfessed here today.

"Music is a great antidote for unrest," said the steel captain. "The most primitive and ignorant are susceptible to music. It is a sedative and stabilizer and promotes beautiful thoughts. No normal person could do wrong or think wrong with the sound of music in his ears. In all my establishments I encourage music of every kind.

"Better business and better work is done by persons who have an appreciation of the finer things of life and there is nothing finer than good musc.

Mail and Empire, Toronto
April 5, 1920

Write us stating the number of employees you have and the kind of music you are interested in—factory choruses, bands or orchestras. We shall gladly send you full particulars regarding the best method of introducing music into your plant

FRANK E. MUTTON, Vice-President and General Manager
Head Office and Factory: Campbell Ave., TORONTO, Ont.

Branches in all Principal Cities

(Also makers of Hollerith Electric Tabulators and Dayton Computing Scales)

DISSATISFIED MEN

Next to the apple of the Garden of Eden, the oldest source of dissatisfaction is mistakes in the pay envelope. Unexpected dockages for lateness or lost time, mistakes in calculation of pay, etc., certainly get a man up in the air. Occasionally, these mistakes are unavoidable with some of the antiquated time-keeping systems in use—the only wonder is, there aren't more of them.

SATISFIED MEN

Let a man make his own time records. Let him see the actual printed figures, unchangeable, legible, unmistakable, and you eliminate one big source of trouble. Every man knows then that his time record is absolutely right—no "human element" has entered into it—a machine did it.

We make Time Recorders, Master Clocks, Secondary Clocks, Program Devices, some electrically operated, others spring-driven. Let us send you particulars.

Tariff Department News

New Australian Tariff

Information Now Available in Tariff Department Regarding New Rates of Duty

The Tariff Department has particulars of the new Customs tariff of Australia, which became effective, provisionally, on the 25th March last; and it is now in a position to answer enquiries regarding the new rates of duty on specific products.

Paper Duty Free

New United States Enactment Lets in All Paper Valued Under Eight Cents a Pound

On January 31, 1920, a bill was introduced in Congress, which after amendment was duly passed and became law on April 24, permitting paper valued under eight cents per pound to enter the United States duty free.

Export of Cheese

British Government Decides Not to Purchase Any More Imported Cheese

The Canadian Trade Commission, Ottawa, have received the following cable from the Overseas Branch, Department of Trade and Commerce of Canada, in regard to the importation of cheese into Great Britain:—

"April 30.—Government announces it has been decided not to make any further purchases of imported cheese. Orders providing for requisition of private imports and fixing maximum wholesale prices will be removed at an early date. Order fixing maximum retail price will, however, remain in force for the time being."

Termination of French Treaty

Notice Given and Change Will Take Effect on the 18th Day of June Next

The required three months' notice has been given for the termination of the convention respecting commercial relations between Canada and France, and the change will take effect on the 19th day of June, 1920. Thereafter, it appears that importations into Canada from France will be subject to the rates of duty under the general tariff, and importations into France from Canada, which, under the convention, were entitled to the benefit of the French minimum tariff, will be subject to the maximum tariff rates.

Board of Customs Decisions

Various Rulings Made as to the Duty Applicable on a Number of Commodities

Pratt and Whitney standard measuring machine, per illustration, declared to be properly dutiable under tariff item 657, at 25 per cent. and 7 per cent. war tax.

Incubators and brooders declared to be dutiable according to material.

Glass rolling pins declared to be dutiable under tariff item 510, at 20 per cent. plus 7½ per cent. war tax.

Cassava flour processed in any manner for use as glue held to be a vegetable glue and declared to be dutiable under tariff item 232, at 27½ per cent. plus 7½ per cent. war tax.

Stuffed olives for the manufacture of pickles declared to be dutiable under tariff item 749, at 20 per cent. plus 7½ per cent. war tax.

Declared that dictating machines, such as the "Ediphone" and the "Dictaphone," and cylinders for same are not subject to war excise tax.

Upson wallboard declared to be dutiable under tariff item 199, as a manufacture of paper, at 35 per cent. plus 7½ per cent. war tax.

Departmental Rulings.

Culti-packers or Trac-o-packers, per illustrations, ruled to be dutiable under tariff item 448, at the rate of 20 per cent.

Sheaves with patent roller bearings or bushings, when imported to be incorporated into pulley blocks for the equipment of ships and vessels, are now manufactured in Canada, and are, therefore, not entitled to entry under tariff item 470.

Shoes, per samples submitted, from Endicott & Johnson, New York, having the soles both sewn and nailed, ruled to be dutiable under tariff item 611 (*a*) at the rate of 30 per. cent.

Departmental decision on Christmas stockings, as contained in Appraisers' Bulletin No. 929, is cancelled and the following substituted therefor:—"Christmas stockings are dutiable at the rate applying to component materials of chief value therein, and when imported from Great Britain are entitled to preferential treatment when not less than one-quarter of the cost of production for export has been produced through the industry of one of more British countries."

Marbles for use in lithographic work ruled to be dutiable according to material.

Rotary cloth press, of a class or kind not made in Canada, ruled to be dutiable under tariff item 468 at the rate of 10 per cent. plus the war tariff of 7½ per cent.

Polysulphide ruled to be dutiable under tariff item 711 at the rate of 17 per cent. plus the war tariff of 7½ per cent.

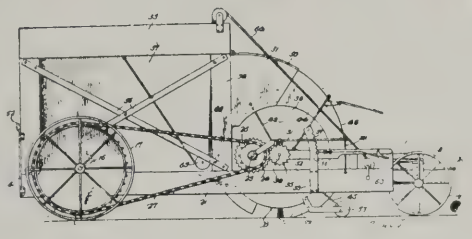
Dried peat ruled to be dutiable under tariff item 539 as free of duty, but subject to the war tariff of 7½ per cent.

Steel balls for the manufacture of bearings for binders ruled to be dutiable under tariff item 491 at the rate of 10 per cent.

Refined cotton seed foots, as per sample, ruled to be dutiable under tariff item 280 as free of duty, but subject to the war tariff of 7½ per cent.

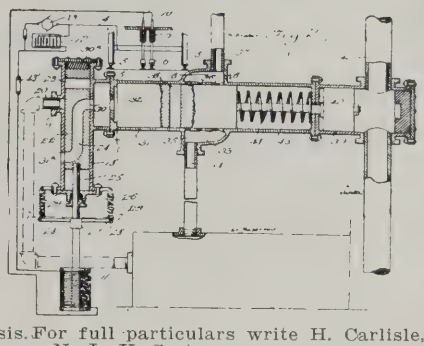
Potato graders ruled to be dutiable under tariff item 448 at the rate of 20 per cent.

Needles set in strips of metal, of a class or kind not made in Canada, being part of a weaving machine, ruled to be dutiable under tariff item 468 at the rate of 10 per cent. plus the war tariff of 7½ per cent.

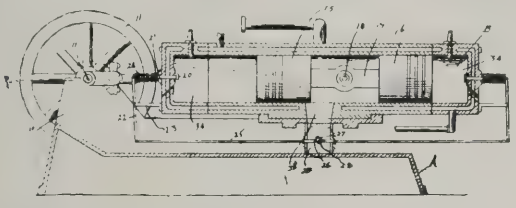


New Canadian Patents

Some Interesting Devices That Have Recently Been Patented in Canada

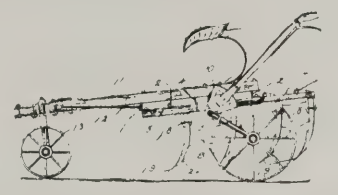


The following is a list of Canadian patents recently issued through the agency of Messrs. Ridout & Maybee, 156 Yonge Street, Toronto, from whom further particulars may be obtained: Kilgour Bros., paper containers; George A. Helson, street cleaning apparatus; F. S. Harrington, pick; Philip T. Jackson, cooking apparatus; E. Beaumont Jarvis, metal framing; Evan O. Williams, reinforced concrete ships, barges, floating structures and the like; Walter Willmott, stamping book covers and the like; Wm. J. Gives, wrenches; Justus M. Silliman, demountable metal tires for vehicle wheels; Jabez Muskett, rubber-covered rollers; F. W. Shenstone, keyboards for musical instruments; Schoichi Tamura, automatic bottle-filling machine; Frank Perry, incandescent gas lighting; Dr. Wm. C. Toll, Tonsillectome; A. Brokenshire, tire carrier for motor cars; G. Beechey, garden barrows and cultivators; James Nevin, artificial leg.

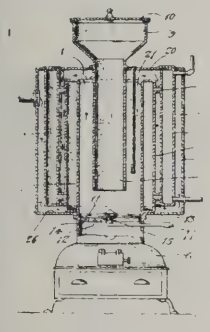


PATENTS FOR SALE

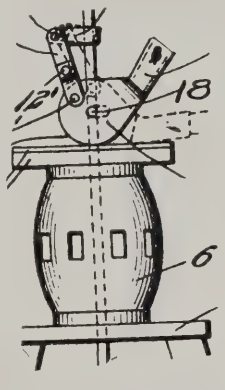
STREET CLEANING MACHINE, consisting of a novel construction, yet simple and durable, which would make a practical machine for use in cleaning city streets. Canadian and U.S. patents can be had at a reasonable price by applying to M. L. Osborne, Waukomis, Okla., U.S.A.



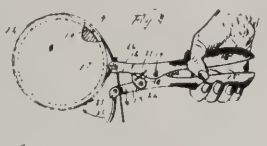
TRAIN CONTROL SYSTEM. This invention relates to a train control system which has many features, and should be looked into by railroad companies throughout Canada and U.S. Patents have been taken out in Canada, Mexico, France, Great Britain and U.S. These are all for sale outright or on a royalty basis. For full particulars write H. Carlisle, P.O. Box 68, Lessburg, N. J., U. S. A.



INTERNAL-COMBUSTION ENGINE, which provides a simple and efficient means for actuating the control valves for regulating the inlet and exhaust of the gases to and from the explosion cylinders. Canadian and U.S. patents for sale. Full particulars can be had from R. M. Day, Alcester, S. Dak., U.S.A.

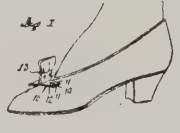


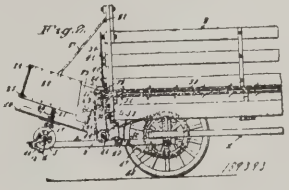
QUACK GRASS DIGGER, which consists of a novel device and combination of devices which will be found extremely simple and highly efficient in Quack Grass Digging. Canadian and U. S. patents for sale. Write Frank H. Klose, care Klose Mfg. Co., St. James, Minn., U. S. A.



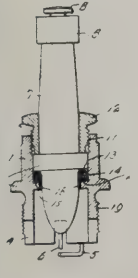
STOVE having for its object to provide a means for improving the efficient water heating pipes of stoves. Full particulars can be had from S. D. Blackburn, 104 Jenkins Avenue, Lansdale, Pa., U.S.A., who has Canadian and U.S. patents for sale.

CLAMPING DEVICE for securing work, especially wheels to a stand. It may be operated quickly and will dispense with the present lock and screw device commonly used. Canadian and U.S. patents for sale by B. J. Hudson, Box No. 93, Wilsey, Kans., U. S. A.



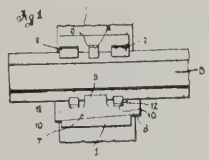


SPRING FOR BEDS. This invention relates to a novel means of making and fitting springs into bed construction. Full particulars can be had from A. E. Powell, Box 49, Caron, Sask, Can., who has Canadian and U. S. patents for sale.

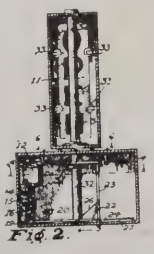


COMPRESSING TOOL FOR PISTON RINGS, whereby rings are contracted to a reduced diameter so that they do not project beyond the piston while the latter may be readily passed into the cylinder. Write H. O. Ewing, Middleport, Ohio, U. S. A., for full particulars and copy of his Canadian and U. S. patents, which are for sale.

DETACHABLE BOW SUPPORT FOR SHOES, providing a very simple means for detachably supporting a bow upon a slipper, whereby a new bow may be readily attached when the former one has become soiled. Full particulars can be had from Le Roy F. Jones, P.O. Box 50, Waiakos Maui, Hawaii, who has Canadian and United States patents for sale.



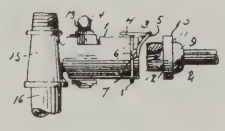
STRAW SPREADER, which is used in connection with threshers and will be found of great advantage. It is simple in construction and efficient in operation. Full particulars can be had from F. C. Mares, Dwight, Nebr., U. S. A. Canadian and U. S. patents for sale.



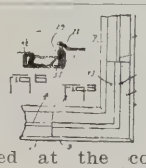
SPARK PLUG which has many features of advantage over the ordinary plug, and owing to its simple and efficient construction, should become a wide seller, if properly placed on the market. Write R. H. Duncan, 159 Hendrie Ave., Detroit, Mich., U. S. A., for full particulars, as Canadian and U. S. patents are for sale.

TIE PLATE, to be associated with a rail tie formed of wood so as to increase the life of the tie, the said plate being equipped with a novel means of securing the rail to the plate. Canadian and U. S. patents for sale by J. Wedgeworth, Sarapta, La., U. S. A.

AUTOMATIC TRAFFIC REGULATOR, which automatically operates, alternately directing the movement of pedestrians and vehicles in cross street intersections. Canadian and U. S. patents are for sale. Write E. A. Pound, 1114 2nd Avenue, Venice, Cal., U. S. A.

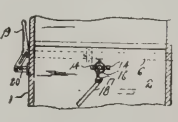


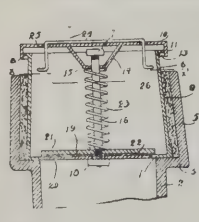
HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada



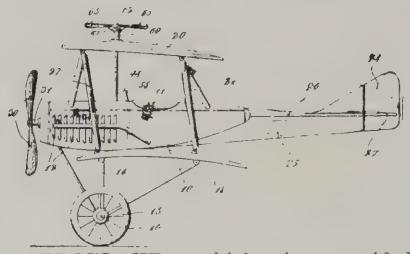
PATENTS FOR SALE

KNITTING NEEDLE, consisting of a particular way of forming the needle, having much advantage over the ordinary construction and which can be easily and cheaply manufactured. Canadian and U. S. patents are for sale and full particulars can be had from Mary E. Ross, 992 Rose St., Baker, Ore., U. S. A.



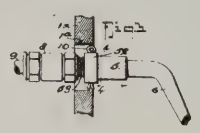


PIPE OR HOSE COUPLING whereby a device of safety and also security to prevent the disconnecting of gas tubes or hose from the stop cocks on radiators or other gas, liquid or air appliances. The device is such that the safety handle must be shut off entirely before a disconnection can be made. The nipple ends are secured to the metal, porcelain or wood, thereby overcoming the great trouble of breakable rubber ends. For full particulars, write Chas. Steiger, 4152 Federal St., Camden, N. J., U. S. A.

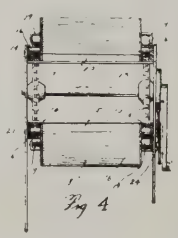


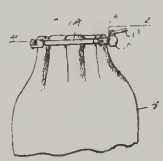
SCREEN FOR WINDOWS, in which the wire fabric can be easily and quickly renewed without the services of a skilled mechanic. The stiles and rails are connected at the corners by an invisible connection. Canadian and U.S. patents for sale. Write Wm. Steger, Linden Heights, Ohio, U.S.A.

ANIMAL RELEASING DEVICE, consisting of a novel means whereby a number of animals confined in stalls in a barn may be simultaneously released. The device may be cheaply installed and will operate with a maximum efficiency. Full particulars can be had from G. Zohner, Forres, Sask., Can. Canadian and U. S. patents for sale.



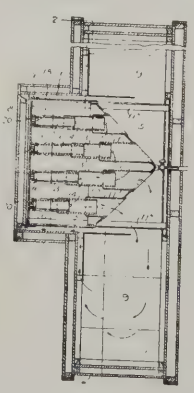
CLEAN - OUT PLUG FOR SEWERS, providing a means whereby the plug consisting of a collar and a valve which may be engaged in a pipe for cleaning the same out. Canadian and U. S. patents for sale. For full particulars, write Chas. E. Gate, 308 Maryland St., Winnipeg, Manitoba, Can.





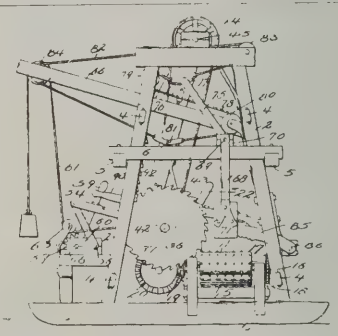
AEROPLANE, which is provided with a propeller arranged over the apparatus which may be used as a helicopter at any desired time and may be folded and disconnected with little delay. Full particulars can be had from D. Pecher, Princeton, B. C., Can.

CRANK FOR GASOLINE ENGINES. This invention is one which should be looked into by automobile manufacturers throughout Canada and U. S. The invention is one of merit and should find a good market if sold at a reasonable price and properly advertised. Accessory manufacturers should be interested. Write A. M. Ewart, 300 6th St., Barberton, Ohio, U. S. A.



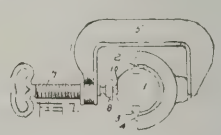
FIRE ESCAPE, providing a novel means whereby persons may be lowered on the outside of the building. It further provides a particular means of allowing the lowering of such fire escapes. Canadian and U. S. patents for sale. Write D. H. Olson, 2400 12th Ave. South, Minneapolis, Minn., U. S. A.

LOCKING DEVICE FOR BAGS, whereby they can be effectively locked by a device which is easily applied, reliable in use, of highly simplified construction and cheap to manufacture. Canadian and U. S. patents for sale by J. M. Almedia, P.O. Box 642, Rock Springs, Wyo., U. S. A.

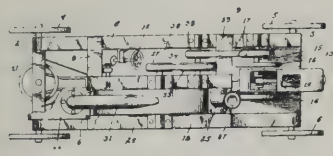


REFRIGERATOR which provides pure, dry, cold air for perfect refrigeration of a display counter. Descriptive circular can be had by writing to Mr. C. A. Ketterer, 215 Baugh Ave., East St. Louis, Mo., U. S. A. Canadian and U. S. patents for sale.

COLLAPSIBLE BED, providing a single article of furniture which serves either as a sofa, lounge, bed or couch of simple, strong and durable design. Canadian and U. S. patents for sale. Full particulars can be had from D. Balyk, 535 Fallow Ave., Medicine Hat, Alta., Can.

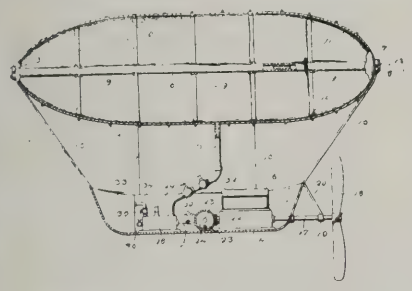


WELL DRILLING DEVICE. Canadian patent, No. 172318, is for sale and covers a novel construction in well drilling devices, which should be carefully looked into, as the same has considerable merit, if properly handled and placed on the market. For full particulars, write James Ferrier, Curzon St., Toowoomba, Queensland, Australia.



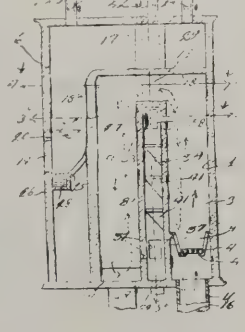
WOOD SAWING MACHINE whereby the operations to be performed may be accomplished rapidly, with facility and safety. The saw can be attached for sawing blocks or pieces any desired length, and provides a means for clamping or holding the log while being sawed. Canada and U. S. patents for sale. Write Lars G. Gustafson, Ethel, Wash. U. S. A.

BOBBITTING MANDREL. This invention has many merits of advantage and if properly shown to the manufacturers throughout Canada and U. S. it should be a popular seller. Canadian and U. S. patents can be had outright or on a royalty basis from J. M. Mark, 706 J. Adams St., Oregon City, Ore., U. S. A.

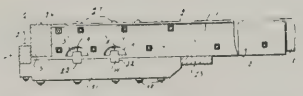


HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada

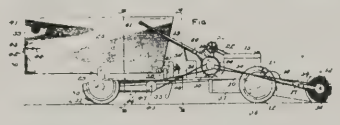
PATENTS FOR SALE



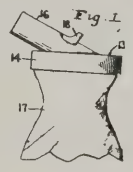
INSECT DESTROYING MACHINE, providing a means for destroying insects, which can also be used as a vacuum cleaner, driven by a suitable motor and adapted to be moved from room to room. The simple construction of this invention should be looked into by manufacturers looking for an invention of merit. Canadian and U. S. patents for sale. Write James W. Lemon, Box 43, Hardy, Ark., U. S. A.



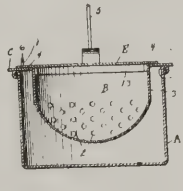
AIRSHIP, comprising a balloon portion having a car supported therefrom, a means for inflating or deflating the balloon to control the ascending or descending of the craft. Copy of Canadian and U. S. patents can be had from J. F. O'Grady, Sisseton, S. Dak., U. S. A.



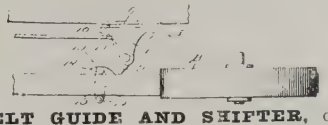
ELECTRIC LIGHT SWITCH OPERATOR, through the medium of which an electric light switch may be operated both to turn on and off the light by pulling downwardly upon a depending pull cord or handle. Full particulars can be had from E. H. Shute, 2046 Cortes St., Chicago, Ill., U. S. A. Canadian and U. S. patents for sale.



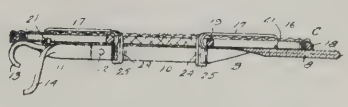
HEATER, adapted for heating railway stations, country schools, offices and various other buildings. The invention can be easily constructed and is adapted to burn any kind of fuel. Canadian and U. S. patents for sale. Write Robt. De Polo, Connellsville, Pa., U.S.A.



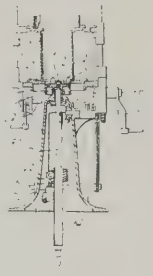
LOCKING MEANS FOR DRAFT SILLS OF RAILWAY CARS, which provides a novel construction of wooden railway cars in which the longitudinally extending centre wheels are connected to the draft wheels which carry the draw-bar attachments. For full particulars of this write A. M. Lowry, 8 Kelly St., Fairfield, Me., U. S. A., who has Canadian and U. S. patents for sale.



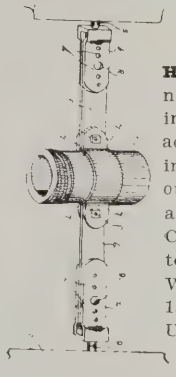
MOTOR STREET CLEANER provides a motor driven device adapted for cleaning streets during the passage of the device thereover, the arrangement being such as to sweep and transfer the sweepings into a dumping receptacle. Canadian and U. S. patents for sale. Full particulars can be had from Andrew Simko, 92 Third St., Passaic, N. J., U. S. A.



CREAM SEPARATOR ATTACHMENT FOR MILK BOTTLES, by simply placing the attachment on the top of the bottle with the forefinger resting on the finger piece, the thumb and other fingers holding the bottle, the cream, whether thick or thin, flows out rapidly when the bottle is tilted. This attachment can be made at a reasonable cost and a good profit can be had by house to house canvass. Write for full particulars to J. A. Moffatt, 166 North Bay St., Hamilton, Ont., Can., as Canadian and U. S. patents are for sale.

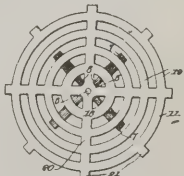


COMBINED VEGETABLE COOKER AND DRAINER, consisting of useful improvements in a kitchen utensil adapted to be employed as a vegetable cooker, steamer and drainer, and in which elements may as desired be employed for mashing vegetables. For full particulars, write Minnie Fournier, Minong, Wis., U. S. A. Canadian and U. S. patents for sale.



BELT GUIDE AND SHIFTER, consisting of a novel construction for guiding an endless belt, and a means for shifting the belt from the drive pulley to the idler or vice-versa. This invention has considerable merit and particulars should be inquired of from G. M. Eriebel, Balcarres, Sask., Can.

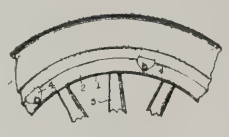
STRAINER, specially designed for straining milk directly into the supply tank of a cream separator. The support is applicable to all makes of separator tanks and may be readily placed in operative relation or removed by simply lifting up by the long end. Canadian and U. S. patents for sale. Write M. J. Ostul, Ghent, Minn., U. S. A.

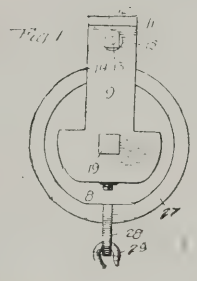


SELF - SHARPENING ADJUSTABLE PACKER HEAD-PLATE which has much advantage and manufacturers in this line should at once write to Mr. Jos. Vogt, care Richmond Pressed Stone Works, Richmond, Minn., U. S. A., for full particulars, as his Canadian and U. S. patent rights are for sale. Full particulars and drawings will be sent on request.

ADJUSTABLE PIPE HANGER, consisting of novel means of clamping around pipes and adjustably holding these in relation to walls and other supporting means at any desired angle. Canadian and U.S. patents for sale. Write W. C. Duke, 1163 E. 13th St., Richmond, Va., U.S.A.

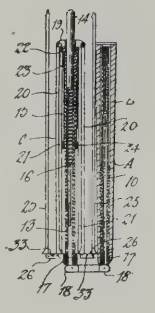
REVOLVING TABLE OVEN This invention has many good features which oven manufacturers should look carefully into. Full particulars can be had from Mary A. Scrimgeour, 376 College Street, Lewiston, Maine, U. S. A., as both Canadian and U. S. patents are for sale, copies and full data will be sent on request.



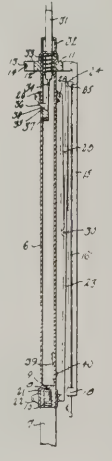


VIOLIN SHOULDER-REST which may be readily secured to a violin or other instrument of that general type and held in proper position by a resiliently-mounted clamping member for readily holding the violin in proper position to the shoulder. Full particulars can be had from John McLay, Box 26, Bellerive, Valleyfield, Que., who has Canadian and U. S. Patents for sale.

HAROLD C. SHIPMAN & CO., Patent Attorneys, Ottawa, Canada



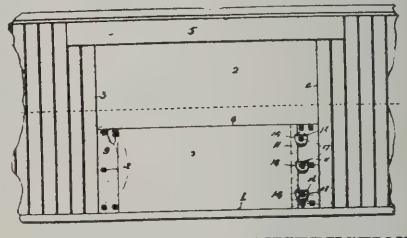
PATENTS FOR SALE



WHEEL RIM and more especially a demountable or detachable rim from the felly of the wheel. The rim supporting automobile tires can be easily and quickly removed to substitute new tires for punctured or damaged ones. Full particulars can be had from E. S. Beeman, Laporte, Indiana, U.S.A. Canadian and U. S. patents for sale.

HANGER FOR SWINGS, providing a novel means which is inexpensive and should find an attractive market when properly advertised. Canadian and U. S. patents for sale. Copies and full particulars can be had from Harry J. Volkewein, 317 Fingal St., Pittsburg, Pa., U. S. A.

UMBRELLA which will fold into a length approximately one-half the length of a rib of an ordinary umbrella. Umbrella manufacturers should at once look into this patent, as the invention has considerable merit and commercial possibilities. Full particulars can be had from M. Schock, 310 Cleveland St., Monticello, Indiana, U. S. A., who has Canadian and U. S. patents for sale.



UMBRELLA which has novel features which should make this an attractive seller if properly placed on the market. Full particulars can be had from Thos. Verdugo, 923 Shotwell St., San Francisco, Cal., U. S. A., who has Canadian and U. S. patents for sale.

PATENTS

Trade Marks, Design Patents, Copyrights

Being near the Canadian Patent Office we are able to personally interview examiners, thus often getting broader claims and earlier allowance of your Patent. We have access to all Patent Office Records for making searches and report, and solicit the business of Manufacturers, Engineers and others who realize the advisability of having their Patent Business given PERSONAL ATTENTION by Experts at Ottawa.

GRAIN DOOR CONSTRUCTION which provides a simple and inexpensive construction which will be effective in retaining grain, coal and other light products without leakage from the car while in transit, but it can be easily released to discharge said products when desired. Can. and U. S. patents for sale by W. H. Toomer, Gladstone, Man., Can.

Their 1920 Calendar

The calendar issued this year by Lockwood, Greene & Co., copy of which has recently been received, shows in attractive form a number of the more important engineering undertakings of the company. Among them are several fine manufacturing plants, including the new works of T. McAvity & Sons, at St. John, N.B. The calendar is in monthly sheets, each with its own illustration.

New Company Publication

Among the latest Canadian manufacturing companies to establish a company publication is Lever Bros., Limited, who started in April a neat 36-page pocket-size magazine, under the name of "Progress Canada." Printed on coated paper, with numerous half-tone illustrations, it makes a tasty little production. The April number is largely devoted to an account of Lord Leverhulme's visit to Canada, though there is much other material of interest to the company and its employees. The publication will undoubtedly contribute to the maintenance of friendly relations between employer and employee.

Nickel Company's Periodical

Under the name of the "Inco," the International Nickel Company have commenced the publication of a monthly periodical intended to promote the interests of the company. It is a well printed little publication and contains much useful information about the company and its products.

ANNOUNCING

DOMINION OXYGEN COMPANY, Ltd.

The Dominion Oxygen Company, Ltd., from its very inception takes high rank among the leaders of Canadian Industry.

Product

Foreseeing an extraordinarily rapid development of Canadian business, it plans a chain of modern plants for the production of atmospheric oxygen of high purity.

Five important industrial centers have already been chosen as locations for as many plants. The building program is actually under way and is being rapidly pushed to completion.

Cylinders

Dominion Oxygen Cylinders will be of the most modern type, designed to carry the maximum quantity of gas with the least possible weight, thus insuring the lowest shipping and handling expense.

Under the comprehensive selling plan of the Company, these cylinders will be loaned to the consumer on liberal terms.

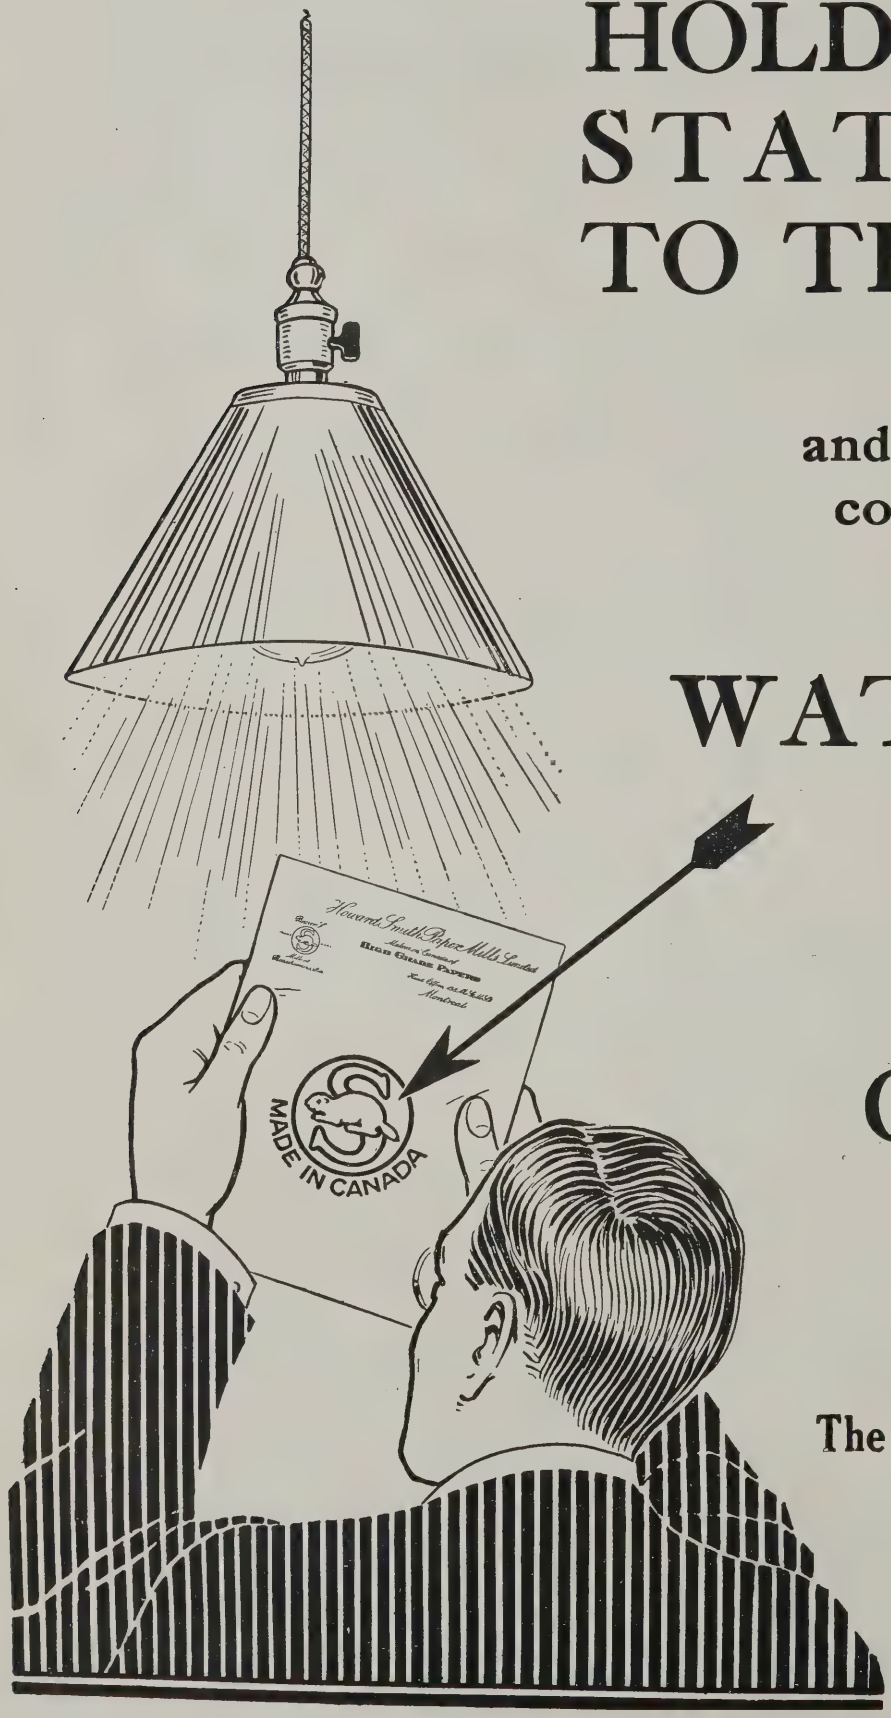
Policy

Broad in its scope, the Dominion Oxygen Company, Ltd., is still broader in its policy. It has planned and is providing a great distributing system which, through a network of centrally located warehouses and distributing stations, will insure Canadian oxygen users of a never-failing and prompt supply of pure oxygen in any quantities.

This service will be extended in all its ramifications as rapidly as new plants are completed.

By inaugurating, with its patrons, a relationship of unusual breadth and liberality, the Dominion Oxygen Company, Ltd., will be a constructive force in promoting the tremendously increased use of the oxy-acetylene process.

A Suggestion



It will be to the advantage of Canadian users of oxygen to write for more detailed information before contracting for their future oxygen requirements.

The Cost System---a Fundamental Guide to Efficiency

What the Chart is to the Seaman, His Cost System Should be to the Manufacturer — a Source of Light and Leading

By W. L. EDMONDS

KNOWLEDGE of cost in respect to production is destined to become increasingly important in respect to success in the manufacturing industries of the Dominion. Carping critics may say what they will in regard to profits secured, but to the unprejudiced mind it must be apparent, in view of the upward trend in the cost of raw materials, labor and freight rates, that it is only by employing the highest possible measure of efficiency in production that manufacturers can hope to create a surplus sufficient to pay dividends and create reserve accounts of adequate amounts to provide for the eventualities of "rainy days" and for necessary expansion in business.

It naturally follows that the fundamental guide to efficiency is an efficient cost system. A cost system is to the manufacturer what a chart is to the seaman. It enables him to get his bearings and to map out his future course.

Incomplete Cost Systems

Not long ago the travellers of a certain manufacturing concern reported that a competitor was selling an article at twenty-six cents which it cost the former thirty cents to produce. After puzzling over the matter for some time the manager could come to no other conclusion than that the competing firm was selling below actual cost.

"If that is their little game," he finally concluded, "I'll help them to increase their losses, I'll stop manufacturing the article and buy their line instead."

Shortly after coming to this conclusion he consulted a man who was an authority on cost accounting, whom he informed, in reply to a specific question, that his cost of thirty cents on the particular article was made up of labor 10c., material 8c., and overhead 12c. He had to acknowledge, however, that his factory was running on less than half time.

"What would your overhead be if you were running on full time?" he was asked.

"About five cents," he replied.

"Ah, now I see the seat of the trouble," continued the expert. "If your factory was running full time you could produce that article at about twenty-three cents instead of at thirty cents. Your competitor is able to undersell you because he is running his factory full time."

The trouble with this particular firm's system was that, while it furnished an apparently initial record in regard to cost of production, it did not go beyond that point. Had it not been so, the manager would not have found it necessary to call in an outsider to enlighten him as to the source of his difficulty.

There is an old English maxim to the effect that "there is no wrong without a remedy." The office of a cost system is to provide the manager of an industry with data that will serve to assist him in rectifying errors as well as to furnish him with figures upon which to base the selling cost of factory product.

Three Elemental Factors

Into the manufacturing of any article whatsoever there enter, generally speaking, three elemental factors. These are material, labor and expense. It follows, therefore, that a cost system, to be efficient, must enable the management to ascertain, as nearly accurately as possible, the proportion of cost entailed under these three classifications. Furthermore, it should be made to function in such a way that the management is enabled to ascertain month by month the presence of leaks, if any, and the lines which are either profitable or unprofitable.

It is becoming more and more widely and generally recognized in business practice that it is an unwise policy, except in case of actual necessity, for a manufacturer to continue to produce or a merchant to continue to carry in stock a line which is persistently unprofitable. It therefore follows that if a manufacturer is to be in the position where he can from month to month be provided with accurate information in this particular, he must have in operation a system that works out costs in detail and not on a basis that merely strikes an average for the various lines his factory produces. But even though, for policy's sake, it may be wise to continue the manufacture of a subordinate line in which there is either little or no profit, sound business practice demands that the management should be in a position to know the facts regarding each and every line of goods the factory turns out. Otherwise how can it intelligently manage? Without the employment of a cost system that is efficient in this particular detail the manager can scarcely be in a position to determine the lines which require special treatment, either with a view to bringing this or that article out of the unprofitable class or of pushing more vigorously those which are netting the company a larger percentage of profits.

Average vs. Detail Costs

Four or five years ago two manufacturers, whom we may designate A and B, were engaged in a friendly chat regarding their respective business methods. During the conversation A acknowledged that although his factory turned out over two hundred different articles he could not produce figures which would show the profitable or unprofitable character of any one of them. His cost system only provided ways and means of ascertaining the average profit on the total turnover. B, on the other hand, although making about the same number of lines as A, employed a system that enabled him to ascertain the cost of each. "When I find," he explained, "that a certain article is no longer being produced at a profit, and there does not, after a careful investigation has been made, appear to be any possibility of our being able to do so in the future, I cut it out."

B, it will be seen, believed in making money in detail as well as in total. A was satisfied with the latter. From the standpoint of sound business practice there can scarcely be any doubt as to which theory is the preferable.

HEAD OFFICE - TORONTO

Canadian Mead-Morrison

Unsold Portion of Preferred Stock Issue Has Been on Offer to Canadian Investors

Preferred stock of the Canadian Mead-Morrison Co., Limited, the new Canadian corporation which has taken over the business of M. Beatty & Sons, Limited, Welland, has been on offer through the Montreal financial house of Hanson Bros. The company have issued $600,000 of 7 per cent. cumulative redeemable sinking fund preferred shares, and 8,500 common shares, of no par value. Hanson Bros. offered the unsold portion of the preferred issue at par and accrued interest, with bonus of forty per cent. of common. As the company have practically no bonded indebtedness, the preferred stock is nearly equivalent to a first mortgage.

Provincial Paper

Reorganization of the Company Has Been Effected and Shares Will be Exchanged

A reorganization of the Provincial Paper Mills Co., Limited, has taken place, a new company, Provincial Pulp and Paper Mills, Limited, having been formed to take over the old company. Through the reorganization, holders of common stock of the latter are given a bonus of 50 per cent. of their holdings in the new company, while preferred stock is exchanged share for share. The Port Arthur Pulp & Paper Co., which was a subsidiary of the old company, is taken over and forms part of the new organization. The some officers and directors are in control.

Consolidated Smelters

Sales of Smelter Product, Ore and Other Materials Amounted to $9,761,000

Despite labor troubles and unsettled markets, sales by the Consolidated Mining & Smelting Co. of Canada, Limited, during the fifteen months ended December 31, 1919, amounted to $9,761,000, or about the same as during the twelve months ended September 30, 1918. Total receipts in the fifteen-month period amounted to $13,002,498. To meet dividends at the regular rate of ten per cent. per annum, it was necessary to draw on reserves to the extent of $489,789, bringing the balance down from $2,148,122 to $1,658,333. Referring to this phase of the situation, the president, James J. Warren, states: "Your directors felt satisfied in declaring the usual dividends, because the deficit was attributable largely to non-operation and non-production, through temporary conditions not likely to recur." Heavy disbursements were made on capital account, $754,000 being advanced to the West Kootenay Power Co., and $637,413 expended on smelter improvements and extensions.

Steel Co. of Canada

Gross Profits for the Year 1919 Were Slightly in Excess of Four Millions

Gross profits of the Steel Co. of Canada, Limited, for the year ended December 31, 1919, amounted to $4,000,940, comparing with $5,367,120 in 1918 and $6,040,318 in 1917. In both the latter years, however, allowances were necessary for the excess cost of construction of coke ovens, etc., which did not apply in 1919, so that the showing on the whole compared favorably with previous years. After the usual deductions for reserves, interest, sinking fund and dividends,

$872,430 remained to be carried to profit and loss, bringing the balance in that account up to $8,195,302.

In his report to the shareholders, the president, Robert Hobson, stated that in connection with the coke ovens it has been decided to instal a plant for the extraction of benzol from the gases of the ovens, and work has already been started on this plant. In addition, the directors have under consideration further material extensions, which will increase the output of semi-finished and finished material at an economical cost. The company have consolidated coal holdings with two very strong U.S. companies, and now hold a one-third interest in 4,438 acres in block.

Sawyer-Massey Co.

Results for the Last Fiscal Year Were not Particularly Encouraging to Shareholders

Profit earned by the Sawyer-Massey Co., Limited, for the year ended November 30, 1919, amounted to $144,445. After paying administrative expenses and bond interest, a net profit of $63,573 remained. The company started the year with a debit balance in profit and loss account of $310,114, and to this was added the sum of $206,446, written off for bad and doubtful debts. Deducting net profit for the year, the adverse balance at November 30, 1919, was $452,987. It is stated, however, that the amounts written off and the figures as they now appear in the balance sheet reflect the realizable value of the liquid assets.

In Western Canada sales were less than in the previous year, due in part to acute competition in American-made tractors admitted "duty free," injury to crops due to drought, and stricter regulations regarding terms and credit. In Eastern Canada sales were in excess of the previous year, due to a greater demand for road-making machinery. Foreign sales showed an increase, due to shipments of threshers to the United States. Prospects for the present year are declared to be encouraging.

Canadian Westinghouse

Earnings for 1919 Showed Only a Small Decline From Those of Previous Years

Earnings of the Canadian Westinghouse Co., Limited, from manufacturing operations were $1,416,205 in 1919, as compared with $1,622,048 in 1918. Net profits were $600,936, as compared with $560,646. The balance carried forward was $1,814,272, as against $1,711,688.

The chairman of the board, H. H. Westinghouse, reports that "Business in the first year following the close of the World War has been marked by readjustments unavoidably associated with the sudden change in the underlying basis of all industrial endeavor. In place of imperative requirement for production of all agencies of destruction and their application to the point of contact between the huge contending armies—heedless of cost so long as time, quantity and effectiveness were served—the effort became one of seeking to re-establish production of the necessities and comforts of life and their distribution, both under the requirements and the limitations of the ordinary operations of commerce so long and so severely interrupted. For the first few months there was a feeling of hesitancy and a slackening of operations, but with a growing realization that shelves were bare of supplies the world over, expansion followed curtailment, so that before the end of the year manufacture was equalling, and in many lines exceeding, its pre-war activity.

"Your company, whose products are of the prime requisites of the industrial and transportation life of the com-

WE OFFER

Accurate, intelligent attention Cumulative experience of ninety years
Prompt careful deliveries Fair prices Satisfaction

On account of the service offered, we number among our friends most of the Governments, Federal and Provincial—Municipalities, Banks, Transportation Companies, Corporations, Professional Firms, Colleges, Schools, etc.

If you have not already done so—why not open a ledger account with us. You will be surprised at the change.

P.S.—Catalogues and advertising literature yours for the asking

munity, reflected in its operations these changes in the general situation. With an average amount of business offering during the early months, the year closed with such an increasing volume of orders as to assure that the plants will be taxed to capacity for some time to come. Shipments of products have corresponded closely in amount with those of the preceding year, while higher cost of materials and increased salaries and wages of employees, both universally prevalent, have operated to decrease somewhat the margin of profit."

Goodwin's Limited

Company's Sales Last Year Were Largest in Its History and Profits Increased

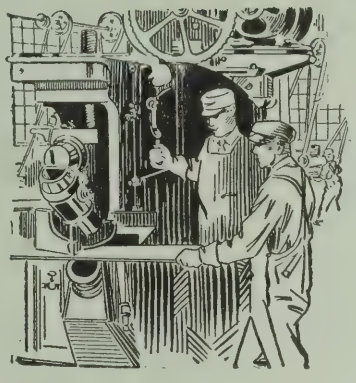
Gross profits of Goodwin's, Limited, for the period ended January 28, 1920, amounted to $444,942, being an increase of $107,995 over the previous year. After the payment of bond and other interest charges, a depreciation allowance of $65,000, and the transfer of $10,000 to reserve for doubtful accounts, there remained a surplus of $274,614. The total credit and loss balance is now $959,730. Allowing for all deductions, the year's surplus earnings were equivalent to 15.7 per cent. on the outstanding preferred stock issue of the company, this comparing with 9.4 per cent. in 1918. Sales for the year were the largest in the company's history.

Abitibi Power & Paper

Surplus of the Company Exceeded Million and a Half at End of 1919

Operations for the year 1919 of the Abitibi Power & Paper Co., Limited, before providing for depreciation, etc., showed a profit of $2,125,717. After deducting depreciation, interest and other charges, there remained a surplus for the year of $1,143,693, which, added to the surplus at the end of 1918, made a total of $2,216,943. After paying dividends of $262,500 on preferred and $300,000 on common shares, together with business profits tax of $79,463, the net surplus at the end of the year stood at $1,574,979.

The earnings cover the full capacity of the paper mill for the entire year, but not of the groundwood and sulphite mills which, on account of the unfavorable market conditions in the early part of the year, were not operated to full capacity. For 1920 the company have sold their entire output of paper at materially higher prices, while the indications are that the full capacity of the entire groundwood and sulphite product will be placed.



Arrangements have been completed for the sale of $4,000,000 of consolidated refunding 6 per cent. 20-year gold bonds, the proceeds of which will be used to retire the 7 per cent. debenture stock and 7 per cent. convertible mortgage debentures, as well as to defray the cost of new construction now in progress. The latter consists of the installation of three additional newsprint machines, and one wrapping machine, and the completion of a new power plant at Twin Falls.

Canada Machinery

Profits for Year Ending January 31 Showed a Large Falling-off From Previous Year

Net profits of the Canada Machinery Corporation, after the payment of bond interest, amounted to $128,144, as against $277,101 in the previous year. Preferred dividends at 7 per cent. and common dividends at 5 per cent. were disbursed, and $24,778 allowed for depreciation. A balance of $103,197 remained to the credit of profit and loss, as

LABOR

In the Savings Departments of all our 400 branches the workman will find convenience and safety for his savings. The ambitious wage-earner who lives by budget—and not by chance—can thus make adequate provision for old age by depositing a fixed sum regularly. Financial independence may be gained by steady accumulation of small amounts.

compared with $100,880 at the first of the year. The annual report states that "In view of the large volume of second-hand machinery which has been offered for sale, at sacrifice prices, the results of the year are better than we anticipated, and we think will be entirely satisfactory to the shareholders. As to prospects for the current year, it is very difficult to make any forecast, although sales to date show a marked improvement over the same period last year."

Canadian Fairbanks-Morse

Volume of Business in 1919 Showed a Decrease of Approximately 15 Per Cent.

After deduction of all expenses of manufacturing, selling and administration, and after providing for war tax, profits of the Canadian Fairbanks-Morse Co., Limited, for the year ended December 31, 1919, were $532,069. Dividends of $90,000 on the preferred and $128,000 on the common stock were paid, the balance at profit and loss being increased from $1,762,537 to $2,076,607. The volume of business in the sales department showed a decrease of approximately 15 per cent. from the preceding year, business being extremely quiet in the first few months of the year but improving as the year went on and closing with a greater amount of unfilled orders than at any time in the history of the company.

Referring to the Toronto plant, the president, Henry J. Fuller, reports that conditions were such as to make it impossible to resume any production excepting in the closing weeks of the year. This is explained by the fact that the foundry was not operated during the period of the war, and they were not successful, owing to labor conditions, to recruit their foundry organization until late in the year. A policy of intensive manufacture of a few lines was decided upon. The sum of $150,000 was set aside for plant rehabilitation and new equipment.

Port Hope Sanitary

Company in Better Position Financially as a Result of Last Year's Operations

Profits of the Port Hope Sanitary Mfg. Co., Limited, for the year ended January 31, 1920, were $132,015, as compared with $46,285 in the previous year. Net profits were $79,411, which, added to the previous balance at profit and loss, brought the surplus up to $97,107. Current assets amounted to $302,834, as compared with current liabilities of $83,688. Capital assets were $1,096,898. The company's improved position will enable it to carry out its plan for further plant improvements and extensions.

Acadia Sugar

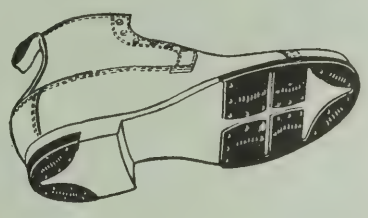
Company's Net Trading Profit for the Past Year Amounted to Sum of $266,918

The net trading profit of the Acadia Sugar Refining Co., Limited, for 1919, amounted to $266,918. From this was deducted interest on loan, $251,461, and directors' fees, $7,300. The balance applied to the debit balance at profit and loss reduced this sum from $221,584 to $213,427.

The directors' report states that during the first six months of the year the feeling generally was that there was an over-abundance of sugar. Buying was of the hand-to-mouth variety, and in consequence the company were forced to carry large stocks of raw and refined sugar and work on a low melt, which at best prices prevailing was most unprofitable. This condition gradually changed, and in the fall months a shortage developed, and business returned to a more profitable basis.

F. R. GRAHAM D. M. SANSON

Do You Need Additional Capital?



Many prosperous business enterprises are outgrowing their banking accommodations and desire additional capital for one or more of the following purposes:

1. To increase plant capacity and finance rapidly growing business.
2. To acquire additional properties, etc.
3. To retire bonds or other indebtedness.

We would be pleased to discuss with you our method of under-writing the securities of Canadian Industrial Corporations, which meet our requirements as to management and earnings.

Write us for full information.

So They Called the Expert In

Fred Brock of Baxter and Company was a good Office Manager. That was an acknowledged fact, both among his business associates and the boys at the club. People discussed his organizing ability and the capable staff with which he had surrounded himself.

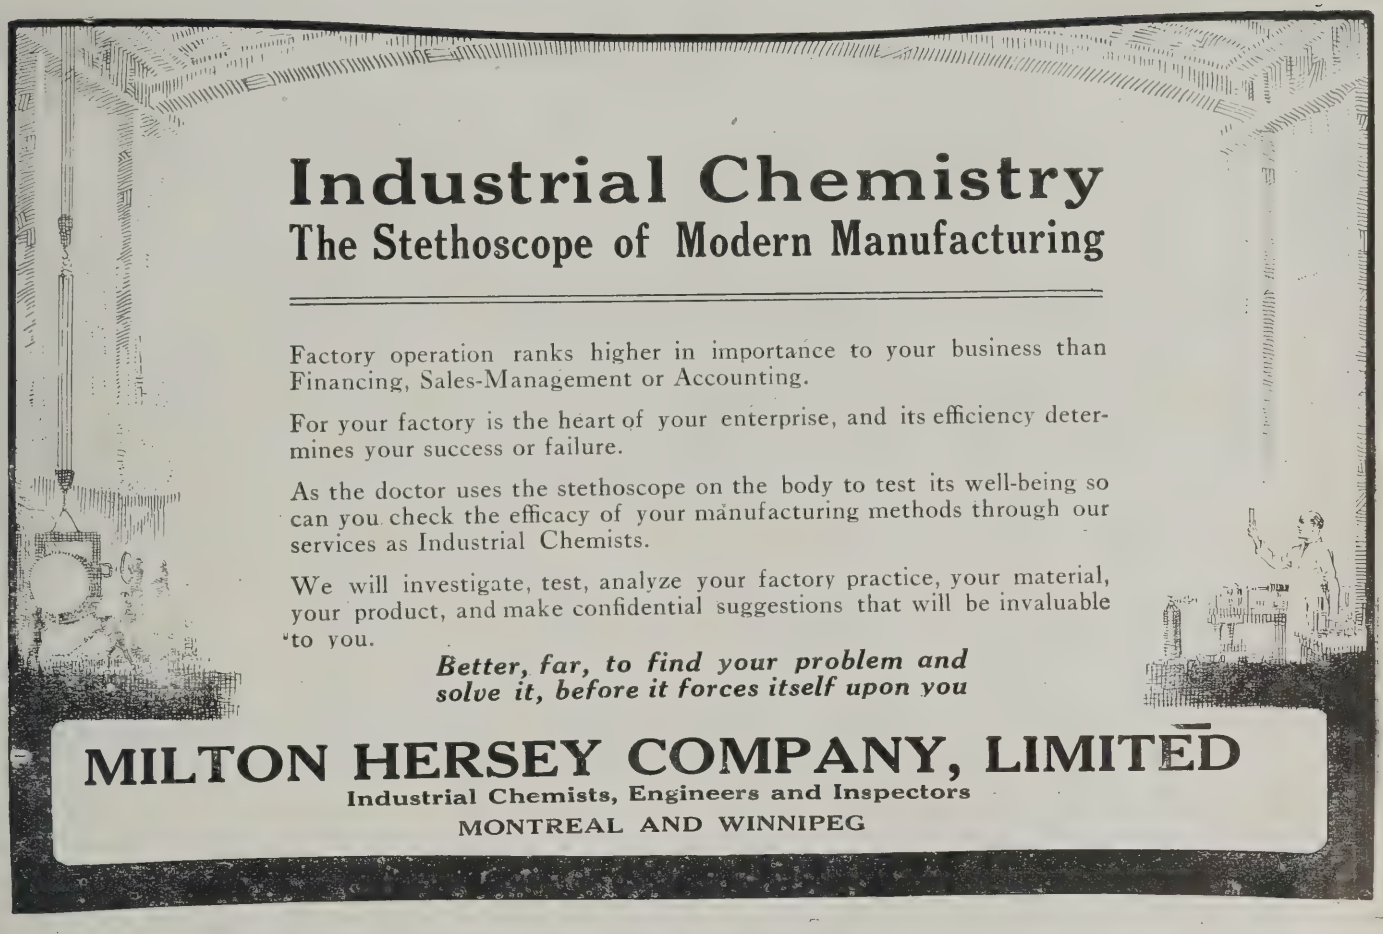
ONE thing troubled Fred, though: his filing system and certain details of office routine. In the rush of two years of unprecedented business he'd no time to re-organize his system. As a result it had become unwieldy; papers were becoming increasingly difficult to find; complaint reports were coming in with greater frequency from the "Chief" and other department executives, so Miss Thompson, the filing clerk reported.

That was just a year ago—before Fred Brock called to his aid the System Service Expert of "Office Specialty". His business day is much pleasanter for him now—since the "Office Specialty" System Expert analyzed his existing systems and submitted a plan that would not only remedy the immediate trouble, but make ample provision for natural expansion for some time to come.

This is the type of expert service that "Office Specialty" is rendering to its thousands of clients to-day—a concrete service backed by the resources of a centralized System Department whose cumulative experience in solving filing and record-keeping problems in many different kinds of business is offered to you in your individual problem without fee or charge, or without reservations of any kind.

SYSTEM SERVICE

"Office Specialty" System Service Experts are men who merit the name *expert*. They are trained, practical men. They will gladly make your office routine, record-keeping, or filing problems their own. Their value to themselves, and to us, depends upon the value of their service to you.



Put your office routine or record-keeping problem up to our nearest Service Store.

Canada's Industrial Expansion

A Record of Progress

New Yarn Plant

Canadian Cottons Limited, Have Started Work on the Erection of Large Building

Canadian Cottons, Limited, are erecting in connection with their Hamilton mill a plant for the manufacture of yarn. It will be approximately 175 feet in length by 125 feet in width, of reinforced concrete construction, and will have a capacity of about one million pounds of yarn of various kinds per annum. The modern gravity system of handling the process will be followed. That is, the picker room, with dust room below, will be located on the top storey instead of on the ground floor, as was customary before. The end of the mill in which the picker room is located will be six storeys and the rest of it four storeys in height. The W. J. Westaway Company are engineers and contract has been let to the W. H. Yates Construction Company. On completion about 200 hands will be employed.

Starting Twine Factory

Sterling Twine Co., Limited, Formed at Walkerton to Make Commercial Twine and Rope

The Sterling Twine Co., Limited, capitalized at $100,000, have recently been incorporated at Walkerton, Ont., for the purpose of manufacturing commercial twine of all kinds (but not binder twine), for sale to the wholesale trade. They have acquired three buildings in the business portion of the town near the C.P.R. station. One building, 45 x 200 feet, will be used for factory purposes, another 50 x 100 feet for warehouse and a third for storage. Machinery is under order, and it is hoped that a portion of it will be delivered by June, so that operations may commence in July. The balance of the machinery will not likely be ready until September. As soon as the plant gets into the proper swing from fifty to sixty hands will be employed.

Tile Industry Resumes

Frontenac Floor and Wall Tile Co., Limited, Kingston, Re-organized Under New Management

The Frontenac Floor and Wall Tile Co., Kingston, whose plant has been closed down for the past two years, have been reorganized and will operate under entirely new management. Mr. Everett Townsend, who will have full charge of the company, was for twenty-five years managing director of the Robertson Art Tile Co., Morrisville, Pa., one of the largest manufacturers of tile in the United States, making what is called a full line of tile, which includes white wall tile, all kinds of bright, dull finish and opaque colored glazes, pinks and ox-bloods, also ceramics for floors as well as half-inch thick tile in white and various colors.

At the present time it is the intention of the Frontenac Floor and Wall Tile Co. to confine themselves to making ceramics only, as the plant with the present equipment is not arranged to make any of the other lines. The company have been somewhat hindered in starting up because of the delay in getting clays and coal from the States, but they are figuring on operating not later than May 15, and will run the plant to full capacity. The plant superintendent will be Mr. Frank Stevenson, who is an expert machinist and die maker, with seven years' experience with the Trent Tile Co., Trenton, N.J., and three years' with the Old Bridge Enamel Brick & Tile Co. of Old Bridge, N.J.

Open Toronto Office

Mason Regulator & Engineering Co., Limited of Montreal, Take Important Step

The Mason Regulator & Engineering Co., Limited, who are the Canadian manufacturers of the well-known "Reilly" feed water heaters, evaporators, distillers, grease extractors and feed filters and "Mason" reducing valves and regulating appliances, are opening a branch office at Toronto, under the management of Mr. S. Balmfirth. Mr. Balmfirth, who is a member of the executive of the Canadian Association of Stationary Engineers, was formerly chief engineer of the Hospital for Sick Children, Toronto, after having been assistant to the superintendent of the McGill University power house. This is in accordance with the firm's policy of having practical engineers as salesmen and executives and they believe they are able to render better service to their customers by this method.

New Port Arthur Industry

Atlas Manufacturing Co. Make Good Progress Since Inception Last Fall

The Atlas Manufacturing Co., Port Arthur, organized last August by Messrs. W. L. McGregor, A. G. Allen, and A. C. Lotoski, have made such favorable progress that they have found it necessary to secure larger premises. A provincial charter, dated March 1, 1920, has been secured, the company being empowered to carry on the business of electricians, mechanical engineers, workers and dealers in electrical supplies and equipment, to manufacture and produce electric automobiles and to manufacture electric flashlights, portable electric lamps, residential electric light plants, electric advertising signs and a new type of bedsteads and brass and aluminum lamp stands.

The company started operations at 234 Cameron Street, but have recently purchased a location on Ambrose Street. A building on the property, 80 feet long, is being remodelled and it is their intention to erect a new brick building four storeys high adjacent to the present building. The plant, when completed in the first section, will give employment to about 200 men, and when in full running order, with the other section built and equipped, will give employment to about 600 men. At the present time, the company are still in the experimental stage, as models, tools, gigs and machinery are not quite ready to commence actual operation.

W. L. McGregor is president; A. G. Day, vice-president;

A. C. Latoski, secretary and general manager. Other directors are Archibald Gibbons and A. G. Allen, while others interested are A. Swanson and E. H. Guse.

Refinery at Moose Jaw

Plant of the Western Oil Company Being Pushed to Completion Rapidly

From a recent issue of the Moose Jaw *News* it is learned that considerable progress has been made with the construction of the new oil refinery of the Western Oil Co. in that city. Foundations are all in for receipt of plant and the large boiler has been set up. Shipments of lubricating stock have been received and will be used in the manufacture of lubricating oil. The office building on Manitoba Street has been practically completed.

Commerce Trucks in Canada

Detroit Industry Decides to Erect Branch Plant in Guelph and Forms Subsidiary

The Commerce Motor Car Company, Detroit, manufacturers of Commerce trucks, have organized a Canadian subsidiary, Commerce Motor Trucks, Limited, who will manufacture Commerce trucks in a plant to be erected in Guelph, Ont. This plant will consist of a production factory, 90 x 300 feet, with one-storey office building, 60 x 50 feet, and according to present indications will be completed and operating by August 1. The same line of trucks as are made in the Detroit plant will be turned out, viz., a one and one and a half-ton model truck. Production for the first year is estimated at from 5,000 to 6,000 units.

The Canadian company is owned by Canadian stockholders and stockholders in the Detroit company. W. E. Parker, president of the parent company, is president; E. M. Baker, general manager and a director of the parent company, is first vice-president and general manager; H. Westoby, president Dominion Food Products Co., and mayor of Guelph, is secretary-treasurer. Other directors include F. E. Partridge, of the Partridge Rubber Co.; John M. Taylor, Taylor-Forbes Co., and J. E. Carter, all of Guelph. George D. Wilcox and Charles L. Granger, who are respectively director of sales and advertising and production manager in the Detroit plant, hold corresponding positions in the Canadian company.

Bridge Company Re-organized

Sarnia Bridge Company, Limited, Now Operating Under a Dominion Charter

The Sarnia Bridge Co., Limited, have recently been incorporated under a Dominion charter with capitalization of $500,000, for the purpose of acquiring the Sarnia Bridge Co., Limited, incorporated in 1908 under an Ontario charter. The officials are president, R. M. Norton; vice-president, H. B. Fenton; secretary-treasurer, H. F. Holland; directors, W. H. Kenny, H. W. Stuart, H. M. Pardee and F. J. Scupholm. Mr. Norton has been connected with the organization for many years and has practically spent his life in the structural steel business, while Mr. Fenton was at one time with the organization, but during the war served with the American Shipping Bureau. The remainder of the directors are local business men.

It is not the immediate intention of the company to enlarge the shop, but plans are being drawn for further development. While the company specialize in structural steel work, they also carry a line of charcoal iron, boiler

tubes and alloy steel. They have a large stock of structural steel of assorted sizes carried for warehouse purposes and have built up an extensive trade in this line within the last three years.

Enlarge Welland Plants

Canada Foundries & Forgings, Limited, Installing New Forging Equipment to Double Output

A programme of expansion is being carried out at the Welland plants of the Canada Foundries & Forgings, Limited, which will largely increase the output of heavy drop forgings, automotive axles and crankshafts especially. The company have at Welland large modern steel buildings, served with overhead electric cranes, which were used for forging shells on a large scale during the war. These buildings will house the new forging equipment, which will consist of a battery of heavy steam drop-hammers and miscellaneous equipment, such as presses, upsetting machinery and furnaces, sufficient to double the output of their Canada Forge plant. These will be in full operation by July 1.

The Guelph Cotton Mills, Limited, have been purchased by the Regent Textiles, Limited, and will be operated as before, spinning cotton and twines.

Locate in Woodstock

The Kennedy Car Liner & Bag Company Will Establish a Canadian Branch Industry

The Kennedy Car Liner & Bag Company, manufacturers of Kennedy car-liners, bags and covers, Shelbyville, Ind., have purchased premises in Woodstock, Ont., on which to locate a branch industry for the manufacture of their product in Canada. The building acquired is 40 x 160 feet, three storeys and basement. They hardly expect to be able to commence operations before June 15 or July 1.

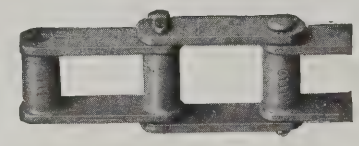
Replacing Their Mill

McGibbon Lumber Co., Limited, Penetanguishene, are Building a New Sawmill

A new mill, 30 x 150 feet, with lath mill wing, 40 x 30 feet and sorting shed, 30 x 125 feet, is being hurried to completion by the McGibbon Lumber Co., Limited, of Penetanguishene, in order to replace the mill destroyed by fire last fall. The mill is on cement foundations, while the foundations for engines and boilers are of cement. A double-cut, 13-inch band saw and band upright resaw, with return feed, are being installed. The motive equipment will consist of three 500-h.p. boilers and an engine of 450 h.p. The mill will be ready on June 1.

Concentrate Toronto Plant

Zimmerman-Reliance, Limited, Acquire Large Building and Consolidate Their Operations



Announcement is made that Zimmerman-Reliance, Limited, manufacturers of underwear, hosiery, sweaters, jerseys, etc., have purchased the building at the corner of King and Bathurst Streets, Toronto, in which they have been renting space. Their purchase will give them about 50,000 square feet of additional floor space, and this will enable them to transfer their spinning plant, at present located at the corner of Niagara and Bathurst Streets, and consolidate their Toronto operations.

Building New Wing

The Kaufman Rubber Co., Limited, to Spend $100,000 on Plant Enlargement

A large addition to the plant of the Kaufman Rubber Company, Limited, is under erection in Kitchener. The new structure covers about 6,000 square feet of space and will

Keeping the Wheels Turning with DAYLO

A LOOSENED connection on the power switchboard, a blown out main fuse on the lighting board or a worn brush on a motor—all mean production delays.

Even in the darkness of a complete electrical breakdown Daylo enables repairs and adjustments to be made instantly. And its brilliant white light guards against the dangers of fumbling among live connections or bus-bars.

Everywhere in the shop, the storerooms and office—Daylo shortens delays, reduces costs and increases production. It points its all-revealing beam to the quickly needed tool; it locates trouble in machines; it finds the right package on the stock shelves—it answers the hurry call for the "first aid" of light in any dark corner.

Your overhead expense for a five minute shut-down will pay ten times the cost of a Daylo that would have reduced the delay to one minute. And Daylo prevents breakdowns by making machine inspections more thorough.

There's a Daylo to solve your difficulties—one of the many different styles of light that point the way to efficiency. All leading electrical, hardware, drug, sporting goods and auto accessory jobbers and dealers stock Daylo. Or write us.

be four storeys and basement, being an extension of the present building. It is expected that the extension will be ready for operation by about December 1. It will be utilized in the manufacture of rubber footwear and will provide space for an additional 100 employees. The investment represented is about $100,0000.

To Erect New Plant

Elliott & Whitehall, Machine and Tool Co., Expect to be Operating by September

The Elliott & Whitehall Machine & Tool Co., who have been granted a loan of $25,000 by the city of Galt, to assist in the erection of a new plant, will proceed with construction at once. The plant will be built on a two-acre lot at the corner of Dundas and Beverly streets, and will be fifty feet wide. They will manufacture their standard line of milling cutters and small tools, also metal stamping dies, jigs and fixtures, and expect to be located in their new plant by September, when they will employ about sixty hands.

Enlarging Tannery

C. Parsons & Son, Limited, Toronto, Are Making Addition to Their Plant at Omemee

C. Parsons & Son, Limited, Toronto, have discontinued the manufacture of harness leather at their tannery in Omemee and are remodelling and enlarging the plant in order to undertake the manufacture of sole leather. The addition to the plant has been commenced and they expect to have it completed in July or August. The capacity of the new plant will be from 300 to 400 sides per day.

New Brick Industry

Whitby Brick and Clay Products Co., Limited, Are Putting Up a Modern Plant

The Whitby Brick and Clay Products Co., Limited, successors to Wm. Gilmore, Whitby, Ont., are erecting a thoroughly modern plant. Seven 30-foot round down-draft kilns will be erected with waste-heat drier and up-to-date machinery. The plant will have a capacity of 30M brick per day or an equivalent tonnage of hollow-ware. The machinery has already been purchased and the lumber and other material for construction is now partly on the plant. They have a very fine raw material, and will be able to put a first-class article on the market.

To Make Sidecars

The Canada Sidecar Manufacturing and Welding Co., Limited, Incorporated at Hamilton

The Canada Sidecar Manufacturing & Welding Co., Limited, have recently been incorporated at Hamilton, with capital of $100,000, to take over and operate the Canada Sidecar & Mfg. Co., and the W. Carter Welding Co., and will engage in the manufacture of motorcycle sidecars, vans, accessories, etc.; also conducting a general oxy-acetylene, electric, thermit, welding and manufacturing plant. At present they are using the original plant, but they contemplate building additional premises in the near future, and are in the market for lathes, drills, power hack saws, electric spot welders, etc. Present production is 500 sidecars per annum, but this is to be increased to 1,000 sidecars, in addition to their line of motorcycle delivery vans, accessories, etc. Wm. Carter is president; Wilfred Carter, secretary and treasurer; Wm. Boston, advertising manager, and Arthur Paterson and Wm. H. Fowler, directors.

The Canadian Appraisal Company
Limited

FULL consideration must be given to the present conditions of high costs if adequate insurance is to be provided, an adverse operation of the Co-insurance Clause is to be avoided, and a satisfactory adjustment is to be assured in the event of fire.

Buildings erected only a few years ago may very possibly be worth double their original cost to-day. *This increased value is insurable and must be insured.* A bitter experience awaits the manufacturer who has not considered the necessity and who may have to rebuild after a fire.

To guess at values when insuring is obviously bad business. A leading Insurance Company states: "It is a fact that 85 per cent. of manufacturers do not carry enough fire insurance as compared with their present valuations."

An Appraisal made on the basis of to-day's costs of labour and material is the only sound foundation for correct methods of insurance.

Grinnells would have saved it

NEARLY every big fire had a small beginning. Chicago was burned because an old woman's cow took a notion to kick.

One Grinnell Automatic Sprinkler would have saved Chicago. One Grinnell Sprinkler may some day save your plant from total destruction.

Of course you feel you have already all the fire protection you need but---your insurance rate will tell you the danger of fire is two to five times what other men will tolerate.

Go to your insurance man. Tell him you are thinking of installing a Grinnell Automatic Sprinkler System. Ask him what it will save you in premiums. Then figure out how long it will be before the Grinnell System has paid for itself.

No fire appliance that depends on human agency can possibly compare with the ever-watchful Grinnell silent sentinel.

Day or night, Sunday and holidays, it waits for the first sign of fire. Then, "click." The fire is over almost before it has begun because *when the fire starts the water starts*---and on even terms water always wins.

Important

Heretofore the underwriters have often required a tank supply for automatic sprinklers in addition to the city mains. Now, however, Grinnell Sprinkler equipments can often be installed without a tank.

Don't theorize. Get the facts. Write to us for full information about *your* business.

Improve Canadian Plants

The Carborundum Company to Extend Capacity at Niagara Falls and Shawinigan Falls

The Carborundum Company, who have been greatly extending their paper and cloth plant at Niagara Falls, N.Y., have plans for enlarging their two Canadian plants at Niagara Falls, Ont., and Shawinigan Falls, P.Q. At the former, additions to the crushing department, and other improvements will be made, which will increase the output of abrasive aloxite, and at the latter the carborundum furnace plant will be extended. At Niagara Falls, N.Y., at least fourteen different departments will be enlarged, an addition 81 x 432 feet having been erected.

Re-open Canadian Plant

The Draper Manufacturing Co., Port Huron, Will Again Operate Their Plant at Petrolia

The Draper Manufacturing Co., Port Huron, announce that they are re-opening and extending their plant at Petrolia which was closed down some time ago. The company manufacture valve facing tools, ball check valves, ball globe valves, balanced brass balls, perfect iron and steel balls, perfect brass balls, etc. Their business will be principally with the railways and paper mills and with other users of brass balls. They expect to be in running order within the next two months and will do export business from the Canadian plant.

Enamelled Wire Plant

Eugene F. Phillips, Electrical Works, Limited, the Pioneers in New Line of Industry

The Eugene F. Phillips Electrical Works, Limited, Montreal, confirm the report that they are installing an enamelling wire plant in connection with their industry. This material is not at present manufactured in Canada, and has to be imported from the United States. They expect to be producing by the end of June, and will have a capacity of from 300,000 to 400,000 lbs. per annum. The plant that is being installed will be capable of turning out enamelled copper wire of any of the regular gauges, both coarse and fine, and the company will be in a position to supply this material either as plain enamel or insulated with cotton or silk, as may be required.

New Furniture Company

Malcolm & Hill, Limited, Formed to Take Over the Business of D. Hibner Furniture Co.

Malcolm & Hill, Limited, is the name of a new company incorporated for the purpose of taking over the business of the D. Hibner Furniture Co., Kitchener. The principals are James Malcolm, of the Andrew Malcolm Furniture Co., Limited, Kincardine, and Edwin A. Hill, president of the Toronto Plate Glass Co. It is the intention of the new company to operate a highly specialized chamber furniture plant at Kitchener, making exclusive designs. A new feature will be the use exclusively of Canadian birch lumber, with mahogany and walnut veneer panels in three colors, viz., mahogany, walnut and enamel.

Malcolm & Hill, Limited, have secured the services of Stanley H. Stirrup, the famous English designer, who has severed his connection with Berkey & Gay and the Luce Furniture Co., Grand Rapids, and who will in future make his home in Canada, designing lines for the Andrew Malcolm Furniture Co., Limited, and Malcolm & Hill, Limited.

The factory will be superintended by Henry Maxwell, formerly with Berkey & Gay, one of the best known furni-

ture superintendents on the continent. The finishing department will be in charge of Fred Hanson, formerly with the Grand Rapids Chair Co. The president of the company is E. A. Hill, the vice-president and managing director, James Malcolm, and the secretary-treasurer, J. H. Kennedy, who was formerly in the banking business, but more recently with the Knight Metal Products Co. of Toronto and Detroit. The capital is $500,000, fully paid up.

Enlarging Their Plants

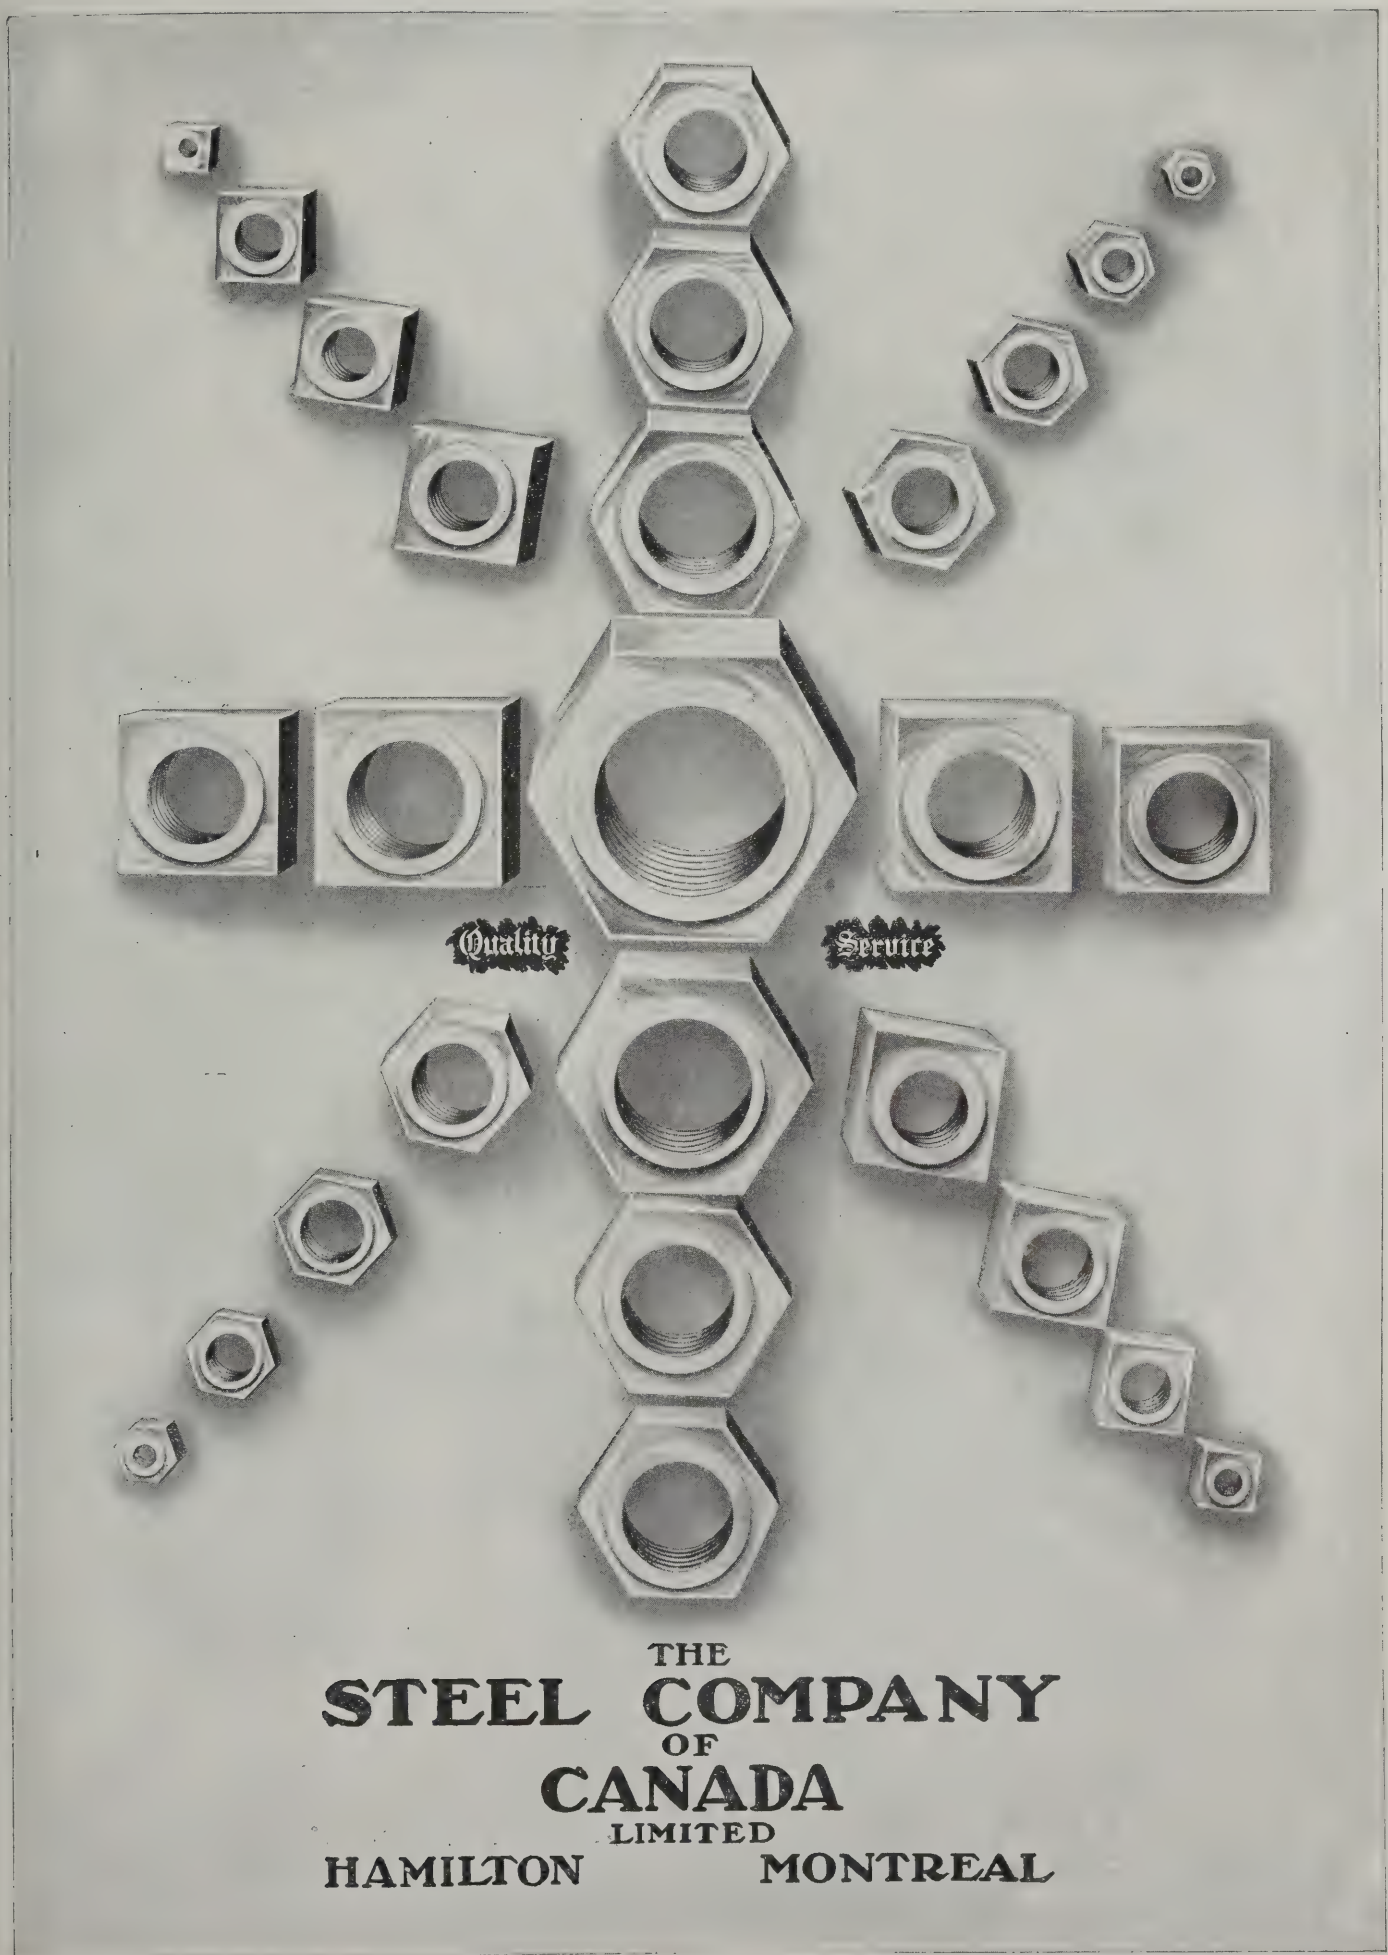
Beatty Bros., Limited, Fergus, Increase Capital and Add to Their Capacity

Beatty Bros., Limited, Fergus, who are manufacturers of barn and stable equipment, pumps, churns, washers, ladders, etc., have recently increased their capital from $750,000 to $2,000,000, in order to provide additional capital to take care of increased business. Not only has home trade been largely increased since the end of the war, but they have been doing considerable foreign trade as well. They are selling a certain amount of new stock, and will invest this year about $150,000 in additions to buildings, plant and machinery. They are adding some 70,000 square feet of floor space to the Fergus plants, and making certain changes and improvements to the London factories.

Bakery for Ottawa

Standard Bread Company Purpose to Erect Modern Plant in Heart of City

The Standard Bread Company, Ottawa, have purchased a large site of 60,000 square feet in the heart of the city, and purpose erecting one of the most modern and efficient plants in the Dominion. Its estimated cost is $200,000, and it will include a Joseph Baker gas-fired travelling oven, the latest wonder in the baking industry. The Standard Bread Co. have only been in business five years. The owners are G. Cecil Morrison and Richard Lamothe, both young men under thirty years of age. The company have enjoyed phenomenal success, due mainly to the determination of the owners to put out a high-class loaf of bread and give good service. Providing labor conditions are satisfactory, ground for the new plant will be broken about July 1st, and the plant will be completed early in 1921.



Locate at Peterboro

The Raybestos Company, Bridgeport, Conn., Are Establishing a Canadian Plant

The Raybestos Co., Bridgeport, Conn., who make brake linings, clutch facings, automobile brakes and specialties for Ford cars have purchased the factory in Peterboro, formerly occupied by the Lundy Shovel & Tool Co., and will make use of it for the manufacture in Canada of their standard Raybestos products. The factory has a floor space of 20,000 square feet, single storey, and has service by both G.T.R. and C.P.R.

At the present time there is no manufacturer of asbestos brake lining in Canada, although 80 per cent. of the world's supply of asbestos is mined in the Dominion. As business develops, with the increasing manufacture and use of cars in Canada, the company will construct new buildings. There have been delays in getting machinery and parts, but they hope to get started by the middle of summer.

The company are originators of asbestos friction lining for automobile brakes and clutch discs, their lining being distinguished by a silver edge and trade-mark "Raybestos" stamped in silver on every foot. It is a nationally advertised product and is distributed in all parts of the world where

any automobiles, trucks or tractors are in use. Up to the present time the product has been distributed in Canada through the medium of automobile accessory jobbers, but this business has been more or less limited, due to the tariff and rate of exchange.

It is the intention of the Amerlin Company to build a large addition to their present factory building at Petrolia, but details as to size, etc., have not yet been worked out.

The Canadian Fairbanks-Morse Company, Limited, are erecting a building on Pitt Street East, Windsor, which will be used for sales office and warehouse. The building will be two storeys, 50 x 90, with iron warehouse to the rear.

The National Shipbuilding Co., Limited, Goderich, intend installing a mill for the refining of fibre and seed from the flax crops in the vicinity. Details of the project are not yet available.

The Brompton Pulp & Paper Company, Limited, will start at once on the construction of a new groundwood pulp mill at East Angus, Que., which they expect will produce about 20,000 tons per annum.

The Canada Wire & Cable Co., Limited, whose factories are at Leaside, decided some time ago to establish an enameled copper wire department in connection with their industry and expect to have the same in operation by June.

The new factory addition of the Guelph Worsted Spinning Mills, Guelph, was formally opened on the evening of April 13, when a banquet and dance, attended by over 400 people, was given by the management.

The Saskatchewan Co-operative Elevator Co. have purchased twenty acres of land immediately south of the Forsythe Elevator at Portage la Prairie with a view to erecting a large elevator and flour mill on the property. The construction plans call for reinforced concrete elevator of thirty-six tanks. It is expected work will be commenced this season.

Fulton Motors Corporation, New York City, are arranging for the manufacture of the 1½-ton Fulton truck in Canada, but, according to information received from Garvin Denby, president and general manager, do not contemplate the building of a plant. The manufacture and distribution of the car will be undertaken by the Denby Motor Truck Co. of Canada, Chatham.

Sydney Basic Slag

The Cross Fertilizer Company, Limited, Sydney, N.S., issue a folder giving reasons why their product should be bought in preference to acid phosphate. Apart from the results of experiments, which are attested by a number of government officials and departments, an economic argument is advanced. It is contended that the bulk of acid phosphate used in Canada is imported from the United States, or, when manufactured in Canada, is made from imported rock phosphate. By buying the all-Canadian product the purchaser is helping to restore the value of the Canadian dollar.

CHARACTER

Character has always inspired respect. It always will. Men come and go; those of character are remembered and loved, others are forgotten. Character creates friends. It inspires confidence. It elevates those of whom it becomes a part.

Character preaches the Gospel of Christianity amongst men. It possesses a dynamic power to influence humanity. It denotes strength, integrity and the desire to serve others.

An organization of character is not a vision. It is immensely practical. Each member, skilled or unskilled, feels its uplifting influence. Their policies and actions are guided into safe and sure channels—channels of service, the practice of good will and the satisfaction of all reasonable requests.

McCLARY'S are such an organization. They commenced to build character 73 years ago. Big minded, practical executives saw the value of character in the minds of intelligent buyers. They have carried through by force of example this original plan. To-day, to all men who desire to associate themselves with such a dependable organization, McCLARY'S invite their co-operation in the displaying and selling of their famous quality products.

New Pension Plan

Northern Electric Co., Limited, Introduce Generous Scheme of Pensions and Benefits

The latest company to introduce a pension and benefit scheme is the Northern Electric Co., Limited, Montreal. This company have established a fund for the purpose, the whole cost of operating the scheme being borne by the company. A committee consisting of the general superintendent, secretary, general sales manager, chief engineer and chief accountant has been appointed to administer the fund and to decide all questions relating to the plan.

The plan embraces pensions for retired or disabled employees, accident disability benefits, sickness disability benefits and death benefits and the whole has been worked out on a generous scale. Ample provision has been made for those employees who left the employ of the company for military service, as is shown in the following paragraph taken from the plan:—

"Military Service, 1914-1919: All former employees who left the employ of the company for military service, and who returned to our employ previous to January 1st, 1920, shall receive credit for the total period of their military service when calculating their 'term of employment.'"

Good Power Possibilities

Massey Board of Trade Anxious to see Neighboring Rivers Developed

The association is in receipt of a communication from the secretary of the Board of Trade of Massey, Ont., directing the attention of manufacturers to power prospects in the neighborhood of that town. Massey is situated at the junction of the Spanish and Sauble Rivers, on the C.P.R. Soo Line, about fifty-eight miles west of Sudbury. The Sauble River forms the east boundary of the town, and while it is classed as a small river, is capable of providing considerable electric power when developed. The water powers are located at from one-half to sixteen miles from Massey, the natural fall of the river being such that many units could be developed in the distance named without excessive cost. There are other powers at a greater distance up the river and a large reserve of water could be maintained. A gravel auto-truck road extends for twenty miles up the river, built and in use by the lumbermen. The Spanish River is capable of navigation from Massey to the Georgian Bay by vessels of seven or eight feet draft, which could be increased to ten or twelve feet by dredging the sand bar at the mouth of the river.

Grain Growers Sell Bonds

United Grain Growers Dispose of Large Issue to the Sun Life Assurance Co.

The Montreal *Journal of Commerce*, in its issue of April 6, prints the following item regarding a sale of bonds by the United Grain Growers to the Sun Life Assurance Company of Canada:

"A financial transaction of national importance, but of especial interest to the farmers and grain growers of the West, has just been completed between the United Grain Growers and the Sun Life Assurance Co. of Canada, according to an announcement obtained by this newspaper from Mr. E. A. Macnutt, treasurer of the Sun Life.

"The remarkable growth of the vast amount of good accomplished by the United Grain Growers in their measure of co-operation in the marketing of grain, etc., for the farming community of Western Canada are well known.

C. H. JOHNSON & SONS, LIMITED

Wire Works: St. Henry, Montreal

The board of directors of the United Growers intend to branch out on a still larger scale and has just authorized an issue of two million dollars of six per cent. first mortgage twenty year gold bonds.

"Three-quarters of a million of this issue has just been purchased by the Sun Life of Canada, and the remainder of the issue, when needed by the Grain Growers, will be offered to the Sun Life.

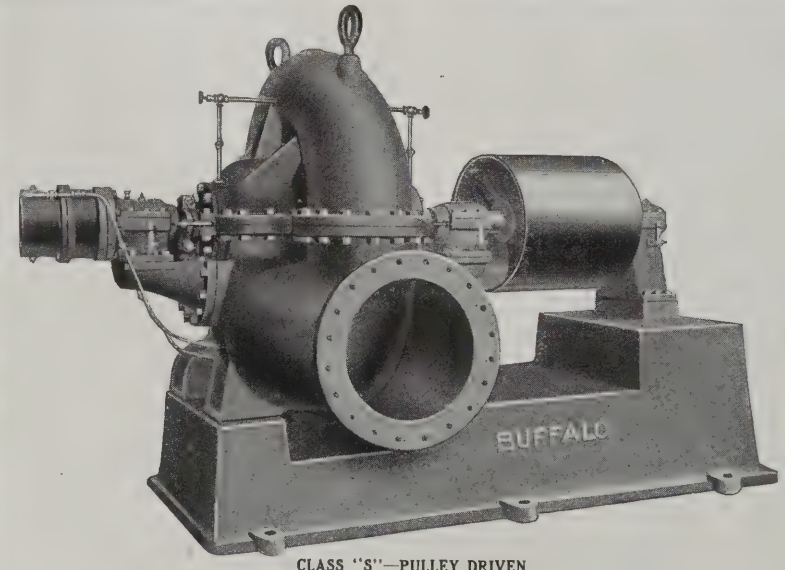
"This is an instance of a Canadian Life Company which draws its resources in the way of premiums from the public, directly assisting a co-operative enterprise of a very important section of the people.

"The bonds are secured on the elevators and real estate of the Grain Growers spread over the provinces of Alberta, Saskatchewan and Manitoba, and the company is composed of more than 30,000 shareholders who reside in these western provinces and are farmers and grain growers.

"The head office of the Grain Growers is in Winnipeg and the officers are: President, Hon. T. A. Crerar; first vice-president, C. Rice Jones; second vice-president, J. Kennedy; secretary, J. A. Hand; treasurer, F. N. Black."

Engineers Visit Plant

Ontario Section, A.S.M.E., Guests of Canadian Fairbanks-Morse Company, Limited, Toronto



The Ontario Section of the American Society of Mechanical Engineers held one of the best meetings of the season on Thursday, April 8th, when they were the guests of the Canadian Fairbanks-Morse Company, Limited, at their Bloor Street West plant, Toronto. The programme began at 4 o'clock with a trip through the manufacturing department of the Fairbanks plant. At 6 o'clock the company entertained the entire party at dinner in the new club room on the top floor of the main building. These club rooms with the cafeteria on the floor below are a part of the general welfare scheme of the company, and are just now open. At 8 o'clock the meeting was called to order to listen to a paper by Mr. B. P. Graves, designer of milling machines for the Brown & Sharpe Manufacturing Company, Providence, R.I. His subject was "Milling Machine Design," and he spoke of this subject with the authority and naturalness of one who has grown up with it. The lecture was illustrated with lantern slides, and was followed by a very interesting discussion which became at times quite of a detail nature. In the absence of Professor Angus, the chairman, Mr. Watkins, of the Fairbanks Company, was both presiding officer and host.

Monarch Knitting

Company Maintains Its Net Profits and Builds Up a Substantial Reserve

The Monarch Knitting Company, Limited, in the thirteen-month period ended December 31, 1919, earned net profits of $386,686, as compared with net profits of $351,654 in the preceding twelve months. After the payment of $133,375 in dividends, $253,311 was added to the balance at credit of profit and loss, bringing this up to $925,217. Assets show an increase from $3,371,313 to $3,469.405.

The report states that the popular demand for the company's goods continues. An addition to the hosiery plant at St. Catharines is being built. Nearly 1,500 employees are engaged in turning out the various lines of "Monarch Knit" products. A dividend of 4 per cent. and bonus of 2 per cent. was paid on the common stock. It is hoped that with the continuation of good business conditions and reasonable tariff regulations, this dividend will be maintained.

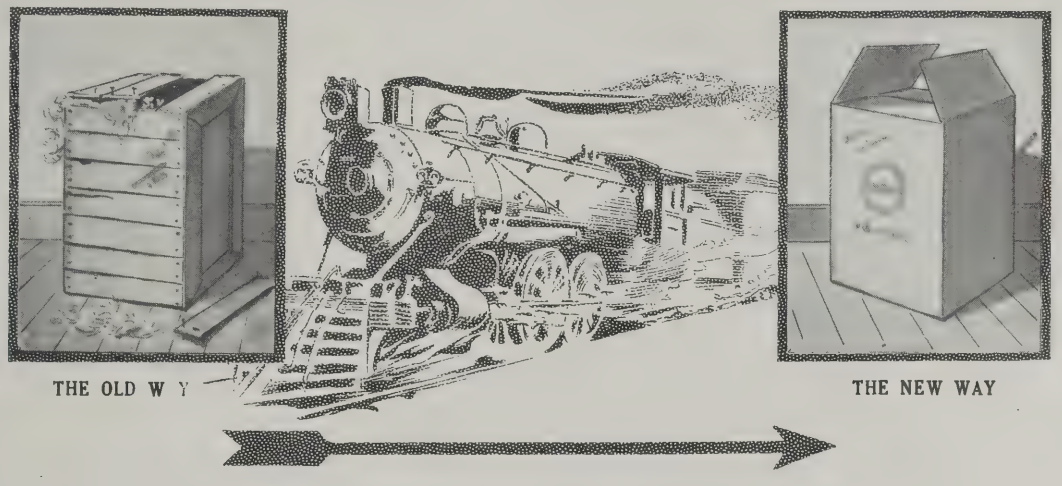
The Closing Down of a Great Factory

(From the "London Standard")

THE employees of Brinsmeads, the famous pianoforte factory, which, it appears, is to close down through growing expenses and dwindling output, state that they are "completely taken by surprise," though apparently there has been a good deal of conference between masters and men on the way things have been going—or, rather, not going. In view of this disadvantage, no definite statement is made from the men's side, but it is declared they they "have nothing to fear from full inquiry."

The main point about any inquest, however, is the body. The coroner may be pleasant to everybody concerned, the jury may be highly sympathetic, the police constable may be congratulated on the way he gave his evidence; but, after all, the corpse remains a corpse, and will pay no further dividends as a going concern. Brinsmeads' workmen may be able to lay their hands on their hearts and say they did everything to avoid trouble. But the cold fact remains that the directors have found that, despite exaggerated prices charged to the public, they are unable to produce at a profit. It took six employees just before the war to turn out a piano a week; it now takes 26; in America, one of the directors states, the same output is attained with only two men.

Trade Going Out of Business.



It seems that "baby grands," which before the war were sold to the public for £84, are now being sold (at a loss) for £220; the cost of polishing alone is about equal to the pre-war prime cost of the completed materials. In such circumstances it is not wonderful to learn that a formerly large overseas trade is "diverted to other countries where production is cheaper and more certain." Yet, say the men, the firm paid no more than any other piano manufacturers; they got the trade union wage and no more. The inference seems to be simple, though not quite what the trade unions would have the public make. It is that the British piano trade generally is likely to go out of business.

Now, Brinsmeads' is a pocket edition of what is going on everywhere. Increased wages would not matter if they were accompanied by an equivalent in increased efficiency. But the tendency everywhere is towards increased wages, reduced hours, and reduced energy during those hours. With this triple leakage, production sags, prices to the public are forced to an extravagant level, and finally even at that level profitable business is impossible.

We simply cannot go on that way. The greater part of the goods produced in this country, apart from a few staple trades, are articles of luxury, and there is a limit to what the country (and the world in its present state) will pay for non-essentials. For some time longer, no doubt, labor will be able to compel in certain great industries, such as those which provide us with coal, clothing and other vital wants, wages in excess of the economic level. But this can only be done at the expense of other trades, and as the working expenses of those trades go beyond reason we may expect many stoppages like that of Brinsmeads'.

The moral for labor is surely obvious enough. Brinsmeads can shut down and get out without ruin. Brinsmeads men cannot shut down without ruin. For the moment they may get good employment elsewhere. But what has happened with Brinsmeads is bound to happen on a large scale unless

things alter, and sooner or later labor will discover to its cost the grim truth embedded in the old fable of the goose that laid eggs of gold.

Manager's Statement

Mr. Henry Billinghurst, managing director of John Brinsmead & Sons, and a grandson of the firm, issued the following statement:

"Yesterday I had one of the hardest tasks of my life. I had to write and cable to my agents throughout the world cancelling valuable contracts because the firm of John Brinsmead & Sons is no longer able to carry them out. The firm has been compelled to give up the making of pianos, a business in which it has specialized for nearly a century.

"The task was a heart-breaking one. Before the war, when we in the firm represented a big, happy family, the possibility of such an event as this would have been laughed to scorn. And even now, when all my employees are under notice, the thing seems strange and unreal. I find myself wondering why, in the twentieth century, when we are supposed to be so enlightened, a world-renowned business should have to be destroyed.

"Yet, there are the facts. We have to give up piano-making at a time when there is an unprecedented demand for our instruments.

"I do not exaggerate when I say that such an event as this is of national importance. It means that industrial methods have been pursued to such extraordinary lengths that both master and men are driven out of the field.

"My honest opinion is that unless conditions change many other firms will be compelled to close down just as we have done. Against such an evil as under-production the business man of to-day is helpless. It inevitably forces men into unemployment and the master into giving up business.

"We have had to decide to close down at a moment when we are overwhelmed with orders. The firm has enough work in hand to keep its big works employed at full speed for two years. It is four and a half years since I had a traveller out. Orders are simply tumbling in without any solicitation. Everybody seems to want one of our pianos.

Will Not Produce Fast Enough

"And at such a prosperous time as this we are compelled to close down, just because the workers will not make pianos at a rate fast enough to enable us to sell at a profit. The output per man is so small in comparison with what it used to be that we lose money on every instrument we turn out.

"If the workers would only increase their output the whole trouble would be solved. Under-production to-day is the curse of industry, and under-production is practised because trade unionists have always had before them the fear of unemployment. To-day, however, there is no danger whatever of unemployment. We are inundated with orders, and there is ample work for a long time to come.

"The present methods of workers are killing the goose that lays the wonderful golden eggs, and what is true of the piano trade is just as true of other businesses. If output were increased there would be no further need to worry about the value of the British pound in America; that problem would right itself at once.

"The whole world is crying for British manufactured stuff, and the workers are denying that demand by producing less per man than ever. We should be exporting as hard as we can, but instead the whole system seems to be to kill exports and to force the home buyer into paying exorbitant prices.

"Why is America to-day the richest country in the world? Because during the war she exported, exported all the time.

She is the great creditor nation. If England were to do the same she would right her position at once and become a great creditor nation. That is the bottom of everything.

"Instead of doing so, however, the workers are restricting their output, and the consequences are all too evident. I have no objection at all to high wages, but the only thing that makes them possible is adequate output on the part of the recipients. Without that output, the wages cannot be paid, except by means of a price for the manufactured article that prohibits us from competing in the open market.

"How is it that America has done so well in what was once our overseas market? For two years she was out of the war while we were sending our best men to fight or to manufacture munitions. That gave her a great opportunity, but other factors count now. The Americans receive high wages, but in return they produce the utmost possible work.

"As a result the output in many American factories is one piano for every two men. Our experience is one piano for every 26 men. How can we compete on such terms?

"We have to meet Japan, too, with its cheap products that are the result of low wages, and Holland, which has become particularly enterprising.

"The competition of Germany must not be overlooked. Germany is manufacturing pianos as fast as she can. She has made up her mind to re-establish this wonderful industry of hers. So far the competition is not keen, but there is not the slightest question that it will come. In this connection the low value of the mark outside Germany will operate very seriously against us.

"Increased production is our only remedy for existing troubles, and if the workers do not realize it we shall go from bad to worse. In return for it the employer will not cavil at high wages, for he will then be able to pay them without losing.

"I am not against trade unionism, for I know how much good it can do. What I regard as a very real danger, however, is trade unionism badly applied, as it certainly has been in the works of John Brinsmead & Sons.

"I think that the circumstances which have compelled us to close down constitute a great warning to the workers of the country.

"It does not mean that the firm is approaching liquidation. There is no question of that. We still have our assets, but we have decided to keep them instead of frittering them away in piano making. We are leaving that now, and we shall never return to it under the unprofitable conditions that exist to-day. Our efforts will be in other directions.

"We have to sacrifice a great business that is world known, but there is no alternative. Decreased output has killed it."

A Maritime Chair Plant*

Description of the Industry at Bass River, N.S., which, Despite Handicaps of Distance from the Railways, is Successful

By GLADYS M. LEWIS
Dalhousie University, Halifax, N.S.

The only chair-manufacturing plant in the Maritime Provinces is situated in the little village of Bass River, Colchester County, Nova Scotia. Bass River is a very pretty place, flanked on one side by the Cobequid Bay, and on the other by the Cobequid Mountains, with their beautiful forests and their lakes teeming with trout; while winding through the middle of the village is the little river to which it owes its name. The fact that Londonderry, the nearest railway station, is fourteen miles distant makes the truckage problem a serious one, especially in winter, but the business has been worked up until it is quite a paying one.

The Dominion Chair Company, as it is called, started operations in 1860. At first they manufactured other furniture as well, but of late years they have specialized in chairs only. Four times the factory has been rebuilt and enlarged each time, until now the company employs about seventy-five men (not including the men who work in the woods), and the factory is fairly well equipped with modern machinery. Of course it cannot be compared in size and machinery with the large chair factories in Ontario, but considering the distance which the chairs have to be trucked before they can be put on the cars, and the foreign markets to which they are shipped, the Dominion Chair plant is quite remarkable.

The stock used is hardwood lumber, birch, beech and maple, secured from the mountain forests. The curly or bird's-eye maple is very pretty, but on account of its tendency to have an unsound or dark-colored core, it is not as good lumber as birch, which is good, clean wood throughout. Moreover it (birch) is very tough in texture and capable of bearing shocks. Beech, although not remarkable for either strength or durability, is considered more practical for turned stock such as rungs, posts, etc., as it works better in green condition. When beech cannot be obtained in sufficient quantities, maple or birch is used. Hardwood grows on drier and higher ground than spruce or fir, and when the land contains about seventy-five or eighty trees per acre, it is considered well wooded. The Dominion Chair Company get most of their lumber from their own land. They do not cut trees that measure less than twelve inches in diameter at the base. Smaller logs can be utilized in the factory, but it would be a mistake to cut their own timber too closely.

Before the war, Dominion chairs were in every continent, but the principal foreign markets were the West Indies, South Africa, Australia, South America and Ireland. The embargoes imposed during the war changed matters, and at present the chairs go mostly to Newfoundland, the West Indies and Canadian markets. The number of chairs manufactured in this factory per year runs from eighty thousand to one hundred thousand.

There are numerous different styles of chairs manufactured in this factory, and some are treated differently, but all go through the same general process. Besides the plain wooden chairs, they make chairs with cane seats, leather

seats and veneer or perforated seats. The material for these is imported from the New England States. The veneer seats are made in Canada, but the Company found they could import them to better advantage. At one time they used a considerable number of these, but have not found them satisfactory these last few years. They are made of three thicknesses, and the air gets in through the perforations, causing them to crack and go to pieces. The cane used to be imported in large bundles. The framework for the seat was made in the factory, in four pieces, and put together with wooden pins, since this way was found more solid than with glue. Then they were sent out for the people around the country to weave the cane into them. In late years, however, as country people have become more prosperous, it is impossible to get enough workers to supply the demand, so they buy the cane already woven in webs the right width and from one hundred to two hundred yards in length. This is put in in the factory. The seats made in this way are, as one would expect, not nearly as good as those in which the cane is woven by hand.

Until this last summer, the chairs were trucked all the way to Londonderry station, about fourteen miles, with horses, two teams making a trip each per day. This was very laborious work, especially in the spring and fall, when the roads are very bad. This summer, however, they have been using an auto truck, which easily makes three trips a day. Of course this truck can be used only during six or seven months of the year, when the roads are good. The rest of the year they will have to go back to the horses. They are the only solution of the problem until the Government carries out its promise (first made about twenty years ago and renewed before every election time since) of building a railroad along the shore from Truro to Parrsboro'.

Whether this promise will ever be fulfilled or not remains to be seen, but it certainly would be a great thing for the Dominion Chair Company if it should be. They would be better able to meet competition, as they could put their chairs on the market much cheaper than they can at present.

Honor for Amherst

Piano Manufactured in Nova Scotia Town Becomes a Royal Present in England

Canadian industry in general and the Amherst Pianos, Limited, Amherst, N.S., in particular, have been honored by the selection on the part of Queen Alexandra, of an Amherst piano as a birthday gift to the Princess Royal. The Princess Royal and party personally visited the piano warerooms in London recently opened by the company and made her own selection. The piano is now in her private reception room, where she receives her personal friends. She has christened the particular style of piano she selected the "Princess Royal" and has authorized the company to use her name in recommending the piano, creating them manufacturers "By Royal Appointment."

To mark the achievement, the Board of Trade of Amherst recently tendered a tribute to the management and craftsmen of Amherst Pianos, Limited, this taking the form of a public meeting at which a congratulatory address and presentation was made to the workmen. The address emphasized the way in which Amherst products were attaining a world-wide distribution and reputation and complimented the men on the skill, ambition and patriotism that they had evinced in their work. Each employee was given a neatly-engraved card and a five-dollar gold piece.

What the War Trade Board Accomplished*

By J. H. WILKIE
Secretary of the Board

NOW that the time has come for the dissolution of the War Trade Board of Canada, the winding-up of its affairs discloses the fact that in supervising, controlling and aiding Canadian industrial effort from the time of its appointment in February, 1918, the Board was able to do service of international importance and magnitude at a profit to the country. The Dominion Government advanced $150,000 to the Board to enable it to carry on, but its balance sheet shows the expenditures for all purposes to have been little more than $144,000, and its receipts to be more than $260,000. Already the Board has paid back to the Dominion Government $220,000, and the remaining $40,000 will go back soon.

The Canadian War Trade Board was born of a crisis. Until the United States entered the war Canada had been able to obtain raw materials and half-finished products necessary in the munitions industry without difficulty from her southern neighbor. Afterwards the situation changed by reason of the fact that the United States immediately began to conserve every raw material and product which could be used in the war. To present her case effectively, Canada had to organize on national lines. The two countries were interdependent, American industries needing nickel matte, asbestos, pulp and power from Canada, and Canadian, requiring pig-iron, iron ore, steel sheets, coal, cotton, etc., from the United States. By both countries appointing a War Trade Board composed of outstanding business men in both countries, and by means of a Canadian War Mission established in Washington, the two countries were able to present one industrial front to the enemy and still preserve the national interests intact.

Drastic elimination of non-essentials had to be the first order of the day, so that the railroads of the continent and the shipping of the world would be able to devote all their power and space to carrying necessaries and to keeping the Allied war effort up to one hundred per cent. The Canadian Board had to see that no company imported any material when stocks in Canada could be utilized for its needs. This was not only to fulfil its obligations to the United States War Trade Board, but to keep down imports to the lowest possible figure so that Canada's trade balance with respect to the United States should be as little adverse as possible. For the same reason a number of imports were placed on the restricted list.

Every day from all over Canada there came anxious men and constant streams of letters and telegrams informing the Board as to stocks of raw materials on hand, and explaining the needs. The War Trade Board's duty was to see that the materials were forthcoming, if possible, and to take whatever measures were necessary to secure essential raw materials, whether from Canada or the United States or elsewhere. In following out its duties it had to purchase and distribute tin plate in Canada; it had to negotiate for the re-opening of dormant blast furnaces and the construction of new under-

takings for the production of pig-iron in Canada as well as getting the huge supplies required from the United States. It had to control the sale, purchase and use of platinum. It had to finance the purchase and allotment through the Wool Commission of 46,208 bales of Australian wool weighing 15,573,542 pounds and valued at ten and a half million dollars as well as five and a half million dollars worth of tops and noils from the United Kingdom. It was given power to pay bounties on the production of linen yarns in Canada. It was given control of production and distribution of iron and steel and their products in Canada, and it was empowered to take over and carry on the management of chrome ore producing properties for a period of five years. Besides this, the Board had to be a clearing-house for industrial information to manufacturers, and it had to carry on its duties by means of constant communication with the various industries, either individually or through such bodies as the Imperial Munitions Board, the Canadian Wool Commission, the War Purchasing Commission, the Canadian Tanners' Council, the Canadian Pulp and Paper Association, and the Canadian Wool Growers' Association. But for the existence of such a body, there were many raw materials and products which Canadians could not have secured at all as the British, United States and Australian Governments would not have permitted their shipment but for assurances as to the use to which they would be put or of a substantial cash advance. The shortage of shipping made it necessary in some cases to secure a vessel to go to South America or some other country to get materials urgently needed in Canada, and only a Government body could have induced the Admiralty to permit it.

The securing of steel plates for Canadian shipbuilding industries was one of the Board's most arduous and continuous tasks. Profiteering in steel plate and boiler tube stocks was sternly checked in the cases where complaints were well founded. Canadian steel companies were induced to make all the car plates necessary for the Government's car programme. The pyrites exports were increased to meet the needs of the sulphuric acid makers in the United States. Nitro-glycerine was conserved by restricting the content in commercial explosives. The commandeering powers of the Board were not often exercised, the possession of the powers being amply sufficient to obtain the ends for which it was created without going to the limit of its authority. Most of the money made by the Board was in connection with its wool purchases. The money obtained for the tops and noils from the United Kingdom it sent to the British Treasury.

At the time of its appointment, the War Trade Board consisted of the chairman, Sir George E. Foster, Minister of Trade and Commerce—though he was replaced during a long vacation and when absent in Europe by the Hon. A. K. Maclean, the vice-chairman—Mr. F. P. Jones, and the following members. Mr. C. B. McNaught, Toronto; Mr. J. W. McConnell, Montreal; Mr. J. H. Gundy and Mr. Joseph Gibbons, Toronto; Sir Hormisdas Laporte, Montreal; and Mr. C. A. Magrath, Fuel Controller, Ottawa. The secretary was Mr. Wm. K. Trower, and the assistant secretary, Mr. J. H. Wilkie. There was no change in the membership, though Mr. Wilkie later became secretary. With the signing of the armistice on November 11, it was no longer necessary to control exports except to enemy countries, Northern European neutrals and to parties on the statutory black list. On January 20, 1919, all restrictions were removed, but on March 1st they were reimposed as far as neutral countries were concerned in order to coordinate Canadian export policy with that of Great Britain and the United States. With the proclamation of peace imminent the Board will be laid away in an honored grave, while its personnel is relieved to go back to business interests neglected at the country's call

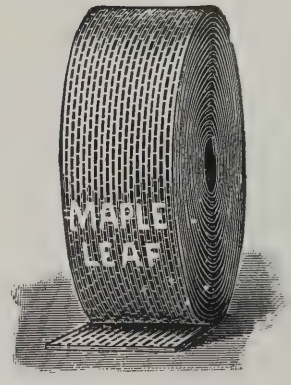
Trade With British Guiana

Canada Ranks Next to Great Britain and the United States in the Volume of Business Done with British Guiana—Exports to this Country are on the Increase

From an Official Report

The following is an extract from an official report issued on the trade of British Guiana. While it is true that the imports from Canada show a small increase, the fact that Canada is also one of British Guiana's best customers, that she is British, that preferential rates of duty are offered on some lines of Canadian goods, that branches of Canadian banks are established there, and that there is direct steamship communication between the two countries should make that market capable of much fuller development than has yet taken place.

The Commercial Intelligence Department of the Canadian Manufacturers' Association will gladly give further information on the classes and kinds and values of goods imported into British Guiana.



ALTHOUGH there was a considerable decline in the exports of British Guiana in 1918 as compared with 1917, general commercial conditions were good and merchants experienced a highly satisfactory year. Prices of exports continued high, easily offsetting the loss in production and making money fairly plentiful among the inhabitants of the colony, enabling them to purchase more extensively as indicated by an increase of $2,344,809, or 16 per cent., in the imports for the year. The prosperity of local industries during the war has resulted in a freer circulation of money among the various classes, and although the price of many commodities and the cost of necessities of life have risen enormously in recent years, yet there has been a surplus of money which has been spent to a great extent in apparel of all kinds and articles of luxury, such as motor cars and jewelry. This spending tendency would have developed further but for the fact that during a considerable portion of the year, owing to lack of tonnage accommodations, non-essential articles, such as carriages, wagons, motor cars, motor cycles, musical instruments, furniture, travelling bags, trunks and valises, baskets, chinaware, earthenware and pottery, glassware of all kinds, perfumery, plate, plated ware, and toys were not allowed to be imported.

Trade with the United States continued to increase, the imports from that country in 1918 being nearly equal to the total imports of the colony in 1913. Up to 1917 England held the lead in imports, but for the past two years it has been unable to supply the usual quantities, so that now the goods received from the United States amount to nearly double those from England. Many new lines of American goods have been introduced, their merits have become well established, and it is believed that a considerable portion of this gain in trade will be permanent.

Financing Trade

Little or no difficulty has been experienced in financing trade, although exchange has been above normal and the cost of remitting has been from 1½ to 3 per cent., unless merchants had balances in New York. There were no failures of consequence and merchants have been able to meet their obligations promptly.

The next table shows the extent to which each country participated in the foreign commerce of British Guiana during 1917 and 1918:

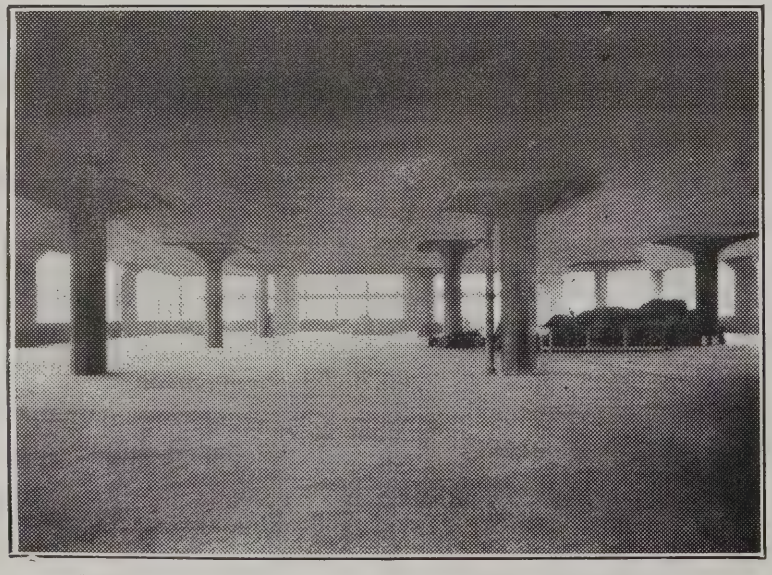
Countries.	Imports from		Exports to	
	1917.	1918.	1917.	1918.
British East Indies...	$278,024	$1,000,053	.....	.....
British West Indies ..	512,725	777,187	$1,708,229	$1,125,676
Canada	2,113,199	2,612,080	7,527,968	5,641,601
Denmark	19,046	5,828	.....	.....
Dutch Guiana	43,246	179,899	1,026,218	928,408
France	38,446	39,431	5	.....
French Guiana	9,560	19,249	194,994	235,390
Netherlands	74,192	59,380	2,056	.....
Newfoundland	75	.....	.....	3,476
Norway	320	.....	.....	.....
Portugal	26,917	15,826	.....	.....
Portuguese possessions	28,617	1,321	.....	.....
Spain	13,982	10,692	.....	.....
Sweden	3,495	614	.....	.....
United Kingdom	4,560,978	4,189,904	9,171,874	7,819,634
United States	5,910,238	7,252,721	770,519	974,199
Venezuela	92,858	90,136	6,515	4,272
All other countries	221,522	37,928	308,130	186,373
Total	$13,947,440	$16,292,249	$20,716,508	$16,919,029

The United States continued the increase in imports noted in 1917, the gain in 1918 being $1,342,483, or 22 per cent. The United States supplied 44.5 per cent. of the total imports, the United Kingdom 25.7 per cent., Canada 16 per cent., and other British possessions 10.8 per cent. The export trade, however, was largely with the United Kingdom and Canada, the United States taking only 5.7 per cent. of the total exports as compared with 46.2 per cent. by the United Kingdom, 33.3 per cent. by Canada, and 6.6 per cent. by other British possessions. The total trade of the colony was divided as follows: The United Kingdom 36 per cent., Canada 24 per cent., the United States 24 per cent., other British possessions 6 per cent., and all other countries 10 per cent.

The principal products of British Guiana are: Sugar, rice, cocoanuts, ground provisions, coffee, rubber, cocoa and limes.

Returns to Canada

R. W. Ashcroft Becomes Director of Publicity of the Ames-Holden-McCready System



R. W. Ashcroft, for the past four years advertising manager of the United States Rubber Company, with headquarters in New York, and previously advertising manager of the Canadian Consolidated Rubber Co., Limited, a subsidiary of the U. S. Rubber Co., has been appointed director of publicity of the Ames-Holden-McCready System, and will presently return to Montreal to take up his new duties.

T. H. Rieder, president and managing director of the Ames-Holden-McCready System, states: "Mr. Ashcroft was associated with me as advertising manager when I was president of the Canadian Consolidated Rubber Company; and did such excellent work that the American owners of the company asked him, four years ago, to go to New York and take charge of the advertising and publicity of the United States Rubber Company and its allied companies.

"Mr. Ashcroft has always been a believer in Canada as a potentially self-contained industrial nation, and is of the firm opinion that to-day, more than ever before, we are in a position to ourselves develop our own industrial and other resources without recourse to alien assistance. He believes, as all other far-seeing Canadians do, in the support of Canadian-owned, Canadian-manned, Canadian-supported business enterprise, equipped to take care of our domestic needs for any essential product and to compete in foreign markets on a basis of equal or better quality and price.

"Realizing that the Ames-Holden-McCready System typifies the 100 per cent. Canadian institution, he has gladly relinquished the most important position of its kind in the U. S. to take charge of our advertising and publicity and to promote the general welfare of Canadian-owned industry."

Hand Your Building Problems to "Sparling Service"

Interior of New Factory of Grahams Limited, Belleville, Ont.

"Sparling Service" shoulders the entire responsibility and by unity of command and concentrated effort your building is completed on schedule time.

"Sparling Service" uses the Richards Patent Truss System in one-story buildings, saving you 20% of the cost of your buildings. This system eliminates 50% of the columns.

Each department of "Sparling Service" is in charge of an expert. The Mechanical Engineering Department being in charge of Mr. C. N. Sparling, who has had 18 years, experience in Mechanical Engineering with Bennett & Wright.

"Sparling Service" guarantees Speed, Efficiency and Economy in building construction.

Call "Sparling Service" to your councils. You will get what you want when you want it.

SIBERIA MEETS SERIOUS PROBLEMS

Two obstacles to the progress of Eastern Siberia are the inefficiency of the Trans-Siberian Railway and the declining rate of ruble exchange. Against these obstacles the country is bravely contending and in spite of them trade, both import and export, is on the increase.

By E. I. Omeltchenke.
(From the "Pan Pacific Magazine.")

The conditions of transportation and of ruble exchange form the key to the business situation in eastern Siberia.

The transport conditions on the Trans-Siberian Railroad seem to be improving. The average daily shipments from Vladivostok terminal, via Manchuria, in June amounted to about 600 tons, while in January only 90 tons were shipped daily. This improvement is due mainly to the natural conditions of weather, to the coming of the warm and hot season, when the percentage of disabled locomotives usually decreases.

From a broader point of view, however, the service of the Trans-Siberian Railroad must still be considered as very far from its normal efficiency. Under the Czar and Kerensky Government, and even under the Bolshevik rule, the Trans-Siberian Railroad was operated better than it is operated now, after six months' work of the Inter-Allied Railroad Commission; as for example: In 1916 the average daily shipment from Vladivostok terminal was about 2,000 tons, while at present the average daily shipment is only about 600 tons. Still more important is the fact that there is but little hope for better efficiency in the near future.

L. A. Oustrugoff, Minister of Ways and Communications of the Kolchak Government, has recently asserted that it will take an indefinitely long time before the Trans-Siberian Railroad will have resumed the carrying of normal traffic.

Under such circumstances one cannot expect speedy relief for the freight congestion in Vladivostok. The conservative Siberian authorities have calculated that it would take about three and a half years to rid the Vladivostok harbor of its tremendous stock of goods, provided the present conditions of transportation do not become worse.

The ruble exchange situation is also discouraging. The rates of rubles are steadily going down. In Vladivostok, in the month of April of this year, one dollar bought 19 to 20 rubles. Late in July this rate declined to 45 rubles per dollar. There were some days when the rate of exchange went down to 60 rubles and even in some private transactions to 80 rubles per dollar. These rates were not steady, but subject to frequent fluctuation.

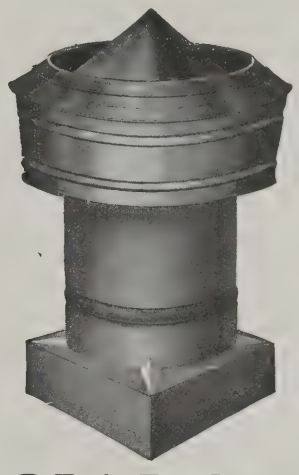
There are many causes for such a decline of ruble exchange, apart from purely political considerations.

The prohibition of the importation of rubles by France, England, and the United States is one of them. It created an artificial isolation of the Siberian money market, depreciated the Russian currency, established two absolutely different rates for rubles; one, within the above-named countries; the other, in Siberia. The latest quotation of rubles in Vladivostok was about $1.25 per 100, while in New York it was quoted as $6.20 to $6.30 per 100 rubles.

The wrong financial policy of the Kolchak Government also contributed a great deal toward the decline of rubles. The Bank of State undertook such measures as could be successful only under a very strong and settled Government. Siberia had three main types of paper currency; Czar rubles, Kerensky rubles, and Siberian rubles. The Czar and part of the Kerensky bank notes were recognized in the foreign markets, but Siberian rubles were not. They were circulated only in Siberia and with a large discount, when compared with Czar and Kerensky currency.

GASOLINE TANKS

WELDED
TESTED
HIGH-CLASS
TANKS



For Underground Storage of Gasoline
Any Fittings to Suit Supplied

A high quality tank steel welded throughout, making it practically a one-piece tank. Treated with an odorless, anti-rust oil, and then painted on the outside with anti-rust acid-proof black paint. They are practically rust and corrosion proof. We are tank builders. We make a specialty of tanks. Anything we turn out in this line you can depend on. They are made by expert workmen. We put our best efforts into tank building; it is our specialty. Our tanks are built to conform to the requirements of the National Board of Fire Underwriters. They are all tested before leaving our works under air pressure by a competent superintendent and then crated and shipped so they will reach you in good condition. We believe our prices will appeal to you as being very reasonable. Nothing but the best will do for handling gasoline. If not as represented when it reaches your station, fire it back at our expense. Can we do fairer? Any size made to your order.

The Ministry of Finance of the Omsk Government undertook the redemption of the Kerensky rubles of small denominations, and carried on this measure on conditions which were practically equivalent to the confiscation of Kerensky currency from the holders. As a result of this reform confidence in Kerensky currency was lost, the Kerensky bank notes declined and the Czar rubles went down in sympathy, not only in Siberia, but in all markets.

The congestion of the main terminal, the traffic difficulties and the decline of rubles make the commercial expansion in Siberia hardly to be expected. Nevertheless, the fact is that very large foreign commerce has recently developed through Vladivostok; larger than one usually imagines in America. The great economic forces of Siberia are continuing to work out their own means of attracting foreign goods and of exporting Russian merchandise, regardless of many embarrassments.

According to recently published figures, importation to eastern Siberia is now carried on on a larger scale than in 1914, when the influence of war was felt in the Vladivostok harbor. During the first quarter of 1919 about 90,000 tons of different goods were imported; the main articles were sugar, railroad equipment, coal, textiles, lubricating oils, foodstuffs, shoes and leather, fresh fruits, paper and paper goods, metal manufactures, chemicals, machinery and agricultural implements and liquors.

Still more interesting is the quite considerable export from Siberia.

Inferior Files mean Waste Money

If your files fall short of ***perfect*** efficiency and reasonable length of service, you are throwing away money.

Famous Five Files do a job as perfectly as it can be done, and do not dull quickly.

The steel in them is made from a special formula, the teeth are properly cut, and they are thoroughly hardened.

They get the best results with little effort.

They ***last***.

The Famous Five are:

EMPLOYEE REPRESENTATION ON TEST

How the works' councils of the International Harvester Company carried on during a time of great industrial unrest and proved their value to management and employees alike. The fundamental point in our industrial trend to-day is the representative direction of industry.

By Cyrus McCormick, Jr.
(From the "Manufacturers' News.")

In the recent labor difficulties in Chicago, employee representation was forced to stand an acid test. We have eight plants in Chicago, in seven of which are works councils. Due to various causes, such as strikes in large neighboring establishments and the presence of a large number of non-American groups of employees, a strike was begun in that plant where there was no works council. When these men, without making any demands, were out upon the street, they proceeded in a body to adjacent factories where there were works councils. The day before this took place the councils in these other plants had negotiated a settlement between the men and the company, which satisfactorily adjusted all questions at issue. In spite of this adjustment, the intimidation of the large number of foreign employees from the striking plant, and the slugging which immediately took place, caused the works councils in four of the remaining plants to advise the cessation of operations. The company accepted the request, and for three weeks these four plants were closed down. The period would not have been so long had there not intervened the terrible race riots and a street car strike. When conditions were right and the works councils felt it desirable and safe to resume operations, the plants were re-opened. It is at least significant that the resumption of work took place with hardly a ripple of excitement, and with no violence of any kind. In two other plants the adjustment was never questioned from the beginning. We therefore found, as a result of this labor difficulty, that our works councils were stronger in the minds of the men than ever before. They stopped work in the plants when it was dangerous to continue to operate. They opened the plants when it was safe to do so (even taking it upon themselves to arrange for the preliminary police protection) and in every way proved themselves worthy representatives of the best traditions of American industry.

Employee representation has spread more rapidly in England than it has in this country, but it has taken a different form. Much has been written about the so-called Whitley plan. That may be desirable for England, but it will not do for this country. Here neither industry nor labor is sufficiently organized to set up the elaborate system of councils required under the Whitley plan. Nor is our Government sufficiently versed in the handling of industrial matters to take as important a part in industrial councils as is required under the English system. Finally, the Whitley plan has organized British industry into two opposing camps, whereas the American system of employee representation is based solely upon mutual co-operation and a substitution of vertical for horizontal divisions. Class prejudice has no place in this country, either in society or in industry.

After all is said and done, the fundamental point in our industrial trend to-day is the representative direction of industry; all else is really detail. Profit sharing may come when it is ripe for it to do so. Government action or rearrangement of our programme of consumption may make it possible for employees to be free of fear of unemployment. Education may raise the standard of working conditions to a real art. But if workmen are allowed self-government they and their employers together can work out these programmes.

BIG PROJECTS IN LATIN-AMERICA

It is estimated that it will take two billion dollars to carry through the great enterprises needed for the adequate development of South America. The most important of these would be the building of a railroad diagonally across the continent, a work that would cost a hundred million more than the Panama Canal.

By S. P. Venner.

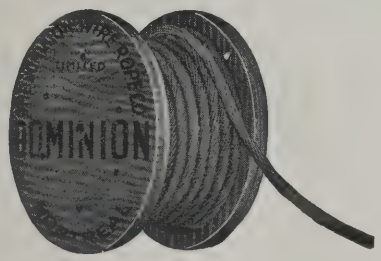
(From the "Pan Pacific Magazine.")

When the world settles down to business after the war is finally out of the way, South America is going to offer opportunities to young men of big vision such as seldom have been afforded to empire builders in all history. The stage is set. The Panama Canal puts Pacific ports closer to the headwaters of the Amazon than London is to the source of the Nile.

There are four big things to be done in South America. I mean "big" in the sense requiring men like Rhodes, Morgan, Harriman and Hill to carry them out in the first category of magnitude. These are the Buena Ventura-Buenos Ayres Railroad diagonally across the continent; the opening of the eastern slope of the Andes to white colonization and settlement, the proper sanitation of the tropical ports and centres of the continent and the development of aerial transportation.

A volume could be written about each of these, but none of them can be carried out without big men plus big money. Of these the men are the more important.

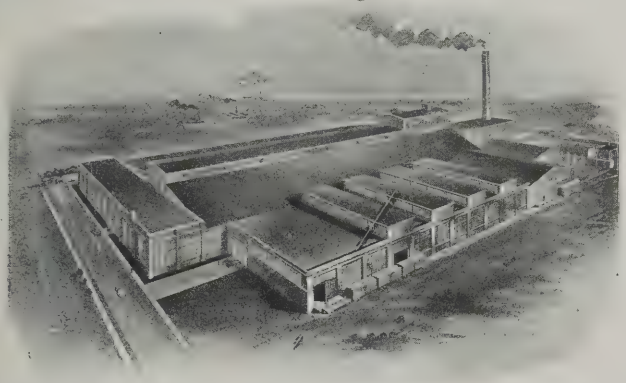
Some of these men are being developed in South America now, but they are necessarily limited to national lines in each country, while the largest problems are international in their scope and it is extremely difficult for a citizen of one republic to exercise a determining influence outside of his own country. This is why there is a demand for leaders in co-ordinating these international undertakings from the outside.



The big railway will cost $100,000,000 more than the canal did. The opening of the upper Amazon would follow this road and would require a total expenditure of about $1,000,000,000 to make it effective so that it would be self-supporting and a part of the productive assets of the world.

The sanitation of these two enterprises would cost, the first about $20,000,000, the second $50,000,000, while the permanent clean-up of existing insanitary ports and centres will require a total capital outlay of about $150,000,000, and an annual budget for maintenance of about $10,000,000, representing a capital necessary to produce that income of $200,000,000.

To get aviation well under way, so as to realize a weekly hydroplane service over the Amazon, the Orinoco, the Magdalena and the La Plata rivers and their main tributaries, without including dirigibles and airplanes for land service, an initial capital for the whole continent of at least $300,000,000 would be required.



Thus there is needed for the co-ordination of the big international enterprises in South America in this generation about $2,000,000,000 in all—less than half of the Victory Loan. The resources which might be pledged to support this outlay are potentially enormously in excess of this sum. South America can pay for it all. What is needed is the men to inspire confidence that the resources may be made to yield the return.

The plant of the Tilbury Brick & Tile Company, Limited, Tilbury, Ont., which was destroyed by fire on March 4, will be restored at once. The new dryer will be about 50 x 120 feet, and the engine room, 50 x 80 feet. Capacity will be from 60 to 100 tons of clay products per day.

Book Reviews

Britain's War Organization

British War Administration. By JOHN A. FAIRLIE, Professor of Political Science, University of Illinois. Carnegie Endowment for International Peace. New York: Oxford University Press. 302 pages.

This volume is No. 8 of the series of Preliminary Economic Studies of the War, issued by the Carnegie Endowment. Its aim is to give a systematic and somewhat comprehensive account of the manifold changes in the machinery of governmental administration in the United Kingdom, and its chapters deal successively with Forms and Agencies of Action; the Cabinet; Naval Administration; Army Administration; Munitions and Aircraft; Defence of the Realm; War Relief, Pensions and Prisoners; Trade and Transportation; Agriculture and Food Control; Financial Adminstration and Other Departments. The work has been carefully handled and is written in an entertaining vein. Naturally, it makes no pretence to be a complete account of British war effort, the treatment being limited to the organization of administrative agencies on the part of the central government.

West Africa Cotton

Cotton in British West Africa.. By N. M. Penzer, B.A., F.R.G.S., F.G.S., with an introduction by the Rt. Hon. the Viscount Milner, P.C., G.C.B., G.C.M.G., London. The Federation of British Industries. 5 shillings net.

This is the first of a series of booklets on the raw materials of the British Empire to be issued to the general public by the Intelligence Department of the Federation of British Industries. It is divided into six sections dealing with (1) the history of the industry; (2) the industry in Nigeria; (3) the industry in the other British Colonies, Gold Coast, Sierra Leone and Gambia; (4) the industry in Togoland and the Cameroons; (5) the possibilities of cotton-growing in British West Africa. General statistics and a bibliography complete the contents of a neat little volume, which contains in compact form all that is to be known about the subject. Copies of the book are obtainable from Thomas Murby & Co., 1 Fleet Lane, Ludgate Circus, E. C. 4.

An Educational Conference

Report of the Proceedings of the National Conference on Character Education in Relation to Canadian Citizenship. Held at Winnipeg, October 20, 21, 22, 1919. Price, 50 cents.

To Mr. W. J. Bulman, past president of the Canadian Manufacturers Association, must be accorded the credit for having initiated and promoted the idea of a national conference which would seek to establish a broad general basis on which to develop character and citizenship through education. The idea originated in 1917 and gradually expanded until it reached the proportions of the conference held in Winnipeg last fall. The success of this gathering was signal. Upwards of 1,500 accredited delegates attended, and at no session did the attendance fall below two thousand. As a result of the conference there was created a National Council of fifty members, which will establish a National Bureau for purposes of educational investigation.

The present report is a book of 150 pages, and all proceedings at the conference are recorded verbatim. An exam-

ination of the table of contents shows that addresses were delivered by a number of eminent educationists and that discussions were led by men and women of outstanding importance in the field of education. It is scarcely necessary to emphasize the value of all this material, and anyone interested in the subject of education will find the report a mine of useful information.

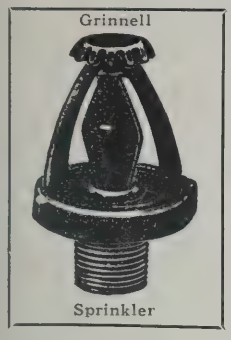
The Labor Problem

Common Sense in Labor Management. By Neil M. Clark. New York: Harper & Brothers. Toronto: The Musson Book Co., Limited. Price, $4.50.

Mr. Clark is the editor of that well-known business magazine, *System*, and this book is the fruit of years of observation and study in the field of employment and industrial relationships. It is a work in which theory and practice are skilfully interwoven, the author's beliefs being illustrated time and again with the actual experience of business managements.

At the outset Mr. Clark emphasizes the changed viewpoint of recent years. The old attitude, which regarded labor as a commodity to be bought, like steel and crude rubber, or which declared that the owner of a business was boss and could do as he pleased, is rapidly disappearing and giving place to a conviction that, after all, the worker has an interest in industry which deserves recognition. It is to various manifestations of this changed viewpoint that Mr. Clark devotes several of his chapters.

The various plans which have been devised for bringing the management and the employee together for the discussion of problems of employment are outlined, the point being made that the workers do not necessarily want to assume any of the responsibilities of management, but merely to see that they are given the chance to achieve satisfaction in their work and its rewards. No one plan is described as superior; each has its good points.



Chapters are given to working conditions and living conditions, the former applying to various phases of the employee's life in the factory, the latter to his home life and recreation. In both instances attention is given to the many plans of social betterment and welfare that have been introduced of late years. The wage question and continuity of employment are each thoroughly discussed, and there is a chapter on the efficiency and value of suggestion systems.

Mr. Clark sums up his argument in a final chapter which he entitles "The Fallacy of Panaceas." Here he demonstrates the need for "frankness, force and justice in management," which are the fundamentals in any plan. "Elemental justice in all the relations of employers and employees, complete frankness in explaining and discussing what is just, and rugged force in carrying out the decrees of justice—that is the policy of management that makes for industrial peace."

"Common Sense in Labor Management" is a book that will keep the employer abreast of the times, and may be commended to all who desire enlightenment on a subject of great importance at the present time.

A Remarkable Chart

The Angus Sinclair Co., New York, publishers of *Railway and Locomotive Engineering*, have just issued a new chart of the Pacific type locomotive. The chart, which measures 44 x 17½ inches, is reputably the most complete thing of its kind that has ever been published. The locomotive is shown in minute detail, with numerical references attached to no fewer than 667 parts. The chart is priced at 50 cents.

Deaths Among Prominent Manufacturers

A Pioneer Flax Grower

Late James Livingston, Ex-M.P., Was President of the Dominion Linseed Oil Co. and Other Enterprises

The late James Livingston, ex-M.P., of Baden, Ont., whose death occurred on April 14, was one of the pioneers of the flax industry in Canada. He was a native of Scotland, where he was born in 1838, and came to Canada early in life. In 1865, in company with his elder brother, John, he commenced flax growing in Wellesley, and for many years carried on flaxseed and oil manufacturing at Baden. At the time of his death Mr. Livingston was president of the Dominion Linseed Oil Co., besides being interested in the Yale Flax Co., one of the largest concerns of its kind in Michigan. He was for twenty years a member of the House of Commons for South Waterloo.

Was Metal Manufacturer

Late William J. McMartin, of Winnipeg, Had Numerous Interests in the West

The death occurred at Winnipeg on April 11 of William J. McMartin, one of Western Canada's well-known metal men. Mr. McMartin was born at Martintown, Glengarry County, Ontario, in 1870, and after living for a time in Duluth, went to Winnipeg in 1904, where he organized the Winnipeg Ceiling and Roofing Co. He was at the time of his death president and general manager of this company; president of the Edmonton Metal Works; treasurer of the Sheet Metal Co., Calgary; president of the Duluth Corrugating Co., Duluth, and president of the Economy Foundry, Portage la Prairie.

A Model Employer

Late Jacob Kaufman, of Kitchener, was Revered by Many Old-time Employees

On April 20 there passed away at Kitchener, Mr. Jacob Kaufman, one of the pioneer manufacturers of the city and a man who has played an important part in the industrial life of Canada in his day. He was born on a farm near New Hamburg in July, 1847. As a youth he learned the trade of carpentry and at the age of 22 went to Gadshill, a village six miles north of Stratford, where he worked as a sawyer for eight years in the mill of Henry Ratz. In 1877 he moved to the then village of Berlin, which had at the time a population of about 3,500, and built a sash and door factory. This was the nucleus of the present industry and has been enlarged many times. Mr. Kaufman's interest in the lumber business extended to the source of supply and he operated as well saw mills at Rosseau Falls and Trout Creek. He also acquired a charcoal and wood alcohol plant at the latter point.

In 1900 Mr. Kaufman became interested in the Berlin Rubber Footwear Manufacturing Co., and three years later started the Merchants Rubber Co., which in 1906 was sold to the Canadian Consolidated Rubber Co. In 1907 he started the Kaufman Rubber Co., Ltd., which industry has progressed and expanded until to-day it is a credit to the community, and represents a large percentage of the rubber footwear business of Canada. He was largely responsible for the establishment of the rubber industry in Kitchener, which has expanded and at present employs about 3,000 people.

TWO beautiful driveways built with Tarvia Filled Macadam in 1918. Prospect Cemetery, Toronto, Ont. (left) and St. John's Cemetery, Toronto, Ont., shown below.

Tarvia Reduces Road Costs—

THE severe Canadian winters and spring thaws demand that roads be waterproof and frost proof.

At the same time construction and maintenance costs must not be excessive

Canadian cemetery authorities, like scores of progressive townships throughout the Dominion, have found Tarvia to be the most satisfactory and economical solution of their road problems.

They have found that water cannot work its way beneath the tough, resilient wearing surface—that frost cannot start a "break-up" or raveling—that Tarvia keeps the road as fit in the spring as it was in the fall.

If there are, in your community, plain macadam roads that are beginning to require repairs, an inexpensive treatment with Tarvia will restore the surface, making it smooth, dustless and durable.

Thus instead of a ruined road which would often require expensive rebuilding, Tarvia will keep your roads in remarkable condition for little money.

Taxpayers prefer Tarvia, because of their economy, as they pay for themselves over and over again through their maintenance cost.

Illustrated booklets describing the various Tarvia treatments free on request.

Tarvia

Preserves Roads Prevents Dust—

Special Service Department

This company has a corps of trained engineers and chemists who have given years of study to modern road problems. The advice of these men may be had for the asking by any one interested.

If you will write to the nearest office regarding road problems and conditions in your vicinity, the matter will be given prompt attention.

Industrial Canada

ISSUED BY

The Canadian Manufacturers Association
INCORPORATED

Vol. XXI. TORONTO, JUNE, 1920 No. 2

Editorial Comment

The Annual General Meeting

AS usual, the July number of INDUSTRIAL CANADA will be devoted to the publication in full of the proceedings at the annual general meeting of the Association in Vancouver and Victoria. Because of the long distance and the difficulty of transmitting news by wire, it is hardly possible that members in Eastern Canada will be able to get that thorough knowledge of what takes place that is so essential to the spirit of good membership. This need, the Association's own official publication will supply, and it is to be hoped that all members will make it a point to look out for the July number and give it a thorough reading. Committee reports were never more comprehensive or more important and the debates, resolutions and speeches will be equally valuable. All these will be supplied in full in the July number.

Annual Meetings of Divisions

DURING the past few weeks, and as a preliminary to the annual general meeting, the five divisions of the Association have held their annual meetings. This is the first year that the new machinery of organization has become effective, and these gatherings were in a sense a testing-out of the new system. It may be stated that the experiment has proved to be a success. Members in the various provinces have rallied loyally to the support of the new bodies, which have been formed to care for the needs of their particular section of the Dominion, and there is every reason to believe that, through the agency of the division, the work and services of the Association will be greatly extended. There is much work that can only be effectively handled by the men on the spot, and the better organized the members become the more valuable will be the results. The strengthening of the divisions and the building up of live branches in all the cities of Canada will be a desirable objective towards which to work.

In this issue of INDUSTRIAL CANADA will be found reports of the proceedings at the various annual meetings of the divisions. These are given as fully as possible, though in some cases the near approach of the annual general meeting has made it difficult for the divisional secretary to provide as complete a report as might have otherwise been given. However, it is desirable that members who were not present at the meetings should post themselves on what was done. Only in this way will the work receive that backing which it requires.

Pass Along a Good Word

WHENEVER opportunity arises, members of the C.M.A. should pass along a good word about the organization. If one of the departments renders you some service which you deem of value, let somebody else know about it. Not only may this result in bringing in new members whose presence and support will strengthen the Association but it will help to build up that reputation for prompt, effective service which is the objective of the officials of the organization. Many people, whose knowledge of the C.M.A. is but superficial, have an altogether erroneous idea of the kind and scope of the work being done. All the more reason, therefore, for members to tell about what the Association has done for them.

Showing Educational Films

IN a recent bulletin issued in connection with their moving picture laboratory, the Ford Motor Company of Canada, Limited, stress the importance of compelling the theatre interests to exhibit films of an educational character. This, they urge, is the essential part of the whole business. Both the Dominion Government and the Ontario Government have established moving picture bureaux, with the object of advertising the resources and industries of the country, but it has remained for the

British Columbia Government to go a step further and require the exhibiting of educational films by law. They have introduced in the Legislature a measure requiring all moving picture theatres to exhibit for fifteen minutes during each performance films provided by the provincial bureaux. These films are to be of an educative character illustrating the natural resources and economic and industrial problems of British Columbia, as well as dealing with general Canadian events of interest.

"The measure now before the British Columbia Legislature," states the bulletin, "is a very wise and commendable step on the part of the Government, and sets an example which the other provinces could very profitably afford to follow. As a rule the attraction of this class of picture has induced theatre managers to voluntarily present them interspersed between regular films, but, as previously pointed out, no one is compelled to exhibit them, consequently the appeal is lost to thousands to whom they would convey helpful knowledge and ideas.

"Provincial, Dominion and municipal governments are not making the advertising use of their films which they could and ought to do, as besides being attractive the use of the film must be effective, but the British Columbia Government has pointed the way, and it is to be hoped that before long the rest of the provinces will follow suit."

Good work is being done by the Ford Motor Car Company themselves in advertising the Dominion by film. At the present time they have two photographers travelling from coast to coast of the Dominion securing topical material for reproduction, and this is distributed very widely not only in Canada but in other parts of the world.

The End of National Borrowing

HOWEVER much divergence of opinion there may be over the terms of Sir Henry Drayton's budget, there is one feature that seems to have struck a responsive chord in the hearts of the people. That is the determination expressed by Sir Henry to end the period of borrowing and inaugurate a new period of "-pay-as-you-go."

The country has now experienced a long series of popular loans, culminating in the Third Victory Loan of 1919. In fact, the annual loan seemed to give promise of becoming a fixture in the financial calendar. From the investment standpoint, these flotations were very nice. They yielded attractive rates of interest and, estimated in the usual way, were gilt-edged. But, with each successive loan, the burden of interest payments, not to mention desirable sinking fund arrangements, was becoming heavier and heavier and the outlook more alarming. Now, Sir Henry calls a halt and his leadership in this regard is acknowledged by all loyal Canadians.

If, as is anticipated, the Dominion can not only meet current expenditure out of revenue but have enough over to retire the 1922 Victory Loan bonds at maturity, no better achievement could be recorded in the interests of national credit. There would be substantial improvement in the status of Canadian securities in the United States. There would be an increased flow of capital to our shores. The unfavorable exchange situation would right itself and a great impetus would be given to business enterprise throughout the country. Let us therefore acclaim the determination of the Minister of Finance to stop the orgy of borrowing that has piled up a national debt of such gigantic proportions.

The Impartiality of Third Parties

COMMISSIONS or conferences in which employers, employees and the Government, as representing the public, are concerned should be so constituted as to ensure the fairest possible conclusions. Particularly is it desirable that third parties should be as thoroughly impartial in their attitude towards the question coming up for decision as it is possible for them to be. Much accordingly depends on Government representation, forming as it should the intermediary between the possible extreme of the other two parties.

When labor problems come up for consideration and settlement, it is fairly natural that Governments should call upon their departments of labor to sit in at the proceedings. These are the departments that have been formed for the purpose of studying these very problems, and the public would naturally regard them as the proper parties to look after the public interest in any differences between the interests of capital and labor.

Unfortunately, in numerous cases, the representatives of the labor departments of Governments are labor leaders who have gravitated into the civil service. However well-intentioned they may be, their training and experience alike give them a natural bias of mind towards their former associates. They are prone to see questions from the labor standpoint, and they often fail to shake off the unfortunate spirit of antagonism towards employers which characterized their attitude before. It is no fault of theirs and yet, even the employees must see that a conference in which such men are sitting, is obviously bound to have a preponderating influence in the one direction.

It is to be hoped that in future all possible efforts will be made to secure complete impartiality on the part of Government representatives. Not only should this be so in justice to the two parties who may be at variance, but in justice to the public, who are anxious that those who ostensibly represent them should be entirely fair in their attitude and dealings.

The Situation at Ottawa Reviewed

Return of Sir Robert Borden Has Steadied the forces of the Government—Introduction of the New Budget an Event of Paramount Importance—Representations Are Being Made to Secure Modifications of Certain of Its Aspects

By Industrial Canada's Parliamentary Correspondent

OTTAWA.—The outstanding features of Parliament during the past month were the resumption of House leadership by the Prime Minister, Sir Robert Borden, Sir Henry Drayton's first Budget and an announcement by Hon. Mr. Ballantyne that no election is expected before 1922.

The long rest which Sir Robert enjoyed appears to have completely repaired the damage wrought by his heavy work at the Peace Conference. Since his return to Ottawa, Sir Robert has been in his place in the House every day, has been alert to the business of Parliament and shown himself handling every phase of house leadership under the rather trying pressure of the Budget debate. His return has steadied the forces of the Government immeasurably, and appears to have put an end to the uncertainty which rather characterized the Government during his absence when he was expected to return only to resign, and when there was some rivalry among members of the administration for succession to the premiership.

Sir Robert Borden

Whose Return to the Active Leadership of the Government was an Important Event in Parliamentary Circles during May

The new Budget is conceded to be one of the most remarkable ever disclosed to Canadians. It announced a heavy national debt, a heavy expenditure, a very large Government income and severe taxation. But it showed, on the whole, that Canada is in a strong and sound position, far better than most of the other countries of the world.

While there has been a demand for tariff reduction, chiefly from western members, the Budget has not been altogether unpopular with the Opposition.

Expenditure for the present year will be heavy, but the Finance Minister was able to show that he could not only take care of this, but would be able to wipe out a floating indebtedness of some seventy-four millions.

The new taxation proposals have attracted great attention, both in Canada and abroad. Outside comment has been generally favorable to the plan of raising revenue, and Canada has been commended for having courage to collect for her needs from those able to pay and for equitably distributing the burden among the various classes of the country.

In Canada there has been considerable criticism of details. Some business classes feel that they have been rather severely dealt with by the new Luxury Tax. But, even with these classes, there is a feeling that the Government had to have the revenue; that both the Luxury Tax and the One Per Cent. Sales Tax were experimental; that they were, in a measure, offered by the Finance Minister for criticism; and that adequate representations will be considered by the Government and that there will be some modifications of the measure when it is in the committee stage.

There is heavy pressure for modification of the taxation proposals which apply to articles of clothing and to pianos. Dealers contend that boots at nine dollars and clothes at forty-five dollars are not luxuries under present market conditions for wool and leather and that the minimum for exemption should be raised. The Government has given no public indication that it is not willing to be influenced by reasonable representations.

There is no doubt that these representations are being made. Delegation after delegation has come to Ottawa to put their case before the Government. All have been listened to, and consideration promised every request. In addition to the representations that have been made in person, ten times as many have been made by mail and wire.

The managers of taxation for the Government have been surprised at the number of unexpected places their new measures have hit. They have, by this Budget, been brought more intimately into touch with the intricacies of business than by any taxation measure devised in the past. The past two weeks have witnessed an astonishing amount of disclosure to the Government of business methods and systems, and this has probably been a good thing for both business and the Government. Intimate touch has been established.

An examination of the Budget shows a tendency from and toward direct taxation. By discontinuing the seven and a half per cent. Customs War Tax, the Government abolished about thirty-four millions of indirect taxation. By the imposition of the One Per Cent. Sales Tax and the Luxury Tax

the Government is imposing about a hundred million dollars direct taxation. This is a substantial change in the taxation principles of Canada, which, in the past have been overwhelmingly for the indirect method of taxation through customs collections.

While the new method of direct taxation is obvious to the consumer, and by this time almost everyone in the country has knowingly paid a luxury tax, very little complaint has been reported to the Government by dealers. Purchasers of luxuries appear to have accepted complacently the requirement placed upon them of contributing to the Dominion Treasury, and make little protest against the taxation item on the sales slips rendered to them for payment.

The reduction of the Business Profits tax was not all that was asked for and many sound judges believe that it was not all that was required. However, it is estimated to amount to a cut of forty per cent. in the burden that business profits have had to bear for the past four years, and has been welcomed by business as a measure of relief which, it is hoped, will be increased in the next Budget.

Scientific Revision of Tariff.

The Government has been congratulated for the announcement that the business conditions of the country were to be studied with the view of making a scieneific revision of the tariff, and having it ready for next session. There is a feeling that the country had outgrown its customs law and that there should be a more scientific adjustment of it, as Sir Henry Drayton stated: "(*a*) To assist in providing adequate revenue, (*b*) to stabilize legitimate industries and to encourage the establishment of new industries essential to the proper economic development of the nation—to the end that a proper and ever-increasing field of useful and remunerative employment be available for the nation's workers, (*c*) to develop to the fullest extent our natural resources, (*d*) to specially promote and increase trade with the Mother Country, the sister dominions and colonies and Crown dependencies, (*e*) to prevent the abuse of the tariff for the exploitation of the consumer and, (*f*) to safeguard the interests of the Canadian people in the existing world struggle for commercial and industrial supremacy. As a means of raising revenue the tariff should be so adjusted as to place the chief burden upon those best able to bear it. Articles of luxury should be heavily taxed through the imposition of customs and excise rates. Food commodities and other necessities of life, not produced or manufactured in Canada, should, if taxed at all, bear only such imposts as are necessary for revenue purposes. Those produced in Canada should be subject to such customs duties only as may be necessary in the general national interest to be determined after strict investigation from time to time."

J. H. Baetz
Baetz Bros. Co., Kitchener
Chairman, Kitchener and Waterloo Branch

These are the principles laid down by Sir Henry for the new tariff that he has to prepare, and upon which representations will be in order as soon as the present Budget is through the committee stage and has been embodied in a statute.

Prorogation is expected before the first of July.

Kitchener and Waterloo Branch is Organized

By J. M. McINTOSH
Manager, Trade Sections Department, C.M.A.

On the evening of the 3rd of May last a well attended meeting of manufacturers of Kitchener and Waterloo was held in the Library Hall, Kitchener, for the purpose of considering the advisability of forming a branch of the Association to consist of the members in Kitchener and Waterloo and such contiguous territory as might be within a convenient radius. The following manufacturers were present: Messrs. W. T. Sass, F. S. Hodgins, S. J. Williams, J. H. Baetz, L. J. Breithaupt, Geo. Lang, J. Woolner, T. A. Witzel, H. M. Snyder, J. H. Kennedy, J. M. Schneider, C. A. Ahrens, W. E. Woelfle, D. Groos, Jr., O. Kinzie, W. H. Hamblin, E. Schlee, G. B. Brown, G. R. Roschman.

Mr. J. E. Walsh, general manager, and Mr. J. M. McIntosh, of the head office staff, attended and explained the proposal in detail.

Matters of local interest to manufacturers are being well covered by the Kitchener and Waterloo Manufacturers' Association. This latter Association is splendidly organized and equipped to render very valuable services to its members. It has been felt, however, that some of its activities, if given the support of the larger Association, might serve the purpose of further developing the important work which both these Associations are covering. In addition to this, through a local branch the members will be brought into closer touch with the activities of the Association as a whole.

It was, therefore, resolved that a branch be organized and that application be made for the necessary authority, the secretarial service to be supplied by head office, one of the official staff visiting Kitchener and Waterloo for one or two days in each month.

Mr. J. H. Baetz, of Baetz Bros. Company, Kitchener, was elected chairman, and Mr. H. M. Snyder, of Snyder Bros., Upholstering Company, Waterloo, vice-chairman. A nominating committee was appointed to bring in a report suggesting names of representatives of different lines of industry in the district out of which the personnel of the Executive Committee may be selected.

H. M. Snyder
Snyder Bros. Upholstering Co., Waterloo
Vice-Chairman, of the new Branch

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Annual Meeting of Ontario Division

By H. MACDONALD
Secretary, Ontario Division

MOST gratifying in every respect was the first annual meeting of the Ontario Division of the Association, held at the King Edward Hotel, Toronto, on Thursday, April 29. The attendance was very satisfactory, while the interest shown in the proceedings abundantly demonstrated the value of such an organization to the membership in the Province.

Luncheon was served at 12.30, following which the meeting was convened under the chairmanship of John R. Shaw, Woodstock, vice-chairman of the Division. A number of letters and telegrams were read from members in different parts of the province, expressing their regret at being unable to attend, among them a wire from the chairman, George H. Douglas, who was in Calgary on his way east from California. Mr. Douglas sent his best wishes for the success of the meeting.

Secretary's Report

The Secretary's report was then presented. This gave an outline of the work of the Secretary's Department, from the inauguration of the Division down to the end of the first year of its existence. It read as follows:—

"At a conference of representative Ontario members, held in the National Club, Toronto, on March 25th, 1919, a resolution was unanimously carried:

" 'That this meeting, having regard to the problem of increasing the membership of the Association, recommend to the Executive Committee the advisability of creating a provincial organization, to be known as the "Ontario Division" of the Association, to include present branches or sub-branches in Toronto, Hamilton, Niagara Falls and Brantford, and any additional branches which may subsequently be organized to deal with matters having a provincial application, leaving to the local organization such matters as affect them locally, and that the By-laws of the Association be amended and enlarged accordingly.'

"Messrs. Roden, Breyfogle, Kinzinger and Champ were then appointed a committee, with powers, to make all necessary arrangements.

"At a meeting of the Toronto Branch Executive, held on 23rd April, your Secretary was instructed to transmit the above recommendation for the approval of the General Executive Committee. This being obtained, it was submitted to the annual general meeting, held in Toronto in June last, and unanimously adopted, the membership of the Association being divided into five Divisions, and, by amendment of the Association By-laws then passed, members located within the Province of Ontario were created the Ontario Division of the Association without, however, affecting the Branch organization as at present constituted—the Special Committee at the same time reporting that the formation of branches in all the chief industrial centres would do much not only to increase the membership but also to stimulate thought on industrial matters.

"Pursuant to the above proceedings, the first organization meeting of the Division was held in the King Edward Hotel on October 16th last, when an Executive Committee was appointed and the necessary organization effected.

"Three new branches were organized during the past year, each at Niagara Falls, Peterboro and Brantford, making in all five local branches within the Division, which, in the order of date of inauguration, respectively, with their membership, are as follows: (1) Toronto, 920 members; (2) Hamilton, 238 members; (3) Niagara Falls, 26 members; (4) Peterboro, 35 members; (5) Brantford, 40 members.

"All these branches were visited by officers from the head office of the Association, who report in each case an active interest in the work of the Association and a greatly increased demand for the services of its departments. The establishment of additional branches is receiving consideration.

Gain in Membership

"The Division played its part in a special membership campaign started during the week, December 1st-6th, which brought a net increase to date of 163 members to the Division. The Ontario Division membership is now 2,121 firms and corporations. The total membership of the Association is 4,046.

"The possible revenue receivable from fees in the territory allotted to the Division is $81,370.00, or 55.91 per cent. of the possible revenue from fees of the Association as a whole.

"While the activities of the Division have covered only a portion of the year, it is believed the members generally will share the feeling that the work which has been, and is being, performed fully justifies the establishment of the Ontario Division as a forward step towards the more intensive organization of the Association.

"It is the unfailing desire of the Executive staff to extend the welfare of the departments under their charge. Every vexatious question, large or small, is of some importance and has generally a more or less relevant bearing on the industrial situation. No member of the Association should shrink from consulting any of our officials at any time on any matter of doubt or difficulty."

Report of Executive Committee

A comprehensive report on the work of the Division since its inception was then presented. As this gives a very complete record of the Division's activities, it is published practically in full, as follows:—

"October 16th, 1919, marked the birth of the Ontario Division. On that date, the organization meeting was held and a Division Executive Committee was chosen to guide the affairs of the Division for its first year, Mr. Geo. H. Douglas, of Hamilton, being elected Chairman, and Mr. J. R. Shaw, of Woodstock, Vice-Chairman, both by acclamation. Mr. H. Macdonald, Secretary of the Toronto Branch, was appointed by the General Executive Committee Secretary of the Division.

"Immediately thereafter a resolution was passed, authorizing the Executive Committee to elect sub-committees.

"At a meeting of the Division Executive, held on December 18th, the following sub-committees were appointed, namely:

1. Education Committee—10 members.
2. Legislation Committee—10 members.
3. Transportation & Power Committee—15 members.
4. Publicity Committee—10 members

with Messrs. J. F. MacKay and J. J. Gibbons as associate members.

General Meetings

"Including the organization meeting, six general meetings of the Division were held, since its organization, as follows:

October 16th, 1919.—At this meeting, a resolution was passed that the Industrial Relations Committee be requested to report fully on the desirability of organizing a permanent Department of Industrial Relations to study the relations existing between employers and employees, to gather data, to supply information, and to be prepared to furnish expert advice and assistance in connection with any further industrial conference or otherwise.

November 27th, 1919.—An important address was delivered by Mr. Lloyd Harris, head of the Canadian Trade Mission to Great Britain, in which he explained that all countries were open for the import of Canadian manufactured goods.

December 18th, 1919.—Past President S. R. Parsons, who represented the employers of Canada at the recent International Labor Conference in Washington, from October 29th-November 29th, 1919, delivered an address, in which he explained why he had opposed the eight-hour day.

January 28th, 1920.—Mr. T. B. Macaulay, President of the Sun Life Insurance Company, Montreal, delivered an interesting address on "Canada and the West Indies." Mr. Macaulay emphasized the value of co-operation between the different parts of the Empire, which had always been desirable but which was now vitally necessary. He explained that out of a total import of $36,000,000, Canada received less than $7,000,000—less than 20 per cent., whereas the general average should not be less than 50 per cent. The West Indies Government, he said, was anxious for co-operation.

February 26th, 1920.—An address was delivered by Professor L. W. Gill, M.Sc., late of Queen's University, Director of Technical Education for Canada, on the operation of the Federal Technical Education Act. The agitation for an adequate system of technical education dates back to a period long before the war, and it has passed through many phases, but it was only through the lessons taught by the war that the urgency of the matter was so forcibly emphasized, that action became imperative. To the C.M.A. must be accorded a good deal of the credit for having forced the subject into prominence.

March 16th, 1920.—At a special meeting of the Division held on this date, consideration was given to a resolution of the Executive Council to enlarge and strengthen the organization and services of the Association, with a view to greater efficiency in the services of its departments. It was explained that commissions, boards and special investigating committees are making extraordinary demands from manufacturers, and it was thus necessary to enlarge all our departments, also to enlarge our library and translation department, and to introduce certain new services, which are now under consideration. The scheme was enthusiastically adopted by the Division in general meeting, and fuller information will be submitted at this meeting.

April 22nd, 1920.—At a general meeting of the Executive, held on this date, the Executive entertained representatives of the Alberta Industrial Development Association.

Meetings of Committees

"Seventeen committee meetings were held: six Executive, three Legislation, one Transportation and Power, two Special, two Conferences, and three deputations to the Provincial Cabinet.

"Eleven general circulars on various subjects were issued to members in the course of the year.

Hydro-Electric Power Commission.—Mr. C. H. Carlisle was nominated to represent consumers on a committee of approval, consisting of members of the Engineering staff of the Commission and several outside bodies, to deal with the question of the approval of electrical fittings, fixtures, devices, etc.

Publicity.—Consideration was given to the part the Division could appropriately take in any scheme of publicity, in the interests of the manufacturers, but as the proposition could not be considered without the necessary funds, it was referred to the General Association.

Tariff Board.—A resolution was transmitted to the Executive Council, recommending that a deputation wait upon the Dominion Government and urge the appointment of a permanent Tariff Board, its members to accompany the proposed Investigating Committee of Cabinet Ministers, if the same were appointed.

Electrical Power Situation.—Careful consideration was given to a report received from the Niagara Falls Branch, with respect to a decrease of the supply of power to manufacturers in the Niagara Falls District. Conferences with the Toronto Hydro Electric System and officers of the Hydro-Electric Power Commission of Ontario, with a view to devising a remedy, were held. A resolution on the subject will be submitted to this meeting at a later stage.

Workmen's Compensation

Workmen's Compensation.—Deputations from the Division Legislation Committee waited twice upon the Government, when various submissions were presented, chiefly on the subject of representation and reduction of accidents in the industries. Several meetings and conferences were also held on the subject of more active co-operation with the Accident Prevention Association and the Board, and the matter is still under advisement.

Board of Commerce.—The Board of Commerce, acting under the Board of Commerce and the Combines and Fair Prices Act, 1919, having filed a stated case for consideration of the Supreme Court of Canada to determine various questions of law and jurisdiction which had arisen before the Board, and which required to be solved before the Board proceeded to exercise the powers, which are said to be vested in it, it was recommended by your Legislation Committee that the Association be represented in the argument before

the Supreme Court by Mr. W. N. Tilley, K.C., Toronto, as special counsel, which recommendation was adopted by the Executive Council. Final judgment has not yet been handed down.

Moratorium Act.—The Legislation Committee communicated to the Attorney-General a recommendation that a repeal of the Moratorium Act should be delayed six months, after proper notice had been given.

Work of the Legislature

"Ontario's Legislature met on Tuesday, March 9th, being the 15th Legislature of the Province of Ontario. Perhaps the most important announcement by the Lieut.-Governor in opening the session was that as an outcome of the National Industrial Conference held in Ottawa and the International Labor Conference in Washington, in accordance with the terms of the Peace Treaty, at both of which gatherings the Province of Ontario was officially represented, the Federal Government has arranged for a meeting of the representatives of the Dominion and the various Provinces to consider the unification of the labor laws of Canada.

"Mr. Sam Harris, Chairman of the General Legislation Committee, has been appointed by the Minister of Labor as the employers' representative for the Province of Ontario—Mr. J. G. Merrick, Secretary of the Toronto Employers' Association, being appointed the employers' representative for the Dominion.

"Copies of the various bills passing through the Provincial House are regularly received by the association and are examined by the Legal Department and appropriate action taken; as are also the Federal bills, and also numerous bills from the outside provinces, on which the association's branch secretaries, and frequently members, wish to be advised. Some of the measures from time to time form the subject of review by the secretary in INDUSTRIAL CANADA.

"Changes in the educational policy of the Provincial Government are forecast, including larger grants to rural schools and extension of the consolidated school system. Plans are reported to have been matured for affording a greater stimulus to agriculture, and, as has been shown by the Ministers' announcement and answers to deputations, the 'good roads' policy will be extremely liberal. The forests and mines of Ontario will also receive much attention, with provision for fire protection and prevention, and advanced methods of reforestation. Other measures that will probably be considered are to adopt the municipal lists in place of enumerations for provincial elections; to provide for local option in taxation; to establish a Minimum Wage Board, and to amend the Workmen's Compensation Act; all of which will receive careful consideration by the appropriate committees of the division.

"Ontario has 23 cities, 139 towns, 150 villages and 553 townships. Here live over 2,000,000 people, prosperous, progressive, industrious—producing a third of all Canada's agricultural products, and more than one-half of its manufactures. Here is a market pulsating with the dynamic energy of great commercial achievements, covering 42,000 square miles, teeming with well-to-do buyers of every kind of merchandise. Industrially, Ontario may be said to be the backbone of Canada, as is shown by the following comparison:

Value of Ontario Products.

	Ontario.	All Canada.
Value of farm products	$ 450,000,000	$1,100,000,000
Value of mineral output	52,000,000	138,500,000
Value of timber output	50,000,000	172,500,000
Value of manufactu'd products	715,000,000	1,390,000,000
Total	$1,267,000,000	$2,801,000,000

Ontario Division's New Chiefs

In the centre stands John R. Shaw of Woodstock, elected chairman for 1920-21; to the left is W. C. Coulter vice-chairman; on the right Secretary Hugh Macdonald.

The annual product of Ontario's farms, mines, forests, industries, etc. (which under the tax power of the Province secures all Ontario Government bonds), would pay off the entire direct bonded debt of the Province over twenty-two times—and do it each year.

"When one considers the achievements of Ontario in connection with war efforts and views the rich and varied resources that await development within our great Province, in common with its sister provinces, we are encouraged to regard the immediate future with confidence and hopefulness."

Election of Officers

The election of officers for the ensuing year resulted as follows:

CHAIRMAN.

J. R. Shaw, Canada Furniture Manufacturers, Ltd., Woodstock.

VICE-CHAIRMAN.

W. C. Coulter, Booth-Coulter Copper & Brass Co., Ltd., Toronto.

EXECUTIVE COMMITTEE.

H. Barrett, Penman's, Limited, Paris.
W. R. Breyfogle, De Laval Co., Limited, Peterboro.
G. C. Cockshutt, Slingsby Mfg. Co., Ltd., Brantford.
W. Cowan, Cowan & Co. of Galt, Limited, Galt.
G. H. Douglas, Thornton & Douglas, Limited, Hamilton.
R. H. Easson, Otto Higel Co., Limited, Toronto.
H. W. Fleury, J. Fleury's Sons, Aurora.
E. H. Gurney, Gurney Foundry Co., Limited, Toronto.
Fred Hatch, Martin Mfg. Co., Limited, Whitby.
T. A. Hollinrake, A. R. Williams Machinery Co., Ltd., Toronto.
J. G. Hossack, Massey-Harris Co., Ltd., Toronto.
Wm. Inglis, John Inglis Co., Limited, Toronto.
Fred Kent, Seaman, Kent Co., Limited, Toronto.
G. M. McGregor, Ford Motor Co. of Canada, Ltd., Ford.
Thos. Roden, Roden Bros., Limited, Toronto.
H. J. Waddie, Canadian Drawn Steel Co., Limited, Hamilton.
C. R. H. Warnock, Galt Knitting Co., Limited, Galt.
S. J. Williams, Williams, Greene & Rowe Co., Ltd., Kitchener.
A. W. White, Geo. White & Sons Co., Limited, London.
F. H. Whitton, Steel Co. of Canada, Limited, Hamilton.

The Power Shortage

A good deal of time was taken up with a discussion of the shortage of hydro-electric power, several members expressing themselves quite forcibly on the subject. Included in the proceedings was the reading of a report on the

power situation at Niagara Falls, which had been prepared by a special committee of the Niagara Falls Branch. The upshot of the debate was the passing of the following resolution:

"Whereas, during the past winter a larger number of the members of this association have suffered very considerable loss as a result of the failure of the Hydro-Eletric Power Commission of Ontario to supply the amount of power contracted for—a single member having in ten weeks lost 36,000 hours' work;

"And whereas, such loss involves a most serious decrease in production at a time when the greatest possible production is imperatively necessary;

"And whereas, such loss falls not merely on the employers, but on the workers, who stand to lose the wages they would otherwise earn;

"And whereas, even if the special difficulties encountered in the past few months were overcome before another winter, there would still, unless adequate steps are taken, be a serious shortage, owing to the fact that many of the industries at present served, will require an increased supply and many other industries will be certain to need Hydro power;

"Therefore, be it resolved by this Ontario Division of the Canadian Manufacturers' Association, in annual meeting assembled:

"(1) That the above considerations be brought to the attention of the Hydro-Electric Power Commission, and that the Commission be asked to leave no stone unturned to meet the pressing need which so many industries feel of larger and surer supply of power;

"(2) That before new radial railway enterprises calling for the use of large quantities of power be entered upon, all existing contracts for power be fulfilled;

"(3) And that the Power Committee of the Ontario Division be authorized and empowered to appeal to the Provincial Government for the appointment of a Royal Commission to investigate and report on the production, distribution, and adequate supply of power in all parts of Ontario, so that the industries of the provinces may not be further impeded."

The Fuel Supply

A second resolution bearing on the development of Canada's fuel supply was also adopted by the meeting. This read as follows:

"Whereas Canada's dependence for fuel on foreign countries is increasing to the point of being, economically, a menace;

"And whereas no proper steps are being taken to develop Canada's vast fuel and power resources, in spite of the strongest recommendations made by the Dominion Fuel Controller, which recommendations were referred to the Advisory Council for Scientific and Industrial Research, and in spite of the fact that a Dominion Power Board and a Lignite Utilization Board were appointed over a year ago;

Therefore, be it resolved that the Dominion Government be petitioned to take immediate steps, in co-operation with the interested provinces, to formulate a comprehensive policy for the speedy development of Canada's lignite, peat and other fuel and power resources, with a view to removing the very real menace constituted by the country's present position of humiliating dependence on foreign countries."

Quebec Division in Annual Session

By R. W. GOULD

Secretary, Quebec Division, C.M.A.

QUEBEC Division's first annual meeting took place in the Association's Board Room, 113 Board of Trade Building, Montreal, on Saturday morning, May 22. Owing to the proximity of the holiday and for various other reasons the attendance was not quite as large as might otherwise have been expected, but all necessary business was transacted. The following report, read by the Secretary, outlined the programme of the Division since its organization:

"Boasting an existence of little more than six months, at this early age the Quebec Division of the Manufacturers' Association has proven its worth and justified its existence.

"On Thursday, October 16, the Quebec Division was brought into existence at a provincial convention of the members held in the Windsor Hotel. Its birth was an auspicious one, and round its cradle gathered the wise men of manufacture of the Province of Quebec, and they have assisted it in order to assist themselves during the past six months.

"At this convention C. H. Duggan was appointed the first chairman and C. Howard Smith, its vice-chairman, with a strong executive to back them up. During that six months the division has not had an opportunity to do any spectacular work, but has proved its honest worth. This was demonstrated in no mistakable manner when in January last there came a call from the provincial department of labor that the division appoint a representative to represent the employers of labor of the Province of Quebec to take part in the discussions of a Dominion-wide conference to be held at Ottawa for the purpose of finding ways and means to unify existing provincial labor laws. There was a good attendance at the executive meeting on this occasion, and Mr. John Lowe, of Valleyfield, was appointed to the post and accepted to undertake the work for the division.

"That meeting has already taken place, but I understand the work is not yet completed. The results of the first sessions, however, indicated the need for such a conference, and the division was ably represented by Mr. Lowe, who has already presented a report which he read at the annual meeting of the Montreal Branch held on Wednesday, May 12th.

Quebec City Members

"At the special meeting of the executive when Mr. Lowe was appointed, it was also decided to inaugurate a membership campaign in the City of Quebec. This was done when a luncheon was held in the Chateau Frontenac on Thursday, March 4th, followed by a canvas made largely by the manufacturers, then members of the Association in that city. I am pleased to report, gentlemen, that 30 new members were added to our rolls in the City of Quebec by that effort.

"Good work was done by the division, the effectiveness of which has already been seen, in an effort to prevent the re-enactment of the business Profits War Tax Act, the changes in which were outlined by Sir Henry Drayton in his budget speech a few days ago.

"In this connection the division has done very good work in the past few days in the securing of interpretations of many features of the new budget, and assisting members throughout the province in this way.

"In affairs such as this the division has been found to be invaluable in maintaining contact and unanimity of purpose among the members scattered all over the province. It is difficult to secure good attendance at the meetings owing to the distance the members have to travel, and the fact that they have been very busy with their own personal affairs during the past six months.

"A meeting of the division was held in Quebec, following the luncheon in the Chateau Frontenac at which J. E. Walsh, general manager of the Association, and J. R. K. Bristol, manager of the tariff department, were present. At that

meeting they suggested that in order to equally divide the meetings so that all might get an opportunity to attend some at least with facility, that three meetings per year should be held in Montreal, three in the City of Quebec, and one each in Sherbrooke and Three Rivers.

"I might state here that preparations are now under way for the organization of a branch in the City of Three Rivers, and Mr. Robert Ryan, of that place, has been never-ceasing in his efforts to maintain interest in that centre, and will carry the banner in the effort to organize a branch this fall.

"There is much of the intangible in the moral effect which the creation of the division has had upon the work of the Association, a benefit which cannot be set down upon paper, but which as time goes on will make itself felt more and more in a sort of sub-conscious manner, which cannot be misconstrued, and which will be so clear that he who runs may read."

Industrial Development Committee

One of the important steps taken by the meeting was the appointment of an Industrial Development Committee, the purpose of which was to endeavor to attract new industries to the province. The committee is composed of Robert Ryan, Three Rivers; J. H. Fortier, Paul E. Sise, J. A. Richard, Leslie Drake, Joseph Picard, George D. MacKinnon, C. J. Laframboise, Jean Rolland, W. H. Miner, W. I. Matheson, and J. F. Alain. The Montreal branch has also formed a local committee to assist in this work.

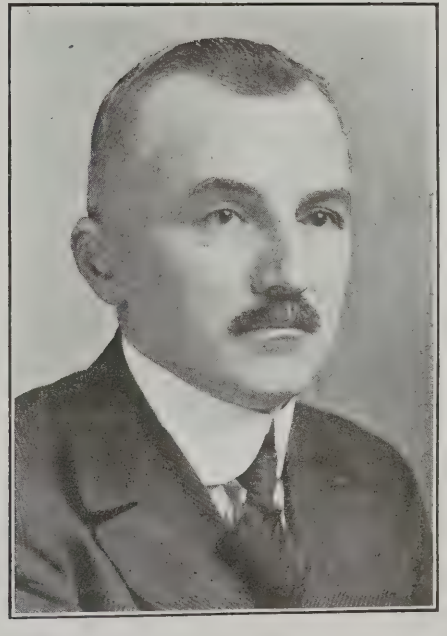
Election of Officers

The following officers have been elected by the Division for the ensuing year:

CHAIRMAN.

C. Howard Smith, Howard Smith Paper Mills, Limited, Montreal.

VICE-CHAIRMAN.



J. H. Fortier, P. T. Legare, Limited, Quebec.

EXECUTIVE COMMITTEE.

Paul E. Sise, Northern Electric Co., Limited, Montreal.
J. A. Richard, Fashion Craft Mfrs., Limited, Montreal.
W. B. Ramsay, A. Ramsay & Son, Montreal.
Lt.-Col. W. J. Sadler, Sadler & Haworth, Montreal.
W. S. Fallis, Sherwin-Williams Co., Montreal.
Raoul Grothe, L. O. Grothe, Limited, Montreal.

Maritime Division Holds Annual at Moncton

By H. R. THOMPSON
Secretary, Maritime Division, C.M.A.

THE annual meeting of the Maritime Division, C.M.A., was held at Moncton on April 28, 1920, convening at ten o'clock a.m. and continuing throughout the day. In the unavoidable absence of the Chairman, Mr. Angus McLean, who was representing the New Brunswick employers at the recent Industrial Conference at Ottawa, the Vice-Chairman, Mr. L. W. Simms, presided.

Nominating and resolution committees were appointed by the Chair, in order to expedite the election of the officers and committees for the ensuing year, and the drafting and adoption of resolutions.

In the absence of the Chairman of the Transportation Committee, the Secretary reviewed the work of this Committee

R. H. McKay
McKay & Fraser, Limited, New Glasgow, N.S.
Chairman, 1920-21, Maritime Division

for the past year. He explained the necessity for an exhaustive study of all phases of transportation, in view of the fact that the Intercolonial Railway, now a part of the Canadian National Railway System, will probably be brought under the jurisdiction of the Board of Railway Commissioners at an early date. He pointed out that the question of the advances in freight rates, affecting the Maritime Provinces, resolves itself into two chief phases, the political and the purely business. It is anticipated that the three Maritime Governments will jointly review the conditions under which these provinces entered Confederation and that the political aspect of the transportation problem will be considered at the same time. The business aspect is now receiving the attention of the Association.

Legislation Committee

The following bills directly affecting the manufacturers have been presented to the Nova Scotia Legislature:

Amendments to the Workmen's Compensation Act.
Amendments to the Factories Act.
Minimum wages for women employed in Industry.

In the New Brunswick Legislature, enactments have been made as follows:

Providing for the development of Hydro-Electric Power.
Amending and consolidating the Factories Act.
Amending the Workmen's Compensation Act.
Taxation of Unlicensed Insurance.

A special circular, dealing with the above, will be prepared and mailed to the members at an early date.

Accident Prevention

The secretary reviewed the organization and work of the Nova Scotia Accident Prevention Association, for which he has been acting as secretary. Following his remarks a motion was passed, that a committee be appointed in an endeavor to promote an organization to carry on a similar work in New Brunswick. The nominating committee was therefore requested to suggest the appointees.

Election of Officers and Committees

The report of the nominating committee, recommending the appointment of the following officers and committees, was adopted unanimously:

CHAIRMAN.

R. H. McKay, McKay & Fraser, New Glasgow, N.S.

VICE-CHAIRMEN.

L. W. Simms, T. S. Simms & Co., St. John, N.B.
A. G. Robb, Robb Engineering Works, Amherst, N.S.
J. A. Marven, J. A. Marven, Ltd., Moncton, N.B.

EXECUTIVE COMMITTEE

S. E. Elkin, Maritime Mail Co., St. John, N.B.
G. C. McAvity, T. McAvity & Sons, St. John, N.B.
C. D. Dennis, Rhodes, Curry, Limited, Amherst, N.S.
A. D. Ganong, Ganong Brothers, St. Stephen, N.B.
E. E. Shaw, Shaw & Mason, Sydney, N.S.
J. L. McDonald, Atlantic Underwear, Ltd., Moncton, N.B.
H. S. Crowell, New Burrell Johnson Iron Co., Yarmouth, N.S.
A. R. McPherson, Windsor Fdy. & Machine Co., Windsor, N.S.
Geo. W. Hallier, Brandram Henderson, Ltd., Halifax, N.S.
J. T. Cumming, J W. Cumming & Sons, Ltd., New Glasgow, N.S.
Chas. V. Monaghan, Moirs, Limited, Halifax, N.S.
W. D. Piercey, Piercey Supply Co., Ltd., Halifax, N.S.
J. A. Reid, Hartt Boot & Shoe Co., Fredericton, N.B.
C. S. Sutherland, Amherst Boot & Shoe Co., Amherst, N.S.
W. T. Ritcey, Acadia Gas Engine Co., Ltd., Bridgewater, N.S.
Archd. McColl, Nova Scotia Steel & Coal Co., New Glasgow, N.S.
Bruce Stewart, Bruce Stewart Co., Ltd., Charlottetown, P.E.I.

EX-OFFICIO.

W. S. Fisher, Emerson & Fisher, Ltd., St. John, N.B.
Angus McLean, Bathurst Lumber Co., Bathurst, N.B.
F. Magee, F. Magee, Limited, Port Elgin, N.B.
Alex. Wilson, Wilson Box Co., Ltd., St. John, N.B.

Representatives on Executive Council: W. S. Fisher, as Vice-President of C.M.A.; F. Magee, as Chairman Fish Section; Alex. Wilson, as Chairman Box Section; R. H. McKay, as Chairman Maritime Division; J. D. Palmer Fredericton, N.B.; L. W. Simms, St. John, N.B.; C. S. Sutherland, Amherst, N.S.; A. D. Ganong, St. Stephen, N.B.; F. A. Shand, Windsor, N.S.; R. B. Stewart, New Glasgow, N.S.

COMMITTEES.

New Brunswick Legislation: J. A. Reid, Angus McLean, Alex. Wilson.
Nova Scotia Legislation: R. H. McKay, A. H. Whitman, A. G. Robb.
Committee to Promote on Accident Prevention Association in New Brunswick: Angus McLean, L. W. Simms, G. C. McAvity.
Transportation Committee: Angus McLean, H. R. Silver, A. H. Whitman, A. McColl, W. S. Fisher, J. D. Palmer, J. A. Marven.
Power Development Committee: Angus McLean, J. A. Reid, A. A. Colter, W. D. Piercey, H. L. Fenerty, G. V. Monaghan.

Federal Tax Unlicensed Insurance

The Chairman brought up the question of the proposed federal tax on unlicensed insurance and emphasized the necessity for preventing any restriction being placed on the competition which now exists between the licensed and unlicensed insurance companies, pointing out particularly the benefit of being able to place insurance with the New England Factory Mutuals. After full discussion the resolution committee was requested to draft a resolution dealing with this matter.

British Preferential Tariffs.

The secretary informed the members that several boards of trade had passed resolutions favoring the restricting of the preferential tariffs to goods entering Canada through Canadian seaports only. During a discussion which ensued, it was pointed out that such action might adversely affect the importers who were not able to bring in full cargoes and therefore sometimes find it necessary to have their shipments placed in vessels consigned to New York or other United States ports. It was the general opinion that this question should be given exhaustive consideration before any recommendations should be made. The Resolution Committee was requested to suggest a resolution in this regard.

Government Employment Bureaux

It is understood that the Dominion Employment Bureaux are to be discontinued if the individual provinces are not willing to pay half of the maintenance costs. It is generally conceded that there should be some permanent and co-ordinated source for obtaining information as to the supply of and the demand for labor in the various sections of the provinces, with a view to evening up the shortage in one district with the surplus of another, etc. This matter received the consideration of the meeting and the Resolution Committee was requested to draft a resolution requesting the three local governments to give the financial assistance necessary for the continuance of these employment bureaux.

Representation on Power Commissions

A motion was passed that this division endorse the appointment of R. H. McKay as a member of the Nova Scotia Power Commission, representing the manufacturing industry.

A motion was passed that the New Brunswick Government be requested to consider giving the manufacturers direct representation on the New Brunswick Water Power Commission, which is to be appointed in the near future, as a result of an Act passed, at the late session, respecting the development of hydro-electric power in that province.

Proposed Legislation

Motions were passed requesting the New Brunswick and Nova Scotia Legislation Committees to consider the desirability of, and if found advisable, to take action towards arranging for some special party to keep in constant touch with what is transpiring when the local legislatures are in session, in an endeavor to ascertain beforehand what legislation is to be introduced, which will in any way affect the manufacturing industry. This action seems necessary, as it is anticipated that more legislation of a contentious nature will be considered hereafter than probably has been the case in the past. It usually happens that the three local legislatures are in session at the same time, and it is therefore impossible for the secretary to adequately take care of this feature.

Advancing Freight Rates

A motion was passed requesting the Transportation Department at Toronto to carefully consider the need for increased revenue for the railways, before agreeing to the principle of a general advance in freight rates. In any case the straight percentage increases to be most strenuously opposed.

Foundry Pig Iron

The secretary reported that an attempt had been made to get the steel companies in Nova Scotia to make a suitable grade of foundry pig iron, particularly for the use of the foundries in the Maritime Provinces, which are now competing for the western markets, under serious handicaps with the foundries of other provinces. The steel companies, however, have stated that they are not in a position to take this action at present. It is generally considered that the matter should be pursued, and it was therefore referred to the Executive Committee for further attention.

L. W. Simms
T. S. Simms & Co., Limited, St. John
Vice-Chairman, Maritime Division

Invitation from Fredericton

The Fredericton members of the Association extended a cordial invitation to the division to hold its next general meeting in Fredericton. A convention will probably be held during the fall months, and the Executive Committee will consider this thoughtful invitation when making preparations for this meeting.

Resolutions

The following resolutions were presented by the Resolution Committee and were adopted unanimously:

Shipments Through Canadian Ports

Whereas, the British preferential tariffs now apply on all shipments brought through the United States, as well as Canadian ports, and

Whereas, if such tariffs only applied on shipments through Canadian ports, it would mean

(*a*) The intensifying of a more thorough Canadian National Policy.

(*b*) The encouragement of steamship lines plying between Canada and Great Britain and other countries entitled to the preference.

(*c*) The removal from the minds of British exporters any apprehension they may have regarding the availability of Atlantic ports during the winter season.

(*d*) A greater volume of west bound traffic through Atlantic ports and via Canadian National Railways, through the Maritime Provinces.

Therefore be it resolved, that the Maritime Division, Canadian Manufacturers' Association, in meeting assembled at Moncton, April 28th, urge the Tariff Committee of the Association to consider, in all its phases, and from a national standpoint, the question of restricting the British preferences to goods entering Canada through Canadian seaports only, first establishing by close investigation that such restrictions will not adversely affect individual importers.

Further resolved, that if it is found, that sufficient reasons cannot be advanced to warrant the maintenance of the present policy, that representations be made to the Federal authorities to have the restrictions put in force without unnecessary delay.

Taxation of Insurance Companies

Whereas, we understand the Federal Government now has under consideration a proposal to tax unlicensed insurance companies, and

Whereas, it is vitally important to distinguish between ordinary unlicensed companies and New England Mutuals who insure factory sprinklered risks exclusively, and

Whereas, these companies have been of immense benefit to manufacturing interests of Canada through their educational efforts along lines of fire prevention,

Resolved, that the Maritime Division of Canadian Manufacturers' Association in meeting April 28th, 1920, strongly urge upon the Federal Government to avoid any legislation to discourage their business and influence in Canada, and which would remove or restrict the competition afforded by these companies,

Further resolved, that the sense of this resolution be at once transmitted by wire to the Minister of Finance, Ottawa.

Employment Bureaux

Whereas, the Federal Employment Bureaux formerly maintained in the Maritime Provinces, have been closed until such time as the Provincial Governments agree to bear half the cost of their maintenance, and

Whereas, these agencies have proven of great advantage to both employers and workmen and have acted as a clearing house to equalize shortage and surplus of labor, and

Whereas, we understand that all other Provincial Governments have agreed to bear their portion of the expense and to continue these offices;

Therefore be it resolved, that the Maritime Division of this Association assembled in annual meeting at Moncton, April 28th, 1920, respectfully urge upon the respective governments of the Maritime Provinces, that they take steps to reopen and maintain these offices, and that they bear their share of the cost of maintenance.

Further resolved, that copies of this resolution be submitted to the several Provincial Premiers.

Maritime Province Co-operation

Whereas, we understand that it is the intention of the three Maritime Provinces to jointly consider and take action on the question of increased subsidies due these provinces in lieu of land grants to other provinces;

Therefore be it resolved, that the Maritime Division Canadian Manufacturers' Association, in meeting assembled at Moncton, April 28th, express its pleasure at the proposed co-operative action on a matter of extreme importance, and urge that all conditions leading up to and under which these provinces entered Confederation, be reviewed, and that the question of Transportation be given immediate and particular consideration.

Further resolved, that copies of this resolution be forwarded to the Premiers of the three Provinces.

Development of Power

Whereas, in previous resolutions adopted by the Maritime Branch, Canadian Manufacturers Association, the desirability of developing the water powers of the Maritime Provinces was brought to the attention of the Provincial Governments, and

Whereas, it is of the greatest advantage to develop every possible economic source of power, in order that our manufacturing industries can use these resources and be placed in as good a position, respecting needed energy, as the manufacturers of other provinces;

Therefore be it resolved, that at this meeting of the Maritime Division, Canadian Manufacturers' Association, assembled at Moncton this 28th day of April, 1920, that we express our pleasure at the action so far taken by the Nova Scotia and New Brunswick Governments towards the early development of Hydro-Electric Power.

Further resolved, that we urge the Governments to continued action and also to extend to every bona-fide company which is prepared to proceed to develop these resources, every possible encouragement and assistance, and we further recommend that such water power resources as are now held by individuals or corporations for speculative purposes, should be secured by the provinces and so handled that they may be used for the best welfare of the people.

Pacific Division Reviews Year's Work

By HUGH DALTON
Secretary, Pacific Division

THE annual meeting of the Pacific Division, C.M.A., took place in the Board of Trade Rooms, Vancouver, on April 15, with a good attendance of members of the division present. After the reading of the minutes of the previous annual meeting, the secretary presented his report. This read in part as follows:

"During the past year the Executive Committee of this division held twelve meetings; the Legislation Committee held four meetings, the Membership Committee five meetings, and the Transportation Committee one meeting; in addition to which a number of meetings have been held by different groups of manufacturers interested in particular phases of legislation, etc.

"Following out the policy of the Association of encouraging in every way possible the organization of trade sections for the advancement of the interests of manufacturers in one line of industry, and particularly for the building up of export trade, a section composed of the box manufacturers of this province was organized last November. This section comprises seventeen firms in that line of business in different parts of the province, and since its inception fourteen meetings have taken place in the Vancouver offices.

"The membership of the division has continued its steady growth; the membership to-day comprising one hundred and sixty-two (162) manufacturers representing practically every class of industry in the province. A particularly pleasing feature in this connection, and one which has largely contributed to the growth of the Association during the past year, is the enthusiasm of the members familiar with the work of the Association in bringing in new members. The secretary gratefully acknowledges the whole-hearted assistance given him by many members along this line during the past year.

"The Victoria and Vancouver Island Branch of this division, which was organized just prior to our last annual meeting, has also shown a most satisfactory growth. The

James B. Thomson
James Thomson & Sons, Limited, Vancouver
Chairman 1920-21, British Columbia Division

Norman Yarrow
Yarrow's Limited, Victoria, B.C.
Vice-Chairman, 1920-21, British Columbia Division

membership on Vancouver Island to-day comprises thirty-two (32) firms, and the executive of that branch has set an objective of sixty members for the next annual meeting.

"Mr. Norman Yarrow was elected Chairman at the annual meeting of the Victoria and Vancouver Island Branch, held on the 13th instant, with Mr. R. W. Mayhew of the Sidney Rubber Roofing Company as Vice-Chairman, and an executive composed of Messrs. Tomlin, Tate and Graham.

"The Vancouver and Victoria offices of the Association have had numerous visitors from all parts of the world during the past year, and a considerable part of the time of the secretaries of these offices has been placed at the disposal of such visitors, in placing them in touch with local manufacturers, and in furnishing them with information as to goods manufactured elsewhere in Canada, as well as markets in Canada for various raw materials.

"The Vancouver office of the Association was also used for some six weeks in the latter part of 1919 as headquarters for Canadian trade commissioners from Great Britain, South Africa, Australia and New Zealand, and everything possible was done to assist the work of the trade commissioners in meeting manufacturers, importers and exporters, with a view to facilitating Canada's trade abroad. The trade commissioners and the Department of Trade and Commerce have expressed themselves as highly gratified at the services rendered them by the Association during their visit to British Columbia.

"It is gratifying to be able to report that an ever-increasing number of members of this division are availing themselves of the expert assistance of the head office staff of the Association in regard to tariff, transportation, legislation and other matters affecting their individual interests.

"During the past year the Vancouver office of the Association has co-operated in every way possible with the British Columbia offices of the Department of Soldiers' Civil Re-establishment in the work of placing returned men in employment. The co-operation offered by this Association was referred to in highly appreciative terms in the annual report to headquarters at Ottawa by the local S.C.R. offices."

Chairman's Remarks

The Chairman of the Division, Mr. McNeill, explained that, having only just returned from the east, he had not had time to prepare the customary written report reviewing the year's activities. He referred, however, to the gratifying increase in the membership of the division, which from about fifty-two years ago had grown to 162. He expressed the belief that succeeding years would show as great, if not greater, increases. Mr. McNeill then expressed gratification at the fact that the annual general meeting of the Association was to be held on the coast. While there were points of difference between the east and west that were irreconcilable, there were points of contact of far more consequence, and he was glad that many prominent men were coming from the east in order that by personal touch they might smooth away any difficulties that existed.

Election of Officers

The election of officers for 1920-21 was next proceeded with, resulting in the following choice of chairman, vice-chairman and executive:

CHAIRMAN.

J. B. Thomson, Jas. Thomson & Sons, Limited, Vancouver.

VICE-CHAIRMAN.

Norman Yarrow, Yarrows, Limited, Victoria.

EXECUTIVE COMMITTEE.

H. J. Bigger, American Can Co., Vancouver.
F. E. Burke, Wallace Fisheries, Limited, Vancouver.
J. J. Coughlan, J. Coughlan & Sons, Vancouver.
E. W. Hamber, B.C. Mills Timber & Trading Co., Vancouver.
J. W. F. Johnson, B.C. Sugar Refining Co., Limited, Vancouver.
W. H. Leckie, J. Leckie Co., Limited, Vancouver.
H. MacLaren, Simmons, Limited, Vancouver.
J. H. McDonald, B.C. Manufacturing Co., Ltd., New Westminster.
Frank Parsons, Gregory Tire & Rubber Co., Vancouver.
R. B. Sharpe, Pacific Box Co., Limited, Vancouver.
W. C. Shelly, Shelly Bros., Limited, Vancouver.
J. L. Tait, Colonist Printing & Publishing Co., Victoria.
Edwin Tomlin, B.C. Cement Co., Limited, Victoria.
G. W. Wooster, Granby Consolidated M., S. & P. Co., Vancouver.

Representatives on the Executive Council of the General Association were selected as follows: J. B. Thomson, Chairman of the Division; Norman Yarrow, Chairman of the Victoria and Vancouver Island Branch; R. B. Sharpe, Chairman of the Box Manufacturers' Section; F. E. Burke, E. W. Hamber, J. J. Coughlan, and W. H. Leckie.

Resolution to Change Name

A resolution was next submitted to the meeting and carried that, in order that the identity of British Columbia should be retained as a distinctive unit in the organization of the Association, a request should be made to the annual general meeting to have the by-laws changed so that the division shall be known in future as the British Columbia Division, rather than the Pacific Division.

Some time was then spent in discussing arrangements for the annual general meeting and, after votes of thanks to the retiring chairman and secretary, the meeting adjourned.

Standing Committees

At a meeting of the new Executive Committee on April 29, the following standing committees were appointed:

TRANSPORTATION.

H. J. Bigger (Chairman), American Can Co., Vancouver.
J. H. McDonald, B.C. Manufacturing Co., New Westminster.
A. E. McMaster, Whalen Pulp & Paper Mills, Vancouver.
J. E. Hall, Vancouver Milling & Grain Co., Vancouver.
Albert Erb, Davies Paper Box Co., Vancouver.
W. R. W. McIntosh, Kelly, Douglas Co., Vancouver.

TARIFF.

H. MacLaren (Chairman), Simmons, Limited, Vancouver.
O. W. Pearson, Swift Canadian Co., Limited, Vancouver.
E. C. Knight, Vancouver Lumber Co., Vancouver.
T. B. Dixon, Gault Bros., Limited, Vancouver.
L. G. De Merrall, Martin-Senour Co., Victoria.
F. A. Quigley, Vancouver Knitting Co., Limited, Vancouver.

LEGISLATION.

J. B. Thomson (Chairman), Jas. Thomson & Sons, Vancouver.
Wm. McNeill, Western Power Co. of Canada, Ltd., Vancouver.
J. G. Todhunter, Clarke & Stuart, Co., Ltd., Vancouver.
Frank Parsons, Gregory Tire & Rubber Co., Ltd., Vancouver.
W. H. Malkin, The W. H. Malkin Co., Ltd., Vancouver.
E. W. Hamber, B.C. Mills Timber & Trading Co., Vancouver.
W. H. Leckie, J. Leckie & Co., Ltd., Vancouver.

Annual Meeting of the Montreal Branch

By R. W. GOULD

Secretary, Montreal Branch, C.M.A.

ONE of the best-attended and most successful annual meetings of the Montreal Branch, ever held, took place on the afternoon and evening of May 12. The business session took place in the afternoon, following which the annual dinner, attended by 150 members, rounded out the day's proceedings. At the afternoon meeting, which was presided over by the retiring chairman of the branch, Mr. W. J. Sadler, the various reports were presented.

The secretary's report gave a resumé of the year's business of the branch. In part it reads as follows:

The Secretary's Report.

"The problems of your Executive Committee during the past year have been in almost every case those arising out of the reconstruction of business on a peace basis following the war. It took years to win the war, and while no spirit of pessimism is entertained, it will take another year at least in the opinion of many, for that reconstruction programme to be completed and peace conditions finally astride the saddle of commerce and industrial activity. There has been a great industrial development in the City of Montreal amongst our members. Factories have been extended, capital increased and new markets developed. All this brought about greater activity in the Association and made the work of your executive committee more voluminous.

"Many emisaries of industry from all parts of the Empire and from far countries have visited Canada during the past year, and in almost every instance they solicited the assistance and advice of the Montreal Branch officials, for Montreal is never overlooked in a business itinerary of Canada. Your executive was pleased to give assistance and confer with representatives from the United Kingdom, from France, China, Japan, the United States, and Australia. Men from almost every corner of the civilized globe have as a matter of fact been assisted and have returned to their respective countries with very kindly feelings indeed toward the Canadian manufacturer and his association in this country.

"During the year the most fruitful source of labor extraordinary to your executive was perhaps the various forms of legislation introduced in the Federal House and the activities of the Board of Commerce. In the case of the latter your executive members and those interested in various specific forms of legislative and near legislative provisions did their best to assist the Government in all cases where constructive work was attempted. In some cases it was found that there was not a common understanding between the aims of the manufacturers and the Board of Commerce, and delegations who, appearing before the board acted as an interpreting medium and in almost every instance the way was smoothed. It is pretty nearly accepted now that the Board of Commerce in the final analysis in each case realized that your executive and assisting members were not out to oppose Government measures or any other effort that might be made to stabilize the country during the reconstruction period, but rather were anxious and eager to assist and give the Board of Commerce and similar bodies the benefit of their experience, wisdom and advice in any effort that was made to this end. The work in this connection is dealt with in greater detail in the report of the Legislation Committee.

Formation of Quebec Division.

"So far as our internal economy is concerned by far the most outstanding and important step that was taken during the past year was the formation of a Quebec Division, which provides for machinery by which matters of purely provincial interest may be handled with despatch and satisfaction. The Montreal Branch took a very lively interest in this work, and various members from Quebec, Sherbrooke and Three Rivers, as well as other points, assisted in a splendid manner. In November of last year the Division was formed with G. H.

Duggan as chairman and C. Howard Smith as vice-chairman, backed by a strong executive representing the various industrial centres of the Province of Quebec. Good work has been accomplished by reason of the additional facilities given the members through a provincial division, and each succeeding year promises to bring it into a greater sphere of activity and usefulness until the Province of Quebec has the largest and most active division in the whole Dominion.

Relations With Labor.

"Your executive labored incessantly during the year in order to bring about a better understanding between labor in the City of Montreal and employers, largely represented in the Association. In this effort the executive was aided by the labor leaders of the city who realized that a common ground for the discussion of all trouble and grievances whether real or imagined was of prime importance to industrial peace in Montreal. In this effort your executive was signally successful. It is a significant fact that when the civic employees of the waterworks department went out on strike in January last, the labor leaders and the heads of that particular union came to your executive with a request that they be allowed to place their case before the branch with the request that the executive assist as a mediator in the settlement of the trouble. Although in the final settlement the Association did not appear in the arbitration proceedings, and while it may not be generally known it is nevertheless a fact that your executive was actually instrumental in bringing about a settlement of a strike which was dangerous to the best interests of the city and which during its continuance brought much suffering and hardship to bear upon the citizens in all walks of life.

"During the past few months Mr. John Lowe was on invitation of the Federal Government appointed by your Executive as the representative of the employers in the Province of Quebec at a conference which has already been held, on the Unification of Provincial Labor Laws. In this matter and in other questions akin to this Mr. Lowe has given the Association splendid service at a great personal sacrifice during the past year, and has become what might be justly termed our plenipotentiary extraordinary in these matters.

Meetings of Executive Committee.

"Eight meetings of the Executive Committee were held during the year with an average attendance of fifteen. During the past three months our members have been unusually busy with their personal business interests, and it has been very dicult for them to get away from their business to attend Association meetings, of which there have been many of a special character."

Reception and Membership Committee

The report of the Reception and Membership Committee was presented by its chairman, Mr. F. W. Stuart. It read as follows:

"One year ago when this committee presented its report at the annual meeting it was announced that there had been a net gain in the membership of the branch during the year of thirty-four members. 'This,' to quote the report, 'is by far the largest percentage of increase which the branch has enjoyed for a number of years, and is in itself a marked recognition of the Association's endeavors during the past twelve months on behalf of its members.' This year I am pleased to report a net gain membership for the year of 173. In addition to this total we have secured seven new members during the present month, not included in the above calculation, which rounds our year out with a net gain of 180 new members.

"The record of applications and resignations during the past year by months is as follows:

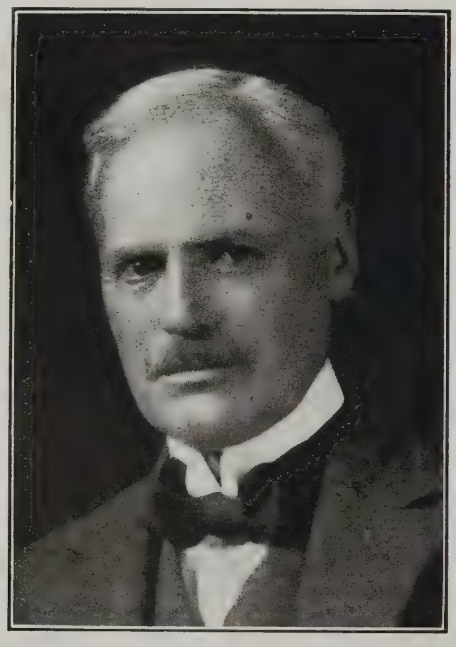
	Applications.	Resignations.
May	5	0
June	4	2
July	3	0
September	17	2
October	4	2
November	1	2
December	10	2
January	120	4
February	13	1
March	2	2
April	12	0

"This gives us a total new membership for the year of 190 and a total of 17 resignations. The total number of members in the branch at the end of last year was 621, while the total number of members at the present time in the branch is 794, a net gain of 173, not taking into account the seven new members during the present month which officially will be added to the count of the new year.

"It will be noted that January is credited with 120 new members. This was the result of the membership campaign which was carried on during the month of December concurrently in every Division in the Association. The Montreal Branch gave the Ontario Division a close run for premier position in this campaign, and was beaten out by a very small margin. The impetus of the December campaign has not died out as yet, and it will be noted that February brought thirteen new members and April twelve more.

Reasons for Resignations.

"At this juncture permit me to point out that in the case of the seventeen resignations in almost every case they were brought about owing to the discontinuance of business by firms holding these memberships or by amalgamations of groups whose activities were along kindred lines. The increase therefore in membership during the past year is considerably in excess of the total membership increase of the branch in the past six years.



"Although the Montreal Branch has not yet secured a 100 per cent. membership of all eligible manufacturers within its jurisdiction it is estimated that there is not more than six per cent. of our eligible manufacturers outside the pale of the Association, and it is hoped that during the coming twelve months these will be gathered into the fold. During the campaign, in most cases, no great difficulty was experienced in convincing the prospects visited to take membership in the Association. This your committee took as a strong indication that the work of the Association has become very well and favorably known even among the few manufacturers who have not yet joined the organization.

"In passing I wish to pay a tribute to those who made a personal sacrifice of their business interests to assist in the membership campaign, which without their thorough cooperation and effort would not have been the success it was. The team captains and team members worked arduously and long on the campaign, and I would like to thank especially Messrs. S. W. Ewing, F. R. Whittal, A. H. Brittain, James L. Waldie, Paul F. Sise and H. L. Perchard for the splendid work which they accomplished in this effort.

"During the year six dinners and luncheon meetings were held, the first being the occasion of the organization of

the Quebec Division on October 16th, at which there was a good attendance. There then followed the meeting on January 8th, when Roger W. Babson addressed a joint luncheon of the Kiwanis Club, the Montreal Publicity Association and the Canadian Manufacturers' Association. There was an attendance of considerably over 600, and the meeting was a splendid success. The quarterly dinner was held on February 4th, at which Hon. Robert Rogers was the speaker. This was attended by 120. A luncheon was held in the City of Quebec on March 4th in connection with a drive for members in that city. Hon. L. A. Taschereau, Attorney-General and acting Prime Minister of the Province, was the chief speaker. There were 74 present, and some 30 new members were secured through the effort.

"The Dominion Council meeting of March 25th was held in Montreal, there being an attendance of seventy-eight at the noon luncheon. The speaker on this occasion was J. A. Woodward, one of the labor leaders of the city. The latest luncheon meeting was that arranged for the officials of the Alberta Industrial Development Association, which was held on April 27th, at which there was an attendance of seventy-three.

F. W. Stewart
Cluett, Peabody & Co., of Canada, Limited
Chairman, 1920-21, Montreal Branch

"There is still much work to be done in Montreal in the matter of increasing the membership, and it is hoped that at the next annual meeting the committee will be able to report 100 per cent. membership in this city."

Legislation Committee

The following report was presented by the Legislation Committee, of which Mr. B. W. Coglin is chairman:

"The work of the Legislation Committee during the past year has been considerable in volume. Much of the special details of the work however fell upon the shoulders of those members whose manufacturing interests were peculiarly affected by legislation which was introduced both before the House at Ottawa and in the Provincial Parliament at Quebec.

"Overshadowing all the legislation which contained objectionable clauses which were brought down in these Houses were the restrictions and demands made upon the manufacturing community by the Board of Commerce. During the year history-making and celebrated arguments were carried on between this Board and various sections of the manufacturing interests.

"The most important of those was perhaps that between the Board of Commerce and the textile manufacturers. This arose out of the issuance of a questionnaire which contained many objectionable clauses and caused the textile industry no little concern all over Canada. The Montreal textile people were particularly active in this matter, and were later joined in their efforts by kindred manufacturing interests in the textile trade. The results of the effort on the whole were satisfactory, but their final culmination is yet to be seen.

"The latest work of the committee was that in connection with Bill No. 27, the Food and Drugs Bill, introduced in the House by Hon. N. W. Rowell. The results attained by the Montreal manufacturers affected by this bill doubtless crowned all previous efforts during the year, at Ottawa, of this character. They in co-operation with the Ontario manufacturers of similar lines put up a splendid and winning fight which removed many of the objectionable clauses from the bill entirely, and deleted portions of other clauses not conducive to the welfare of manufacturers of lines affected.

"The effort to prevent the re-enactment of the Business Profits War Tax Act was something upon which considerable time was spent by your committee. Representations were made to various members of the cabinet as well as members of parliament, and a memorandum was presented to the Government officially. Copies of these memorandums were sent out to various boards of trades and similar organizations throughout the province who concurred in our actions and also made representations to the Government in their own behalf.

Business Profits War Tax.

"Recently information has been received from Ottawa that the Government intended to re-enact this Act and a second effort was made, the members representing Montreal being appealed to by members of the Association, asking them to give the matter their immediate attention. The outlook, however, at the present time is that there will be a re-enactment of the Act, the Government pleading that no other vehicle of a more acceptable character can be devised to take the place of the Business Profits War Tax Act in the raising of revenue.

"Your committee has given some assistance to the Premium Payers Committee, recently organized under the auspices of the Association, to fight the proposal of the Government to place a tax of 15% upon unlicensed insurance companies, which will, if passed, include the mutuals and reciprocals in which many of our members are interested. A delegation proceeded to Ottawa on May 1st and interviewed Sir Henry Drayton, Minister of Finance, and Hon. C. C. Ballantyne, Minister of Marine and Fisheries, on this subject. The outcome of this interview has not yet been made known, and not until the budget is brought down will we learn whether or not our representations were successful.

"The Association through its committee took a great interest in several measures going through the Provincial Parliament, chief among which was the bill introduced by Hon. L. A. David, Provincial Secretary, for the creation of a commission to draft a new civic charter for the City of Montreal. The Association demanded of the Government that it be given a representative on this commission. This the Government, however, refused to do but assured the Association to a certain degree of its satisfaction that the interests of the manufacturers of Montreal would be safeguarded zealously in the drafting of the new proposed charter.

"The entire and complete co-operation of the legal department at head office, under Mr. H. Macdonald, has during the

past year been a source of great satisfaction to not only the Legislation Committee but also the entire branch membership. Many legal enquiries were directed to the legal department, and they were attended to with a despatch and efficiency which could not but make for satisfaction in the service rendered.

"One or two more or less serious matters of difference between members of the Association over contracts, etc., in different parts of Canada were brought to the attention of the committee of the branch which co-operated with head office in any way possible tending towards their settlement, which was the final outcome of such disputes in every instance."

Chairman's Address

A feature of the proceedings was the annual address of the chairman, Mr. W. J. Sadler, which is reproduced in full:

"It is with not a little temerity that I approach the task of attempting to make even a superficial survey of the events that have called for the attention of the industrial communities of Canada during the past year. It is true that when one year ago we met for the annual meeting, we talked of the new era of peace and reconstruction that was upon us. We have experienced the task of reconstruction, which is not yet completed, but, of the era of peace, we have found that we shifted from a struggle of nations to a struggle of classes. We have cried 'Peace, peace' while at the same time we have been seeking for that peace which we were loudly declaiming to our fellows.

"So far as our experience of the past year has been concerned, in many things our lot has not been cast in pleasant places. I am pleased, however, to point out that so far as Canada has been concerned, while we have had our industrial disputes and our industrial troubles, we have not suffered to such an extent by these scourges as the European nations nor yet the nation to the south of us. In the maintenance of a sound and sane industrial peace in Canada, the Canadian Manufacturers' Association has played a not unimportant role, and in that effort the Montreal Branch has taken its share of the responsibility and effort and I think has shouldered that responsibility with some degree of success.

Catastrophe of the War.

"It was not until the past year that we came to realize to the fullest extent what a great catastrophe the world war really was. During the years of the struggle and following immediately upon its heels we felt more keenly the heart pangs in the loss of thousands of our young men. To-day we are feeling to the full extent, may I say, the industrial pangs of their loss. It is pleasing to note that during the past six months there appears to have been an easing off in the industrial unrest in Canada as compared with the corresponding period last year. When the thousands of soldiers of Canada came pouring back home, it was impossible for our industrial establishments to absorb them as rapidly as they returned. This caused unrest and dissatisfaction. The industries have, however, to a large extent been able to overtake this problem and to-day nearly all of the returned soldiers are rehabilitated in civilian life, and their influence for good is beginning to be felt in every avenue of activity in Canada.

"During the past year our export trade in Canada has grown by leaps and bounds. We have stretched the tentacles of trade far out across oceans and continents and have made new business friends in every civilized country. The glory of gallantry given to the word 'Canada' by our sons on European battlefields has been reinforced by the quality of the Canadian manufactured product throughout the world. Indeed our export trade might be doubled, nay trebled, during the next year providing our manufacturers in this country were in a position to successfully fill the great demands made upon them by foreign markets. Our greatest difficulty at the present time is to secure the goods to satisfy the market. The demand far exceeds the supply and orders go begging up and down the country.

"The Canadian manufacturer with his accustomed foresight and keen business acumen is preparing as rapidly as he is able to take care of these demands for additional manufactured goods, and our manufacturing plants are expanding all over the country. The indications are to-day that within the next twelve months Canadian manufacturers will be in a position where they will be able to meet in a measure the great demands of the outside world for her products.

B. W. Coghlin
B. J. Coghlin Co., Limited
Vice-Chairman, 1920-21, Montreal Branch

"Closely allied with industrial unrest and the great demand for goods especially in Europe, we have passed through an unprecedented period in the last year in the matter of the cost of living. As wages have increased and the cost of raw materials have been forced upwards by the great demand, the cost of the necessities of life have risen until to-day we are carrying a cost of living budget never before equalled in our history. One of our old English assayists a half century ago in writing on 'The Pleasures of Wealth' remarks that full contentment should come to a man on £400 per year, and he points out that, with this income, one might own a comfortable estate, keep a butler, two maids, a gardener and a coachman and withal not fear the wolf at the door. To-day such an establishment on $2,000 per annum sounds like the tale of Alladin's Lamp. In view of this condition I am more and more of the opinion that the old war-time clarion call of 'Patriotism and Production' is what we need in Canada in these days of reconstruction even as much as we did in the days when we were at grips with the Central Powers of Europe.

"Among other disturbing elements to-day that calls loudly for our attention is the tangled situation with respect to the

exchange rate. Canada is suffering but a little from this condition, but it is possible, as some of our financiers have pointed out, that this indeed may be a blessing in disguise, that it is a strong stimulus toward the production of more goods in our own country, the purchase of our own goods more exclusively and in many other ways a general tonic for our national pride in achievement. The situation it seems will not become very much more acute, and it is hoped that in the not far distant future Canada will have reached that point in her production and export to the United States, where she will have corrected a most aggravating financial circumstance.

Problems of Tariff.

"The tariff problem is one which your Executive has been taking a deep interest in. The Association has now a large and very comprehensive scheme, whereby it may assist the Government materially in the carrying out of the idea of establishing a Tariff Commission similar to that in the United States. A scientific study of the tariff will be made, and the Association is arranging that when this is started we will be in possession of an array of facts and figures which will show plainly and truthfully, beyond the possibility of refutation, what tariff means to our national life, to our industries,, and what a broad programme of free trade, as a national policy, would bring in its train, in undermining the very groundwork of our prosperity as a country.

"Indications are—and I do not wish to pose as a prophet—that the next general election in Canada will see the tariff question one of the features of the campaign. There has grown up in our country west of the Great Lakes a section of the people bound to the doctrine of free trade. They undoubtedly will press their claims with all the strength they possess at the next occasion at the polls. The Canadian Manufacturers' Association must impress upon the people of Canada that it does not demand a protective tariff that will assist the manufacturers as a class, at the expense of the rest of the population, but it does desire a tariff which, in its application, will prove to be the greatest good for the greatest number. That a reasonable amount of protection is the system by which the greatest good to the greatest number may be obtained by a national policy for Canada, the Canadian Manufacturers' Association is prepared to prove by facts based on the actual conditions in this country and neighboring countries.

Liquidation of National Debt.

"This question suggests the problem of the liquidation of the great national debt, which to-day is causing no little concern in Canada. This great debt, piled up by our participation in the war, is in many respects our sinking fund of sacrifice. It will not be for us, within our allotted span of four score years and ten to liquidate it, but it is for us to lay the foundations broad and deep of a programme which, when carried out by our children and children's children will sweep that debt out of existence as gloriously and successfully as did our gallant sons sweep the enemy from their path on the Western front during five years of war.

"Turning from questions of national import, I would like to dwell for a moment upon one or two of our domestic problems as a city. Montreal, for her size and importance as a manufacturing centre and the commercial metropolis of Canada, is, to my mind, woefully lacking in what I may be permitted to term a comprehensive advertising programme. I am firmly convinced that, if the city of Montreal would organize a publicity and information department, or better, perhaps, the province organize such a department, and it be operated scientifically and efficiently, many manufacturers from the United Kingdom and the United States would be attracted to the province of Quebec for the location of subsidiary plants. When we remember that during the past year upwards of twenty American concerns have, or are about to, establish subsidiary plants within this province, without having any particular invitation to locate here, we will realize the potentialities of our province in this respect. I would respectfully suggest that this matter be given consideration by the incoming Executive.

"As our city grows and expands our civic viewpoint must grow and expand, if we are to keep pace. In this connection I am of the opinion that the time has come when Montreal for the proper conduct of her business, needs a tube system for the handling of passenger traffic. I do not mean to imply by this that our radial system is inefficient, but there comes a time in all large cities when no radial system, no matter how efficiently conducted, is able to meet and cope with the growing problem of passenger traffic. This, too, is a matter which I believe, in the interest of our city, the incoming Executive should give a measure of attention.

The Million-Dollar Fund.

"Returning once more to the work of the Association before I close, permit me to refer briefly to the Emergency Fund which the Association is now attempting to raise among its members. One million dollars is the objective, and many of the problems which I have referred to previously in this report will, if they are tackled in earnest, require the expenditure of considerable sums of money. Our services must be broadened and increased if we are to give our members the assistance which we desire to give them. Our Tariff Department is greatly in need of extension, as are our other departments. Quebec has been allotted $300,000 as her quota of this total, and it is my earnest hope that we will be able to reach our objective before the end of the month and demonstrate to the Association that our Division and Branches in this Province are not lacking in initiative and enthusiasm. Mr. T. P. Howard, our Dominion President, will give you an address at our dinner which will follow this meeting and outline in detail the programme upon which this fund will be expended.

"Time does not permit me to touch on other important questions, of which there are many, and I have chosen almost at random those which I have referred to. I desire before I close to thank you all heartily for your attendance at this annual meeting, and for the splendid support which you gave me during the year which is gone in the work of the Association, when I had the honor to act as your chairman. I feel sure that our meeting together to-day, for a resume of our year's work, will not be without its beneficial results, and I am certain that the next year will prove the most fruitful, as each succeeding year should, in the history of our Branch and of the Association as a whole. I thank you."

Election of Officers

The following officers were elected for the ensuing year:—

CHAIRMAN.

F. W. Stewart, Cluett, Peabody & Co. of Canada, Limited.

VICE-CHAIRMAN.

B. W. Coghlin, B. J. Coghlin Co., Limited.

EXECUTIVE COMMITTEE.

A. H. Brittain, Maritime Fish Corporation, Limited.
E. C. Budge, Budge Carbon Paper Mfg. Co., Ltd.
F. G. Daniels, Dominion Textile Co., Ltd.
Joseph Daoust, Daoust, Lalonde & Co., Ltd.
A. S. Falle, Waltham Watch Co., Ltd.
I. Greenberg, Greenberg-Smith Company.

Art. Harries, the Canada Paper Box Co., Ltd.
Paul E. Joubert, Lamontagne, Ltd.
John Lowe, Montreal Cottons, Ltd.
W. H. Miner, Miner Rubber Co., Ltd.
J. A. Richard, Fashion-Craft Mfrs., Ltd.
Lieut. C. P. Slater, Geo. A. Slater, Ltd.
Julien C. Smith, Canada Carbide Co., Ltd.
Eug. Tarte, La Patrie Publishing Co., Ltd.
Jos. L. Waldie, Canadian Tube & Iron Co., Ltd.
F. R. Whittall, A. R. Whittall Can Ca., Ltd.

Annual Banquet

The annual dinner of the Branch was graced by the attendance of several prominent public men, among them being Colonel Grant Morden, Sir James McKechnie, K.B.E., Senator J. P. B. Casgrain, J. W. Norcross, W. F. Foster, B. W. Coghlin, Lieut.-Col. W. J. Sadler, E. B. Bristol, M.P., Hon. Frank Carrel, Major-General Sir Alexander Bertram and others. The new chairman of the Branch, Mr. F. W. Stewart, presided.

Mr. T. P. Howard, in his address, as president of the Dominion C.M.A., spoke along the lines of the necessity for a scientific tariff board for Canada, which could settle the question of tariff on actuarial bases.

"We approached the Government on this matter," said Mr. Howard, "and in this we were supported by the labor elements. The better classes of the labor unions to-day are not opposed to protection, and I am glad to say that they are as patriotic in their impulses for the betterment of Canadian industry as are the best in Great Britain. This matter, when it is taken up, will be considered with the support of 1,600 labor unions of Canada, as well as the manufacturers and employers."

Mr. Howard then dealt with the importance of the establishment of a Canadian Chamber of Commerce at London, and other work in the interests of both employers and employees, and said that for this a large amount of money would be required, for which the million dollar fund was being raised.

Sir James McKechnie, chairman of Vickers, Limited, who is on a visit to Canada, followed, and gave a short address, in which he dealt with the position of shipbuilding in Great Britain and Canada. He said he had been greatly struck with the manner in which the Canadian employees entered into their work, as compared with the manner of the workers in England. If the present manner went on, he said, the future of the steel shipbuilding industry in Canada was assured. Sir James spoke of the apprentice system in this country, and urged that in the shipbuilding work apprentices should be trained during the first years of their work, so that they would be really trained, and not made mere helpers to other skilled workmen.

"Train your boys so that they will be skilled workers," he said, "and make it compulsory that employers so train them, that in future the Dominion will have a crop of skilled workers growing out of the younger generation of apprentices. That will be the means of securing the future of the Canadian shipbuilding industry."

Col. Grant Morden

Col. Grant Morden, who was well received, spoke in part as follows:

In opening his remarks, Col. Grant Morden said he was a very old member of the Canadian Manufacturers' Association, though he had not had the opportunity of attending an annual banquet for nearly twenty years. He recalled that on the last occasion he had heard a speech by the late Sir Wilfrid Laurier, who followed the trail that was blazed by that great Empire-builder, the late Sir John A. Macdonald.

"You are not taking to heart that broad view of the future that these great pioneer Canadians did in the past," said Colonel Morden, "and yet there never was a time in the history of this country, facing a great war debt, when it was so necessary to look into the future to convert the undoubted resources of this great Dominion into dollars and cents, not only to enable you to pay off the war debt, but to put this great country in a foremost position among the nations that form the British Empire."

Col. Morden referred to the Federation of British Industries in England, representing some four thousand millions sterling invested in industry in the United Kingdom. He had been opposed to that organization being turned into a political force, and he said his reasons would apply equally to the Canadian Manufacturers' Association. "In the first place, I am entirely opposed to class government," he said. "It is absolutely against the great democratic system of government which has been the pattern of the United Kingdom and for liberty-loving people throughout the world. I do not believe in the Farmers' party, and a Farmers' Government would be disastrous. It would mean class rule. The object of the British Constitution has always been for fair representation of all classes, and this means fair protection for each particular class. Having these views, but also feeling that the industrial classes of England were not proportionately represented in the Imperial Parliament—and I do not think they are equitably represented to-day in your Parliament in Canada, I endeavored to work out a plan by which we could get this representation without anyone being able to point out that we, as industrialists, were attempting to form a party or to bring influence on the Government to the detriment of the other classes of the community. This resulted in the formation of the British Commonwealth Union. The Federation of British Industries accepted our views, and their members liberally responded in the way of funds."

Protection of Industry.

The lines of procedure were explained by the speaker, showing that any candidate or member, whether Liberal, Unionist, or Tory, was only required to pledge himself to stand solidly with the British Commonwealth Union in regard to the protection of industry. As a result, 87 members of Parliament were elected who were pledged in that way, and others had followed, so that to-day there were 100 members of the Imperial Parliament pledged to protect manufacturing interests in the United Kingdom. Col. Morden said he was chairman of the political committee of that Union. As to the supposition that he would be opposed by labor as the representative of capitalists, he said labor leaders in England were beginning to realize to-day that the interests of capital and labor were one. There had been no outcry from labor in England either in respect to industrial consolidations or banking consolidations, though more of such combinations had taken place in the last year or two than in the last half century.

"Our labor leaders in England have learned much; they have a great vision of Empire," continued Col. Morden. "Surely your labor leaders are not going to be behind in their views with the labor leaders of the United Kingdom? Why, with their initiative, they should welcome consolidations of industrial concerns, which mean greater stability to industry, which assures greater security of tenure of employment. They should also know that the more prosperous a concern becomes, the more that concern can afford to distribute amongst its employees.

"My business colleagues in Canada and myself are to-day giving great attention to a plan that will be announced in due course, by which we will give our employees not only an opportunity to participate in the success of our industry,

but also for representation on our directorate. I always believe in meeting labor, not across the table, but around the table."

The Canadian Association in London, of which he is chairman, was next referred to by Col. Morden. Its aim was to co-ordinate and combine efforts to advance the interests of the Dominion. Now he had been empowered by the committee to place before the Canadian Manufacturers' Association their willingness to convert this organization into a Canadian Chamber of Commerce in London. The American Chamber of Commerce there had accomplished great things for its own country. "If your organization will support us, we are prepared to take the bulk of the financial burden and devote our energy to the building up of a Canadian Chamber of Commerce in London. The Minister of Trade and Commerce, Sir George Foster, now acting premier, has stated to me that, provided we establish such a Chamber of Commerce on lines that would be beneficial to Canada, and of a permanent nature, he is entirely in favor of it being done.

Inland Waterways

Col. Morden emphasized the transportation possibilities of the St. Lawrence if its canals were enlarged, and asserted that in spite of the vaporings of a certain member of Parliament at Ottawa, Canada had the cheapest water transportation in the world. Was it realized that a ton of bulk freight was carried eastwards for one-tenth of a cent per ton per mile, that the Canada Steamship Lines carried a ton of freight 1,000 miles for one dollar? Also, that it carried bulk freight westwards for exactly half its eastern rate, which meant carrying a ton of freight 1,000 miles for fifty cents? Ocean tonnage to-day costs over three times that amount. Apparently the member for North Lambton did not consider for one moment the cheapness of the rates or the efficiency in the service. All that he did was to point out that this company had built up in the course of seven years assets two or three times in excess of their original value. "Let me say that this company until last year did not distribute any of their profits in dividends to their common stockholders. I can give a reason why, with these abnormally low rates, the company can make a substantial profit. I can give the answer in one word, and that word is efficiency."

Touching on the shipbuilding industry, the speaker referred to the steel plants of Sydney, and their wonderful facilities in having the raw material at hand, and the finest geographical position. It would be obvious that with ships, there would be a complete circle in industry, which would make the country quite independent. The British Empire Steel Corporation was going to build ships. Iron and steel had made both England and the United States. Canada was now getting her opportunity.

Commons' Criticism

The recent debate inaugurated by Mr. Richardson in the House of Commons, when he introduced a motion to investigate the British Empire Steel Corporation was next reviewed by Col. Morden, who said the member for Springfield had apparently been misled by a most malicious letter from a source not disclosed. As to Dr. Michael Clark's criticisms, if his reasoning were followed, the industrial interests of Canada would have no protection whatever, and Canada would be used as a dumping ground for foreign manufactures. The speaker expressed appreciation of the speech made by Mr. Nesbitt, North Oxford, also that of Col. Currie, North Simcoe, in which they pointed out that the United States Steel Corporation, the greatest steel corporation in the world, was selling steel at very much lower prices than any independent company, and that this corporation had proved a great benefit to the United States as a whole. As to W. F. Maclean's comments, Col. Morden wondered if he had not been reading the newspapers and heard of the Government railroad deficits? Did he want the people of Canada to pay for similar deficits in the water transportation companies or the steel companies? Remarks that the English labor men were all free traders were not correct. They had had practical experience in the past of the harm wrought by free trade. Some of these critics should cross over and test feeling at the present day. The leader of the Opposition, the Hon. Mackenzie King, said Col. Morden had made a most statesmanlike speech. He had said that competition was not between company and company, nor country and country, but between continent and continent. How could Canada, in point of capital and population, ever expect to compete against the great and wealthy nations of the world unless she combined her own interests in similar lines of industry, unless she associated these with others within the Empire, which would provide her with the capital, the experience, and the marketing powers possessed particularly by the United Kingdom? We must have industrial partnership within the Empire. With such partnership we can defy all outside competition. We can then have free trade within the Empire. When the public of Canada fully realized the ultra-conservative capitalization and the whole method of procedure in this consolidation, and the advantages that were going to accrue not only to the shareholders of the individual companies, but to Canada as a whole, instead of one word of criticism, there would be nothing but praise.

Tuckett Tobacco Co.

A Good-sized Increase in Profits Recorded by this Company for Last Fiscal Year

Profits of the Tuckett Tobacco Co. for the year ending March 31st, amounted to $333,131, as against $264,113 in 1918-19 and $201,481 in 1917-18. Earnings on common were about 7.7 per cent. as compared with 4.5 per cent. in the previous year. After paying $140,000 on preferred and $50,000 on ordinary shares, the balance at profit and loss stood at $605,177, which represents an increase from $462,046 for the year. In his report, the president, Mr. Howard S. Ambrose, states that to meet the increased demand for cigars additional factory space has been acquired adjoining the Montreal plant.

Back Numbers Wanted

If any of our readers have copies of the May, 1919, and October, 1919, issues of INDUSTRIAL CANADA, for which they have no further use, would they be kind enough to send them to the office of publication, 1301 Bank of Hamilton Building, Toronto. Both these issues are completely out of print and a few copies are urgently needed.

Toronto Branch Reviews Its Year

By H. MACDONALD
Secretary Toronto Branch, C.M.A.

IMMEDIATELY following the annual meeting of the Ontario Division on April 29, the Toronto Branch held its annual meeting. After a short adjournment at five o'clock, dinner was served at seven o'clock, and business was resumed immediately thereafter.

The first item on the agenda was the report of the Secretary, which read in part as follows:—

"During the year, the Executive Committee which, inclusive of *ex-officio* members, consisted of 23, was convened at 32 meetings—12 ordinary and 20 special occasions—as against 30 in the preceding year.

"Two special general meetings of the Branch were held in the course of the year—one on September 26th, to receive a report of the National Industrial Conference held in Ottawa, September 15th-20th, when it was unanimously agreed to recommend to the General Executive Committee that a permanent Department of Industrial Relations be organized to study labor questions, and to be prepared to furnish expert assistance in connection with any further industrial conferences that may be held.

"Another special general meeting of the Branch was held on Wednesday, 29th January, when an important address was delivered by Mr. Thos. Mulvey, K.C., Under Secretary of State, Ottawa, on "Blue Sky Law"—a bill for this purpose having been introduced last year in the local Legislature.

Work of Educational Committee

"The Educational Committee held two meetings, and the usual prizes, amounting in value approximately to $200, were awarded to the evening classes in the Central Technical School. Fifty-two scholarships donated by members of the Toronto Branch were awarded to qualified students in the day school, with conspicuously satisfactory results. A grant of $50 was awarded to the Ontario College of Art for the current year. It should be noted that the Association, through its membership in the Advisory Industrial Committee of the Board of Education, is directly represented in the administration of the Central Technical School, the representatives being Messrs. Geo. Brigden, W. C. Coulter and W. H. Shapley. According to the terms of the Ontario College of Art Act (No. 177, 2 Geo. V, 1912), the Association is entitled to a representation of two, the present representatives being Messrs. John Alexander and Thos. Roden.

"Messrs. Thos. Roden, W. C. Coulter and A. Nieghorn were elected representatives to the Bureau of Industrial Research, Royal Canadian Institute, for the ensuing year.

"Mr. George Brigden was appointed the representative of the Branch on the Joint Committee of Technical Organizations.

"Messrs. Thos. Roden and Ed. J. Freyseng were appointed representatives on the Citizens' Business Council, organized to co-operate in assisting in replacing discharged soldiers in civil life.

"Messrs. W. C. Coulter, J. P. Murray and the Secretary were appointed an Advisory Committee to assist the Victory Loan Toronto Executive.

"The Chairman and the Secretary were appointed as representatives of the Branch on the Executive of the Ontario Safety League.

"The average attendance at meetings of the Executive Committee has been five, which constituted a good working quorum. In this connection, we are happy to realize that all the members of the Executive Committee are always available to us with their counsel and advice, when special occasion requires.

"The expenditures from the general revenue of the Association for Branch purposes during the past year amounted to $3,897.30, an increase of $1,405.41 over the corresponding period of last year.

"The classification of membership indicates a possible revenue receivable from the territory allotted to the Branch of $33,190.00, being an increase of $9,960.00 on the previous year, due chiefly to the increase of fees and partly to increased membership.

"One hundred and thirty-one applications for membership were received and accepted for the year and 39 resignations, chiefly due to firms discontinuing business and amalgamations—some lines being adversely affected by the abnormal trade conditions—there being no resignation known as due to dissatisfaction with the services given in any of our Departments. Our Toronto Branch membership now stands at 920 firms and corporations, a gratifying net increase of 92 for the year.

"The Bureau of Advice and Information also received, during the year, numerous inquiries and extensive correspondence. Our members have evinced continued appreciation of this Department, its services unquestionably saving

T. A. Hollinrake
The A. R. Williams Machinery Co., Limited
Chairman, 1920-21, Toronto Branch

a considerable amount to the manufacturers. Advertising schemes, in particular, should, when any doubt exists, be referred to the Bureau of Advice and Information before any contract is made. Numerous statutory declarations and affidavits for members were taken by your Secretary during the year.

"Your Secretary attended the sittings of the Royal Commission on Industrial Relations in the City Hall on May 26th, 27th and 28th, and organized the delegates appointed to give evidence as to the causes of industrial unrest."

Executive Committee's Report

An exhaustive report on the year's work was next presented by the Executive Committee. This report referred in detail to the organization work done by the Executive in connection with the sittings in Toronto of the Royal Commission on Industrial Relations; the efforts put forth by the Branch to secure a settlement of the labor unrest arising from the deadlock in the metal industries; the participation of the Branch in conferences having in view the unifying of proposals for a civic war memorial; consideration of the question of uniformity in the payment of returned soldiers under vocational training, etc. Other matters dealt with included the street car strike, the formation of a police union, the establishment of closer relations between engineers and manufacturers, offences to the city smoke by-law, the coal situation, representation of manufacturers on public bodies, shortage of power, amendments to the Assessment Act, and burdensome taxation. In conclusion, the report said:—

"The industries during the year have been working under exceptional circumstances. Among the difficulties they are at present combating are shortage of skilled labor, high operating costs, serious shortage of raw material, and lack of coal, while there is a preponderance of orders at the mills.

"Generally speaking, the work of the past year has been of a character that necessitated an unusual amount of research, correspondence and compilation, with useful results accomplished.

"Due to the divisional organization of the Association, the sphere of work of your Committee has of necessity been confined to subjects of an immediate and local character, but these furnish such variety and scope as to fully engage the time of your Executive Committee and sub-committees. Not only have unprecedented burdens been borne by the official staff, but the abnormal demands upon the committees, which have far surpassed any previous year, suggest that next year the Executive should consider some plan of arrangement rendering less frequent meetings necessary, without in any way intending to impair the services."

Educational Committee's Report

A valuable report on the year's developments in connection with technical education in Toronto was presented to the meeting by George Brigden, chairman of the Educational Committee. After referring in a general way to the increasing importance of education in the life of the nation, the report went on to give practical information about the work in the city.

"Members of the Toronto Branch, appreciating the fundamental value of education, have contributed last year more generously than ever to the scholarship scheme. In the day school, 52 scholarships donated last year by members of the Toronto Branch were awarded to an equal number of pupils on the results of the previous year's work.

"It may be interesting to note the progress made since 1916, when the present scheme was inaugurated.

1916	31	scholarships
1917	45	"
1918	51	"
1919	52	"

amounting in all to $4,475.

"The usual prizes were donated to students in the evening school, amounting to approximately $200. The report of the Principal, Dr. McKay, concerning the work of the Central Technical School and the branch technical schools during the past year, is as follows:—

" 'The registered attendance for the academic year 1919-20 has been as follows:—

DAY CLASSES.

Regular courses	1,316	
Special courses	766	
Returned soldiers	864	
		2,946

EVENING CLASSES.

Central School	7,053	
Humberside Branch	108	
Oakwood Branch	235	
Riverdale Branch	494	
		7,890
Total		10,836

" 'Comparison of these figures with those of former years shows that our work is extending, and is influencing the lives of continually increasing numbers of young people.

Technical School Crowded

" 'During the fall and winter terms, every room at the Central Technical School was in use every day. In fact, the pressure on our space was so great that we were compelled to move the steel lockers from two of our specially designed locker rooms, in order that these might be used as class rooms for returned soldiers.

" 'For four years we have been conducting classes for returned men, in co-operation with the Soldiers' Aid Commission. In these classes we have had about three thousand men, and I am proud to say that the great majority of these persons have made a success of their new venture, and are now happily situated in new self-supporting vocations.

" 'The Dominion grant for the support of Technical and Industrial Education is making possible the extension of this type of educational work, not only in Toronto, but also in the towns and villages of Ontario. This grant, and the supplementary equal amount which must be added by the Province, make provision for fifty per cent. of the cost of buildings and equipment, as well as at least twenty-five per cent. of salaries of approved teachers. This is the most liberal support ever given in Canada to any type of educational work, and makes industrial education a possibility for every live community.

" 'The support given to this work in former years by the Canadian Manufacturers Association and other representative bodies is just now bearing fruit. The scholarships and prizes given to the Central Technical School by the members of the Association were all awarded to worthy students. The support and good-will, evidenced by the interest and generosity of the Canadian Manufacturers Association, bring much encouragement to those of us who are responsible for

the conduct of the schools. As Principal, I wish to express my appreciation of the many personal kindnesses shown to me by the manufacturers of the City of Toronto.'

"Your Committee, acting on a report by its Educational Committee, has resolved to appeal to last year's donors of $25 scholarships for a renewal of their award for the ensuing year. When it is stated that only 8 per cent. of the children of the Province have more than a primary education, the need will be apparent. The secretary will be glad to receive the names of educational donations. The Industrial courses in the Central Technical School extend over three years, and the scholarships are paid upon examinations, in three instalments each year. It is obvious that the efficiency acquired by a three-years' industrial course makes students, thus equipped, desirable candidates for vacancies in our industrial corporations."

Report of Exhibition Committee

The report of the Exhibition Committee, of which G. T. Irving is chairman, dealt with the improvements in the exhibits noticeable at the last Exhibition. It was explained that, "A circular was issued on 4th November last to 250 manufacturers of machines and machinery listed in the Canadian Trade Index, designed to obtain expressions of opinion from manufacturers in respect to the value to them of an opportunity to make an annual display of their products at the Canadian National Exhibition, in a new building, adequately equipped to handle the heaviest lines. It was estimated that the cost, approximately, of such additional accommodation would be $500,000, and it was proposed that charges, commensurate with the cost and maintenance, be made for space.

"Thirty-four favorable responses were received, and from an examination of the names, it appeared that the manufacturers of heavy machinery are sympathetic to the proposal. It is confidently believed that the Exhibition officials would have little difficulty in disposing of the space, and thus building up a demonstration of great value to this important branch of industry."

Mr. T. A. Russell resigned from the Manufacturers' Section of the Board and was elected honorary president and a life director of the Exhibition.

Mr. J. S. McKinnon was elected to succeed Mr. Russell in the Manufacturers' Section.

The Board of Directors of the Exhibition has reappointed Mr. G. T. Irving Chairman of the Section, and the following to act as vice-chairman of the different buildings for the ensuing year:

Manufacturers'—Mr. E. J. Freyseng.
Manufacturers' Annex—Mr. George Brigden, Mr. S. H. Chapman.
Grounds—Mr. S. Harris, Ald. Clifford, Mr. E. Blackburn.
Industrial—Mr. J. Firstbrook, Mr. T. Roden.
Transportation—Mr. J. S. McKinnon, Mr. W. C. Coulter.
Machinery Hall—Mr. J. P. Murray.
Government Building—Ald. S. Ryding.
Electric Building—Mr. E. F. Crossland, Mr. H. H. Couzens.

Retiring Chairman's Address

The annual address of the retiring chairman, Mr. W. C. Coulter, was a comprehensive review of a number of the outstanding problems of the day, and was listened to with close attention by those present. Speaking on post-war adjustments, Mr. Coulter said:—

"One year ago to-day we had not yet recovered from the joy of achievement which we had celebrated with much enthusiasm on November 11, 1918, and we were looking forward to the coming year with expectancy, but with misgivings. The last stage of the history of a critical period had been written, but even then there were the shadows of a host of perplexing problems that threatened the peace of the world. During the past year these problems have assumed more concrete form, some have indeed already been met and successfully faced, but still we must look forward to meeting and solving many of the after war problems.

"A year ago to-day the one problem that loomed largest was probably that of putting the munition worker and returned soldier back into civil occupation. Men used to get together and reflect on the problem that faced the city, the province and the nation. It was felt by us in the City of Toronto that the greatest difficulty would be met here, as Toronto had been the greatest centre of recruiting and munition manufacturing, and that our difficulties would there-

R. H. Easson
Vice-President, The Otto Higel Co., Limited
Vice-Chairman, 1920-21, Toronto Branch

fore be greater than any other part of the country. Some men went so far as to urge that the Government should delay the bringing of the soldiers home, so that the situation should not be aggravated or should only be brought home as occupations for them should be found. These suggestions, ignoring as they did the rights and feelings of the soldiers long absent from their own country was, of course, impossible of acceptance, and the army was brought home as rapidly as shipping could be provided.

"It was estimated that at the time of the armistice 80,000 men in or from the City of Toronto were employed in the army and on military work. This, therefore, seemed a tremendous problem to face. But what has become of this problem that so affrighted us? It is astonishing how well the city and the country have tided over the period in which the resumption of ordinary industry took place. There has been a certain amount of unemployment, but nothing such as was feared. The achievement of this almost miracle has been due to the individual recognizing his responsibilities in the matter, and each and all doing the most that could be done to put the returning men back into industrial life.

"If we will but contemplate this one achievement, we have much to encourage us to go forward and meet the other problems that remain. If we will each recognize our responsibilities as we did in the case of finding employment for the returned soldiers, in the settlement of our other problems, we will look backward next year upon their solution also."

After referring to Canada's contribution in money to the war, with all its attendant expenses, Mr. Coulter said that it was gratifying to find that Toronto's Industrial Department had brought thirty-six new industries to the city within the last year. While most of these were from the United States, it was interesting to find that Great Britain was awakening to the advantage of locating branch industries in Canada.

Mr. Coulter then dealt with the strikes of the past year and with the agitation for an eight-hour day. He then referred at some length to the subject of group insurance, which he declared to be an important factor in solving the problem of industrial unrest. He next commented favorably on the appointment of a permanent tariff commission, and after giving some attention to the power and fuel situation, wound up with an appeal on behalf of the Special Fund Campaign. This latter appeal was later supplemented by Mr. S. R. Parsons, who went very thoroughly into an explanation of what was involved.

Election of Officers

The election of officers was next proceeded with, resulting as follows:—

CHAIRMAN.

T. A. Hollinrake, A. R. Williams Machinery Co., Limited.

VICE-CHAIRMAN.

R. H. Easson, Otto Higel Co., Limited.

EXECUTIVE COMMITTEE.

C. H. Carlisle, Goodyear Tire & Rubber Co. of Canada, Limited.
F. S. Corrigan, Sheet Metal Products Co. of Canada, Limited.
E. J. Freyseng, Freyseng Cork Co., Limited.
W. R. Gibson, Gurney Foundry Co., Limited.
A. H. Gourlay, Gourlay, Winter & Leeming, Limited.
A. E. King, Dunlop Tire & Rubber Goods Co., Limited.
Walter Laidlaw, R. Laidlaw Lumber Co., Limited.
R. L. McIntyre, McGregor & McIntyre, Limited.
T. F. Monypenny, Imperial Varnish & Color Co., Limited.
Chas. Morrison, Jas. Morrison Brass Mfg. Co., Limited.
J. Allan Ross, Wm. Wrigley, Jr., Co., Limited.
J. A. Scythes, Scythes & Co., Limited.
W. H. Shapley, Sterling Action & Keys, Limited.
H. D. Scully, Willys-Overland, Limited.
E. G. Staunton, Staunton's, Limited.
J. F. M. Stewart, Point Anne Quarries, Limited.
H. A. Telfer, Telfer Bros., Limited.
Geo. Valentine, Massey-Harris Co., Limited.
Geo. W. Watts, Canadian General Electric Co., Limited.

Resolutions Passed

Three resolutions were passed by the meeting. The first dealt with the shortage of power and was as follows:—

"Whereas, during the past winter, a large number of the Toronto members of this Association have suffered very considerable loss as a result of the serious shortage of power—a single member having, in ten weeks, lost 36,000 hours' work;

"And whereas, such loss involves a most serious decrease in production at a time when the greatest possible production is imperatively necessary;

"And whereas, such loss falls not merely on the employers, but on the workers, who stand to lose the wages they would otherwise earn;

"And whereas, even if the special difficulties encountered at Niagara in the past few months were overcome before another winter, there would still, unless adequate steps are taken, be a serious shortage, owing to the fact that many of the industries at present served, will require an increased supply, and many other industries will be certain to need hydro power;

"Therefore, be it resolved by this Toronto Branch of the Ontario Division of the Canadian Manufacturers Association, in annual meeting assembled, that the above considerations be brought to the attention of the Toronto Hydro-Electric System, and that the System be urged to consider the advisability of establishing one or more auxiliary steam plants, with a view to preventing a shortage of power, which might well be so serious as to be critical."

Development of Fuel Resources

The second resolution urged that the Government take immediate steps to formulate a policy for the development of Canada's fuel resources. It read as follows:—

"Whereas Canada's dependence for fuel on foreign countries is increasing to the point of being, economically, a menace;

"And whereas no proper steps are being taken to develop Canada's vast fuel and power resources, in spite of the strongest recommendations made by the Dominion Fuel Controller, which recommendations were referred to the Advisory Council for Scientific and Industrial Research, and in spite of the fact that a Dominion Power Board and a Lignite Utilization Board were appointed over a year ago;

"Therefore, be it resolved that the Dominion Government be petitioned to take immediate steps, in co-operation with the interested Provinces, to formulate a comprehensive policy for the speedy development of Canada's coal, peat and other fuel and power resources, with a view to removing the very real menace constituted by the country's present position of humiliating dependence on foreign countries."

Scientific and Industrial Research

The third resolution had to do with the subject of scientific and industrial research:—

"Whereas the industrial condition of Canada's present problems calls for careful consideration and adjustment, and demand that Canada shall by all the means available develop her abundant resources to the full;

"And whereas the Federal Government now has the service of an Advisory Council for Scientific and Industrial Research;

"Be it therefore resolved that the Toronto Branch of the Canadian Manufacturers Association, in annual meeting assembled, request that the Federal Government direct the Advisory Board to co-operate with our industries, to the end:

"1. That information bureaux be organized to supply information to manufacturers of new processes and technique in their industries;

"2. That a laboratory be instituted for the solution of industrial problems, and the discovery of means for the utilization of substitutes and the avoidance of waste.

"Be it further resolved that the Government be urged to see that such sums of money as may be necessary for the putting of these plans into operation are placed in the estimates, so that definite early action may be possible."

Pacific-Burt Co.

Profits For the Past Year Increased by Seventy-five per cent. Over Previous Year

Profits of the Pacific-Burt Co., Limited, for the year ending March 31st last were $139,216, comparing with $83,743 for the previous twelve months, being an increase of about 75 per cent. After all deductions, $53,889 was carried forward, as against $29,654 in 1919. In his report, the president, Mr. S. J. Moore, states that new records were established both in respect of volume of business and of net profits, and this was accomplished in face of a world scarcity of paper.

Hamilton Branch Closed Successful Year

By H. E. WATERMAN
Secretary, Hamilton Branch, C.M.A.

THE annual meeting of the Hamilton Branch was held at the Royal Connaught Hotel, on the evening of May 11, and was very well attended. The Branch Chairman, Mr. George H. Douglas, who had been away from home for about two months, returned just in time to preside at the meeting.

The year's activities of the branch were covered very fully in the chairman's report, which read in part as follows:

"One of our strongest advocates of the Made-in-Canada idea is Mr. F. H. Whitton, Vice-President and General Manager of the Steel Company of Canada, Limited, and we were fortunate in having him address a meeting of the members of this branch in the Connaught Hotel on this important subject. The attendance was large and fully appreciative of the splendid address delivered, and all present unanimously agreed in the principle of the Made-in-Canada movement.

"Along this line I might say that according to information at hand Canada bought goods to the value of $483,159,230 from the United States during the seven months ending January this year, as against $542,472,967 for the corresponding period ending January 1919. Canada's sales to the United States for these periods were $319,160,730 and $292,490,855 respectively. Thus the excess of imports over exports respecting Canada's adverse balance of trade with the United States in the seven months ending January, 1920, was $162,-142,500, as against $242,982,112 for the same period ending January, 1919; a reduction of about $90,000,000.

"In this reduction of $90,000,000 in Canada's excess of imports from the United States we find a source of congratulation and a move in the right direction, as the less of our needs are imported the more of our own resources are we drawing from. The aim of Canada should be, first—to buy within her boundaries for her own needs as far as practicable, and then second—trade within the Empire.

Preferential Trade Relations

"Following out the idea of trading within the Empire, a resolution was passed by this branch and forwarded to the Executive Council of the Association advocating that immediate steps be taken to extend preferential trade relations to all parts of the British Empire, and that the matter be at once taken up with the authorities with a view to securing the object of this resolution.

Meeting of Ontario Division.

"The Executive Council of our Association honored Hamilton with its meeting place in January last. The meeting took the form of a luncheon, to which were invited all the members of the Ontario Division. We were fortunate in having with us, as speaker following the luncheon, Mr. T. B. Macaulay, President Sun Life Assurance Company of Canada, who delivered a splendid address on 'Closer Trade Relations with the British West Indies.' Mr. Macaulay is a forceful speaker, and all who heard him enjoyed a real treat. Following his address a resolution was passed urging that the Government take up the question of bringing about closer trade relations with the West Indies.

Hydro-Electric Power

"Users of hydro-electric power were greatly curtailed in their supply during the past winter months, and were harassed with frequent shut-downs of varying duration. It was a serious handicap to the industries affected, as they were all working full and in an effort to get out production. A general meeting of hydro power users was called in January last, to which were invited the local Hydro Commissioners and their Engineer, Mr. Sifton, and Engineers Gaby and Jeffrey of the Ontario Commission. Mr. Gaby was called upon to explain to the manufacturers present the general situation with regard to hydro power. He went very exhaustively into the matter, and in the course of his remarks explained that the sudden shortage of power and shut-offs was the result of ice trouble in the Niagara River. This was a condition in which enormous amounts of money had been spent in order to overcome but without success, and it was not thought that much relief could be expected in the situation as long as ice conditions would last. Eleven thousand horsepower was added about February 1st, and some 1,300 horsepower was diverted from the City Waterworks on account of their turning to steam. A number of the manufacturers spoke of their own personal experiences, and all were looking forward to any relief which may be obtained. The general feeling was that the Hydro-Electric Commission had over-sold their supply.

Employment of Returned Soldiers

"The members of this branch, I am pleased to say, are continuing their co-operation with the Department of Soldiers' Civil Re-establishment in the employment of the returned men, positions being found for them where at all possible. In the Vocational Training Branch of the Department of Soldiers' Civil Re-establishment returned men who are incapacitated with wounds or illness, to carry on their former employment are being taught new trades and educated in many branches of technical training. A number of these men are receiving their vocational training in a practical way in our factories, while being carried on the payroll of the Government, and in this way our members are co-operating with the Vocational Training Branch in the re-establishment of the maimed and incapacitated soldiers.

Customs Tariff

"One of the most important matters engaging the interest of the manufacturers of Canada is the maintenance of an adequate and stable tariff for the protection of Canadian industry. Strong efforts on the part of western interests have been put forth toward securing drastic reduction of the tariff, which, if adopted, could only have the most disastrous results upon the industrial and employment conditions of our country, and I would therefore strongly urge your co-operation in every way in the efforts of the Association in the interests of Canadian industry and Canadian labor.

Workmen's Compensation Act

"Regarding the proposed amendments to the Workmen's Compensation Act, you are no doubt all familiar, through information received from our head office, of the drastic changes that are proposed in the Bill which has been presented to the Legislature. This matter has been closely watched by a strong committee of the Association, who have waited upon the Government and laid before them their oppo-

sition and views, and this matter was the subject of a strong resolution passed by Hamilton Branch, which reads:

"'The members of the Hamilton Branch, Canadian Manufacturers Association, strongly protest against some of the proposed amendments to the Workmen's Compensation Act.

"'We approve of the increased grant to widows and children and strongly oppose the increase from 55 per cent. to 75 per cent. in compensation rates and the minimum rate of $12.50 per week and the making of any increase retroactive, for the following reasons:

"'1. Sufficient reason has not been shown for any change in the present Act, but a survey of two hundred and fifty cases out of two thousand five hundred and sixteen disability cases shows that pensions have, on the whole made up the wage loss resulting from injury. Furthermore, many employees will now benefit from the disability benefit in group insurance, and many workmen also have lodge benefits.

"'2. The proposed amendments are wrong in principle. They are designed more for old age and unemployment than for loss of wages to active workers. The proposed minimum disability of $12.50 per week is practically vicious, in that it is an inducement to malingering, especially to all wage-earners whose wages are less than $12.50 per week.

"'3. The proposed increase will only make worse the present evil of too large a percentage of the agricultural young men drifting into the city under the lure of better wages, thus decreasing the so much-needed production and increasing the high cost of living.'

"This resolution was forwarded to local members of the Legislature, Hon. W. R. Rollo, Minister of Labor and Health, and Mr. Geo. G. Halcrow, M.P.P., and a copy sent to our head office with a recommendation that they circularize the farmer members of the Legislature, pointing out the effects the proposed increase would have in inducing agricultural workers to come into the city under the lure of better wages and conditions.

Consolidated Railway Act

"Once more the long-discussed amendment to the Canadian Railway Act has been brought before the Government at Ottawa. This involves, as it has been explained in former reports, the control of water carriers by the Dominion Railway Commission. Notwithstanding repeated defeats the sponsor of this Bill continues to bring it up year after year, and it seems unfair that one individual representative should continue to aggravate all industrial interests, who have shown conclusively under good evidence, the unreasonableness of the efforts being made to restrict our waterways by Commission control. A great mass of evidence and protests have been sent in from members of this branch, as well as from the shipping interests all over Canada, and our local member, Mr. T. J. Stewart, presented strong arguments in opposition to this Bill on the floor of the House, and it is felt that nothing further will be heard of the Bill, at least during this session of Parliament.

"The membership of this branch at the last report included 190 firms, with a total of 215 representatives, and after adding the new members and deducting the resignations the membership of the branch now totals 200 firms with 234 representatives.

"During the year one of our members was called by death in the person of Mr. John T. Irwin, of Thos. Irwin & Son. Mr. Irwin was prominent in the social and industrial life of our city and his passing has been a great loss to our Association and the city."

Election of Officers

The following officers were then elected for the ensuing year:

CHAIRMAN.

George H. Douglas, Thornton & Douglas, Limited.

VICE-CHAIRMAN.

A. L. Page, Frost Steel & Wire Co., Limited.

EXECUTIVE COMMITTEE.

Henry Bertram, The John Bertram & Sons Co., Limited.
George C. Coppley, Coppley, Noyes & Randall, Limited.
J. A. McMahon, The Union Drawn Steel Co., Limited.
W. R. McNeil, Bird & Son.
H. P. Hubbard, E. C. Atkins & Co., Limited.
W. R. Dunn, International Harvester Co. of Canada, Limited.
Cyrus A. Birge, Steel Co. of Canada, Limited.
Robert Hobson, Steel Co. of Canada, Limited.
C. W. Sherman, Dominion Steel Foundry Co., Limited.
A. F. Hatch, Canada Steel Goods Co., Limited.
F. J. Gernandt, International Harvester Co. of Canada, Limited
F. R. Close, Duncan Lithographing Co., Limited.

Re Budget—New Excise Taxes

The Tariff Department of the Association is keeping in close touch with the new taxation proposals contained in the Budget. Copies of rulings made by the Department of Inland Revenue are on file in the office of the Tariff Department, and inquiries relating to the operation of the tax schemes addressed to the Tariff Department will receive the prompt attention of Mr. R. N. McCormack, assistant manager of that department.

A Circular Letter, No. 255, accompanied by the text of resolutions, has been sent out to all members and also a Supplement, No. 1. Further supplements will be issued from time to time as rulings are received.

Manitoba Workmen's Compensation

In a reference to the features contained in the new Workmen's Compensation Act in Manitoba in the May issue, it was stated that the waiting period had been reduced from six to three days. While correct enough in itself, it should perhaps have been explained that there is no come-back included. That is to say, no compensation is allowed for the three days of waiting. This differs from the Ontario law, which, while requiring a wait of seven days before compensation is allowed, dates the payment of compensation back to the time of the injury.

Manitoba Council of Industry

In connection with the amendments to the Industrial Conditions Act, passed by the Manitoba Legislature at its last session, a joint council of industry has been appointed. The chairman is Rev. C. W. Gordon. The employers' representatives are Messrs. John Stovel, the Stovel Co., Limited, and H. B. Lyall, and the employees' representatives, Messrs. W. B. Simpson and E. Robinson.

Section 20 and 21 of the Act recognize the right of employers and employees to organize and provide that employers and employees shall have the right to bargain with one another, individually or collectively, through their organization or representatives. In the event of a dispute between employers and employees as to the method or manner or terms and conditions of such bargaining, such disputes shall be submitted to the Joint Council of Industry.

Employers are being advised to have some understanding with their employees for a satisfactory arrangement as to the manner in which negotiations between the two shall be carried on, as it is felt that the Joint Council of Industry will not interfere where some plan is in effect for negotiations between employers and employees that is satisfactory to the majority.

Industrial Hygiene in Canadian Factories

Formation of a Committee to Give Practical Help in Canadian Industry—Functions of the Committee Outlined—The Economic Value of Industrial Medical Departments Explained — Some Examples of the Effectiveness of the Work

Prepared under the direction of the Committee on Industrial Fatigue

By R. M. HUTTON
Secretary of the Committee

THE CANADIAN Government has recently established a Committee which should be of practical use to the whole of industry, both to manufacturers and to labor. The Committee, which is under the Honorary Advisory Council for Scientific and Industrial Research and is known as the Committee on Industrial Fatigue, is composed of the following members:

Professor J. J. R. Macleod, Department of Physiology, University of Toronto (Chairman.)

Mr. E. A. Bott, Department of Psychology, University of Toronto, (Honorary Secretary).

Dr. A. B. Macallum, Administrative Chairman, Honorary Advisory Council for Scientific and Industrial Research. (Ex-officio.)

Professor Asselin, Department of Physiology, Laval University, Montreal.

Professor Dagneau, Department of Anatomy, Laval University, Quebec.

Professor D. Fraser Harris, Department of Physiology, Dalhousie University, Halifax.

Mrs. George Hambleton, representing women's organizations and social work.

Mr. John Lowe, Jr., the Montreal Cottons, Ltd., Valleyfield, Que.

Mr. J. A. McClelland, representing the Department of Labor, Ottawa.

Professor John Tait, Department of Physiology, McGill University, Montreal.

Professor William Tait, Department of Psychology, McGill University, Montreal.

Prof. J. J. R. Macleod

Chairman of the Committee on Industrial Fatigue

Means of Communication With The Committee

Eventually it is hoped to establish offices in all the chief industrial centres. At present only one office has been established. This is in the Medical Building of the University of Toronto. Enquiries will be welcomed, and should be addressed to the Secretary, R. M. Hutton, Committee on Industrial Fatigue, care The Medical Building, University of Toronto.

The Purpose of the Committee

The functions of the Committee are purely advisory and investigatory.

Its general purpose is to make the knowledge and experience of Medical Science, as it bears on industrial health and efficiency, available for all industry. Thus the Committee thinks that it can help employers to increase production by reducing lost time and labor turnover, and can help employees to maintain steady wages and employment by reducing preventable illness and unnecessary hardships of working conditions.

Its main objects are:—

1. To offer manufacturers the assistance of scientific laboratories in solving the health problems presented by particular processes in their plants.

2. To offer all interested the use of the Committee's intelligence bureau where the most up-to-date information on general and specific problems of industrial hygiene is kept.

3. To co-operate in investigations into the conditions in different industries: into the incidence and causes of sickness, whether occupational or general; and into the actual relation existing between hours of work, working environment, etc., and production.

Use of Scientific Laboratories

1. *To offer manufacturers the assistance of scientific laboratories in solving the health problems presented by particular processes in their plants.*

For this purpose the Committee has, as will be seen from the list of members given above, peculiar facilities. The service of the departments of physiology of the various universities, with their laboratories, and specialists, trained in scientific research and experiment, can be utilized, or, where other assistance is required, this can be obtained. Thus, for example, where manufacturers are in doubt as to the possible health effects of some new method or process, the question might in many instances be answered in a scientific laboratory, where the actual effects of the process could be discovered by practical experiment. Again, where certain physical symptoms appear among employees engaged on similar work, scientific investigation can decide whether the symptoms are caused by direct contact, by fume inhalation, or by skin absorption, and, in each case, should be able to indicate the preventive measures to be taken.

Use of the Intelligence Bureau

2. *To offer all interested the use of the Committee's intelligence bureau where the most up-to-date information on general and specific problems of industrial hygiene is kept.*

In many cases the existence of this bureau will afford

means of answering problems of industrial hygiene without incurring the delay and possible expense of individual investigation. The Committee is in touch with other associations engaged in similar work, both in Canada and elsewhere, and has established a reference library where the best current literature on the subject is obtainable. Reports of trade investigations and surveys, results of scientific experiments, reports and articles by plant physicians, health officers, sanitary engineers, and safety men, etc., are filed and, in some cases, abstracted. The index of this library represents a detailed bibliography on the different phases of industrial hygiene and offers a manufacturer confronted with some specific problems of his plant immediate information as to the difficulties of other manufacturers in the same industry and the solutions which their experience has proved good. In short, the library is planned with the idea that it should be a general clearing house of information by means of which employment managers, plant physicians, sanitary engineers and others can keep abreast of the latest developments and improvements in their particular spheres.

Special attention is paid to occupational hazards, whether disease or accident, particularly from the point of view of preventive medicine. Thus on industries where there are recognized health dangers, as for instance in the printing, painting, stone-cutting trades, or the white lead, rubber, dye and phosphorus industries, etc., the most up-to-date information is being collected. This information deals with the immediate source of danger (whether by touch or inhalation or otherwise), the best preventive measures in use (whether selection of naturally immune employees, use of protective clothing, or introduction of improved exhaust systems), and the best medical treatment after trouble has arisen.

Information will also be available on smaller matters of detail, as for instance on the most useful form of sickness record or the most generally accepted definition of terms such as "labor turnover."

Co-operation in Investigation

3. *To co-operate in investigations into the conditions in different industries; into the incidence and causes of sickness, whether occupational or general; and into the actual relation existing between hours of work, working environment, etc., and production.*

In this connection there seems to be a general concensus of opinion that while statistics on these points from other countries are suggestive they do not do away with the need of finding out the actual facts in our own country and drawing our own conclusions therefrom.

If lost time and labor turnover are to be kept down it is well to have means of judging as accurately as possible what the immediate causes of this lost time and labor turnover are. An obvious cause, and one which, when recognized, can very often be largely decreased, is sickness. The Committee, feeling that facts on this point would be of interest to all employers and employees, is at present, with the co-operation of certain employers, investigating the actual proportion of lost time in certain plants directly due to sickness.

Economic Value of Industrial Medical Departments

The primary way of preventing sickness is the establishment of some form of industrial health supervision. Now that this is being done with increasing generality, whether by the installation of a well-equipped plant hospital with full-time physician, or by the employment of a visiting nurse, or merely by the provision of a "first-aid" kit, it is important to collect information as to the actual results obtained by such means.

The results to an employee are obvious and need no emphasis. The presence of a medical department in the plant where he works provides for the discovery and prevention of conditions detrimental to health; it makes it easy to secure treatment at the first onset of illness; it helps him to get work within, *not just beyond*, his physical capacity; it prevents loss of wages through absence.

Employers Say it is Good Business

From the employer's point of view, one writer deduces the fact that health supervision is of direct economic value from his experience in a recent investigation of 99 establishments in various industries, in so much as no single case was found where health supervision once begun had been discontinued. Another writer quotes the following answers given by well-known firms to the query, "*Why do you have a medical department?*"

"We owe it to our men." "It pays." "It's good business." "It keeps the men on the job." "It is just as necessary as a cost department or any other non-producing department." "To safeguard the health of workers in the belief that the healthy worker is more efficient."

It is not hard to see on what facts such answers are based. The establishment of a medical department first "pays" the employer by preventing the financial loss incurred in hiring the hopelessly unfit worker, whose health is bound to prevent him working himself and to be a source of danger to others. Similarly, it sees that workers with certain disabilities are assigned to departments where their incapacity is neither increased by the necessities of the work nor their output hindered; the flat-footed is given sedentary work, the latent tuberculosis is not sent into constant contact with dust. It "pays" the employer again by reducing the time loss due to sickness: this is done by the early treatment of minor ailments before they become serious ailments, and by the control of infectious diseases.

To take one very common cause of lost time, that is infections and complications arising out of minor and so-called trivial accidents, the following is the statement of Dr. H. E. Mock on an industry employing an average of 12,000 men and women which adopted an efficient medical and surgical system some years ago:

"The number of infections following injuries has been reduced from 28.6 per cent. in 1912 to 7.57 per cent. in 1916. The time lost from infections in 1912 amounted to 1,987 days, or an average of 2⅗ days per case, while time loss from this cause in 1916 amounted to 816 days, or an average of 1⅛ days. This was accomplished in spite of the fact that the working force had increased approximately one-fourth during the same period. This represents a saving of some $5,000 in wages and approximately $5,000 in hospital bills, compensation, etc." **

In another large manufacturing concern the effectiveness of the medical department in keeping down lost time may be argued by comparison of the following figures:

Highest Number of Hours Lost in any Week During May.

1912-13.	1913-14.
Through sickness about 810	About 395
Through accident about 105	About 40
Through personal reason 560	About 330

In making this comparison we have selected the month of May as being apparently a typical month and one where the comparison is not falsified by the presence or absence of in-

**Industrial Medicine and Surgery, Mock, W. B. Sanders Co., 1919, p. 85.

fluenza epidemic or unduly hot weather, or similar possible cause of increased absence. The reduction of lost time in 1913-14 is more marked at various other dates during the year.

A Toronto firm gives the following figures for the lost time among members of its "Sick Club":

Days Lost Per Member Per Month

	1918.	1919.
January	.410	.448
February	.557	.291
March	.470	.351
April	.526	.307
May	.334	.190
June	.320	.213
July	.294	.189
August	.291	.199
September	.319	.165
October	1.748	.198
November	.988	.129
December	.317	.169

That is to say, in 1918, the yearly average loss per man per month was approximately one-half day, and this was reduced in 1919 to approximately one-fifth day. The comparison is, however, somewhat modified by the greater inflation due to influenza in the latter part of 1918 than that due to the same cause in the early part of 1919. Perhaps the truest comparison is between the first six months of 1918 with the last six months of 1919, when the health conditions were normal in both cases.

The actual benefits of a medical department in preventing sickness and reducing lost time would of course appear more clearly if it were possible to compare the lost time through sickness by a firm *before* it had established health supervision and *after*. Naturally, however, it is difficult to secure reliable records as to the causes of lost time before some form of health supervision was in operation. While the figures given above do not, accordingly, do full justice to the results actually achieved by health supervision, they are indicative since they show the progress made in consecutive years in reducing sickness, as confidence in the plant dispensary, the plant doctor and the plant nurse grew, and experience increased.

Western Exhibitions

Association Receives Encouraging Letters Showing That Manufacturers are Becoming Interested

The Association drew the attention of Canadian manufacturers, in March last, to the excellent opportunities for the display of their products provided by the annual exhibitions which are being held this year in the month of July in Calgary, Edmonton, Saskatoon, Brandon, and Regina. The result has been that these exhibitions have been inundated with applications for space, and the accommodation for industrial exhibits has been taxed to the limit. The following are some extracts from letters received from different managers of these exhibitions:

"We have received this year more requests for space and inquiries *re* space from Eastern Canada than in any year since I have been connected with the exhibition, doubtless due to your circular letter and the article which was published in Industrial Canada. From present indications, our buildings will be taxed to give accommodation to all. We have under contemplation, however, an extension programme which will ultimately give us ample space for all departments."

"In this circular you state the facts in reference to Western exhibitions. As far as my observation goes, and I visit all of them, in my judgment there never was a more opportune time for Canadian manufacturers to get busy with a determination to supplant American manufactured goods. There is no question but that Canadian goods would be used if the people knew more about them, and could see them on exhibition. Speaking for all the exhibitions in the West, I can assure you that the manufacturers will receive every courtesy possible. We purpose erecting another display building for mercantile exhibits, and we will be able to accommodate an increased number."

"We appreciate very much your efforts on our behalf and assure you that we are getting results."

New Clothespin Plant

Miller & Gordon Manufacturing Co., Yarmouth, N.S., to Locate Industry at Carleton

Miller & Gordon Manufacturing Company, recently formed at Yarmouth, N.S., are proposing to establish a hardwood working plant at Carleton. Their plans call for a building 50x120, part two storeys and part three storeys, with an engine-house, 30x30 feet, and a battery of three 75-h.p boilers, each enclosed in a building, 30x45 feet. Power will be furnished by a 225-horse-power Laurie-Corliss engine. The manufacturing plant will be part concrete and part wood, the engine and boiler-houses to be built of fireproof building blocks. They expect to manufacture clothespins, dowels and other manufactured hardwood articles. Operations will commence some time next fall and they will employ about 100 hands. The plant will probably cost in the neighborhood of $40,000. W. E. Miller is president and treasurer; Winfield Gordon, vice-president, and Roy D. Miller, manager and secretary.

Increased Telegraph Tolls

Board of Railway Commissioners Authorize Telegraph Companies to Raise Rates

The Board of Railway Commissioners have now issued their General Order 297, which gives telegraph companies operating in Canada authority to file with them new tariffs, providing for increased tolls. Heretofore the charge for a ten word message has been 25c. in Eastern Canada. Under the Board's order, this territory will be split up into a number of zones. The charge for a single message of ten words between any two points in one zone shall be increased from 25 to 30c.; the charge for each additional word over the ten words, shall be increased from one to two cents.

The application of the telegraph companies has been before the Board for some time, and although the matter was heard at numerous public sittings, comparatively little objection was offered to the increases.

Maple Leaf Milling

Profits for 1919-1920 Were Only Slightly Under Those for the Previous Year

Profits of the Maple Leaf Milling Co. for the year ended March 31, 1920, were $917,409, as compared with $929,105 for the previous year. As common dividends paid during the year only amounted to $300,000 as compared with $600,000 in the previous year, a larger balance was carried forward to profit and loss, this amounting to $1,853.675, as against

FOR SALE BY TENDER

Factory Suitable for Paper or Pulp Mill or any other manufacturing purposes

IN THE SUPREME COURT OF ONTARIO.

In the matter of the J. McCarthy & Sons Company of Prescott, Limited.

And in the matter of the Winding Up Act.

Pursuant to the direction of the Local Master at Ottawa the following property is offered for sale by tender, namely: All and singular that certain parcel of land and premises situated in the Township of Augusta, in the County of Grenville, Province of Ontario, being composed of parts of the east half of lot number nine and of the west half of lot number eight, in the first concession of the said Township of Augusta, which lands may be described as follows:—Commencing at the centre line of said lot number nine, on the bank of the St. Lawrence River, in the said Township of Augusta, thence easterly along the bank of the said river to the mouth of the creek that empties into said river at or near the centre of lot number eight aforesaid, thence northerly along the centre line of said lot eight to the southern boundary of the Prescott-Brockville Highway, thence westerly along said southern boundary of said Highway to the said centre line of lot nine, thence southerly along said last mentioned centre line to the place of beginning, said lands comprising eleven acres more or less.

Upon said lands are erected the following buildings all in substantial repair, namely:—(1) one-storey brick storehouse, 26 x 123, with cellar and stone foundation; (2) two-storey frame warehouse, 37 x 100; (3) three-storey brick and stone malt house, 40 x 100; (4) brick and stone malt kiln, 32 x 32 x 30; (5) one-storey stone building, 22 x 56; (6) stone and brick engine house, 13 x 25; (7) stone and brick office vault, 7 x 7; (8) brick and stone building, 5 stories, 33 x 59, and 6 stories, 41 x 55; (9), two-storey stone and brick building, 24 x 24 x 25; (10) one-storey stone building with cellar, 20 x 50; (11) frame icehouse, 30 x 50; (12) stone dwelling with brick extension, two-stories, 31 x 57 containing 15 rooms and basement; (13) "L" shaped wharf, 24 x 82 and 13 x 107.

The main buildings are of first class construction and contain approximately 50,000 sq. ft. floor space, will carry almost any weight of machinery and are connected with the Hydro-Electric System for light and power.

This property is located in a large bay on the St. Lawrence River, one mile west of the Town of Prescott, Ontario, and opposite the City of Ogdensburg, New York State, at the foot of the Great Lakes navigation. It is 112 miles west of Montreal, 52 south of Ottawa and 221 east of Toronto. Any boat plying the said river can be accommodated at the wharf. In addition to shipping facilities by boat, there are also the Grand Trunk and Canadian Pacific Railways. The new Toronto-Montreal Highway forms the north boundary of the property. Large amount of electric power is available and coal can be brought either all rail or boat. The frontage of the property on the river is approximately one-quarter mile.

The buildings easily adapt themselves for manufacturing of any kind, elevator or pulp or paper mills, and the site would be ideal for a dry dock, and being at the foot of the Great Lakes navigation, will have an additional potential value on the completion of the new Welland Canal.

Included with the buildings are the contents of engine room comprising boiler, engine, steam pump and tools, and also all other machinery vats, shafting, belting, malt and grist mills and equipment on the premises.

An unlimited supply of pure crystal water can be obtained from two wells located in the buildings.

The above property will bear inspection and can be seen at any time on application to the Liquidator.

Tenders for the purchase of the said property will be received by the Liquidator up to noon of the 1st July, 1920. The highest or any tender not necessarily accepted.

Terms of sale, 10% on notice of acceptance of tender and the balance without interest in 30 days thereafter.

For further particulars apply to W. A. Cole, Ottawa, Ont., the Liquidator of the said Company, or to W. C. McCarthy, 53 Queen St., Ottawa, Ont., Solicitor for the Liquidator.

Dated at Ottawa, this 6th day of May, 1920.

JOHN BISHOP.
Local Master.

$1,568,545. A large reduction was made in inventory, which dropped from $4,749,459 to $2,687,813. Investments increased from $2,545,776 to $3,934,275. Bank advances declined from $4,676,487 to $3,432,500. After allowing for bank interest and preferred dividends, there was available $563,640, or 22.5 per cent. on common stock outstanding.

Canadian Cottons

Large Increase in Profits shown For the Year Ended March 31st last

After allowing for excess profits tax, manufacturing profits, rentals and interest on investments of Canadian Cottons, Limited, for the year ended March 31, amounted to $1,839,443. This compares with $1,563,103 in 1918-19, and $1,126,125 in 1917-18. After all deductions and allowances, including $400,000 for replacement reserve and a similar amount for depreciation, the balance available for application on the common shares was equivalent to 23.24 per cent. Gross sales for the twelve months aggregated $11,148,438, as compared with $10,828,326 in 1918-19. The year's surplus amounted to $454,585, bringing the total surplus at the credit of profit and loss up to $2,683,479.

New Feed Mill

Jas. Davidson & Co., Limited, Fort William, Will Erect New $25,000 Plant

A new feed plant is being erected at Fort William, Ont., by James Davidson & Company, Limited. It is costing in the neighborhood of $25,000 and will be ready for operating by about September 1. The mill will have a storage capacity of approximately 10,000 bushels. The company propose to do a general wholesale and retail flour, hay and feed business, including the grinding of all kinds of animal and poultry feeds. They will be in a position to cater to Eastern trade with anything in the feed or seed line that may be called for.

New Heading Mill

Canadian Cooperage Manufacturing Co., Limited, Smith's Falls, Start New Mill

A new heading mill adjoining their present plant at Smith's Falls, is being erected by the Canadian Cooperage Manufacturing Company, Limited, and will commence operations about the middle of the month. It is a one-line mill, with a capacity of 3,000 sets per day, and will give employment to about 25 men. The company started operations in Smith's Falls about nine years ago and have had a successful career. They are capitalized at $100,000. C. H. Easson is president; James Innes, vice-president and manager; W. M. Fleming, secretary-treasurer, and William Demarse, superintendent.

Build Rubber Boot Plant

Ames-Holden Rubber Boot Co., Limited, Will Locate Plant at Kitchener

Ames-Holden Rubber Boot Company, Limited, have recently been incorporated to manufacture and deal in rubber boots and shoes and all other things of which rubber forms a part. Property known as the Orphanage property, situated at the corner of King and Wilmot streets, Kitchener, has been secured, together with a large piece of adjacent ground from the Lang Tanning Company, Limited, on which it is

Ker & Goodwin Machinery Co. LIMITED
BRANTFORD, Ont.

proposed to erect a modern plant similar in construction to that of Ames-Holden Tire Company, Limited, for the manufacture of rubber boots and heavy rubbers for farmers, lumbermen, miners, fishermen, sportsmen and workmen in general. As the Ames-Holden Tire Company's factory is located directly across the street, many economies in operation can be effected, such as power, heat, fire protection, etc. Arrangements are being made to start manufacturing this summer, pending erection of the building, by installing equipment in the tire factory. This will later be removed to the new building.

Dominion Textile Co.

Annual Report Shows Smaller Profits but an Improved Financial Position

Manufacturing profits of the Dominion Textile Co. for the year ended March 31, 1920, were $1,701,244, as compared with $3,454,752 in the previous year. Net profits, which include interest on investments, amounted to $1,845,375. Deducting from this bond interest, rentals and preferred dividends, there remained $1,103,961, which is equal to 22.1 per cent. on the common stock. From this $400,000 was paid in common dividends, leaving $703,961 to be carried to profit and loss, bringing it up to $4,053,044. Commercial loans were increased by $3,828,363 to $4,160,420; inventories of raw cotton have advanced from $1,807,754 to $4,497,094. The purchase of Mount Royal Spinning Mills increased the value of plant and machinery by $2,643,835 to $15,046,460. Liquid assets have been increased from $7,899,040 to $11,921,782; liquid liabilities from $1,119,577 to $5,919,367.

P. Lyall & Sons

Earnings for Year Ending March 31, Show Reduction of Nearly a Million

The directors' report of P. Lyall & Sons Construction Co., Limited, expresses satisfaction with the year's results, when consideration is given to the trying and unsettled conditions which prevailed. Gross earnings, after deducting all charges, amounted to $377,734, this comparing with $1,314,582 for the year ended March 31, 1919. From this was deducted bond interest of $57,164, preferred dividends, $91,000, common dividends $140,000, sinking fund bond redemption $53,500, making a total of $341,664 and leaving a balance of $36,070 to be carried forward.

Reference is made briefly to the automobile engine with which the company had experimented. It is stated that the tests of experts did not offer sufficient encouragement to warrant the company undertaking its manufacture.

Canadian Converters

Further Gain is Reported in Net Earnings for the Fiscal Year Ended March 31, Last

Net earnings of the Canadian Converters, Limited, for the year ended March 31st amounted to $529,822, as compared with $257,324 in 1918-19. In fact there has been a regular increase from year to year. After necessary deductions, $221,995 remained for dividends or other distribution. This was equivalent to 12.8 per cent. on the capital stock. A surplus of $126,653 was carried forward. The liquid position of the company showed a correspondingly improved position, the net working capital having increased from $751,853 two years ago to $795,552.

The Province of Promise

ALBERTA has 87 per cent. of Canada's coal.

ALBERTA has immense clay deposits, the investigation of which is only beginning.

ALBERTA supplies natural gas for power, heat and light in three cities and many towns and villages.

ALBERTA has beds of tar sands extending 100 miles along the Athabasca River and containing 18.5 per cent. bitumen.

ALBERTA has two large beds of salt, 200 feet in thickness, the survey of which is now in progress.

ALBERTA has twenty-one billion feet of merchantable timber.

ALBERTA will this year see over half a million dollars spent in oil development.

ALBERTA has undeveloped water power to the extent of 433,120 horse power.

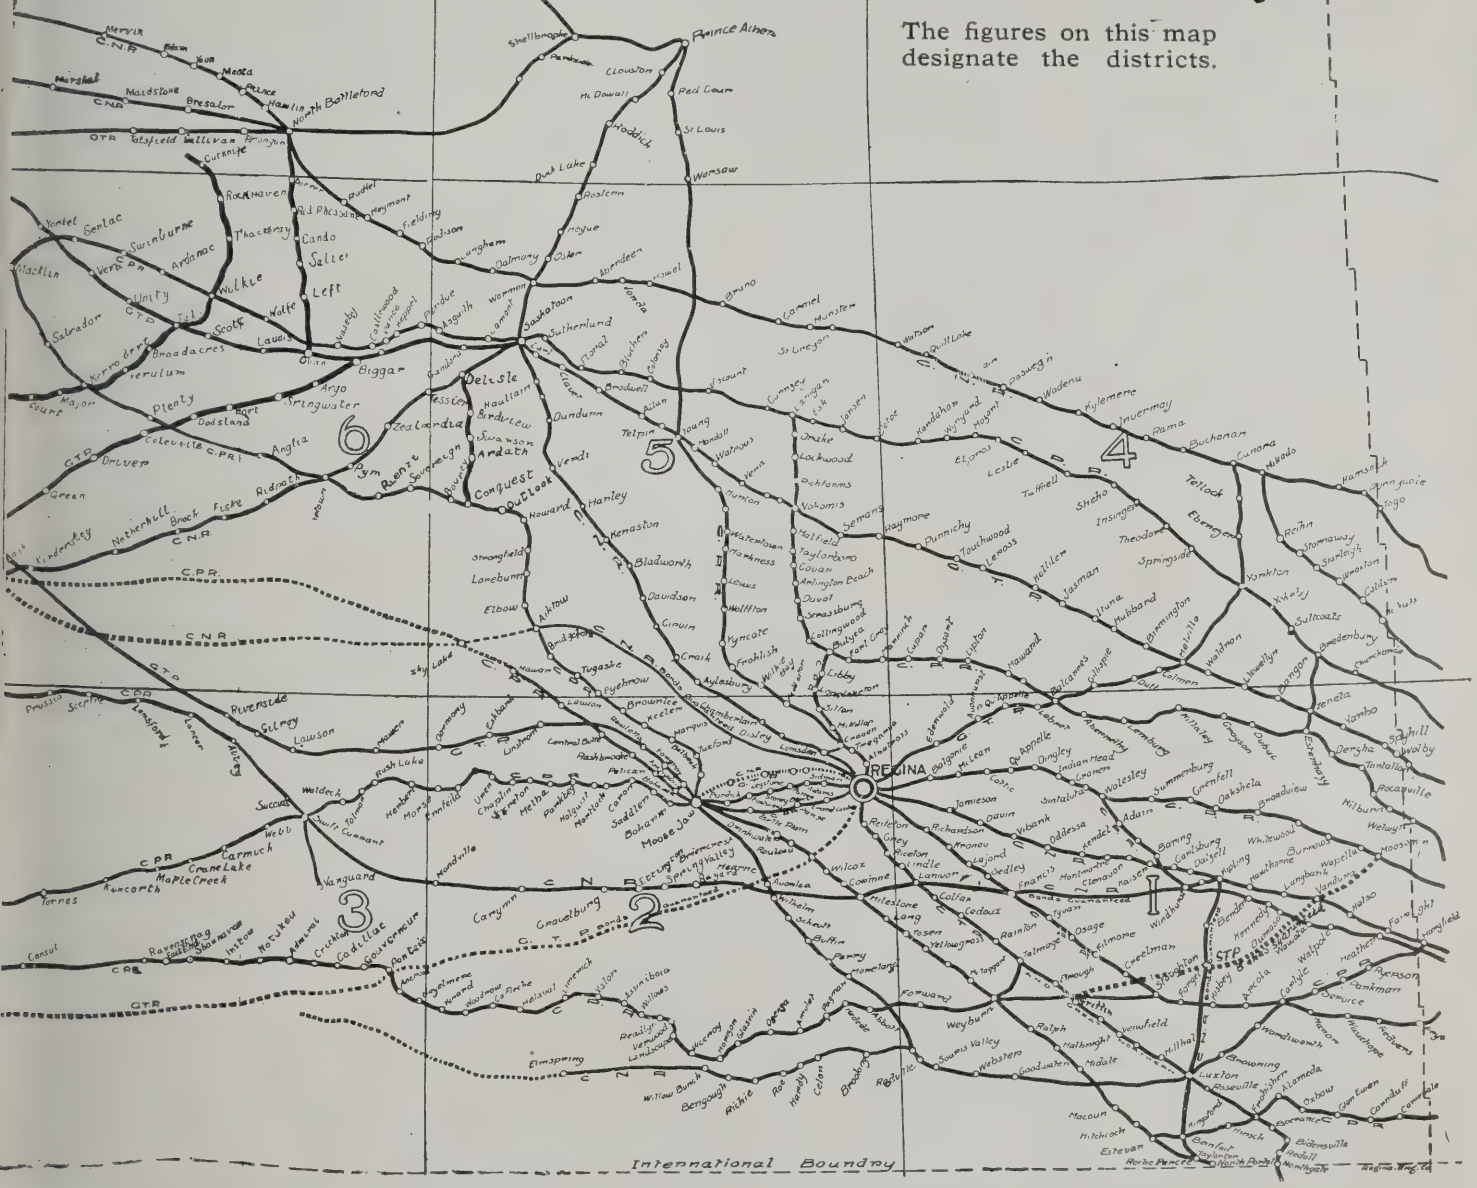
HAMILTON - CANADA



REGINA
Saskatchewan Canada

1920

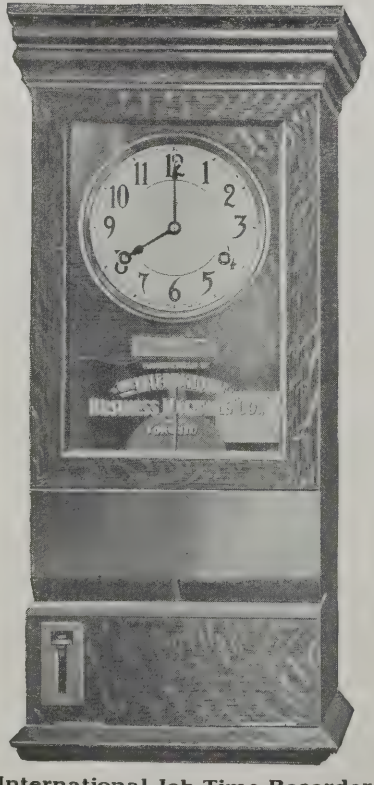
Regina serves 2,255 miles of Railway and 250 towns and villages. Population of District 466,666.

In districts Nos. 1, 2, 4 and 5 are two-thirds of the population of the Province, and over two-thirds of the grain of the Province is raised in these four districts. Of the 1,870,123 head of stock in the Province, three-quarters of the total are raised in the above four districts.

The figures on this map designate the districts.

REGINA, the capital city of Saskatchewan is situated on the main line of the Canadian Pacific Railway, Grand Trunk Pacific Railway and Canadian National Railway. It is the principal city between Winnipeg and Calgary, lying 357 miles west of Winnipeg and 483 miles east of Calgary.

REGINA is the largest distributing centre of Western Canada and, as a distributor of farm implements, the greatest in the world, business in this line in one year having reached a total of over $25,000,000.



REGINA is the distributing centre, the commercial centre and the educational centre of this part of Western Canada. Building construction already arranged for, in 1920, amounts to $4,500,000. Every lot in the wholesale area is served with railway tracks; a large portion of the area is still available for building purposes and may be obtained from the City.

For further information apply to L. T. McDONALD, Board of Trade, Regina or Commissioner L. A. THORNTON, City Hall, Regina

Here is your future Superintendent.

Here is the Machine that helps you find Him.

International Job Time Recorder

HE'S one of your producers! The "International" Job Time Recorder finds him for you. There are other good workers, and there are also non-producers.

¶ It is production you are after and this International Job Time Recorder will show you exactly where you are getting it. Automatically printed on each Job Card is the exact starting and stopping time on each and every operation.

¶ The International unerringly records the points of high and excessive production costs through every stage of manufacture—indicates the inefficient workmen, the non-producers and helps you clear out the "deadwood." Best of all, it ***shows the men who are producing*** and develops them by stirring up lively competition. You can ***watch them grow,*** and out of this group who take an interest in your business you'll pick your "Job Bosses" and, when the time comes, your Assistant Foremen.

Why keep your modern machinery hitched to an ancient time and cost recording system when an International Job Recorder will help you "jump" production records to the peak?

There's an International for every business. Let us send you our literature.

LET THE RED RECORDS SOLVE YOUR PROBLEM OF TIME-KEEPING

Double Drum Time Recorder

THE flail and the spinning wheel have passed long since into the limbo of unused things. Why cling to the old-fashioned time-book? It served its purpose, too, at one time, in its own dog-eared, inexact and irritating way.

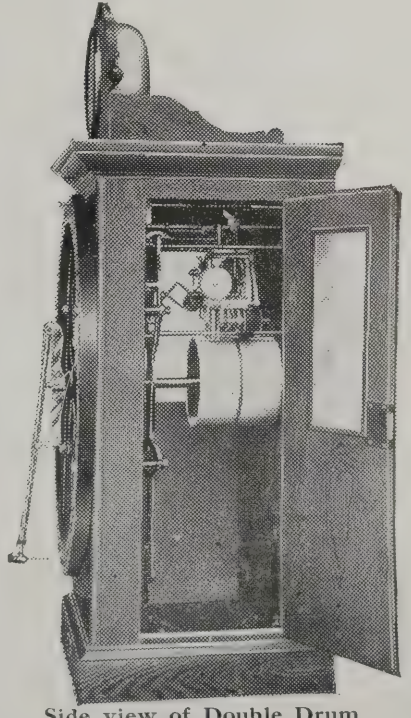
Mistakes and vexation are avoidable.

AUTOMATIC DIAL TIME RECORDERS MEET EVERY NEED, EMPLOYES WRITE THEIR OWN PAY SLIPS

Every feature of the machine is automatic. Wind it once a week. Workmen press a lever, a bell rings and their time is recorded legibly and indisputably.

THE DOUBLE DRUM DIAL RECORDER

IS ONE OF THE SIMPLEST AND MOST CONVENIENT TYPES MADE



It meets the requirements of plants in which the labour element is shifting. No cards are used. The "DOUBLE DRUM" feature makes possible the removal of yesterday's record without disturbing to-day's and without interruption of the machine's work.

It will automatically change the columns from "in" to "out" and from the first drum to the second drum and show all irregular time "IN LATE," "OUT EARLY" and "OVERTIME" in red figures. All regular time is in green. All employes' registrations are in numerical order.

The Time records of the previous day are totalled in their respective columns and only show the outer column with the total number of hours worked that day. Back records may be seen readily by turning back the slips.

The RED RECORDS indicate "IN LATE" or "OUT EARLY." In making up your payroll, look at the reds only—the others are full time. The red records eliminate eighty per cent. of the clerical work on your payroll.

The "DOUBLE DRUM" Recorder is made in three sizes with capacity for fifty, one hundred or one hundred and fifty employes. They are saving the time and worry of cashiers in many of Canada's large plants. They promote punctuality and honesty as well as eliminate irritation and friction over payroll records.

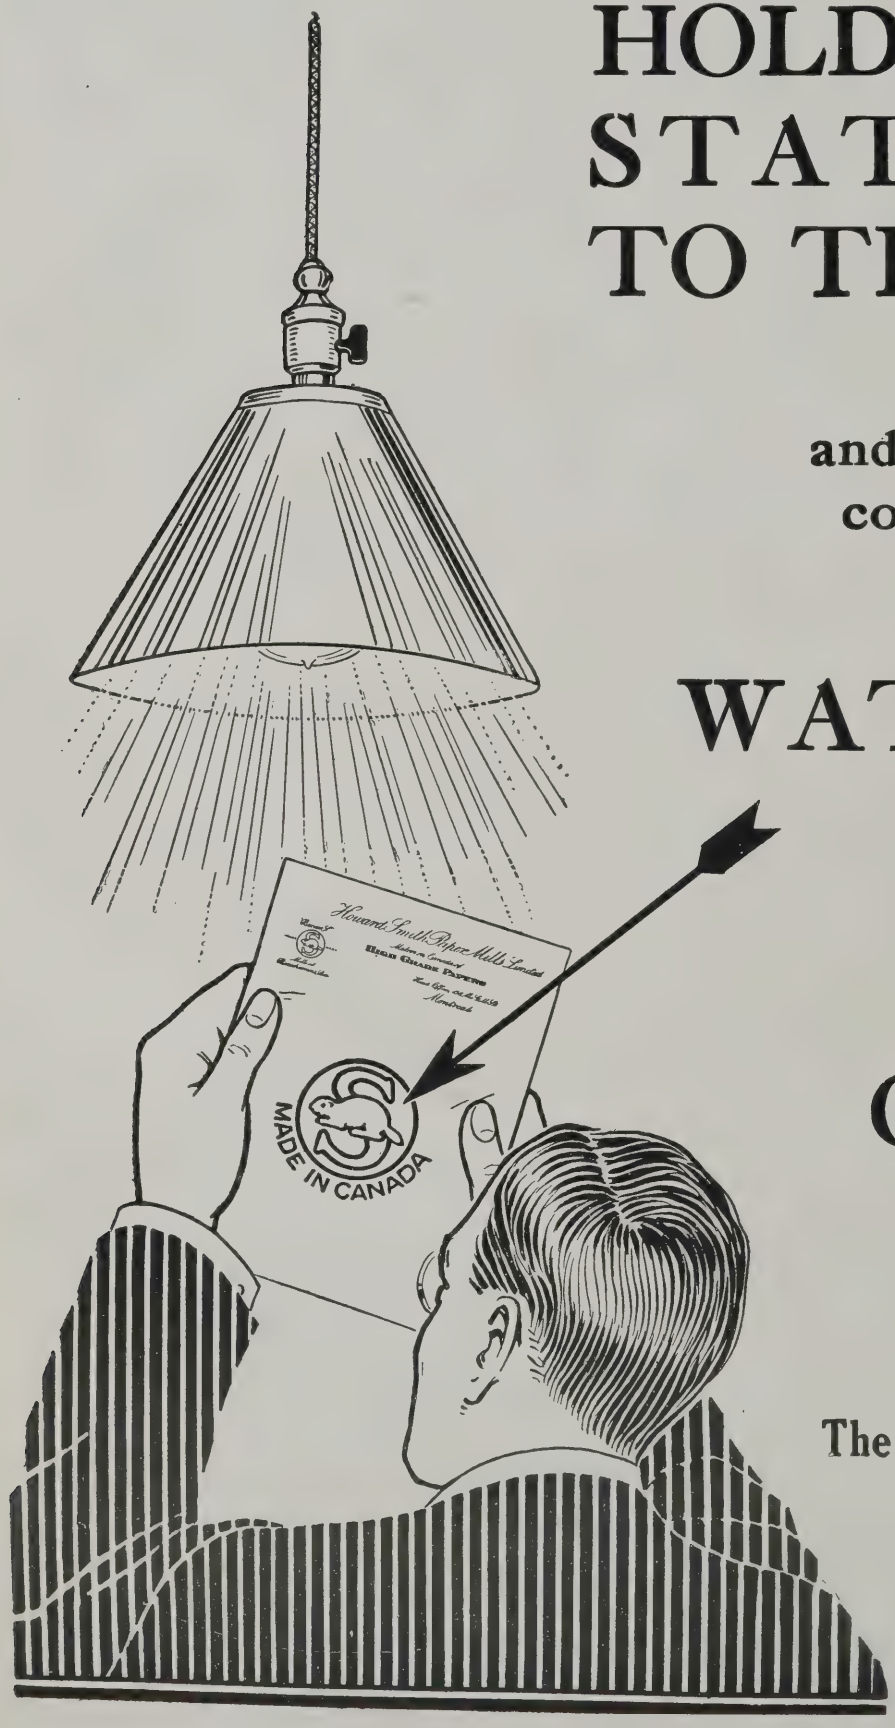
Report of the Auditors to the Shareholders of The Merchants Bank of Canada

In accordance with the provisions of sub-sections 19 and 20 of section 56 of the Bank Act, we report to the shareholders as follows:—



We have examined the above Balance Sheet with the Books of Account and other records at the Chief Office of the Bank and with the signed returns from the Branches and Agencies and have checked the cash and verified the securities of the Bank at the Chief Office against the entries in regard thereto in the books of the Bank at 30th April, 1920, an dat a different time during the year and found them to agree with such entries. We also attended at some of the Branches during the year and checked the cash and verified the securities held at the dates of our attendances and found them to agree with the entries in regard thereto in the books of the Bank.

We have obtained all the information and explanations we have required. In our opinion, the transactions of the Bank which have come under our notice have been within the powers of the Bank, and the above Balance Sheet is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us, and as shown by the books of the Bank.

OFFICE AND FINANCE

Keeping an Accurate Record of Stock

By W. R. PATERSON

DESPITE the fact that materials in all lines of buisness are so hard to procure and that it is absolutely necessary to keep an efficient stock record, there are still quite a large number of executives who pay very little attention to this all-important part of their business.

They have not as yet realized that the only real value to-day is merchandise. Money is simply an instrument to facilitate the exchange of merchandise, and it is hard indeed to understand why any business man, who usually employs such careful methods for the protection of actual cash and cash values in the shape of book records, gives such little attention to the protection of his stock.

Both are tangible assets. The stock on the shelves is just as valuable as cash in the till. And to-day it is even more so in some cases, because the stock on hand could not be replaced for some considerable length of time and at a greatly increased price.

The stockkeeper, who is the custodian of the company's property and is accountable for its disposition, is in exactly the same position as a cashier or comptroller, who is responsible for the money entrusted to his custody. Logically, then, an intelligently planned and accurate system for keeping track of stock is as important to successful business operation as the indispensable system for recording book and cash assets.

A Stock Recording System

A proper system for handling and recording stock calls for just as close recording work on stock records as it does for actual money. The saving effected in this manner in a year will more than pay for the cost entailed in installing and keeping up a stock record system

In most factories there are generally two stock departments—the raw stock department and the finished stock department. Both of these departments must, of course, operate a stock record for their respective stock. The raw stock department furnishes materials to the various manufacturing departments on receipt of requisitions issued by the various foremen. At the close of the day these requisitions are posted off the raw stock inventory card.

In the finished stock department manufactured products are shipped on order from the office to customers, and are promptly checked off the inventory. The inventory records are easily kept by the stockkeeper, although in some cases it is more advantageous to control them from the office. In the rush to get the goods out there is the possibility of the shipper forgetting to subtract the shipments from the stock record.

Efficient stock records are essential to every manufacturing concern. No factory can afford to jeopardize production through lack of this "barometer" that gives timely warning of the shrinkage of materials necessary to the conduct of continuous manufacturing operations. With effective regulation being attached to the keeping and requisitioning of all supplies, the physical inventory should at all times agree with the card record. Even though the stock department is conducted efficiently, regardless of the accurate day-to-day control of materials which the stock record assures, many firms make it a rule to check up their inventories at stated periods. This practice is a final check, and is to be commended.

Guesswork has no place in any production activity of the present day. It is no longer satisfying to the factory general superintendent to receive the report that "the coal pile is in fair shape." He wants to know how many days' working energy is in the pile, measured by actual weight.

Coal, lumber, steel and paper—every raw product upon which the factory is dependent must be accurately recorded. The stockkeeper must make sure that none of the raw products gets down to the danger point that threatens hampered production—but perpetual stock record masters the problem for all.

Summarized briefly, the reasons for, and the advantages resulting from, an efficient stock record are:

(1) Prevention of use of material without authorization or without being accounted for.

(2) Prevention of unnecessary investment in material, by setting properly calculated maximum and minimum amounts for each item of stock.

IMPERIAL BANK
OF CANADA

CAPITAL PAID UP $7,000,000 **RESERVE FUND $7,500,000**

PELEG HOWLAND, President

The Bank offers a service of the highest order to Canadian manufacturers because of its 180 Branches located in important industrial and agricultural centres throughout Canada.

COLLECTIONS made at all points in Canada and in foreign centres.

DRAFTS—Money Orders and Letters of Credit issued, available throughout the world.

EXCHANGE—Domestic and Foreign Exchange bought and sold.

SAVINGS received at all Branches—interest credited half yearly at current rate.

Accounts of Merchants and Manufacturers solicited.

HEAD OFFICE - TORONTO

(3) Elimination of errors in promising delivery of goods not in stock.

(4) Proper identification and proof of the proper articles being shipped.

(5) A daily record of stock after the shipments of each day have been made—properly called a perpetual inventory.

(6) Maintenance of a perpetual inventory, which is kept checked up against the controlling stock, and which will give tangible proof of the amount of stock on hand when settling insurance claims.

(7) A clear indication of how and when every item of stock is used.

(8) Fixes the responsibility and checks the efficiency of the stockkeeper.

Bank of Montreal

Half-yearly Report Shows Large Increase in Current Loans to Manufacturers

The half-yearly statement of the Bank of Montreal issued last month reveals a condition that will give confidence to the business men of the country. Just now the world is passing through a particularly trying period, and any means by which basic conditions may be gauged is sure to be carefully examined. The Bank of Montreal statement is one of the best of these gauges.

As compared with a year ago there is a marked expansion in all departments and as a result total assets now stand at $571,150,138, against $489,271,197 a year ago. Of the total assets, liquid assets amount to $302,821,821, against $293,980,708 last year, while total current loans and loans to cities, etc., have gained to $253,637,259, compared with $183,668,838, an increase of approximately $70,000,000.

Both classes of deposits have shown steady advances during the year and deposits not bearing interest now stand at $157,790,000, against $124,736,000 a year ago, while deposits bearing interest have now reached a total of $312,317,174, up from $268,167,111. This represents a gain in total deposits for the year of approximately $77,000,000.

The profit and loss account shows a slight gain, as compared with the corresponding period in the previous year. This is probably due to the very much larger business the bank is now handling. Net profits for the six months to April 30th amounted to $1,802,585, as compared with $1,751,237 in the corresponding period last year. After the payment of dividends and making reservation for bank premises and war tax, the balance carried forward totalled $2,090,440 against $1,661,614 at the end of April a year ago.

Dominion Steel Corporation

Considerable Reduction in Profits for 1919-1920, But Financial Position Otherwise Strong

Income of the Dominion Steel Corporation for the year ended March 31, 1920, including interest on investments and surplus funds, after deducting all manufacturing, selling and administrative expenses, but before charging provision for sinking funds, depreciation and interest, amounted to $5,532,529, as compared with $8,768,054 in 1918-19 and $11,930,112 in 1917-18. Depreciation, sinking fund, renewals, etc., took $1,266,856, and interest on bonds and debentures $1,004,060, leaving net income of $3,261,613, as against $6,450,46 the previous year. After paying preferred dividends, a balance equivalent to 6.15 per cent. on common stock remained. The surplus for the year was $251,984, compared with $3,705,095 in 1918-19.

Total assets rose from $95,910,612 to $102,645,205. Current assets were up from $20,258,469 to $22,053,566. Current liabil

ties increased from $5,632,821 to $9,600,837. Surplus current assets or net working capital showed a decrease from $14,625,648 to $12,452,729.

The statement says: "On account of trade conditions, operation of the Steel Company's works was greatly restricted during the months of August, September, October and November, and in consequence, the year's output of steel was correspondingly reduced. During the last quarter of the fiscal year operations were gradually increased, and are now upon a more satisfactory basis. It will be noted that a new item has been added to the list of materials produced, and that steel plates are now being made in quantities."

Merchants Bank

Remarkable Year of Growth With Large Increase in Assets is Reported By This Bank

The annual statement of the Merchants Bank of Canada, for the year ending April 30th, shows a remarkable increase both in the volume of business and in the strength and character of the assets, as well as in the profits derived by the shareholders of the bank.

The total amount of assets is now in excess of 197 million dollars, being an increase of nearly 31 million dollars for the year. About $2,800,000 of this increase is not accompanied by any increase of liabilities to the public, being due to the issue of $1,400,000 of capital stock, now fully paid up, and to the increase of the Rest Fund by $700,000 of premium on the new stock, and $700,000 out of profits. The chief cause of the increase in the volume of business is the growth of deposits which are now over 163 million dollars, and have increased during the year almost $25,000,000.

Against its total public liabilities of just under 180 million dollars, the Bank holds quick assets amounting to over seventy-two and a half million dollars, or a ratio of nearly 40.81 per cent.

In spite of the strength of its liquid position, the Bank is doing an immense amount of work for the assistance of current business in Canada, as is shown in the current loans and discounts in the Dominion, which now total $113,198,913.

Net profits for the year were the greatest in the history of the Bank, amounting to $1,686,156, an increase of $300,000 over the previous year. A bonus of 1 per cent. was added to the regular 12 per cent. dividend, so that the total distribution to the shareholders amounted to $1,068,286, while $700,000 was added to the Rest Fund, and $100,000 was written off Premises Account, the balance carried forward being $260,774.

Standard Chemical Co.

Profits in 1919 Were Much Reduced But Financial Position is Stronger

Gross profits of the Standard Chemical Co., Limited, for the year 1919 were $118,607, to which was added the sum of $200,000 derived from an inventory reserve fund previously provided out of profits. From this total $150,000 was charged to depreciation; $86,927 paid on interest; $60,211 for maintenance and improvements, leaving a balance of $21,468 to be carried to surplus account, which now amounts to $305,247, as against $311,577 at the end of the previous year.

Referring to the condition of the industry, L. M. Wood, chairman of the board, states that following the war the wood distillation industry became badly demoralized, and plants were shut down during the spring and summer months to about 30 per cent. of normal capacity. The company emerged from this period with greatly reduced liabilities and with very little loss.

BUSINESS LOANS

This Bank is at all times prepared to assist legitimate business enterprises requiring banking accommodation, either by way of secured loans or the discount of approved trade paper.

Better Results from Business Letters

¶ Advertising managers and sales managers are striving continually for better letters—letters that have the "punch" or the "pull" that gets results. The most effective letter is handicapped before it is read if it is enclosed in an envelope or written on a paper that makes an unfavorable impression. Good paper in your stationery commands attention and respect. It instils a confidence that compels action.

THE FINEST BOND PAPER MADE IN CANADA IS

SUPERFINE LINEN RECORD

¶ If not already using it—ask your printer or lithographer about it—he knows it and will recommend it. Let us send you examples of printing and lithographing work produced on Superfine Linen Record.

Ontario Smelters and Refiners

Offering of $250,000 First Mortgage Gold Bonds Being Made to Finance Enlargement

An offering of $250,000 seven per cent. first mortgage gold bonds, maturing serially from 1925 to 1940, is being made by Tanner, Gates & Co., Toronto, for the Ontario Smelters & Refiners, Limited. This company have recently taken over the Standard Smelting & Refining Co., formerly the North Bay and Chippawa and the Metals Chemical Co., of Welland, Ont. The proceeds from the sale of the bonds are to be used for the purpose of enlarging the company's manufacturing plant, additions to the smelter and erection of new buildings. The bonds are offered at par and accrued interest, with a 25 per cent. bonus of common stock.

Dominion Loose Leaf

Ottawa Company Issue $150,000 Eight Per Cent. Cumulative Participating Preferred Stock

An offering of $150,000 eight per cent. cumulative participating preferred stock of the Dominion Loose Leaf Co., Limited, Ottawa, has recently been made by Housser, Wood & Co., Toronto. The stock is offered at 100 and accrued dividends. The company's business was established in 1910 and has enjoyed rapid growth. A new building is now under erection which will be occupied within the next eight months. The company manufacture a complete line of loose leaf, card index and vertical filing system. There are no bonds outstanding and only $35,600 of $350,000 authorized common stock has been issued.

Imperial Bank

Substantial Appreciation in Profits, Commercial Loans and in Amount Carried Forward

There are two fixed items in the financial statement of a chartered bank which, in the main, reflect the relationship of the institution to the public. The one is the deposit account, which in a measure reflects the confidence of the public; the other is commercial loans, which reflects the measure of the bank's connection with the business interests of the country. In both these respects the financial statement of the Imperial Bank of Canada for the fiscal year ending April 30th, as submitted to the shareholders at their annual meeting in Toronto on May 26th, is a matter of satisfaction.

Deposits increased by no less than $14,585,983, or 17.53 per cent. The total on April 30th stood at $97,784,217, as compared with $83,198,234 on the corresponding date in 1919. Savings deposits at $72,676,679, showed an increase over the previous year of $10,964,535, or 18 per cent., while demand or non-interest-bearing deposits increased by $3,621,448.

Commercial loans stood at $60,452,943, as compared with $48,544,711 a year ago. An increase of $11,908,232, or 24.53 per cent., within the past twelve months, is indicative of the support which the Imperial Bank is giving to legitimate Canadian enterprises.

The profits for the year amounted to $1,379,318, as compared with $1,247,516, an increase of $151,802. In consequence of this excellent showing, the shareholders receive a bonus of one per cent. in addition to the usual dividend of 12 per cent. That this bonus was warranted is evident from the fact that, after allowances for pension and guarantee funds, contributions to repatriation campaign, and the payment of Dominion Government taxes, amounting to $125,000, as against $70,000 the previous year, the balance of account carried forward was $1,062,278.

INDUSTRY

WE offer every legitimate financial facility to growing manufacturers. We are prepared to make advances against approved trade paper. The collection of drafts receives special attention. Sound industries can obtain necessary backing for development. Our practical advisory assistance can be an all-important factor in the success of any industry.

IMPERIAL BANK OF CANADA

Forty-fifth Annual Meeting of the Shareholders

The Forty-fifth Annual General Meeting of the Imperial Bank of Canada was held in pursuance of the terms of the Charter at the Head Office in Toronto on Wednesday, 26th May, 1920. at 12 noon.

THE REPORT

The Directors have pleasure in presenting to the Shareholders the Forty-fifth Annual Report and Balance Sheet of the affairs of the Bank as on 30th April, 1920, together with Statement of Profit and Loss Account, showing the result of the operations for the year.

The balance at credit of Profit and Loss Account brought forward from last year was	$65,459 66
Net profits for the year, after deducting charges of management, auditors' fees and interest due depositors, and after making provision for bad and doubtful debts and for rebate on bills under discount, amounted to	1,379,318 38
Making a total at credit of Profit and Loss Account	$2,244,778 04

This amount has been appropriated as follows:

Dividends at the rate of 12 per cent. per annum	$840,000 00
Special bonus of 1 per cent. for the year	70,000 00
Annual contribution to Officers' Pension and Guarantee Funds	42,500 00
Special contribution to Pension Fund	100,000 00
Contribution to Repatriation Compaign	5,000 00
Dominion Government Taxes	125,000 00
Balance of Account carried forward	1,062,278 04
	$2,244,778 04

During the year Branches of the Bank have been opened at the following points, in addition to those referred to in last year's Report:—

In Alberta:—Benalto, Bittern Lake, Cherhill; Edmonton; 124th Street, Norwood Boulevard; Griffin Creek, Gwynne, Lousana, Robinson's Crossing, Trochu, Westlock.

In British Columbia:—Creston, Michel.

In Manitoba:—MacGregor; Winnipeg—Portage and Colony Street.

In Ontario:—Toronto: Kingston Road and Balsam Avenue, Monarch Park Avenue and Danforth; Avon, Crampton, Hawkesbury, Hearst, Hilton, Mount Elgin; St. Thomas: Ross and Wellington Streets; Schomberg, Stamford, Sioux Lookout, Verschoyle, Walkerville.

In Saskatchewan:—Cando, Edgeley, Foam Lake, Handel, Lebret, Phippen, Yorkton.

The following Branches have been closed:—

In Alberta:—Robinson's Crossing, Rockfort.

In British Columbia:—Kimberley.

In Ontario:—Mount Elgin.

It is with deep regret that your Directors have to record the death during the year of Mr. William Ramsay, who was one of the original founders of the Bank and a Director since its inception; also of Mr. Elias Rogers, who has been a Director since 1897 and Vice-President since 1914. The vacancy in the Vice-Presidency has been filled by the appointment of Dr. W. H. Merritt.

The vacancies on the Board have not been filled, and a by-law reducing the number of Directors to ten with power to increase the number to twelve will be submitted to you.

Mr. A. E. Phipps, who has been in the service of the Bank since 1891, and has until recently been Superintendent of Branches, has been appointed to the position of Assistant General Manager.

The Auditors appointed by you have made their examinations as required by the Bank Act, and their Report and Certificate is appended to the Balance Sheet. They offer themselves for reappointment. The Head Office and Branches have also been carefully inspected during the year in accordance with the usual custom.

The Directors again desire to testify to the satisfactory manner in which the Officers of the Bank have discharged their respective duties.

All of which is respectfully submitted.

PELEG HOWLAND,
President.

Auditors' Report to Shareholders

We have compared the above Balance Sheet with the books and accounts at the Chief Office of Imperial Bank of Canada and with the certified returns received from its Branches, and after checking the cash and verifying the securities at the Chief Office and certain of the principal Branches on 30th April, 1920, we certify that in our opinion such Balance Sheet exhibits a true and correct view of the Bank's affairs according to the best of our information, the explanations given to us and as shown by the books of the Bank.

In addition to the examinations mentioned, the cash and securities at the Chief Office and certain of the principal Branches were checked and verified by us during the year and found to be in accord with the books of the Bank.

All information and explanations required have been given to us and all transactions of the Bank which have come under our notice have in our opinion been within the powers of the Bank.

G. T. CLARKSON, F.C.A.
R. J. DILWORTH F.C.A.
of Clarkson, Gordon & Dilworth.

The customary motions were made and carried unanimously.

Mr. G. T. Clarkson, F.C.A., Toronto, and Mr. R. J. Dilworth, F.C.A., Toronto, were appointed Auditors of the Bank for the ensuing year.

The Scrutineers appointed at the meeting reported the following Shareholders duly elected Directors for the ensuing year: Mr. Peleg Howland, William Hamilton Merritt, M.D. (St. Catharines), Sir William Gage, Sir James Aikins, K.C. (Winnipeg), John Northway, J. F. Michie, Sir James Woods, E. Hay, Frank A. Rolph, R. S. Waldie.

At a subsequent meeting of the Directors, Mr. Peleg Howland was re-elected President, and Dr. W. H. Merritt Vice-President for the ensuing year.

Canada's Industrial Expansion

A Record of Progress

Locate in Brantford

Champion Ignition Company, Flint, Michigan, Are Building Canadian Plant

The Champion Ignition Company of Flint, Mich., are locating a Canadian plant in Brantford, which they will operate under the name of the A. C. Spark Plug Co., Limited. A site covering 15¼ acres, which is part of the waterworks property, has been selected and a factory containing 15,000 square feet will be erected. This will be capable of enlargement as required. Operations will be started as soon as the building is completed, which will be in about four or five months. At the outset about 100 people will be employed. The sole product of the industry will be A.C. spark plugs.

Refinery to be Enlarged

Acadia Sugar Refining Co., Halifax, is on the Eve of Big Expansion

New financing at present being carried on by the Acadia Sugar Refining Co., Halifax, will enable the company to enlarge their capacity from 700,000 pounds a day to 1,000,000 pounds a day. The engineers report that with a comparatively small further outlay, the capacity can be increased to 1,500,000 pounds. The property comprises 170 acres with a water frontage of 1,465 feet and docking facilities on deep water open all the year round. The company also own their own cooperage plant at Moncton.

Plant in Operation

Central Spring Company, Oshawa, Have Started Production of Auto Springs

The Central Spring Company's new plant at Oshawa has been completed, and is now under operation. The main building is 80 x 120 feet, with power house 20 x 42 feet, and office building of ample capacity to take care of future expansion. The most up-to-date machinery has been installed for the fabrication of auto springs. When under way, it is expected that the plant will have an output of approximately 220 to 240 tons per month, and will employ 70 operators. The company, who are owned and operated by Ontario Steel Products Co., Limited, Gananoque, have sufficient space for seven more units similar to the one illustrated in the accompanying view.

Flax Industry for Orono

Company Take Over Old Furniture Factory Building for Ten Year Term

A flax industry is to be located in Orono, Ont. According to the *Orono News*, Messrs. Wilder and Hutchinson, who are the promoters, have leased the old Waddell furniture factory for a term of ten years and will at once remodel it for a flax mill. A part of the machinery has already arrived and the balance will be delivered early in July. The prices paid for flax seems to appeal to the farmers of the district, who have readily contracted a satisfactory acreage.

Branch in Port Hope

Cobourg Felt Co., Limited, Are Establishing Branch Industry in Near-by Town

The Cobourg Felt Co., Limited, have taken over the former Helm Foundry plant in Port Hope and are establishing a factory for the manufacture of soft sole felt slippers. The factory is of brick construction, the main section being 40 x 75, two storeys, with addition 40 x 60 feet one storey and wing 40 x 65 feet. In all there is about 10,000 square feet of floor space. The plant is starting with about forty hands and will have a capacity of 1,500 pairs of felt slippers. The

A Fine New Plant For Oshawa

Exterior and interior views of the main building of the Central Spring Company, erected for the fabrication of auto springs, of which it will produce from 220 to 240 tons per month.

plant, which commenced operation in May, will make footwear only, the felt used being made in the company's mills at Cobourg. A. J. Kimmel, president; A. W. Young, vice-president and secretary-treasurer; A. C. Kimmel, managing director.

Buy New Buiding

S. R. Hart & Company Will Occupy Double the Space of Their Present Premises

S. R. Hart & Company, manufacturing stationers, who have been located for many years at 40 Wellington St. East, Toronto, have purchased a five-storey building at 493 King St. West, into which they will move in the fall. They will have double the space in their present premises, as well as additional space which may be used as the expansion of business warrants. Present quarters have proved to be very considerably too small for their business at the present time, with the result that they have been unable to turn out their product at anything like the rate they would wish. In fact, during the last few years, they have been compelled to turn down orders that they have been unable to handle.

A Charlottetown Development

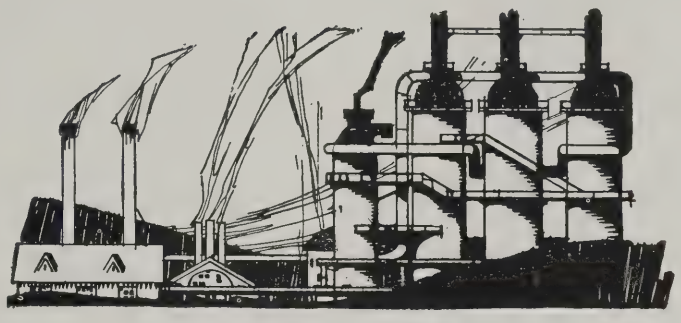
Bruce Stewart & Co., Limited, Are Doubling Capacity of Their Gasoline Engine Plant

An interesting development in Prince Edward Island at the present time is the enlargement of the plant at Charlottetown of Bruce Stewart & Co., Limited, manufacturers of the "Imperial" line of gasoline engines. In order to meet the increasing demand for these engines, it has been found necessary to erect a new building. This is a structure 60 x 120 feet, brick with concrete trimmings and steel sash, asbestos-slate roofing diagonal pattern and thoroughly fireproof. It will be ready for occupation about July 1st, and will about double the company's capacity. In addition to manufacturing gasoline engines, Bruce Stewart & Co., Limited, conduct a general machine shop and foundry business, including boiler-making, plumbing, steam and hot water heating, ship chandlery, sail-making, etc., and are also dealers in automobiles and accessories. They report that business has been good this spring, notwithstanding the high cost of materials of all kinds.

Building Addition

United Drug Co., Limited, Toronto, Putting Up New Building at Cost of $125,000

The United Drug Co., Limited, manufacturers of Rexall products, are at present erecting an addition to their plant at 78 Broadview Avenue, Toronto. It is 72 x 101 feet, mill construction and uniform with their present building. The new building will provide additional space for enlargement of present departments. It is costing $125,000 and will be completed in July.



The company state that "the present addition will enable us to enlarge our departments so that better production can be obtained and will naturally increase our output and enable us to ship promptly all orders which we are now receiving. Our heaviest business comes in the fall months, and owing to the freezeable nature of some of our productions we are obliged to stock up heavily in the summer months for heavy shipments to the east and west. Again, we find it necessary, on account of embargoes and the difficulty in obtaining crude supplies, to carry much heavier stocks of raw material, containers and packing material than at any time previous."

Toronto Company Expands

The Otto Higel Company, Limited, Adding to Mill Room and Building Dry Kiln

The Otto Higel Company, Limited, manufacturers of piano actions, keys and hammers, etc., Toronto, have recently acquired additional property at the corner of King and Tecumseh streets. This property adjoined their present premises and it was decided to purchase it so that they would control the whole block from Bathurst to Tecumseh Street. It is not their intention at the present time to extend their main plant, but they are making an addition to their mill room which will give them about 10,000 feet more space. They are also putting up a new dry kiln, which will give them a further capacity for drying about one million more feet of lumber per year.

Form New Company

Dominion Bridge Company Carry Out Further Plans in Connection With Subsidiaries

At the annual meeting of the Dominion Bridge Company in January last, announcement was made that, in order to segregate the operation of the department manufacturing paper-mill machinery, a new company was being formed under the name of the Dominion Engineering and Machinery Co., Limited. with an issued capital of $2,500,000. Since then further developments have taken place and an alliance has been formed with several power companies, which must soon make large additions to their hydraulic machinery. In order to provide for this additional work, a new company called the Dominion Engineering Works, Limited, has been incorporated with an authorized capital of $10,000,000, half in 8 per cent. cumulative redeemable preferred shares and half in common shares. The Dominion Engineering and Machinery Co., Limited, will sell its undertaking as a going concern, receiving a majority of both the preferred and common shares and giving the Dominion Bridge Co. a controlling interest. The new company will enter into an agreement with the Wm. Cramp & Sons Ship and Engine Building Co. for the exclusive use in Canada and the British Empire of its designs for water wheels and other hydraulic machinery. The board of directors will include Sir Herbert Holt, George Chahoon, jr., Julian C. Smith, Howard Murray and H. Birchard Taylor, the lattter being Vice-president of the Wm. Cramp & Sons Co.

Improving Plant

Recently Organized Western Canada Pulp and Paper Co., Limited, Take Action

Among companies which have recently been doing some financing in order to provide for plant improvement in the Western Canada Pulp & Paper Co., Limited, who have recently taken over the properties and good-will of the Rainy River Pulp & Paper Co., as well as 19,000 acres of Crown grant lands on Vancouver Island. The company's plant is located on Howe Sound about 25 miles from Vancouver. The pulp mill, under operation by the former company, reached a capacity of 20 tons per day of first quality kraft or sulphate pulp. The enlargement being carried out by the new company will double the capacity. The company own their own townsite, which is located on navigable deep water, equipped with a dock 600 feet long, with sufficient depth in sheltered water for ocean-going vessels. The company have also acquired a valuable asset in the water power of Rainy River, the foreshore rights at the mouth of the river and 1,000 feet of waterfront on Thomborough Channel, Howe Sound. The company's timber holdings, owned and to be acquired, are estimated to contain over 1,500,000 cords of

Will Make Pocket Knives

Canada Cutlery Co., Limited, Establishes a New Industry in City of Kingston

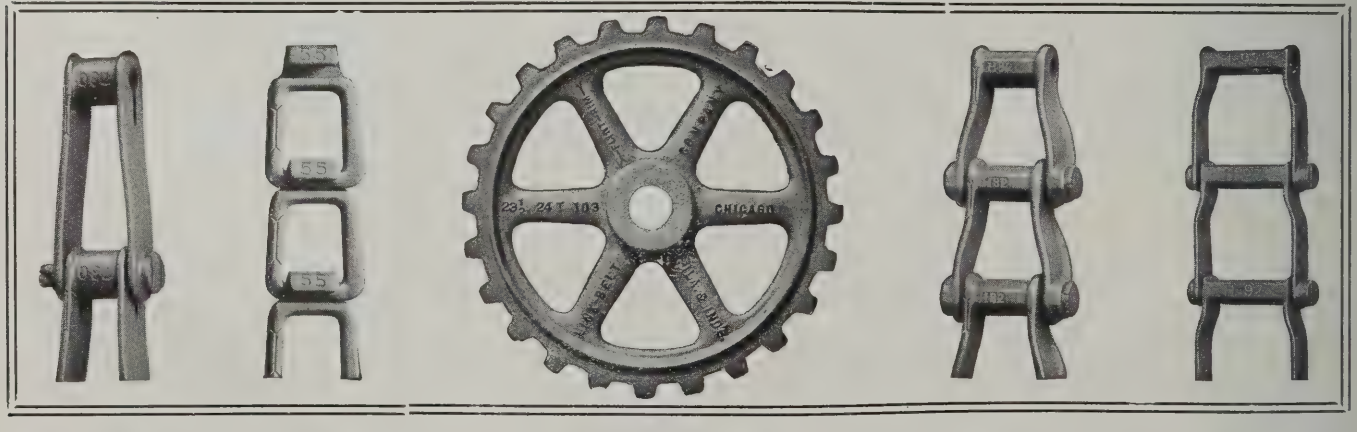
Ratepayers of Kingston voted favorably on May 19 on a by-law providing for the purchase by the city of the Cereal Works property and its lease for twenty years with option of purchase to C. A. Eaton of Turner's Falls, Mass. It is Mr. Eaton's intention to commence the manufacture of pocket knives and a company to be known as the Canada Cutlery Co., Limited, will be formed for the purpose. Mr. Eaton, who has for the past fifteen months been works manager of the John Russell Cutlery Co., Turner's Falls, Mass., will be general manager of the company. The company will have an authorized capital of $50,000, of which $35,000 will be issued immediately and the balance as required.

Extending at Cobourg

The Bird-Archer Co., Take Over Ammunition Plant Formerly Run by Cohoes Steel Co.

The Bird-Archer Co. of New York, who have been operating a plant at Cobourg for the past three years manufacturing boiler compounds, are extending the scope of their industry. They have acquired the ammunition plant formerly occupied by the Cohoes Steel Company, Limited. They are transferring their boiler chemical department to the new plant, and expect to have it in operation by July 1. They propose to add the manufacture of high-speed cast-steel tools and foundry chemicals. Production of the former will be commenced by January 1, and of the latter by the end of September. They will probably employ from 50 to 100 hands.

Locate in Toronto



A. Stein & Co., Chicago, Establish a Branch Plant in Canada to Make Their Products

A branch of the A. Stein & Company, of Chicago, manufacturers of various elastic products, has recently been established in the Empire Building, Toronto, under the name of A. Stein & Co., Limited. The American company have been in business since 1887 and their plant is the largest in the world in its particular line. At present the Canadian company are manufacturing arm-bands and children's hose supporters and will very likely in the near future extend their line to several other elastic products. They have started in a small way with the intention of enlarging as they place their various products into manufacture.

Laurentide Enlargement

Good Progress Being Made in Preparation for Installation of New Machines

According to the *Digester*, the Laurentide Company's weekly publication, it is likely that the new paper machines now being manufactured by the Dominion Engineering Works, Montreal, will be installed and in operation at the company's plant in Grand Mere, P.Q., before the end of the year. Already about 50 of the 80 dryers, needed for the two machines, have been cast and the foundry is turning out one a day. The frames for the dryers are almost complete. The frames

for the four presses have been cast. Meanwhile work is being pushed ahead rapidly on the construction of the new machine room, and by July 1st the building will be far enough advanced to begin the installation of the new machinery.

New Scutching Mill

The Stratford Flax Company, Limited, Are Erecting Four Buildings in Stratford

A scutching mill, 45 x 50 feet, two storeys high, of concrete construction, is under erection at Stratford by the Stratford Flax Company, Limited. The company are also building three steel storehouses about 40 x 100 feet, as they need rather large storage capacity for this size of mill. The company's acreage this year will be about 400 acres and they estimate the total cost of growing an acre of flax from sowing time to the finished scutched flax at about $175. The pulling at present is all done by hand, as is also the retting, both operations being pretty expensive at the present cost of labor. The president and treasurer of the company is Walter Miller, and the manager, Paschal Pigeon, both of whom have had a good many years' experience in the flax business.

Developments at Trenton

Plans of Chemical Products, Limited, for Utilization of Plant of British Chemicals

Some time ago announcement was made that the plant of British Chemicals, Limited, at Trenton, Ont., one of the undertakings of the Imperial Munitions Board, had been taken over by Chemical Products, Limited, a new corporation succeeding Chemical Products of Canada, Limited, 148 Van Horne Street, Toronto. *The Canadian Chemical Journal* now publishes the following information about developments at the Trenton plant:

"It is proposed to divide the plant into four units, the first section to be a sulphuric acid plant, to be operated largely for fertilizer production. The nitric acid plant will be used later with a view to producing mixed acids for explosives, dyestuffs, intermediates, etc. Plant No. 2 is proposed for the manufacture of refined nitrate of soda, Epsom salt and general chemicals. In plant No. 3 it is planned to make salicylates and allied derivatives, namely, aspirin, salicylic acid, sodium salicylate, oil of wintergreen, cresotinic acid, etc. The production of ammonia and coke-oven by-products is contemplated in plant No. 4, including salammonic, ammonium carbonate, liquid ammonia, aromatic hydro carbons and whiting."

Aspirin was successfully produced on a commercial scale by Chemical Products of Canada, Limited, in Toronto. The market is large, and it is believed that from 600 to 800 tons per year can be handled. It is proposed to produce salicylic acid in excess of aspirin and salicylate requirements. This is a chemical, largely used for remedial preparations and dyestuffs, that was produced exclusively in Germany before the war. With respect to refined nitrate of soda, contracts covering about 3,000 tons have already been closed. Acid phosphate, for fertilizer purposes, is in great demand, there being a world shortage. The capacity of the sulphuric acid plant will be 120 tons per day.

The new company, which is capitalized at $2,000,000, has as its directors—R. J. Copeland, Copeland-Chatterson, Limited; D. M. Sanson, Graham, Sanson & Co.; R. J. Cluff, President of Chase Tractors Corporation; J. C. Groves, President Saginaw Chemical Co., Saginaw, Mich.; T. E. O'Reilly, Secretary-treasurer of T. E. O'Reilly, Limited, Toronto; W. H. Vanwinckel, Vice-president of Aniline Dyes and Chemicals,

The Canadian Appraisal Company

Limited

FULL consideration must be given to the present conditions of high costs if adequate insurance is to be provided, an adverse operation of the Co-insurance Clause is to be avoided, and a satisfactory adjustment is to be assured in the event of fire.

Buildings erected only a few years ago may very possibly be worth double their original cost to-day. *This increased value is insurable and must be insured.* A bitter experience awaits the manufacturer who has not considered the necessity and who may have to rebuild after a fire.

To guess at values when insuring is obviously bad business. A leading Insurance Company states: "It is a fact that 85 per cent. of manufacturers do not carry enough fire insurance as compared with their present valuations."

An Appraisal made on the basis of to-day's costs of labour and material is the only sound foundation for correct methods of insurance.

Look for the G on all cast iron fittings

Threading a six inch reducing cast iron fitting on one of the Grinnell Tapping Machines of our own design

Cheaper Because They Are Better

As the manufacturers of Grinnell Automatic Sprinkler Systems, we are one of the largest users of Cast Iron Pipe Fittings in Canada.

So we decided to make our own and make them better than those we could buy. Then we put them on the market, and they've made a big hit.

Grinnell Fittings Save You Money

Grinnell Perfect Fittings save time and labor. They make better jobs that please your customers and help your trade.

They are strictly quality fittings. Every piece is rigidly inspected; and any that are not absolutely up to the standard are thrown out. Nothing but the best is good enough for us—and, therefore, for you and your trade.

Count on Our Big Stock of Pipe and Fittings

We carry one of the largest stocks in Canada and can make quick deliveries. We also carry a full line of Black and Galvanized Pipe, which we cut and thread to your sketch.

New Winnipeg Enterprise

Eternal Battery Co. of Canada, Limited, Will Build Plant in Kildonan

The Eternal Battery Co. of Canada, Lmited, recently formed to take over the business of the Eternal Battery Co., Winnipeg, have acquired a two-acre site at the corner of Main Street and Toronto Avenue in Kildonan and will erect a large new plant. The company are manufacturers of the "Eternal" battery, the invention of Charles William Jenner, president of the company, which is stated to be superior to anything of its kind yet produced. It is the intention to establish agencies in all parts of Canada and ultimately several branch factories, should conditions so warrant. To finance proposed developments an offering of three thousand shares of seven per cent. cumulative and participating preferred stock of the company at par is being made by the Notre Dame Investment Co., Limited, Winnipeg. Associated with Mr. Jenner in the company are Don I. Cameron, Brig. Gen. R. W. Paterson, C.M.G., D.S.O., T. L. Hartley, C. T. Lount and Eimar E. Soot.

Enlarging Plant

The H. E. Furniture Co., Limited, Milverton, Will Have a Larger Capacity Soon

The H. E. Furniture Co., Limited, manufacturers of kitchen cabinets, Milverton, Ont., are at present putting up an addition, 60 x 60 feet, three storeys, solid brick construction, to their factory, at an estimated cost of $25,000. The addition is required largely for offices and shipping room on first floor, trimming department and storage of supplies on second floor, with stock-room on third floor. They expect to add about twenty employees to their staff and will continue to manufacture kitchen aid cabinets and "Red Seal" cedar chests.

More Capacity

Kinleith Paper Mills, Limited, Are Lengthening Size of One of Their Machines

Kinleith Paper Mills, Limited, manufacturers of high-grade book, writing and bond papers, are enlarging the capacity of their mill at St. Catharines by increasing the size of one of their machines. An addition, seventy feet long, is being made to one of the paper machine rooms, which will enable them to put on extra dryers, etc. The estimated cost of this, including the change in the machine, will be about $90,000. They expect to have the addition completed in the early part of November and look for an increase in capacity, as a result, of about 25 per cent.

Enlarge Durham Mill

Rob Roy Mills, Limited, Will Increase Capacity of Rolled Oats and Oatmeal Mill

Rob Roy Mills, Limited, who have been operating oatmeal and rolled oats mills at Durham and Seaforth, Ont., and at Yorkton, Sask., are enlarging their plant at Durham and moving down the machinery from Yorkton. They will make a brick addition to the mill and a concrete addition to their grain elevator in order to increase storage capacity. The total cost of the additions will be from $50,000 to $60,000.

Turned First Sod

Langslow, Limited, Commenced Building Operations at Cobourg on May 27

Mrs. Harry Langslow, of Rochester, N.Y., turned the first sod on May 27th in connection with the establishment of the furniture factory at Cobourg by the Langslow, Fowler Co., Rochester. The affair was made a public function with the mayor, town council, president and members of the Board of Trade, and prominent citizens in attendance. Later a banquet was held. The company, who will operate under the name of Langslow, Limited, have taken over the old Crossen Car Works, but are putting up three new buildings, which, with equipment, will cost in the neighborhood of $200,000. The company will make household, school and office furniture and other wood and steel products.

Adding Another Machine

Spanish River Pulp and Paper Mills, Limited, Order 50-ton Machine for Sturgeon Falls

Following the announcement that two new one-hundred-ton machines were being added to the equipment of the Spanish River Pulp & Paper Mills, Limited, comes the further announcement that a 50-ton machine will also be added to the mill at Sturgeon Falls. About six months will be required to complete the installation and by the end of the year the company's capacity should be up to 650 tons, distributed as follows: Sturgeon Falls, 175 tons; Espanola, 225 tons; Sault Ste. Marie, 250 tons.

Merger at Brantford

John H. Hall & Sons, Limited, Link Up with Williams Tool Corporation, Erie, Pa.

John H. Hall & Sons, Limited, Brantford, who are the largest manufacturers of pipe machines in Canada, have merged their business with that of the Williams Tool Corporation of Erie, Pa., who are the largest and one of the oldest manufacturers of pipe machines in the United States, having a capitalization of $1,000,000. The Brantford plant will be known as the Hall plant of the Williams Tool Corporation.

Mr. Leslie S. Hall, president and general manager of John H. Hall & Sons, Limited, when interviewed as to the possible changes the merger would make with the present active members of their company, stated that no radical change would be made in the management; in fact with the American organization coming in the local branch would be in an enviable position as nearly all of the present officers would continue on in executive positions in the new corporation.

Mr. Leslie S. Hall will be vice-president, taking an executive position between the two factories. Mr. A. R. Hall will be manager of the local plant, and Mr. E. L. Williams will have charge of the office. Mr. E. W. Hall is retiring as secretary and treasurer of the company, and Mr. E. L. Hall will no doubt continue with the new corporation on his return from England.

At present the Brantford plant is running to full capacity, and has been operating a night shift for some months past. With the increasing demand for Hall machines, and the prospect of large export orders, it is expected that it will be necessary, in the near future, to vacate the present premises and build a large modern factory elsewhere.

The merger of these two large companies, specializing on pipe machines alone as they now do, will mean much to the

machinery houses of Canada and the users of pipe threading machines in general. The new corporation will have a capitalization of one and a quarter million dollars, and the entire activities of the company will be to produce the very latest and best in pipe-threading machines. To the machinery houses this will mean that the present high standard of the Hall product will be maintained and if possible improved. Machines will be manufactured in larger quantities and it is hoped in the near future that the company will be able to make shipment from stock held in their own warehouse. Standard stock parts and dies will be available for immediate shipment.

A special department of the new corporation will be the publicity engineer, or educational department. Attractive literature, covering the various uses of the pipe machine, as seen from the users standpoint, will be covered, showing charts, diagrams and devices in actual practice, the cost of threading pipe, lost production and how to overcome same. For the man on the machine a complete service of instructive and educational circulars, service charts and booklets will be issued, giving the operator the manufacturers' advise and service of twenty years' experience in threading pipe.

Hall & Sons have made many distinctive improvements on the pipe machines, which are all covered by patents, and these, in conjunction with the American company's patents, will cover all the requirements of the pipe threading trade. The company are installing several special, high-powered, modern machines which, they hope will enable them to overcome the continued delay in shipments.

Norton Plant Starts

New Industry at Hamilton of Norton Co. of Canada, Limited, Now in Operation

The new plant, which has been under construction at Hamilton by the Norton Company of Canada, Limited, has been completed and is now in operation. It is a branch of the Norton Co. of Worcester, Mass., and Chippawa, Ont., and will manufacture alundum grinding wheels made by either the vitrified or silicate processes. A stock of the various sizes of wheels likely to be called for will be kept on hand and delivery can be effected in short order on wheels that have to be made up. It is expected that the same standard of service and quality will be maintained as before as the wheels are to be made under exactly the same conditions as applied at the plant at Worcester with a staff of foremen from there under the direction of R. G. Douglas, manager; Frank M. Ryan, production engineer, and Albert Johnson, general foreman.

Erect Large Addition

The Louis McLain Company, Limited, Are Putting Up Large Plant in Toronto

The Louis McLain Co., Limited, manufacturers of aluminum cooking utensils, are at present rushing up a new factory building at 2466-80 Dundas St. West, Toronto. The new plant, which will treble their present capacity, is a building, 80 x 110 feet, five storeys high, of steel and brick construction. Its estimated cost will be $125,000 and the company expect to start manufacturing in it by September 1, providing work continues as rapidly as at present. The building will be used exclusively for the manufacture of aluminum cooking utensils and will be the largest and most complete modern factory on the continent making aluminum cooking utensils exclusively.

The company were organized in the fall of 1916 on a very small scale, starting as jobbers at Winnipeg, specializing in

Building The Name McClary's

¶ Stories are often told of how men, in anxious endeavor to secure financial independence, overlook the fundamentals of business success.

¶ The story of McClary's, and the building up of the name, is a record of substantial achievement interspersed with incidents which serve to illustrate the fine principles always rigidly adhered to, even through the passing of seventy-three years.

¶ In 1847, when Ontario was wild, and bartering was the chief method of doing business, the germ of ambition held solid root in the mind of one, John McClary.

¶ He, who, at the full age of ninety-one, still remains the active President of the product of his created genius, overcame difficulties and surmounted temptations through his own prodigious efforts and sterling integrity.

¶ His master mind, through the years of Canadian Development, inspired his executives and helpers to big things, but none greater than the establishment of the unchangeable association of the name **McClary's** with the virtues of confidence, stabilized quality and paramount satisfaction.

¶ Building the name **McClary's** has been arduous, at times trying, but always satisfying—to-day it holds its sway because it was built right and has stayed right.

McClary's

aluminum cooking utensils and articles for the kitchen. Since then they have built a two-storey, 80 x 90 feet, factory in Toronto, continuing their four-storey warehouse in Winnipeg, as well as a large warehouse in Kitchener for eastern distribution. They also have a selling agency in Montreal and one in Vancouver.

Now Well Established

J. H. Soars, Limited, Montreal, Have Their Organization on a Well-Established Basis

J. H. Soars Limited, specialists in roll grinding and corrugating for flour mills, paint, spice, coffee, linseed oil, white lead and ink manufacturers, etc., who started business at 576 Centre Street, Montreal, last September, report that their organization is now on an established basis. Their plant is equipped with the latest machinery and the most modern methods are employed. So accurate are the machines used that they can grind a roll true to the 1/10,000 part of an inch and they guarantee every roll that passes through their hands to be up to this standard. Mr. Soars is a specialist in this business and the management of the plant is entirely in his hands. He was for 15 years before coming to Montreal in charge of the plant of the Sprout, Waldron Co., of Muncy, Pa.

Started at St. Catharines

Walton-Carlson Co., Limited, Began Manufacturing Auto Accessory Tools on June 1

The Walton-Carlson Co., Limited, have established a new industry in St. Catharines for the manufacture principally of auto accessory tools. They have a plant containing 4,000 square feet of space and started operations on June 1, employing about ten or fifteen hands. They are equipped to do drop forging and stamping work in addition to the manufacture of tools, and have a nickel-plating department to take care of their own and outside work. The company are capitalized at $40,000, with A. T. Baker, president; W. V. Carlson, vice-president, and S. G. Walton, secretary-treasurer and manager.

New Industry at Regina

The Western Knitting Co., Are Now Manufacturing High Grade Sweaters, etc.

One of Regina's newest industries is the Western Knitting Co., who started business recently and have been making good progress. They are occupying a plant 50 x 30 feet in size and are making ladies', men's and children's sweaters, with a capacity of two dozen per day. The capital of the company is $7,500 and those interested are J. Saltman, H. Cooperman and H. Lupesen. Since organization the company have increased their machinery to three hand-weaving machines and they intend to increase the number again this fall.

Their Second Addition

Glassco Limited, Oakville, Will Increase Their Output by From 25 to 35 Per Cent

For the second time since 1916, Glassco Limited, fruit preservers, Oakville, have found it necessary to enlarge. They are building an addition, 50 x 50 feet, for the purpose of a storage and packing room. This has been found necessary in order to relieve the congestion in the other buildings of the plant, business having increased steadily ever since the company were established. They expect to complete the work of construction by the middle of the month, and this should increase output by from 25 to 35 per cent. at least.

Glassco Limited stated that the outlook for business is very good, but is confusing on account of the critical situation in the sugar market. It is very hard to obtain materials such as sugar, tins, glass jars, boxes, etc. However, there is bound to be a return to more normal conditions within the next year, in their opinion.

Increased Capacity

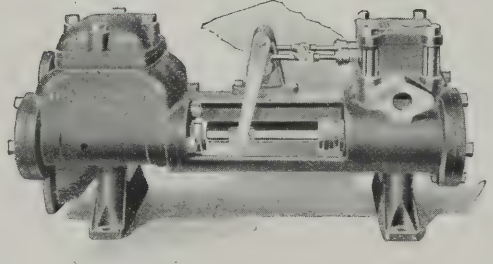
Canadian Woollens, Limited Are Adding to Their Mills at Peterboro, Ontario

Canadian Woollens, Limited, are proposing to add two new storeys to their English Worsted Mills at Peterboro. Three additional storeys will contain twenty spinning frames with necessary drawing, twisting and reeling, which will increase present output by about 50 per cent. These frames will be delivered early in 1921. Good progress is being made with the enlargement of the company's Auburn Mills. This enlargement consists of a weaving shed containing thirty looms. It will be completed in a few weeks and will increase output by about 60 per cent.

Change at Brantford

The McClary Manufacturing Co., London, Take Over the William Buck Stove Co., Limited

The plant of the William Buck Stove Co., Limited, Brantford, which was practically destroyed by fire early in May, has been acquired by the McClary Manufacturing Co. of London, and will in future be operated as a branch of the latter company. The William Buck Stove Co., Limited, was founded by the late William Buck in 1852, and continued by him until his death in 1897, when it was incorporated, since which time it has been operated by his sons, George and Philip, who were president and vice-president respectively. The company were manufacturers of the "Happy Thought" range. About 300 men have been employed by the Buck Co. The McClary Co. have already gotten the plant in running order again.



Simmons, Limited, Montreal, are proposing to build at London, Ont., a service station with about 10,000 square feet of floor space to carry finished stock for the convenience of Western Ontario customers.

The Lake Superior Loader Company, Duluth, Minn., are having some "shuveloders" (underground loading machines) manufactured by the Port Arthur Shipbuilding Co. for sale in Canada. Later on they may organize a Canadian company and manufacture this product themselves, but of this there is no certainty at the present time.

Owing to inability to secure more power, Dumarts, Limited, pork packers, Kitchener, have called in plans for new plant and will not proceed with construction at present. They had intended putting up a building 140 x 40 feet, four storeys and basement, which would have increased their capacity from 100 to about 1,000 hogs a week.

The Belding Paul Corticelli Co., Limited, are erecting a storehouse in connection with their plant at Coaticook, P.Q. It is 40 x 40 feet, two storeys, of concrete and brick construction, costing $7,000. Its erection will give more space for the erection of machinery in the main mill.

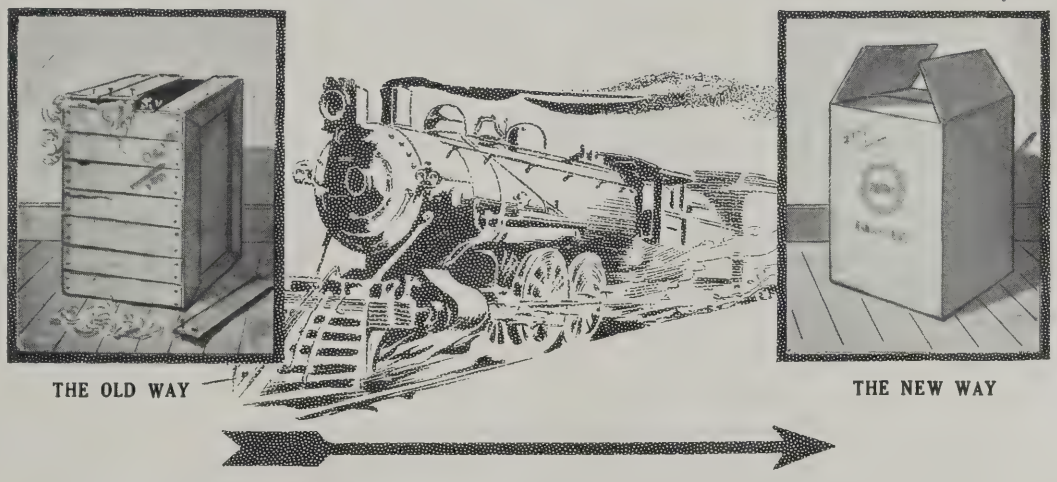
The Central Electric Station Industry

(Analysis of Dominion Water Power Branch)



ELECTRICAL energy, through its ease of transmission and its broad adaptability to domestic, industrial and commercial use, has become of paramount importance to our modern life. The generation of electricity, dependent in the greater part upon coal and water power, has offered outstanding advantages to the efficient utilization of the latter, and Canada has been quick to appreciate the peculiar advantages possessed by her strategically located water powers and to realize in their development for hydro-electrical purposes, one of her greatest natural resources. In this development the central electric station industry has played a most important part, and in view of its exceptionally rapid development, particularly during recent years, a record of its present standing is of special interest.

The Dominion Water Power Branch, Department of the Interior, in co-operation with the Dominion Bureau of Statistics, is publishing an analysis of the results of the second census of central electric stations in Canada, showing the status of this important industry at January 1, 1919. The report includes statistics relative to central electric stations only, as defined for census purposes; that is, stations which sell or distribute electrical energy for lighting, heating or general power purposes, other than that generated by industrial organizations for their own direct use in the operation of some other industry. The statistics, therefore, treat only with the generation and distribution of electrical energy in so far as such energy is not used directly by the station reporting. In each case where the central electric station operations are combined with those of some other industry special care was taken to secure statistics relating only to that part of the operations which is chargeable solely to the central station activities.

The central electric stations are divided into two fundamental classes—generating stations, which include stations generating all or part of the power they sell or distribute, and non-generating stations which purchase from some other station all the energy they sell or distribute. The analysis further divides the stations according to ownership and type of power used, into the following classes: municipal, commercial, hydro-electric power, and fuel power stations. The statistics are given for the Dominion as a whole, and by provinces. As the analysis has just been completed and some time must necessarily elapse before the report is ready for general distribution the following brief summary of the statistics has been prepared:

The total number of stations reporting is 795, of which 515 or 64.8 per cent. generate their own power, and 280 or 35.2 per cent. are of the non-generating type. The commercial stations numbered 377, and the municipal

Steel for Permanence

The All Steel Elevated Water Tank is the most economical installation for Automatic Sprinkler systems for fire protection, general mill supply, or Municipal Water Works systems.

Its first cost is not excessive, the maintenance expense is very low, and there is no danger of leakage, falling ice, or possibility of the tank bursting or catching fire.

Hundreds of our All Steel Elevated Water Tanks now in service throughout Canada bear witness to these facts.

OUR PRODUCT IS MADE IN CANADA

stations 418. Of the generating stations, 332 are commercial and 183 municipal, while of the non-generating stations 45 are commercial and 235 municipal. As noted in the results of the last census, the system of the Hydro-Electric Power Commission of Ontario, with its extensive distribution, selling blocks of power to local municipal commissions, accounts for a large proportion of the municipal non-generating stations.

The aggregate capacity of all primary power machines reported is 1,958,642 horsepower, of which 1,841,114 horsepower is installed in main plants and 117,528 horsepower in auxiliary or stand-by plants. Of the total for the main plants 1,434,196 horsepower or 77.9 per cent. was reported by commercial stations, and 406,918 horsepower or 22.1 per cent. by municipal stations, while of the auxiliary plant equipment, the former accounted for 110,853 horsepower and the latter 6,675 horsepower. According to source of power the total for all prime movers is divided as follows: from water 1,682,191 horsepower, from steam 262,562 horsepower, and from gas and fuel oil 13,889 horsepower.

The average primary power installation of the main plants per thousand population for the Dominion is 209 horsepower. The provincial averages on this basis are as follows: Yukon 1,135 horsepower per thousand population, British Columbia 302 horsepower, Ontario 277 horsepower, Quebec 263 horsepower, Alberta 129 horsepower, Manitoba 121 horsepower, New Brunswick 50 horsepower, Saskatchewan 41 horsepower, Nova Scotia 38 horsepower, and Prince Edward Island 14 horsepower. It is notable that the highest averages on the per capita basis occur in the Yukon Territory and the five provinces in which the greater proportion of the central electric station power is derived from water.

Hydro-Electric power is now served to practically every large industrial centre in Canada, and the rapid extension of the large distribution systems together with the active Hydro-Electric construction at present in progress is fast linking up the few centres which have hitherto derived their power from fuel. In considering the extent to which water is used as a source of primary power in this industry it is of interest to note that according to a recent census of developed water power in the Dominion 72.7 per cent. of the total is utilized in connection with the central electric station industry.

Of the aggregate capacity of all prime movers installed in the main plants 1,682,191 horsepower or 91.4 per cent. is derived from water, and including the prime movers of auxiliary or stand-by fuel plants, the hydraulic installation represents 85.0 per cent. of the total. The percentage of Hydro-Electric power in the various provinces is as follows: Quebec 98.4 per cent., Yukon Territory 97.8 per cent., British Columbia 97.2 per cent., Manitoba 95.5 per cent., Ontario 95.4 per cent., Alberta 42.9 per cent., New Brunswick 37.6 per cent., Nova Scotia 18.5 per cent., and Prince Edward Island 16.8 per cent. Saskatchewan derives 100 per cent. of its central electric station energy

from fuel. From this it will be seen that the first four provinces named and the Yukon Territory reported over 95 per cent. of their total central electric station power derived from water. With the completion of projected Hydro-Electric developments in Nova Scotia and New Brunswick the Hydro power percentages for these provinces will show a marked increase.

In Ontario, Quebec, British Columbia and Manitoba the steam plants which are auxiliary to Hydro developments account for 113,350 horsepower or 69.2 per cent. of the total steam power installation for these provinces. It should also be noted that for the Dominion as a whole there is installed in connection with Hydro-Electric developments 117,198 horsepower in auxiliary fuel plants.

The total number of persons reported as employed in the central electric station industry in Canada is 9,696, with salaries and wages aggregating $10,354,242. Commercial stations employed 5,690 persons at $6,137,525 and municipal stations 4,006 persons at $4,216,717. The total number of persons employed in the industry averages 5.2 per thousand installed primary horsepower, while the aggregate salaries give an average of $5.62 per installed primary horsepower. In connection with the statistics of employees' salaries and wages, it should be noted that in a considerable number of cases employees are engaged for only part of the time in connection with the central electric station operations, the balance of their time being charged to some other work not connected with this industry. This is particularly the case in non-generating municipal stations and in composite stations where the sale of electrical energy is only incidental to some other industrial activity. In instances of this kind only that part of the salaries or wages properly chargeable to the central station industry is recorded.

The results of this census show a decided activity in the development of electrical energy for central electric station purposes. This activity is particularly evident from the reported contemplated enlargements to existing plants as well as from the new developments at present under construction and the extension of the already notable transmission systems of the larger stations.

Great Eastern Paper

Large Issue of Eight Per Cent. Cumulative Preferred Stock Being Offered

An issue of $2,500,000 for eight per cent. cumulative preferred stock of the Great Eastern Paper Co., Limited, is being made by Thornton, Davidson & Co., Montreal. The company own 460 square miles of timber limits in Gaspé Que., on the St. Lawrence River, covering almost the entire drainage of the Madeleine River. The company's plant comprises a barking mill, sawmill with capacity of 10,000,000 ft a year, a ground-wood pulp mill with capacity of 20,000 ton a year and a water-power development with 5,000 horsepower installed and 27,000 horsepower total capacity. The company also own a railway 7½ miles in length, with necessary rolling stock and equipment, together with dock, shipping facilities, lighters, etc. The stock is offered at par and accrued dividend and carries a bonus of 20 per cent. of common stock.

The Real Oppressors of the Poor*

By J. G. SULLIVAN
Consulting Engineer, Winnipeg

ONE does not have to be a student of history to know that there has existed in the old worlds up to recent times a condition which made it practically impossible for any individual to remove himself from the class into which he happened to be born. Even those of us whose fathers came from Great Britain have been told many times by father or grandfather that a gentleman was a man who did not have to work for a living, and that he was in a class by himself, protected in his holdings of land, etc., by laws of entail; and no matter how depraved he might become, the laws and customs maintained him in his position and he and his offspring existed without working. They told us that other classes were tradesmen, farmers and laborers, and that it was next to impossible for any of these to enter into the gentleman's class.

Practically all are Workers

We do not have to go very far in the Bible before we are told that God Himself said to Adam, "With labor and toil shalt thou eat thereof all the days of your life." It would not appear entirely illogical to classify the "gentleman" described above as an oppressor of the poor. Such conditions do not exist in Canada or the United States. Mention a successful rich man, and, in ninety-nine cases out of a hundred, you have named one of the hardest working men in the country. In this country we are practically all workers, and if there are oppressors of the poor we must look for them among the workers.

The radical labor leader will tell you that the arch fiend is the capitalist, without defining what he means by the word capitalist. We would not expect him to include a poor widow who may have a few thousand dollars in the savings bank, although we are not sure how he would class this same widow if she should draw out her savings and purchase war bonds or railway or other commercial stocks.

Capital is what we have saved out of what has been produced, the sole means of sustaining the life of the industrial worker, for as a matter of fact, the industrial worker, whom the radical leader tries to make you believe is the only producer, is not a producer of the real necessities of life, but rather of luxuries which follow where people have been frugal and saved up some capital which will permit them to enjoy luxuries.

False Teachings of Radicals

The real producers of the necessities of life are the farmers, and if they had been controlled and guided by the teachings of the present leaders of industrial workers, it is the writer's belief that a universal famine would exist on this earth to-day, and the first to die would be the industrial worker. The writer has no quarrel with industrial workers or their leaders, but rather with the false teachings of the radicals. For instance, it is a common teaching that the industrial worker is underpaid, and that he is producing all

* This striking article, which is published in INDUSTRIAL CANADA by request of a prominent member of the Association, appeared originally in the form of a letter to the editor of the *Canadian Engineer*. It is most desirable that members should read and familiarize themselves with the facts contained in it, for they will be of assistance in refuting many of the arguments that are being advanced by radical labor leaders.

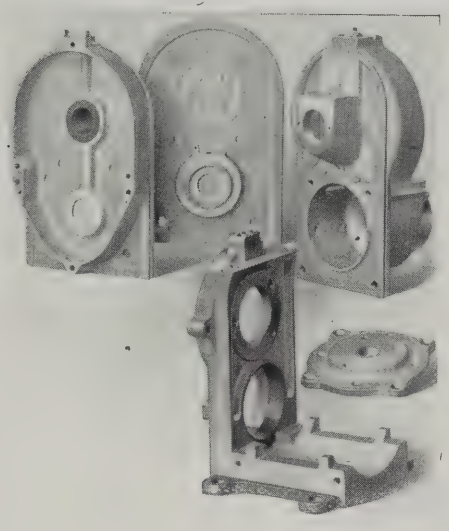
the way from twice to twenty times the amount that he is being paid for. If that were a fact, we would expect to see the wealth of the world increasing at a tremendous rate. What are the actual facts?

The estimated wealth of the world at the beginning of the war did not exceed one trillion dollars. This consisted mostly of tools of production and maintenance used for the comfort and happiness of mankind created by capital, which in turn was created by frugality and sacrifice. The value of the world's plant has not increased during the past five years, but in all probability has decreased in actual value, although on account of the depreciation of the measure of value, those who do not wish to know or hear the truth may produce statistics to prove the contrary. They will surely ask, "Where did all the war millionaires come from?" The answer is easy: "They did not get it from what was produced during these years, for we consumed more than we produced. They made these millions at the expense of the capital of others." The world during the past five years can be compared with the thoughtless man who has a home or a farm left to him and immediately places a heavy mortgage on same, buys an auto, diamond rings for the wife and fine clothes for the children, and in general lives like a prince. When the house-servant and the man who drives the auto see such extravagance they say: "We are the only ones around here who work. All this money is coming from our labor." Then the trouble begins.

Small Wealth Per Capita



A trillion dollars looks like a lot of wealth. It is a considerable sum, but when you divide it by the number of people on earth, about one billion seven hundred millions, we get a sum that comes within the scope of the minds of most of us, namely, about $600. Whether one believes in the Bible or not, he must admit that what was said about toiling for a living is true, otherwise, after some six thousand years of toil and sacrifice, we would have accumulated more than $600 each. If we allowed no credit for the things that God put on the earth for man's use, which he could take without any exertion, and if we start with a capital of one dollar, this capital has increased at the rate of about one-half of one per cent. a year.

Let us take the case of the United States, a comparatively new country to civilization. The estimated wealth of the United States in December, 1917, was two hundred and twenty billions of dollars. If we assume that the accumulation of this wealth started four hundred years ago, and that the value of the natural resources, such as wild prairie lands and timber, which required no human exertion to create their present assessed value, amounted to the low sum of $100,000,000, then the increase would be considerably less than 2% per year. Further, if we entirely ignore the value of the natural resources and started with a capital of one dollar then the increase would be less than 7% per year. But we know as a matter of fact that this latter figure is not correct for that would mean that the wealth of the country would double every ten years.

Railway Operation as Example

Enough has been said to show how foolish is the doctrine that there is wealth enough in the world for all of us to live in comfort and ease if it were equally distributed. We must look some place else for the oppressors of the poor. The miser may accumulate millions, but they are only saved up for the future happiness and comfort of the human race, none of them are carried across the River Styx. They will continue to serve the world for years after their accumulator has been forgotten.

We will assume that the average man will accept as an axiom the statements that it is impossible for the world to consume more than it produces, that the capital of the world is not large, and that the rate of increase is small and must be maintained in order to supply the means by which industrial workers can make a living. If the above be granted, then we can logically say that the oppressor of the poor is the man who consumes more than he creates.

It is a hard problem to say how much a man has a right to consume, therefore a difficult thing to lay your hand on the real culprit, but as a great majority of the industrial workers spend all they get, let us analyze the subject from the point of remuneration for services and try to find out who, if any, are being paid for more than they create.

Because the writer is more or less familiar with the railway business, and further, because of published facts of that business in the United States, we will take that industry as an example.

If the United States had not taken over the operation of the railways, and the private companies had to pay the wages that are now being paid, it is a safe guess that 50% of the railways would now be either in the hands of receivers or ready to be taken over by receivers, and the bondholders would not be getting interest on their capital. There would practically be no dividends paid on stocks—only by the very few strong companies. This burden is being carried by the general taxpayer, and I do not believe that there are very many who think that the holders of railway securities are getting what is justly due them, to say nothing about getting too much, and the majority of the people know that if 50% of the roads were in the hands of receivers that the security-holders would not be getting a just return on their capital; therefore, we can eliminate them from the class of oppressors of the poor.

The shippers of the country, whether rightfully or not, believe that freight and passenger rates are high enough. If that view be correct, the railways are being paid for all they create, and we practically have only the employees left among which to find the oppressors of the poor, if there are any in that industry.

High-Salaried Officials

The radical labor leader will at once point to the high-salaried officer and say, "There is the man." Representative Sims has published in the *Congressional Record* a list of the names of railway officials who were paid $20,000 or more per year in 1917, the last year of private operation. There were about two hundred names on this list—about one hundredth of one per cent. of the total number of employees. The aggregate amount paid these two hundred men was $6,644,074, or a little over $33,200 each per year. If the services of these officers had been dispensed with, and the money divided among the other employees, they would have each received less than $4 more per annum than they were actually paid. Surely these two hundred men were not very grievous oppressors of the poor.

Director-General Hines, on November 14th, 1919, submitted to the president of the senate a report in response to the August 20th resolution of the senate calling for information *re* rates of pay of railway employees. (For further and more detailed information, see *Railway Age*, October 3rd, 10th; November 7th, 14th, 1919.) The figures in this report show that several classes of organized labor are receiving as much and in some cases more than is being paid to the division officers.

Recently, in speaking to a railway superintendent who had formerly been a locomotive engineer, I was told that on account of the depreciated value of the dollar, it was getting next to impossible for him to make both ends meet—he had to dress well and keep up his end in a small town, and was finally compelled to sell his automobile to one of his locomotive firemen.

Organized Labor Taking All

He said, further, that he did not see how the company could afford to raise his pay, for if they did, then they would have to raise the salary of thousands of others who were unorganized, and he did not see how it could be done, as organized labor is taking all and more than the company can afford to pay. He asked and answered this question: "Do you think it is just that a locomotive engineer should get more pay per month for working seven to nine hours per day, three or four days a week, than I receive for working seven days a week and from ten to twenty hours per day? Whom do you consider is the greater producer." The answer was: "He has the advantage over me that he has back of him the brute force of a large combination; and still they talk about the wrongs of the poor and brotherly love! I cannot understand how a locomotive engineer that preaches such doctrines, and in some cases draws from $2.50 to $3 per hour for actual time worked, can look in the face of his auto-driver, whom he pays at the rate of thirty to forty cents per hour, when he knows that it requires more brains, five times as much energy and more responsibility to drive an automobile than it does to drive a locomotive." He concluded by adding: "I know what I am talking about, because I am speaking from several years' of experience in this business."

See the *Railway Age* for October 3rd, 1919, for an account of the testimony of Timothy Shea, acting president of the Brotherhood of Locomotive Firemen, before the United States Board of Railroad Wages and Conditions. Asked if the question of thrift did enter into the situation, Mr. Shea said he did not think it was possible for working people to curtail expenditures any more; that the men he represents are living "right on the margin" and depriving themselves and their families of the necessities of life.

"Do you represent any men who are buying automobiles and those things?" asked Mr. Morse.

"I do not hear of any firemen, or many firemen, buying automobiles," replied Mr. Shea.

"You would not regard an automobile as a necessity, would you?" asked Mr. Morse.

"Yes, I would."

"Well, I have denied myself a necessity all my life, then," said Mr. Morse, who was general manager of a railroad before becoming a member of the wage board.

No Sacrifices by Organized Labor

"An automobile may be a necessity to any man," said Mr. Shea. "I have an automobile, and it is a necessity to me and my family to a considerable extent. That would apply with equal force to any man, and I think we have reached a period of our life where the laboring man must enjoy some of the necessaries and luxuries of life. I do not think the time is at hand when the American working man should be required to make any great sacrifices now. They have made their sacrifice."

The writer does not care to dispute Mr. Shea's testimony he would only be too glad to approve of the idea if the production of the world to-day were such that it would permit of every fireman and every other man doing like work to enjoy the luxury of an automobile; but unfortunately that is not the condition at the present time.

Now as to the real oppressors of the poor. The reader can draw his own conclusions; the writer is not interested

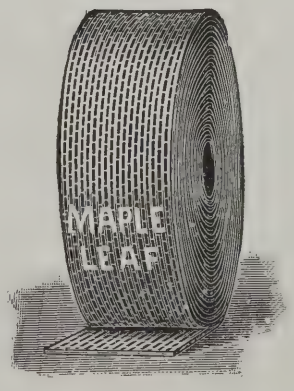
his idea of sport is a fair "free-for-all," but as the radical labor leader has so much to say on this subject, the writer cannot refrain from pointing out the fact if, through brute force of large combinations, organized labor can increase their pay only 20% above what they are producing, they are oppressing their unorganized brothers to that extent.

The radical will reply that the answer is for everybody to be organized, but that is a fallacy, for with everybody effectually organized excepting the high-salaried officers, there would be left to divide only the $4 per man that was paid to the high-salaried man, and the wages of the auto-driver would be equal to those of the locomotive driver, and the latter would be considerably reduced from what they are now.

The Real Oppressors

We know that the radical has not got that $33,200 to two hundred officials out of his mind, so let us take a concrete example. Supposing, for the sake of the example, that brains, energy and ability do not count, and that these men are each getting ten times what they should receive. Then they are oppressing the poor to the extent of the wages of nine times 200, or 1,800 men. But if a million organized railroad employees are getting 5% more than they are entitled to, they are oppressing the poor by a million times 5%, or the wages of 50,000 men. The reader can draw his own conclusions as to who are the real oppressors of the poor.



The sooner labor leaders realize that the industrial workers of the world cannot lift themselves very far by their own boot-straps, the better it will be for the workers as well as everybody else on this earth. At the beginning of the war it was only natural that the law of supply and demand would somewhat increase the price of wheat, meats and materials required for war purposes, but all can remember how soon the labor leader who shouts so loud, about the crime of treating labor as a commodity did that same thing and took every advantage of the law of supply and demand. We saw war munition and shipbuilding workers getting from 75c. to $1.25 per hour, and five to ten times these figures in some cases where they actually exerted themselves and did piecework. At the same time other equally skilled tradesmen, such as carpenters or painters, were actually working for from 35c. to 55c. per hour, and to the writer's mind this was the major factor in starting old H. C. L. on his way. Other tradesmen and laborers could not be expected to be contented under the circumstances and the trouble began.

Industrial workers attempted to do the impossible—to get two or three times the value of what they produced—but another natural law took partial care of that hold-up: The value of the measure of "value" depreciated, and the industrial worker, instead of getting what he wanted, only succeeded in getting a relatively small percentage at the expense of unorganized labor and of those straight-salaried men whose salaries did not go up in the same ratio that the value of the dollar went down.

Money is only a medium of exchange, and the fluctuation of its value is incorrectly interpreted as the high or low cost of everything else. Here on the prairie we can build a mile of railroad to-day cheaper than we could twenty years ago if one measures the cost in what we are producing, namely, bushels of wheat.

There is just one real remedy for all this industrial trouble; that is, more production. When the organized industrial workers realize that fact and change their present ideas of getting as much money as possible for the least amount of time and smallest amount of output, to working a reasonable amount of time to the limit of their ability and capacity, the sooner will they be able to enjoy, rightfully and more universally, the privilege of going to and from their labor in their own automobiles.

Making Wages Elastic*

How Index Numbers Enable the Employer to Adjust Wages to Rising Prices of Commodities

By R. H. TINGLEY

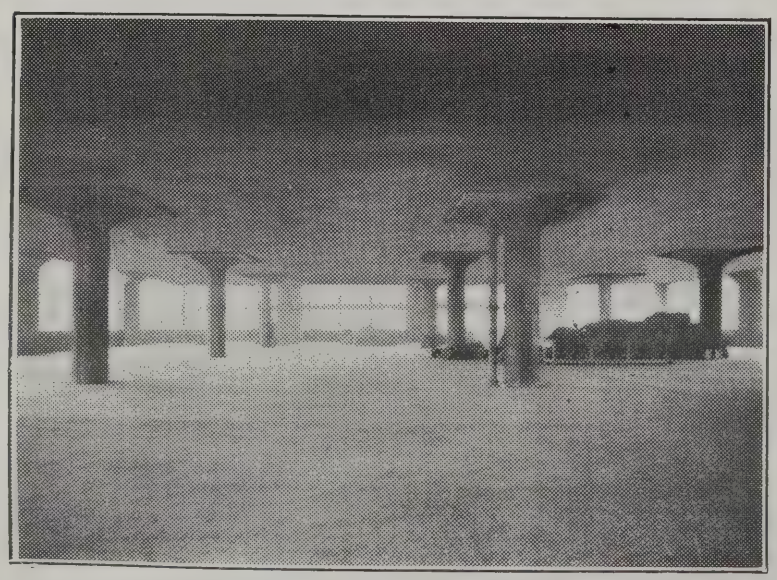
THE index number, as we commonly know it, is the sum or average of the prices of a large number of commodities more or less essential to our existence. If the index number is to be a faithful record of fluctuations, it is obvious that the prices of the chosen commodities must be assembled on certain periodical dates. The totals or averages obtained will thus indicate the average percentage of rise or fall in prices during a given period.

Index numbers have been in more or less constant use since they were first invented by G. R. Carli, an Italian, who attempted to discover by their use the effect of an abnormal quantity of gold money upon rising prices.

Carli's researches stimulated others, and we find frequent reference to index numbers both in European history of the eighteenth century and in our own colonial records. For example, Washington's army was paid in provisional notes the face value of which moved up or down according to the market price of a few essential commodities.

There are now maintained no fewer than five separate systems of index numbers in the United States: Dun's, Bradstreets, Gibson's, The Annalist's and that of the United States Department of Labor. In England there are three, that of the "London Economist" being, probably, the oldest. Almost every other civilized country, too, maintains its own separate set or sets.

Index numbers have been used by statisticians, librarians, economists and historians in many ways for a century or more. In all of these uses, however, their influence is somewhat indirect, and their application belongs rather to the realm of the academician than to that of the every-day business man.



But with the war the business man has taken up the practical application of index numbers to business. The cost of living has been mounting. Wages had to be raised to meet it, but the raising of wages is not always desirable except when the higher figure can be maintained. Business, therefore, has devised a method of adjusting wages to rising costs of living, a method based on changes in commodity prices as revealed by index numbers.

One of the first enterprises to inaugurate a system of adjusting wages to the rising cost of living was the Oneida Community, Limited, manufacturers of silverware, at Oneida, New York. The High Cost of Living Plan, as it was called, was put into operation in January, 1917. For a basis it went back to January, 1916, when a general advance in wages placed the employees in position to share the Community's prosperity.

An estimate based on the living expenses of a large number of families of differing sizes and incomes revealed the fact that during 1916 the cost of living increased 16 per cent. The company announced that each worker would receive an additional pay envelope every month thereafter, this envelope to contain the additional wage resulting from the new system. The additional wage would vary from month to month; every twenty points of change in Bradstreet's

THE JONES
UNDERFEED STOKER

The reason lies in the underfeed principle which reaches perfection in the Jones design. Practically all the heat units present in the fuel are fully utilized. There is no smoke. The Jones turns into power all those heat units which escape up the stack with ordinary firing methods. The Jones therefore increases the capacity of any boiler under which it is installed. Don't take our word for it. Let us tell you about some Jones Stokers in your neighborhood that will give you the proof positive.

In the experience of the Oneida Community covering a period of two and a half years the H. C. of L. envelope has fully covered increases in the living costs of its employees and has given the Community great confidence in the practical value of the figures used. The employees have all felt that, however high prices of flour or potatoes might go, their wages would increase to cover the increased cost.

Last spring there occurred a substantial fall in commodity price-levels as reflected in the index numbers. This resulted in an automatic reduction in the size of the H. C. of L. envelope.

The Oneida Community reports that the employees accepted this reduction without a murmur as a matter of course.

A. M. Kinsley, general manager of the Community, says:

"The High Cost of Living plan was not designed to be permanent. It has served as a bridge to carry a much more ambitious plan of industrial partnership across the difficult period of war. Whether from it shall arise a basis for a permanent system of automatic wage adjustment, belongs to the future."

The Schwarzenbach-Huber Company, silk manufacturers of West Hoboken, N.J., also uses the Bradstreet index numbers. It takes the index for one month and uses it as the basic figure, 100 per cent. An increase or decrease on that

LARGE STOCK OF STRUCTURAL MATERIAL AT ALL PLANTS

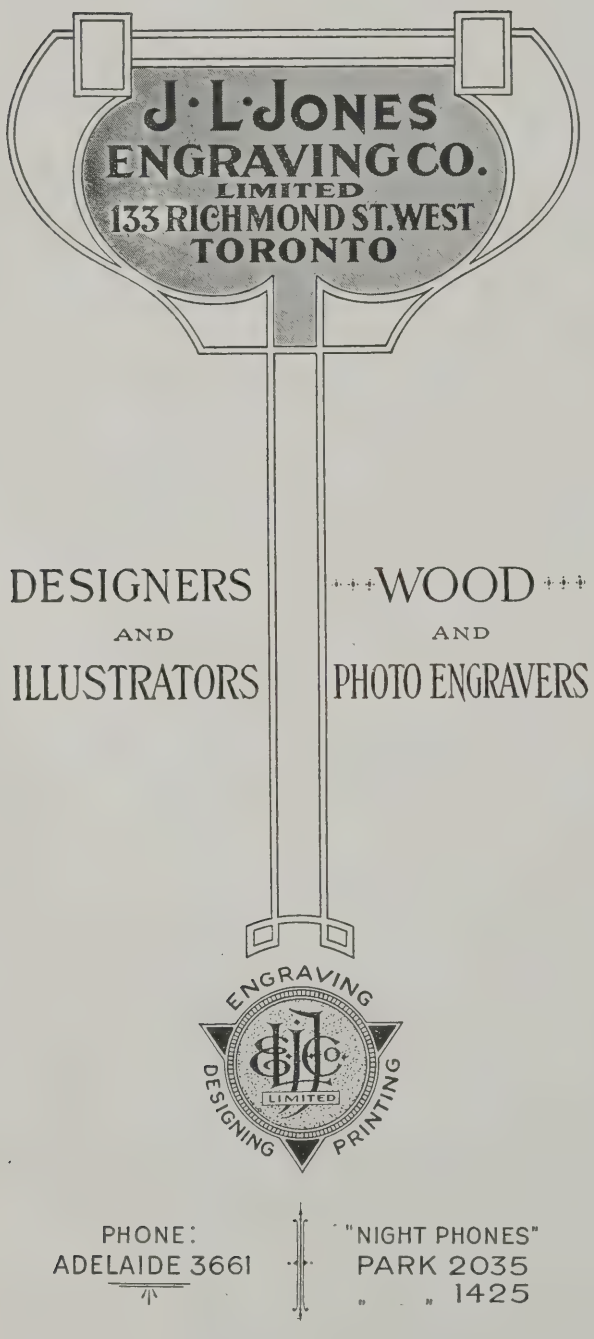

figure occurring during the ensuing months is figured as per cent. of increase or decrease on the basic figure. For example:

	Index.
August, 1919	20.0017
Basic figure, July, 1919	18.8964
Increase	1.1053

1.1053
———— equals 5.85 per cent., the increase.
18.8964

As the increase for August over July was 5.85 per cent., the employees received a bonus of 5.85 per cent. As Bradstreet's issue in one month covers the index for the previous month, the increase for any month is given in the following month.

Carefully avoiding the use of the adjective "high," Barker, Rose & Clinton, hardware merchants, of Elmira, N.Y., have adopted what they call the "Cost of Living," or "Index Number," wage plan. Omission of the word "high" paves the way towards self-protection when the inevitable drop in prices comes—as it will—some day. A. Clinton, of this firm, says:

"'The Cost of Living,' or 'Index Number,' wage plan seems to be a scientific solution of the wage problem: its success depends upon mutual confidence."

As the cost of living advanced, Barker, Rose & Clinton tried many modifications of the arbitrary bonus plan, but found each unsatisfactory. They finally adopted their index number plan based on Dun's system, and have been using it since July, 1919. Their plan works out something as follows:

Suppose an employee was receiving $25 a week during July. Dun's index number for July, 1919, was 233. By August 1 the index number had increased 8 points, or to 241. This increase, reduced to a fraction, is 8/233, or to a decimal, is .0343. The employee's weekly wage of $25 is multiplied by the decimal increase, giving a result of 86 cents. This particular employee's weekly wage for the month of August therefore was $25.86. In September, 1919, the index number of Dun had dropped to 238, or 3 points below August. This represents a decimal drop of .0124, which, multiplied by the employee's previous wage of $25.86, gave him for his September work $25.54 a week. This is a very simple plan and the hardware firm is confident that it has solved its wage problem.

The Union Bleaching and Finishing Company, of Greenville, S.C., has been using the index number system in wage adjustments in its factory for more than a year with satisfactory results. The executives are frank to admit, however, that they do not know exactly how the system will stand under a heavy price decline, but they feel quite sure if it were in universal use there would be no trouble when prices and wages fall.

Mr. R. W. Arrington, secretary, writes:

"We are using as a basis the Bradstreet index number covering not his entire list but his six first items which cover the necessities of life and articles which are used by everybody in every-day life. These six, as I remember them, are breadstuffs, provisions, fruits and produce, meats, hides and leather and textiles.

"We take as a basis the cost of living on January 1, 1916, and show a percentage over that figure of what the cost of living is to-day. We started by paying our people in two separate envelopes: one contained the basis of what they were receiving on January 1, 1916, and in another envelope the additional amount covering 95 per cent., 100 per cent., 103 per cent. or whatever percentage of that basic figure the index number happened to show. We have discontinued the two-envelope system, however, and put all the money in one envelope, but insert slips showing how much money is represented by the index number."

You Are Entitled to Good Filing

And you get it when you specify Famous Five Files.

Made of specially fabricated steel, accurately cut and thoroughly hardened, they do all that can possibly be expected of a file.

Long efficient service, cleanly done jobs, contented workmen, time and money saved ---this is what Famous Five Files mean to you.

They are:

At the head of the Index Visible, Inc., of New Haven, Conn., which makes visible card index systems, is Professor Irving Fisher as president. Since Professor Fisher occupies the chair of political economy at Yale University and is one of the advanced thinkers along economic lines, it might be expected that his company would have worked out a scientific method of applying index numbers to its wage problem. And apparently it has done that very thing.

Professor Fisher's company uses the index numbers of the United States Bureau of Labor Statistics. With this as a basis, to arrive at its own index number, it assumed that its pay-roll at the first of July, 1918, was properly adjusted to the price-level for the period of the first six months of that year. It therefore took an average of the Government index numbers for that period, resulting in an index number of 158, which it uses as a standard. It then divides the Government's monthly index number by the standard number, 158, to get the per cent. to be contained in the H. C. of L. envelopes for each month. For example, in July, 1918, the Government index number had risen to 167, an increase of 5.7 per cent., which accordingly became the percentage of addition for that month.

The Index Visible, Inc., pays its employees their additional wages in a separate H. C. of L. envelope.

E. D. Keith, assistant treasurer of the Index Visible, Inc., writes:

"Our employees are mostly intelligent office help. In the factory we have only one or two who do not understand the system at the outset.

"If the cost of living should go below our standard index number, we would plan to take our chances with all manufacturers in reducing the wage scale, if that became necessary.

"The system appeals to us as being just to the individual and hence a protection to the company in reducing turnover by establishing a reputation for fair dealing."

The Mishawaka Woolen Manufacturing Company, of Mishawaka, Indiana, uses Bradstreet's index number. At the time of inaugurating its plan, in February, 1918, this company was already paying its employees a 10 per cent. bonus on account of the high cost of living. Its new plan was therefore called an "extra bonus" plan. It resembles, in operation, the plan previously adopted by the Oneida Community. The results of its experiments, however, are instructive and I quote them as I received them from L. T. McCollum, of the Mishawaka Company:

Period Ended.	Paid.	Rate.	Index Number.
Feb. 23, 1918	Mar. 29, 1918	7 %	17.9636
Apr. 27, 1918	May 29, 1918	11¾%	18.9133
June 29, 1918	July 25, 1918	13 %	19.1849
Aug. 31, 1918	Sept. 26, 1918	12½%	19.0485
Oct. 26, 1918	Nov. 27, 1918	11¾%	18.911
Dec. 28, 1918	Jan. 30, 1919	10 %	18.5575
Feb. 22, 1919	Mar. 27, 1919	6¼%	17.8139
Apr. 26, 1919	May 28, 1919	10 %	17.2376
June 28, 1919	July 24, 1919	11¾%	18.8964
Aug. 30, 1919	Sept. 25, 1919	14½%	19.4720
Oct. 25, 1919	Nov. 26, 1919	16¾%	19.9026

Mr. McCollum writes as follows:

"Our extra bonus plan worked very satisfactorily while the bonus was increasing in size, but became less satisfactory as it became smaller, and when it fell below 10 per cent. it caused quite a little dissatisfaction."

The Printz-Biederman Company of Cleveland, Ohio, manufacturers of "Printzess" suits and coats, is the only one to my knowledge that has tried the index number wage plan and abandoned it. Their plan was adopted January 2, 1918, and discontinued November 17, 1918. The reasons for aban-

doning the plan, as stated by Arthur C. Hoffman, factory manager, are:

"Because our employees never looked upon it as a regular part of their wages: when they would explain to you how much they were receiving they never would figure in this amount.

"As long as the price of commodities was going up and the index figure went up the employees were satisfied, but we knew that whenever the price went down they would be correspondingly dissatisfied and would feel that something was taken away from them.

"Our experience had shown us that extra dividends that are not included in the weekly wage do not accomplish the purpose for which they are intended. They neither stimulate production nor satisfy the worker.

"Since that time we have made a study of scientific standards and have been able to pay our employees more money as they produced more. Besides this, our wage rate committee, which meets once a week, controls the minima on all operations, so that our wages have also been, in this particular shop, higher than any other place in the industry."

It will be seen that the science of making practical a use of index numbers, as a basis for computing wages, is yet in its infancy. Except for the incident of Revolutionary days, 140 years ago, no serious attempt seems to have been made in this direction until the recent war.

The experiences quoted, with the one exception, all point to good results. Nearly all, however, suggest the thought that there may be a different story to tell when prices fall.

Abitibi Power and Paper

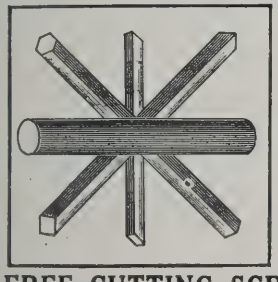
New Bond Issue Being Made to Redeem Debentures and Provide New Capital

An issue of 6 per cent. general mortgage sinking fund gold bonds amounting to $4,000,000 is being made by the Abitibi Power & Paper Co., Limited, through the Royal Securities Corporation. These bonds are dated Jan. 2, 1920, and mature Jan. 2, 1940. The proceeds will be used in part to redeem outstanding 7 per cent. debenture issues aggregating $1,900,000. The balance will be used for the immediate development of Twin Falls water power and the construction of additional mill buildings, etc., and the installation at Iroquois Falls of two 85-ton and one 60-ton newsprint paper machines and one 35-ton wrapping machine. The bonds are offered at 92.50, and interest yielding about 6.70 per cent.

Riordon Pulp & Paper

Company to Consolidate With Kipawa Fibre Co., in New Riordon Corporation

Another Canadian pulp and paper company is to be reorganized. It is now proposed to incorporate the Riordon Corporation, Limited, which will form a holding company for the present Riordon Pulp & Paper Co., Limited, and its subsidiary, the Kipawa Fibre Co., Limited.



The consolidation of the two companies through the medium of the new Riordon Corporation, Limited, is to be effected as follows: The new corporation is to assume the funded debt of the Riordon enterprise and in exchange for the outstanding $1,500,000 7 per cent. cumulative preference stock will issue and pay into the present company's treasury a like amount of 8 per cent. cumulative preferred shares. Against the present $6,000,000 common issue there will be paid to the holding company $9,000,000 par value of 7 per cent. cumulative preferred stock, carrying full voting rights and convertible into common shares, and in addition $12,000,000 of common stock of the new company.

Thus the present company will hold on behalf of its shareholders an actual amount of 8 per cent. preferred stock to that carrying 7 per cent., presently outstanding, while 1½ shares of 7 per cent. preference shares and two common

efficiency. It is not intended that the score be turned in to anyone in authority. It is rather a personal confession on the part of the employee to be made out and kept for his own benefit. In about six months the company will probably issue a second card, so that each individual will be able to check up improvement. The scheme, if it is conscientiously handled by each employee, should do a lot of good.

Book Reviews

A Fire Prevention Report

First Annual Report of the Ontario Fire Prevention League, Inc. Toronto: Printed and published by A. T. Wilgress, printer to the King's Most Excellent Majesty, 1919.

This small volume of 56 pages gives a verbatim report of the proceedings at the meeting held in Toronto on September 4th last. The aims and objects of the League are such as to commend themselves in a very special way to manufacturers, and it is gratifying to find that a number of prominent members of the C.M.A. are interested in the organization. The report has a special value as being the medium through which an important illustrated address on "Dust Explosions," delivered by Dr. H. H. Brown, Explosive Section, Department of Agriculture, Washington, is made available to the public. Accompanying the report of this address are a number of very impressive photographs which bring home to the reader the appalling effect of these disasters. The League is in affiliation with the Ontario Fire Marshal's office, and Mr. George F. Lewis, Deputy Fire Marshal, is secretary-treasurer.

Statistics on Canada

The Royal Bank of Canada Fiftieth Annual Report, 1869-1919. Head office: Montreal.

Special interest attaches to this particular report of the Royal Bank of Canada in that there has been included in the contents of the book a lot of valuable statistical information about Canada, here gathered together in convenient form. Commencing with an account of conditions in 1869 and a contrast of these conditions with those of 1919, the compilation proceeds to furnish information about the area, population and finances of Canada, the production of grain and flour, the extent of trade, the mineral and forest production of the country, traffic returns, census, tariff, etc. There is no doubt that all this information will prove of service to any one in search of knowledge about Canada.

Valuable Reference Work

The "A B C" Lumber Trade Directory, 1920. Edited by J. H. Hamilton. Progress Publishing Co., Limited, Vancouver. 180 pp., cloth bound. $3.00.

The third edition of this useful reference book reflects the improved condition of the lumber industry in British Columbia, being larger and more complete in many particulars. The data relating to lumber and shingle mills is more complete than before, details being given in each case of ownership, output, lines manufactured, shipping point and so forth, which show at a glance the desired business information required. As compared with the 1918 edition, there have been very many changes of ownership of existing mills, and many new ones have commenced business, all of which are noted in the new directory. A full list of logging camps operating this season is included, as also is information regarding wholesalers, log brokers, timber cruisers, and other lines of business connected with the trade.

The section dealing with the timber laws has been brought up to date, including the 1920 amendments, making this a handy reference book in this respect, the copious index making it easy to find the sections wanted. The section dealing

with customs tariffs on lumber imported into foreign countries has also been brought right up to date, a no light matter, we should imagine, considering the great number of changes which have occurred recently.

There is also a technical and statistical section, well illustrated, giving short, concise descriptions of the various trees and lumber of the province, and a mass of statistical information showing quantities cut and exported, and other like information made useful by an index.

New Road Guides

Appleton's Road Guides. Authentic information for motorists, cyclists and travellers, in convenient form. Toronto: The Musson Book Co., Limited. 50 cents each.

These admirable pocket road guides will be found of real service to the motorist, for they contain not only very complete maps but much supplementary information about motor vehicle laws, customs regulations, etc. There are four in the series, the first taking in the district between Windsor and Sarnia and Niagara Falls and Toronto, or the southern section of the Western Ontario peninsula; the second, the district between Lake Huron and a line drawn through Belleville and Tweed; the third, the district east of Belleville to Pembroke and Montreal, and the fourth, the Province of Quebec. In each case one large map gives the western half of the district, and a second map the eastern half. The main travelled roads are indicated in color and are based on information supplied by the leading automobile clubs of the district. In addition to main roads, the maps include all cities, towns, villages, railroads, electric lines, townships, boundaries, lakes, rivers, concessions and side roads. In fact, they are most complete and being printed from new plates are very clear and dependable.

A Voluminous Catalogue

A new general catalogue—No. 20—has just been issued by the Canadian Fairbanks-Morse Company, Limited. It is a stupendous piece of work extending to nearly 1,000 pages of closely-printed matter. Bound in boards and printed on thin paper, this immense quantity of information about the various products of the company has been compressed into serviceable dimensions and the book will be found quite easy to handle and refer to. There is a general index at the back, but this is supplemented by a finger index, which enables the seeker for information to look up any particular section without delay. In addition there is a useful department devoted to engineering data of all sorts. In their preface the company state that much of the matter in the catalogue has had to be presented in condensed form and it has been necessary to omit a good deal, but correspondence is invited in cases where special information is not to be found. Altogether this is a volume which should be at the right hand of every purchaser of mechanical goods.

The Dundas Linen Mills Co., Limited, Iroquois, Ont., have completed the addition of enough looms to increase their output by about 50 per cent. The company manufacture crash towelling, glass cloth, table damask, napkins, towels, etc.

The American La France Fire Engine Co. of Canada, Limited, are erecting an addition, 75 x 125 feet, at their plant on the Weston Road, Toronto. This will cost about $40,000 and be ready in July. It will provide much needed room for the manufacture of their product.

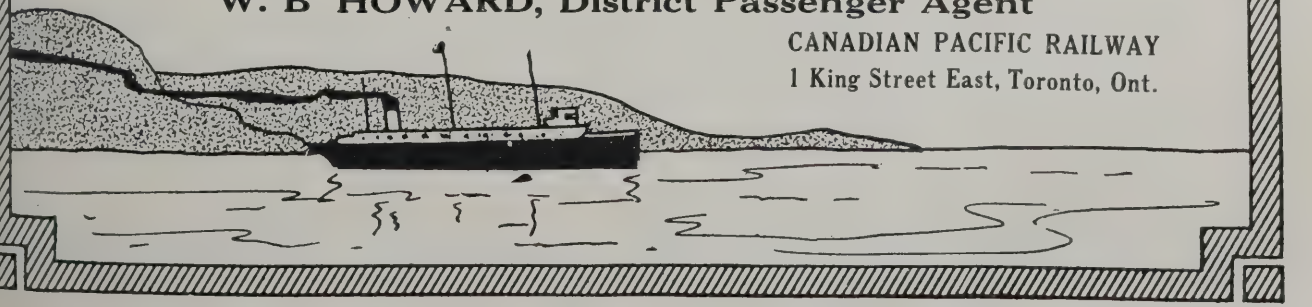
For a "Great" Vacation

Try the Great Lakes Trip by Canadian Pacific Steamer. For when the mercury is playing around in the upper eighties, and you wish Henry Ford would invent a self-refrigerating collar---do you ever stop to remember that the temperature of Lake Superior *never rises above 40 degrees?*



What if you don't spare the time for a long holiday? The Canadian Pacific Railway's Clyde-built steamships make a five-day trip from Port McNicoll to Fort William and back, during which you can be as cool as an Eskimo and as comfortable as a clubman.

Roomy cabins, the best of chefs---oh, those broiled Lake Superior whitefish!---tea on deck under the lazy awnings---seagulls against the long, northern sunset---and a breeze from a thousand miles of clean pine woods, on duty twenty-four hours in the day.

Then---if you find you've got more time than you counted on---how about a week on the Nipigon River, forty miles from Fort William, with guides, canoes and camp-fires and white water under the moon---and more speckled trout than you know what to do with?

How do you get there? That's easy. Phone---write---or see any Canadian Pacific Ticket Agent, or

Recent Trade Enquiries

A List of Enquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

DOMESTIC.

427. Agency.—A gentleman in Halifax would like to get in touch with Canadian manufacturers in Ontario and Quebec who are desirous of having an agent in the Maritime Provinces. He is familiar with shipping and is qualified to handle office equipment and specialties. His references are good.

428. Agency in Vancouver.—A firm in Vancouver that represents several manufacturers in the East would like to extend its business and secure further agencies for boys' clothing, shirts, etc. This firm is well known throughout British Columbia and Alberta.

429. Agency for staple lines.—An experienced salesman who has been resident in Vancouver for fifteen years is desirous of obtaining the agency for one or more lines of staple Canadian manufactured goods. Should any firms be interested in this inquiry, he would make a trip east and go into the matter at first hand.

430. Agency.—A firm of commercial brokers in Vancouver would like to get into immediate touch with Toronto and other Ontario manufacturers desirous of selling their goods in British Columbia. This firm is of good standing and wishes to secure the agency for three or four high-class lines.

FOREIGN.

431. Serbia.—A firm in Serbia wishes to get in touch with manufacturers who are desirous of exporting to that country. The following are the articles in which they are most interested: machinery, railway materials, steel and iron products, war and peace arms, ammunitions, chemicals, underwear, hosiery, cordage.

432. Sole leather.—An Edinburg firm ask to be placed in touch with exporters of the above.

433. Shoe ironmongery and makers' tools.—An Edinburgh firm ask to be placed in touch with exporters of the above.

434. Jewellery, cutlery, fancy goods.—A Glasgow firm would like to get in touch with exporters of the above.

435. Graphite.—A Glasgow firm asks to be put in touch with exporters of graphite.

436. Broom handles.—A Glasgow firm ask to be placed in touch with exporters of the above; 32 in. to 74 in. by 1⅛ in.

437. Agricultural tool handles.—A Glasgow firm are in a position to import at least a car-load of the above.

438. Miners' and navvy pick handles.—A Glasgow firm are in a position to import at least a car-load of the above.

439. Hardware.—A London firm possessing an established connection in the hardware trade, wish to obtain the representation of Canadian manufacturers of hardware lines.

440. Malleable iron and steel castings, steel blooms, billets and bars.—A Birmingham company wish to represent in the United Kingdom Canadian manufacturers of the above.

441. Wire nails, enamelled ware, etc.—An English firm wishes to purchase for direct shipment to customers on the Gold Coast (West Africa) supplies of wire nails, enamelled ware and galvanized corrugated iron sheets, and invite prices from Canadian manufacturers. Terms, cash against documents at London bank.

442. Butter boxes.—The London office of a South African agricultural society wish to place a contract for 100,000 butter boxes of the standard specification, which they use regularly, and invite offers from Canadian manufacturers able to quote for prompt shipment, c.i.f. Durban. Specifications: 100,000 butter boxes, to be made from whitewood only, planed on both sides, free from odor and to be supplied in a seasoned condition. No. 1 tops and bottoms, 16 in. by 11½ in. by ½ in. in 2 pieces, tongued, grooved and glued; sides, 16 in. by 11½ in. by ½ in. in 2 pieces tongued, grooved and glued; ends, 10½ in. by 11½ in. by ⅝ in. in 2 pieces, tongued, grooved and glued. No. 2 tops and bottoms, 13¼ in. by 13 in. by ½ in. in 2 pieces, tongued, grooved and glued; sides, 13¼ in. by 12 in. by ½ in. in 2 pieces, tongued, grooved and glued; ends, 12 in. by 11 in. by ⅝ in. in 2 pieces, tongued, grooved and glued.

443. Porcelain insulators.—A company in the north of England asks for the addresses of Canadian manufacturers of porcelain insulators for use in electrical gear.

444. Matches.—A firm in the English Midlands is desirous of hearing from Canadian manufacturers of matches who can fill orders.

445. West African trade.—A Liverpool firm of West African merchants ask to be placed in touch with exporters of enamel and galvanized ware, building materials, wire nails, locks, hinges, all classes of hardware, canned fruits, meats and salmon, etc., for direct shipment to West Africa.

446. West African trade.—A Liverpool firm of West African merchants wish to be placed in touch with exporters of asbestos roofing, building materials, enamelware, iron bars, wire nails, locks, hinges, galvanized ware, canned fruits, meats and salmon, shovels, tools, flour, etc., for direct export to West Africa.

447. Chemicals, etc.—A Liverpool firm ask to be placed in touch with exporters of chemical, drugs, herbs, roots, bark, burnt sugar (caramel), gelatine, isinglass, essential oils of all kinds, and colors of all descriptions for foodstuffs.

448. Canned lobster.—A firm in Gothenburg, Sweden, asks for the addresses of the principal Canadian packers of canned lobsters.

449. Chemicals, glues, magnesites.—A Glasgow firm ask to be placed in touch with exporters of the above.

450. Curtain poles, spring roller extension rods.—A Glasgow firm are in a position to purchase at least a car-load of each of the above.

451. Hickory tool handles—all kinds and sizes.—A Glasgow firm are in a position to take at least a car-load of the above.

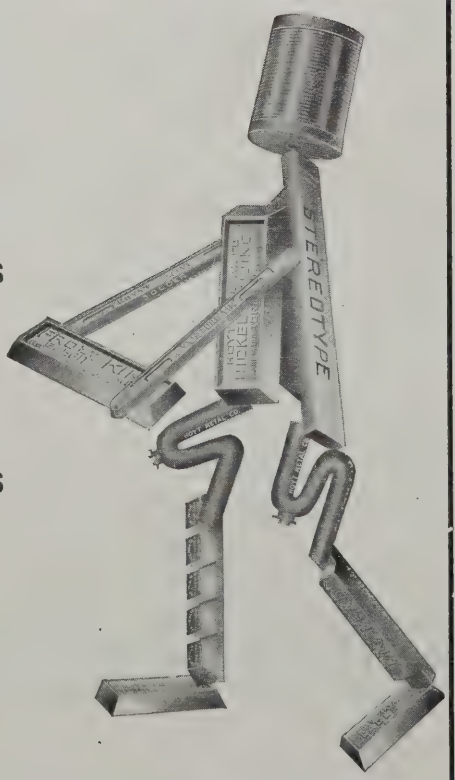
452. Occasional tables.—A Glasgow firm are in a position to buy large quantities of small wooden tables, sizes 16 in. by 16 in. to 20 in. by 30 in.

The Empire Clothing Mfg. Co., 156-160 John Street, Toronto, have purchased the property at the south-east corner of Richmond and Duncan Streets, with a view to erecting a new plant. They are, however, not as yet in a position to make any statement regarding their plans.

Deaths Among Prominent Manufacturers

Specialized in Wheels

The Late A. W. Benjamin of Yarker, Ont., Spent Years in Wheel Manufacturing



A well-known manufacturer of Eastern Ontario passed away on May 11th in the person of A. W. Benjamin, head of the Benjamin Wheel Company, Limited, Yarker, Ont. Mr. Benjamin conducted a wheel and axle factory in Yarker for many years, making most of the wheels used by the McLaughlin Carriage Co. Later, when the latter company went into the automobile business, Mr. Benjamin took up the manufacture of automobile spokes and wheels. Still later he began the manufacture of baskets, boxes and patented shipping containers. His death occurred after a brief illness at the Kingston General Hospital.

Died at Peterboro

The Late Dyson Worth Was Long Identified with the Woollen Manufacturing Industry

After a long illness there passed away at Peterboro on May 21, Dyson Worth of the Canadian Woollens, Limited. Mr. Worth was born in Huddersfield, England, 60 years ago, and lived in England until twenty-three years ago. He then spent sixteen years in the woollen manufacturing business in Sweden. Seven years ago he came to Peterboro and assisted in the formation of the Bonner-Worth Co., which was last year merged in the Canadian Woollens, Limited. He is survived by his wife, three sons and two daughters, all of Peterboro.

Barrett Roofings, Cements Industrial Paints etc.

Back of these products stands the reputation of Canada's oldest and largest manufacturer of Roofings and Industrial Paints. You will find them in every case exactly as represented.

Everjet Industrial Paints

High-grade black carbon paints, developed by our chemists to meet the requirements of the special purposes for which they are intended. We manufacture no products which we can more thoroughly recommend.

Probably no other paints on the Canadian market enjoy such great popularity and fill so many demands in the industrial world as these "Proven Protective Paints." They are used extensively by railroads and large manufacturing companies throughout the Dominion.

Everjet Boiler Paint	Everjet Dip Paint	Everjet Smoke Stack Paint
Everjet Bridge Paint	Everjet Penstock Paint	Everjet Machinery Paint

These paints are all exceptionally durable and absolutely waterproof and effectively resist the corrosive action of acids, alkalies, and fumes of all kinds.

Put up in 1, 5 and 10 gallon cans, half barrels and barrels. Our Service Department, composed of experienced chemists, will be glad to help you solve your paint-problem.

Nox-Aer-Leek Boiler Setting Cement

A tough, elastic, adhesive cement for stopping air leaks in brick boiler-settings. Pays for itself many times in reduced fuel bills and increased boiler efficiency.

Nox-Aer-Leek is composed of elastic bitumen, fused with non-drying oils and asbestos fiber. Low in cost, durable, and wonderfully effective.

Used on exterior walls only; on old or new boiler-settings.

Shipped in barrels (about 550 pounds) and half barrels (about 300 pounds).

Everlastic "Rubber" Roofing

The biggest value in roll-roofing on the Canadian market. Made of the best grade waterproofing materials, low in cost, easy to lay, staunch and durable.

More than a million rolls of Everlastic "Rubber" Roofing were sold last year throughout the world.

Made in three weights light (1-ply), medium (2-ply), heavy (3-ply). Rolls contain 108 Sq. Ft. Nails and cement with each roll.

Everlastic Liquid Roofing Cement

Unequalled for resurfacing worn-out felt and "Rubber" roofs. Has the consistency of thick molasses; is easy to apply and dries quickly into a hard, elastic, wonderfully durable coat. Proof against moisture, acids, alkalies and fumes. Has same base as Barrett Specification Pitch, which is famous for its waterproofing qualities.

Comes ready for use in packages ranging from 1 pint tins to 40 gallon Barrels.

Elastigum Plastic Patching Cement

For patching holes and leaks in all kinds of roofs, repairing flashings, relining gutters, etc. Known as the "Plastic Cement of a Thousand Uses."

Elastigum is tough, elastic, plastic, waterproof, acid-proof and alkali-proof. Requires no heating or mixing. Very inexpensive.

Put up in 1, 5, 25 and 100 lb. packages; ½ Barrels and Barrels.

Descriptive booklets regarding any of these products sent free on request. Address nearest office.

Vol. XXI. TORONTO, JULY, 1920 No. 3

Editorial Comment

Annual Meeting—1920

DETAILED reports of the Annual General Meeting of the Canadian Manufacturers' Association held in Vancouver, B.C., on June 7th, 8th and 9th, last, will be found in this issue of INDUSTRIAL CANADA.

The regular sessions of the Conventions carefully considered the numerous and lengthy reports which synopsized the business transacted by the Executive Council, Executive Committee, Standing Committees of Council, and Division Committees. All reports were adopted in full with the exception of one paragraph in one report.

The discussion of members present indicated that they were satisfied with the work of the Association during the past year, and also assisted in defining principles which will guide the various committees of the Association during the coming year. The past year was one of unusual growth. About 700 new members joined the Association during the year and a very considerable amount of new organization was put into operation.

At the beginning of the calendar year, the Executive Council decided that the Annual Meeting should be held on the Pacific Coast in order to give members an opportunity to visit the chief cities in Manitoba, Saskatchewan, Alberta and British Columbia to investigate the natural resources of these provinces; and to discuss national problems with representative men of these provinces.

A special train of fourteen coaches, carrying the members of the Association, left Toronto on May 29th, by C.P.R. Stop-overs had been previously afranged at Winnipeg, Brandon, Regina, Moose Jaw, Medicine Hat, Lethbridge, Calgary, and Edmonton, on the way to Vancouver. From Edmonton to Vancouver, the party travelled over the new Canadian National Railway road. Victoria, Saskatoon, Winnipeg, Fort William and Port Arthur were visited on the return journey. In all these cities special programmes had been arranged with the co-operation of local members of the Association. The Lieutenant-Governor of Manitoba addressed the visitors in Winnipeg. They were entertained at the Government House of Alberta, and at the Government House of British Columbia, and were also addressed by the Premier of Alberta and the Premier of British Columbia.

About two months before the beginning of the trip the Executive Committee authorized a campaign of publicity, because it was felt that the Canadian Manufacturers' Association and its objects were not sufficiently understood in the four Western provinces. It was decided to issue a statement setting forth the history, constitution, objects, and the organization of the Association. This statement was published as a full-page advertisement in all daily newspapers in Western Canada and appeared on the days that the special train stopped at the respective cities. In addition, a number of articles were prepared, and given to these newspapers, describing the growth of manufacturing and its importance to the people of Canada.

It is gratifying to record that the newspapers of Manitoba, Saskatchewan, Alberta, and British Columbia, having been put in possession of the facts, published them very fully and, on the whole, with very fair, and, in many cases, very favorable editorial comment. In the same issues these newspapers published a great deal of valuable information in regard to local industrial opportunities.

During the trip, at the meetings arranged in the above cities, there was a very frank and full discussion of a number of important national problems, resulting in an interchange of viewpoints which was beneficial to all interests concerned. Many people in Western Canada were somewhat surprised to learn from the facts placed before them by the Association, that Western Canada is becoming industrialized very rapidly. It was pointed out that in 1900 there was not one member of the Canadian Manufacturers' Association located west of the Great Lakes. To-day there are 700 members of the Canadian Manufacturers' Association west of the Great Lakes. Moreover, certain lines of industry are gradually transferring a considerable part, and, in many cases, the chief part, of their activities to Western Canada.

Members of the party learned a great deal about the natural resources of the four Western Provinces and perhaps more especially concerning those of Alberta and

British Columbia. It seemed to be the general opinion of the manufacturers who were on the trip, that British Columbia and Alberta have a great industrial future, and also that manufacturing in Manitoba and even in Saskatchewan is capable of very considerable development.

The party took a keen interest in agricultural questions, and noticed with satisfaction the indisputable signs of agricultural development and prosperity. At the time of their visit all indications pointed towards unusually heavy field crops this year.

There were representatives at the Annual Meeting from the Maritime Provinces, Quebec and Ontario, as well as from the Western Provinces. It was gratifying to record that, at the meetings in all these cities, the point of view on national problems held by manufacturers, and by those who were not manufacturers, differed very little in fundamentals. There was a commendable desire on the part of all as citizens to approach and study all problems from the national point of view, with a common desire to develop Canada as a great nation within the British Empire.

Western Comment on C.M.A. Trip

EDITORIAL comment in the Western press on the tour of the delegates to the Annual General Meeting through the Western provinces was both cordial and appreciative. The arrival of the excursion train in each city visited elicited a warm welcome, while the remarks of the Association's speakers were well received. The *Calgary Herald* had the following observation to make at the conclusion of the tour:—

"Travelling eastward on their way home from the Vancouver convention, members of the Canadian Manufacturers' Association stopped off in Winnipeg long enough to collect their thoughts with reference to the prairie west, and make known their impressions to interviewers. President McKinnon acted as spokesman for the party, and we are persuaded that what he said was meant. That is to say it was not the usual platitudinous "guff" that so often comes from the tripper who feels in duty bound to say something pleasant, no matter what his real thought may be.

"Our eastern manufacturing friends, many of whom had never before seen the west, were tremendously impressed with what they saw. 'A solid foundation' is the way the president expressed it when speaking of agricultural and manufacturing development. The possibilities for manufacturing, naturally, appealed most strongly to these men, and that they were pleased at the outlook for industrial development west of the Great Lakes means much for the future of western centres of population.

"Of particular interest to Albertans is the president's observation on this province and its possibilities. Speaking of it with a special emphasis he said he and his colleagues were surprised at the potentialities of Alberta, and were impressed particularly by the natural resources of the north. The point of this reference lies in the fact that this letting in of the light with reference to our resources was due entirely to the initiative and energy of the heads of the Alberta Industrial Conference, who planned the union of the manufacturers' convention trip and the annual gathering of the conference delegates, thus getting for the province a publicity such as would have cost hundreds of thousands of dollars to secure in any other way. The province will profit immensely in the future as a result of this good bit of work."

The *Herald* also threw out this hint in connection with the excursion and annual meeting:—"If those Manufacturers' Association convention delegates talk in the east as they have been talking in the west, the west will have reason to be glad for a long time that the convention was staged at Vancouver this year."

The Exhibition Season

WE are fast approaching the season when the annual exhibitions and fall fairs are held throughout the country. On more than one occasion during the past winter, manufacturers were urged to devote more attention to the subject of exhibiting at these events. The opportunity for creating an impression this year is a better one than ever before. Since last summer, exchange with the United States has reached an abnormal figure and the Buy-in-Canada argument has assumed a more practical meaning than ever before. Now, while the movement is so strongly before the people, is the time to give added emphasis to it by featuring the Made-in-Canada idea at every exhibition and fair. We should have more exhibits of Canadian-made goods and placards driving home the lesson of home buying should be widely distributed.

The Case for a Tariff Board

THERE appears to be in some quarters an intentional desire to misrepresent the attitude of the Canadian Manufacturers' Association on the subject of a tariff board. To contend that it is the object of the Association to deprive Parliament of its right to adjust the custom tariff of the country as it may deem best in the national interest is as absurd as it is untrue. It is clearly recognized that Parliament is the supreme authority in all matters of taxation and that Parliament must pass favorably or unfavorably on all changes that may be proposed. What is desired is simply that there should be more expert knowledge of tariff matters at the disposal of the Government and members of Parliament, and the Canadian Manufacturers' Association believes that this object can be best attained by the creation of a board charged with making a thorough and practical study of tariff matters from a broad and independent standpoint.

The proposition is sound when considered along business lines. No man of affairs, who is faced with the solution of a complex problem involving matters of which he lacks expert knowledge, would dream of acting without taking the advice of those best qualified to give advice. If it is a legal question, he calls in a lawyer. If it is one

involving construction, he summons an architect or engineer. If it is a scientific question, the chemist or metallurgist is consulted. Even in matters of employment and management, the experts are coming more and more into request.

Why should not our law-makers have the advantage of expert advice when they are framing the tariff? No man, in calling in an adviser, relinquishes his right to give the final decision, nor would Parliament, in seeking information from a tariff board, be delegating its powers. The great desideratum is more knowledge.

Fire Waste in Ontario.

THROUGH the courtesy of the Fire Marshal's Department, the Association is in receipt of the revised statistics of fire waste in Ontario for the year 1919. Quoting from a letter received from Mr. G. F. Lewis, Deputy Fire Marshal, the following interesting information is furnished:

"The total number of fires for the year was 9,396, showing a decrease in number as compared with 1918, of 344 fires, or 3½ per cent. reduction.

"The total loss for 1919 in Ontario amounted to $10,514,232, as compared with $15,673,240 for 1918, showing a reduction for 1919 of $5,159,008, equal to 33 per cent.

"The amount of insurance paid during the year on account of this loss was $6,957,558, compared to $9,675,337 paid by the insurance companies in 1918, showing a reduction in the amount paid by the insurance companies during 1919 on account of fire loss of $2,717,779, equal to 28 per cent.

"The loss not covered by insurance on property destroyed or damaged by fire in 1919 amounted to $3,556,674, and the loss not covered by insurance for the year 1918 amounted to $5,997,903, showing a reduction in this item for the year 1919 of $2,441,229, equal to 40 per cent.

"In compiling our statistics we divide the classes of property destroyed or damaged by fire into twenty-six classifications, and of these the fires in dwellings numbered 5,804, or 62 per cent. of the total number of fires for the year. The loss on dwelling house fires amounted to $1,753,333, or 17 per cent. of the total loss for the year. These figures may be compared with the 1918 statistics which show 5,896 fires in dwellings, which caused a loss of $1,804,717.

"While a large percentage of fires occurred in the homes of the people, practically two out of every three, it is to be noted that the largest loss in any one class was in that of the manufacturing and industrial plants. While the number of fires in this class were only 450, or 5 per cent. of the total number, the loss sustained amounted to $2,441,124, or 23 per cent. of the total loss from all sources in the province during the year. The insurance paid on account of this loss amounted to $2,028,235 or 30 per cent. of the total amount of insurance paid by the companies for the year, and the amount of loss not covered by insurance was $412,889, or 11½ per cent. of the total for the year.

"As you are no doubt most interested in this class it is interesting to note the big reduction from the figures of 1918, which are as follows: 486 fires, or 5 per cent. of the total number caused a loss amounting to $7,565,322, equal to 42 per cent. of the entire fire waste for the year 1918. The insurance paid by the companies on account of this loss amounted to $3,991,806, or 41 per cent. of the total; and the loss not covered by insurance for the year 1918 amounted to $3,573,516, equal to 60 per cent. of the total.

"The next classifications as regards amount of loss was that sustained by 988 fires in mercantile stores during 1919, which caused a loss of $2,312,623. These mercantile stores were responsible for 10½ per cent. of the total number of fires, and 22 per cent. of the entire loss for the year 1919. Comparing these figures with the previous year of 1918 we find that there were 1,166 fires in mercantile stores causing a loss of two and a half million dollars.

"While the reduction in the number of fires may not seem in proportion with the reduction in the total amount of loss, still we have grounds for encouragement, especially in view of the fact that the reports for small fires such as chimney fires, where little or no damage was caused, are being furnished to us more regularly; and in addition I find quite an increase in the number of automobile fires which in 1918 numbered 138 and increased in 1919 to 221; and also garage fires which in 1918 numbered 91 and in 1919 increased to 149.

"The statistics for Ontario show a reduction in the fire waste for the year 1919 as compared to 1918 of $5,159,008, or 33 per cent. The estimated figures for the Dominion of Canada show a total loss for the year 1919 of $24,231,401, as compared to $31,815,844 loss for the year 1918, being a reduction for the year 1919 of $7,584,443, or 24 per cent.

"The statistics for the whole North American continent as estimated for the year 1919 show a total loss amounting to $267,273,140, as compared to the total loss for 1918 amounting to $317,014,385, being a reduction of $49,741,245, or 15 per cent.

"If with the hearty support and co-operation of the manufacturers of Ontario we can succeed during the present year in reducing the fire loss to anything like a proportionate amount of that of last year we will be able to efface from Ontario the unenviable reputation of being the most wasteful province in the country as regards fire."

The New President of the Association

JOHN S. McKINNON

LOYAL service to the Association through a long series of years has had its reward in the election of John S. McKinnon, of Toronto, to the presidency for 1920-1921. As ordinary member, member of committees, chairman of Toronto Branch, and vice-president of the General Association, Mr. McKinnon has given steady attention to the work of the organization, and has gone forward, step by step, to higher duties and responsibilities. He is an all-round type of man, efficient and progressive in his own business; a student of public affairs, well read and well travelled; an active public-spirited citizen, whose special interest has lain in the promotion of technical education; a speaker of considerable force and versatility, and above all a genial, approachable man with a facility for making and keeping friends. He is a native of Huron County, Ontario, and since 1906 has been associated in various capacities with the Company of which he is now the president —S. F. McKinnon & Co., Limited, Toronto.

Proceedings of the Forty-Ninth Annual General Meeting of the Canadian Manufacturers Association

VANCOUVER, JUNE 7, 8 and 9, 1920

AT 2.30 p.m. on Monday, June 7, the first business session of the Convention was opened by the President, Mr. T. P. Howard, who called upon Mr. J. B. Thomson, Chairman of the British Columbia Division, to preside over the inaugural ceremonies.

Mr. Thomson, on behalf of the British Columbia Division, extended a hearty welcome to the visitors from the East and invited Mayor Gale, of Vancouver, to formally open the convention.

Mayor Gale expressed his pleasure at the opportunity not only to declare the convention open but to add a word of welcome to the members of the Association.

"It is fitting," said Mayor Gale, "that we should come together and discuss our various problems. I had an opportunity of being in Ottawa a couple of years ago and meeting many of the Canadian manufacturers, and on that particular occasion one of the Cabinet Ministers, whose name I shall not mention, dropped a remark which was very significant to me. He admitted that in British Columbia we had a very rich and very great Province; that in the City of Vancouver we had a growing and one day destined to become a very great city, but the great trouble was we were too far away. I asked what he meant by that, and suggested that possibly he meant we were too far away from Ottawa. Now, of course, that may be true from a political standpoint, but I do not believe we are too far away for the Dominion of Canada, and I believe that is being fully demonstrated as the years go on. Those of you who have had the privilege of visiting Vancouver before to-day, and I know many of you have, must have become impressed with the importance of Vancouver not only as a city but as a city of the Dominion of Canada. We believe those who have given the matter any thought whatever realize that Vancouver is destined one day to be one of the important cities of Canada, if it has not become so at the present time.

Welcome to Vancouver

"It is hardly necessary for me to say that you are welcome to the City of Vancouver; it is hardly necessary for me to say that the smallest child who is old enough to read the papers or go to school or understand what is happening day after day is glad and more than pleased to know that busy business men have been able to leave their businesses and journey the distance required to come to the City of Vancouver. We appreciate it very much, and I understand our good friend Mr. Thomson and his Executive of this branch have arranged a very extended programme for them. If he should fall down or the Executive should fall down in any way, I can assure you that the city officials stand ready to fill in any gaps that may be left open."

On resuming the chair, the President thanked Mayor Gale for his words of welcome and continued—"I want to say one word to prove to those present that we do not have an East and a West. This morning on my arrival I received a small parcel and on opening it I found this gavel which I was asked to use while presiding at the meeting. It comes by registered mail from our second vice-president, Mr. W. S. Fisher, of St. John, N.B. to Vancouver, B.C. There is no East and West in that. (Applause.) This gavel came across Canada, our Canada that we all ought to serve and to promote in the best interests of everybody."

The Business Session

Proceedings at the first session included the presentation of the Financial Report, the delivering of the President's annual address, the reading and adoption of the report of the Executive Council and the delivery of an address on "Trade with the Orient," by Captain Robert Dollar, all or which are published in full in the following pages.

The second business session took place at 8.30 p.m. on Monday, June 7, and was featured by the presentation of the reports of the Insurance and Industrial Relations Committee and by a lecture on Japan by A. E. Bryan, Canadian Trade Commissioner at Yokohama.

The third business session was held on Tuesday morning, June 8, when reports of the Legislation and Transportation Committees were presented and discussed. At the fourth business session on the afternoon of the same day, the reports of the Tariff, Membership and Commercial Intelligence Committees and of the General Manager were presented. The final business session on Wednesday morning, June 9, was taken up with the election of officers and committees and the adoption of resolutions.

Entertainment

Entertainment features of the convention were well looked after by the committees in charge of arrangements. On arrival in Vancouver on June 7, members of the Association were guests of the Vancouver Board of Trade at luncheon; on June 8, they were entertained at luncheon by the Vancouver Rotary Club, and on June 9 by the Vancouver Kiwanis Club. On the second day of the convention, in the evening, a cruise was enjoyed to Howe Sound on board the S.S. *Princess Patricia*, while on the afternoon of the third day a trip by motor was taken to New Westminster, where the delegates were royally entertained.

The trip to Victoria on Thursday, June 10, the entertainment in the beautiful capital city and the return to Vancouver on June 11, formed a fitting conclusion to a most successful convention. At Victoria, the members were charmed by a visit to the beautiful home and gardens of Mr. and Mrs. R. P. Butchart at Tod Inlet. They were later guests of the Victoria Board of Trade at an entertainment at the Royal Victoria Theatre and were driven to various points of interest in and about Victoria on Friday morning. Following a Rotary Club luncheon, they embarked for the return journey.

An Analysis of the Year's Developments

Progress of Manufacturing—Conditions in the Field of Labor—The Evolution of Class Government—The National Debt and Methods of Taxation — The Question of Public Ownership — Other Outstanding Matters

By T. P. HOWARD

President, 1919-20, Canadian Manufacturers Association

IT is my privilege, as your president, to welcome you to this annual general meeting, which marks the conclusion of the forty-ninth year of this Association's history. It is significant to see here assembled such a number of representatives from great industries in all parts of Canada, and your presence indicates profound and widespread interest in the work of this Association in its relation to the country's industrial progress.

Before proceeding further, I wish to express our sincere thanks and appreciation to the mayor and council of Vancouver for their cordial invitation to our Association to hold this meeting here. In accepting that invitation I beg to say, on behalf of the Association, that we esteem it a great honor and privilege to be the guests of this beautiful city. I also wish to extend the thanks of members from other provinces to our members in British Columbia for their kindly welcome, and also for the great amount of work they have done in preparation for this meeting.

A decade has passed since the Association held its last meeting in Vancouver, and those who have not had the privilege of visiting the city since that time are agreeably surprised at the signs of growth and prosperity that are evident on all sides. It was the destiny of Vancouver that it should be a great ocean port. The history of this part of British Columbia is associated with the names of such empire builders as Captain James Cook, who visited this coast in 1778; Captain George Vancouver, who gave his name to the city; Sir Alexander McKenzie, who made the first journey from Eastern Canada in 1793; Simon Fraser, who explored the Fraser River in the early years of the nineteenth century, and Lord Strathcona, who drove the last spike on the Canadian Pacific Railway in 1885.

Great Natural Outlet.

As a port, Vancouver serves as an outlet for the products of one of the richest areas, so far as natural resources are concerned, remaining in the world to-day. Tremendous inroads have been made during late years on the natural resources of older countries, and while we have been in the habit of congratulating ourselves on the immense resources of Canada, we have sometimes lost sight of the fact that these resources are not inexhaustible, and have been sharply reminded by the Commission of Conservation that in certain fields they are limited. This applies to British Columbia probably less than to any other province of Canada, because this province seems to have been singularly blessed.

Some provinces are adapted for manufacture, others for farming, others for mining or lumbering; but the Province of British Columbia possesses the materials and conditions that are especially suitable for the development of all four of these basic industries. Statistics show the most remarkable and gratifying growth in such British Columbia industries, as manufacturing, farming, lumbering, mining, fishing, fruit-growing and shipbuilding.

British Columbia is making great strides in shipbuilding, and as this industry means a great deal to the province, it is most important that it should have the greatest possible encouragement for its further development. It is significant to notice the increase in the shipping facilities of this province. In addition to the great drydocks at Prince Rupert, Government docks are being undertaken at Vancouver at a cost of $4,000,000, while other harbor improvements will cost another $1,000,000.

The advantages of the city of Vancouver as a port and a manufacturing city are emphasized by the fact that all Canadian transcontinental railways and every trunk railway in the United States are connected with Vancouver, and eight transoceanic shipping lines, in addition to coasting vessels, dock here. Moreover, the harbor is never closed and is accessible every day of the year. Three hundred and twenty-one ocean-going vessels visited Vancouver harbor during 1919, conveying $84,000,000 worth of merchandise.

In addition to establishing a reputation as a great ocean port, the city is rapidly becoming known as an industrial centre, and the articles manufactured here are being shipped in increasing quantities not only to other parts of Canada but are also finding their way to markets abroad. The creation of an industrial area, Granville Island, in the heart of the city, covering twenty-eight acres of land suitable for sites, illustrates the manner in which the city encourages industry and the location of thirty-nine factories on this area proves that advantage is being taken of the opportunities provided.

Vancouver has not only established herself as a city, but has passed that mysterious stage where a city becomes marked in the public mind as one of the future great cities of the world.

The Association's Work.

During the past year the Executive Council of the association dealt with a great many important matters that are recorded in the reports of the various standing committees that supervise the technical departments of the association. As these reports will be submitted to you for approval, I will not anticipate their contents, but I can assure you that they represent a great deal of valuable accomplishment. The report of the Executive Committee, who are practically your Board of Directors, gave a summary of their work, and the report of the general manager will deal with the administrative side of the association's affairs.

In my remarks I shall try to define the point of view of the Executive Council in dealing with various problems that are of interest to us as citizens of Canada as well as of technical importance to us as manufacturers.

Development of Manufacturing

We are specially interested in the industrial growth of Canada. For a period of fifty years, this can best be illustrated by a comparison of the value of goods manufactured at the beginning and end of that period. The census estimate of the value of the output of Canadian factories for 1870 was $221,000,000. For 1917, the last year for which figures are available, it was $3,000,000,000, an increase of about 1,400 per cent. A comparison of the census figures for 1900 and 1917

shows an astonishing development in manufacturing since the beginning of this century:

	1900.	1917.	Inc. p.c.
Mfg. Estabs.	14,650	34,392	135
Capital	$446,916,487	$2,786,649,727	523
Value of products	481,053,375	3,015,577,940	525

Last Year's Problems

Immediately following the armistice, Canada was confronted by the problem of transferring the activities of her citizens from a war to a peace basis. Half a million men had been withdrawn from ordinary occupations to military duty. Agriculture, manufacturing, and transportation had been transformed by the necessities of war and an enormous export trade had been developed. The prospect of the loss or partial loss of this export trade at a time when employment was urgently needed, caused great misgivings. It was feared that a shrinkage of export trade and a possible delay in getting the country back to peace conditions would cause widespread unemployment and a serious depression. I do not think this Association ever admitted that these evil results would necessarily follow the war.

Misgivings Unjustified.

Certainly the members did not shape their policies as though they were actuated by any such ideas. Time has proved that these misgivings were not justified. We have held the greater part of our export trade, and instead of unemployment we are now experiencing an actual shortage of labor. I believe that these dangers were avoided by the courage and resourcefulness of the Canadian people, who looked the situation fairly in the face and took the most practical means of dealing with it.

Thomas Palmer Howard

Whose Year as President of the Association Has Witnessed a Remarkable Growth Both in the Membership and Services of the Organization

The Dominion Government appointed the Canadian Mission in London, and later extended credits to certain European countries for manufactured and agricultural products. Scores of Canadian manufacturing firms immediately sent their travellers to Europe, and were successful in securing a great volume of business. Manufacturers taking a great chance, not only began immediately to change their factories back to a peace basis, but also cast about with the greatest possible energy to develop foreign markets and manufacture new lines of goods.

Farmers' organizations also sent their representatives abroad, and were successful in selling their products. The result was that the industry of the country scarcely hesitated in spite of the critical conditions existing all over the world. Our export trade during the year ending March 31, 1920, amounted to $1,286,658,709, as contrasted with $1,268,765,285 for the year ending March 31, 1919. To-day in Canada, as for employment, no man or woman who wants to work need be without it at the highest wages ever paid in this country.

The Canadian Army

The people of Canada owe a triple debt to the Canadian army; first, for its war record; second, for the manner in which it has resumed the occupations of peace. There are bound to be some exceptions among 500,000 men, but I think I am safe in saying that over 95 per cent. of the Canadian army have resumed peaceful occupations successfully. We owe a third debt to the army, because the great majority of ex-soldiers were opposed to any revolutionary methods of redressing grievances in this country and have stood firmly on the side of law and order.

About half the Canadian army came out of the factories, and it has been encouraging to see the way in which they have resumed their work in the factories, and the splendid manner in which even the disabled men have become independent and efficient. It is also gratifying to see that the Government has spent, up to the end of 1919, the sum of $40,000,000 in the work of re-establishing soldiers, and that, through the Government employment agencies, up to the end of last year, over 106,000 soldiers had been placed in positions.

Post-War Work

Splendid work is being accomplished by the military hospitals and training schools. In the matter of pensions, we hope that the most generous treatment possible will be given. Canada must take proper care of her wounded and disabled soldiers, and also of the dependents of those who were killed or disabled in the war. These pensions must not be pittances, merely sufficient to keep the recipients alive, but must be adequate to maintain them in decency and comfort, and to afford them opportunities for education and advancement.

Labor

In the Canadian labor field during the last year there have been three outstanding events. First, the investigation of the Royal Commission on Industrial Relations, which toured Canada in the spring of 1919, and reported to the Government last summer; second, the National Industrial Conference which was held in Ottawa last September; and, third, the first International Labor Conference authorized by the Peace Treaty, which was held in Washington last November. Members of this Association gave evidence at the twenty-eighth sittings held by the Royal Commission on Industrial Relations from Victoria, B.C., to Sydney, N.S. Representatives from the

chief lines of industry in this Association were present at the National Industrial Conference, along with representatives from railways, lumbering, mining, fishing, banking, and other employers. A past president of this Association represented the employers of Canada at the International Labor Conference in Washington.

One might think from reading certain newspapers and listening to some speakers that all Canada was suffering acutely from a malady vaguely described as "unrest." No doubt there are fever spots where there are either malignant influences at work or where there are real grievances that require remedy, but these isolated cases are not typical of conditions throughout the country, nor of the mental attitude of the great majority of Canadians.

Radicals Drying Up.

The outstanding feature in labor matters during the year has been the gradual elimination of the revolutionary element by moderate labor men. The political and social ideas put forward with considerable vehemence by a minority have been tried partially and have failed utterly in the estimation of wage-earners themselves. On the other hand, a great deal has been done by the moderate wage-earners, who are in the great majority, with the co-operation of other citizens who have the welfare of the country at heart, to make the conditions and rewards of wage-earning citizens more satisfactory. More will be accomplished, but it would appear now that progress will be made in the spirit of co-operation and in the knowledge of the fact that there is a relationship between the interests of all classes of citizens, irrespective of their occupations.

Frequent use of the term "workers" has evolved the pertinent question, "Who is a worker?" So far as Canada is concerned, it would be easier to answer the question, "Who is not a worker?" No one works exclusively with either the body or the brain. All work requires a union of the faculties of both body and brain in varying combination, according to the nature of employment. The number of Canadians who are not workers in the real sense of that word is so small that they are negligible.

There are plenty of men who can sit down and in an hour draw up a magnificent scheme for the reconstitution of society and the redistribution of what they call wealth. The trouble with such schemes is that they do not work because they are opposed to fundamental natural laws, and fail because they are rejected by the common sense of the people whom they are designed to attract and mislead.

Although there is perhaps not sufficient information to pronounce a verdict on the great Russian experiment which has a few enthusiastic admirers, even in this country, we can at least point out some of the results which have been attained to date. In the first place, it withdrew Russia from the war and increased the loss of life and money suffered by the Allies; second, it is maintaining Russia in her position of complete isolation from the rest of the world; and, third, it has produced the announcement, published recently in the American official organ of Sovietism, that the Russian Soviet is conscripting the labor of the entire population above sixteen years of age. Further, the State Department of the United States says that the establishment of a ten and twelve hour day in Soviet Russia was announced by the Bolsheviki on February 19 last.

Hours of Work.

Hours of work must be governed by a country's necessity for production. The result of the experiment of establishing the national eight-hour day in France by law does not seem to have been satisfactory, according to an announcement made by the Minister of Commerce for France at Paris on April 11 last. In referring to the report of the commission which had been appointed to investigate the results of the establishment of the eight-hour day, the minister said that production in France had decreased in exact proportion to the reduction in the hours of labor.

It is being realized that there is no vague fund provided by supernatural means out of which wages, interest charges, operating costs and dividends are paid. These have a common origin, and that origin is production. The Province of British Columbia, for example, fifty years ago, did not promise any man a living or even a minimum wage or fixed hours of labor.

The Province of British Columbia said: "There is timber in the forests; there are fish in the rivers; there are valuable minerals in the mines; there is wealth in the land. If farmers, miners, fishermen, lumbermen, and manufacturers come here and take these natural resources, and out of them fashion something that will sell, and find some one who will buy it, they can have a living." That was the bargain the Province of British Columbia made with its settlers. These pioneers provided capital or borrowed it; they secured directing ability; and they worked as long and as hard as they could.

The result was that a portion of the great natural resources of British Columbia, over and above what was needed for her own population, was made saleable, and markets have been secured for it, and out of the proceeds of these sales wages have been paid, organizing and directing ability has been paid, and capital has been given a return. In other words, the production of British Columbia has been its sole source of wealth. It is against this iron fact that so many of the theories of social and political reorganization break to pieces. Improvement of the living conditions of those engaged in industry, and of other people as well, comes gradually, not by violence and revolution, but through the application of science, intellect, experiment and industry to the processes of production and distribution.

Group Government

The separation of elected representatives of the people into groups, which has been in existence in Europe for some years, shows signs of being introduced on this continent, where up to the present time the two-party system of government has operated. If a Parliament is made up of a group of farmers, another group representing labor, another group representing retail and wholesale trade, another group representing transportation, etc., it may be difficult to carry on government without considerable intrigue and friction. Under the old system of government, with all its faults, the members of a party were held together by a common belief in one principle or policy. Under the group system of government each group, according to experience, pursues very persistently those objects which are of peculiar interest to the group. There is also a constant shifting of alliances among the groups. It may be that the group system is the next logical development in government, and if so, it will be inevitable; but it seems reasonable to fear that if the respective groups forming the Government are actuated by entirely selfish motives, Parliament and Legislature may degenerate into a half dozen hostile, intriguing camps, and public business which should be conducted with the national point of view and for the national welfare, will be impeded.

It is an historical fact that no one class or group can long maintain privileges that are secured at the expense of other classes, because the injured classes finally combine to limit such privileges. We do not want warring groups in Canada,

but rather a union of all groups to advance the interests of our common country.

The Cost of Living.

The high cost of living, which oppresses us all, is not a local condition in Canada—it is world-wide—the inevitable result of a great war—and is caused partly by scarcity of materials and the immense demand of Europe for everything we produce. Another cause is the great inflation of currency which is largely a credit expansion necessitated by government borrowing. A further cause is extravagant living, for it is obvious that if every family in Canada increases its luxuries and comforts, the scarcity of material will also be increased, and the price of commodities will rise in consequence. It has been stated in some quarters that manufacturers favor high prices. This is not true for a very good reason. Manufacturers are the heaviest buyers.

During a period of high prices materials are scarce, dear and difficult to secure. Wages are enormously increased owing to the increased cost of living. This adds to the risk of manufacturing operations. Moreover, when prices are unduly high, the purchasing power of the public is decreased, which results in a decrease in the manufacturer's output. People will not build, for example, after prices reach too high a point. In a country, such as Canada which is of great area and of a relatively small population, a manufacturer especially desires output because the most satisfactory results are secured from a large turnover at a price that will induce the public to buy freely. An increased production of all materials from farm, factory, mine and forest, is the greatest need of Canada to-day, and will do more than anything else to lower the high cost of living.

Export and Import Trade

The following statistics from the returns of the Department of Trade and Commerce indicate our position in regard to export and import trade:

	Year Ending March 31st.		
	1918.	1919.	1920.
Imports	$962,543,746	$916,429,335	$1,064,516,177
Exports	1,586,169,792	1,268,765,285	1,286,658,709
Total trade.	$2,548,713,538	$2,185,194,620	$2,351,174,886

Summarizing the above our extraordinary war trade figures appear to have been fairly well sustained. It must be remembered, however, that these statistics are in the terms of values, and values are represented in dollars. As the purchasing power of the dollar has been steadily diminished there has been a greater decrease in the volume of our trade than the above figures indicate. If we had statistics to show tonnage or other terms denoting quantity they would give a much more accurate picture of the situation.

However, with this reservation in mind, our trade figures for the past year can be viewed with considerable satisfaction.

The Dominion's Debt.

The net debt of Canada, after deducting inactive and non-productive assets, is $2,273,305,436, a great sum, it is true, but not serious if balanced against the industry of our people, and our national wealth, which was estimated in December, 1919, by the Dominion statistician at sixteen billion dollars.

It is desirable for us to curtail as much as possible the imports of those goods that can be made in Canada. The purchase of materials made at home is not in the interests of producers only, but benefits all classes who share in the proceeds of the sale directly or indirectly. The quality of Canadian products in many respects, stands very high, but efforts should be made to improve still further the quality of all classes of goods and to keep the prices at as low a level as possible so as to encourage the sale of our own goods to our own people.

Taxation

Taxation is not a popular subject, certainly not with manufacturers, who are the heaviest taxpayers. Manufacturers pay the bulk of customs tariff duties. They pay business taxes, excise taxes on materials, stamp taxes, taxes on insurance, taxes on goods sold to them, income taxes, corporation taxes, and, in addition, the ordinary taxes paid by the consumer; but we must face the fact that Canada has been through a great war which has cost enormous sums of money, and our increased taxes are for the purpose of helping to pay the cost of the war.

The Government must have revenue, and it is much better to struggle with the difficult problem of securing it by current taxation than to adopt the easier and more dangerous method of unnecessary borrowing. Sir Henry Drayton, Minister of Finance, is to be commended for defining in his budget speech the policy that Canada must stop borrowing and must pay as she goes. The best way to secure relief is to increase production. If our country is prosperous the citizens can pay the taxes, but if the country is poor and non-productive taxes will become an intolerable burden. This point should be remembered: Taxes may be heavy although we won the war; but what would these taxes have been if we had lost the war?

In spite of our great national debt and increased burden of taxation and other domestic problems, Canadians in comparison with other peoples are surely not in any dangerous position. Does any Canadian really doubt the future of this country? There will be periods of prosperity and periods of hard times, but with our resources, our industries, our fertile agricultural lands, the character of our population, is it not certain that the progress of Canada in the future, as in the past, will be steadily onward.

Tariff Increases.

Since the conclusion of the war there has been a very general increase in the protective tariffs of nearly all the industrial countries of the world, because these countries, particularly those that were engaged in the war, were anxious to provide employment for their own population. The tariff of the United States has not been altered. In Canada, the 7½ per cent. war tariff has been entirely removed. The position of this Association in regard to the Canadian customs tariff was clearly defined at the last annual meeting, where a resolution was passed advocating a revision of the tariff and the establishment of a permanent tariff board of experts who would act in an advisory capacity to the Government.

I do not see any reason why this resolution should not be reaffirmed at this meeting. The objects of the fiscal system of Canada should be to diminish, as far as possible, the buying of goods from other countries, which can be produced here; to facilitate the importation of raw materials which cannot be produced at home; to export our own materials in the shape of the finished products; and to make Canada as self-contained as possible by developing and encouraging activities which will give occupation to our citizens. The Association last year also went strongly on record in favor of tariff preferences among the various countries constituting the British Empire. The war strengthened the ties which bind the Empire together, and we believe these ties would be

further strengthened by the extension of Imperial preferential tariffs.

Position of Great Britain

Canadians note with great thankfulness the amazing recovery of Great Britain from the war. During the war Great Britain bore the brunt of the conflict by land and sea, and in the money markets of the world. There were some who prophesied that the strain had been so great that she could not recover, yet the Hon. Austen Chamberlain, Chancellor of the Exchequer, speaking in the House of Commons on April 19 on the budget, described the present position of Great Britain as "One of unexampled and unequalled strength." As citizens of a British country, we rejoice to see the mighty power of the Mother Country reviving.

Transportation

Since our last annual meeting the Dominion Government has added to its railway systems by the purchase of the Grand Trunk Railway. The people of Canada will not be so much concerned with alleged principles underlying ownership of railways as they will be with results. They want service at the lowest cost, consistent with quality of service. The standard of railway service furnished by the Canadian Pacific Railway in the past and at present to the people of Canada is a tribute to the efficiency of private management, and should be maintained.

The success of the Government's experiment cannot be estimated at the present time, and it will succeed or fail according to the quality and cost of the service supplied, and to the extent to which Government management is divorced from political interference. From the last report of the Minister of Marine, it would appear that the new Canadian merchant marine has made a good beginning and has proved a great assistance to Canadian trade. We are all vitally concerned in the transportation problem. Transportation should be cheap as well as efficient because transportation charges form a very considerable part of the cost of living.

Public Ownership.

During the year there has been some extension of the principle which is commonly known as public ownership. Again here we should not yield to the temptation to argue over abstract principles. The application of the principle of public ownership is, after all, entirely a matter of degree. There must always be public ownership in the sense that the Government must control certain services, and this has been admitted for centuries. No one, for example, would advocate placing the army or navy under private ownership and management. The post office should be under Government management. As in similar cases, the real question is: "Where shall the line be drawn?"

Some people advocate that all transportation systems should be owned and operated by the Government. A great many people argue that water power should be owned and controlled by the Government. A few people even advocate that all factories should be owned and operated by the Government. Other progressives contend that all land, including farms, should become Government property, should be divided into areas, and that over each area a Government inspector should have full control and that all farmers should become Government employees on salary. Similar proposals are advocated in regard to publishing, banking, insurance and wholesale and retail trade.

If Government ownership and control is carried to the extreme lengths which are advocated by some people it logically means that private property will disappear and, to some extent, that personal freedom will disappear, and that the entire population will become civil servants on the national payroll, to be promoted, transferred, pensioned or dismissed according to the pleasure of the Government in power. One naturally wonders in contemplating this tremendous scheme, who would make the appointments, who would decide the type of works that would be done by each individual who would fix his pay and decide his hours of labor, and what would be the incentive of the individual, to put forth his best efforts?

I believe that moderate-thinking men do not condemn or approve public ownership or private ownership as such. On the other hand, they are inclined to say:

Let us have public ownership where it can be demonstrated that it is more satisfactory to all classes than private ownership.

It has been the practice of British people to go very slowly from precedent to precedent, and only to accept what appears to have reasonable chance of succeeding; and in regard to this question of public ownership we should do well to be guided by this practice.

Agricultural Features.

We are all hoping to see a good wheat crop this year in Canada. In 1918 the average yield was only ten bushels; in 1919 eleven bushels, while the average for ten years ending 1919 was 17.27 bushels per acre. We are getting into the fortunate position, however, that we are not so badly affected

Industrial Development Association at Edmonton

noted Brig.-Gen. Macdonald, Medicine Hat; J. E. Walsh, Toronto; A. W. Thomas, Toronto; Mayor Clarke, Edmonton; S. R. Parsons, Toronto; S. J. B. Rolland, Montreal; George Brigden, Toronto

as formerly by a poor wheat crop, owing to the great growth of fruit growing, stock raising, dairying and other agricultural activities.

The value of the occupied farm lands of Canada averages about $52 per acre, as against $40 before the war, an increase of 30 per cent. The annual value of field products, according to the last census statistics was about one and one-half billions. There are 730,000 farms under cultivation in Canada and to show that the Maritime Provinces, Ontario and Quebec have large agricultural interests, it is only necessary to point out that two-thirds of these farms are situated in these provinces, while one-third are located in the Provinces of Manitoba, Saskatchewan, Alberta and British Columbia. The size of the farms, however, in Western Canada is much greater than in Eastern Canada, but the same general rule maintains—one farm supports one family.

Manufacturers are glad to see that the assets of the chartered banks have passed the three billion mark, which it is worth noting, is the last reported annual value of the manufactured goods of this country. Manufacturers and farmers have to depend to a great extent on banks for loans to develop their industries, and if the banks are strong, they can give the necessary as instance to productive enterprises.

Immigration

Our high year in immigration was 1915, when, in round numbers, about half a million people came to Canada. Immigration fell off naturally during the war, but there are abundant signs that the tide is once more turning towards Canada. Last year, the immigration was about one-quarter of that in 1913, but this spring every boat entering a Canadian port is loaded with settlers. It is most desirable that we should have increased immigration. We need more people to increase our food production; to increase the home market, and to help us pay our taxes. But we want immigrants of a desirable type, for whom occupations are available in Canada, and who will assimilate with the population of this country, and also we want people who have British ideas and are content to live under the British form of Government, and not under some imaginary form which they and their friends have conceived.

Comes of Age.

It is interesting to note that the Association really becomes of age this year. Although it was founded in 1872, from that year until 1899, it was provincial in character until it was reorganized on a national basis in 1899.

In 1899, the Association had about 300 members. The staff consisted of three, a secretary, a bookkeeper and a stenographer. The Association now has a salaried staff of forty-seven, and maintains in addition to the head office at Toronto, divisional offices at Amherst, N.S., Montreal, Quebec, Winnipeg, Man., and Vancouver, B.C., and furnishes services from seven technical departments, each provided with experts.

The membership of the Association has grown from 300 in 1899 to 4,061 at present.

In conclusion may I appeal for the continued and increased support of the membership of the Association during the coming year. It is a branch of their business. While part of its work is necessarily defensive, it is most desirable that its most important functions should be constructive in character and designed to assist in promoting the welfare and prosperity of the entire country.

In regard to myself, I beg to thank the members, and especially those on the various committees, for the kind and effective assistance they have given me during the year that I have been privileged to act as president.

Appreciation of Address

Following the reading of the President's annual address, a vote of thanks to Mr. Howard was moved by Mr. S. R. Parsons, Toronto, seconded by Mr. J. R. Shaw, Woodstock. Mr. Parsons said in part: "Mr. President, I think that magnificent address ought not to be passed over without commendation on the part of the members who are here assembled this afternoon. It appears to me it is one of the sanest and best presidential addresses that has ever been delivered. It is based on common sense and sound experience, and, gentlemen, we find that when we go outside of our experience and the experience of the past, and we lend ourselves to theories of all sorts, we get into trouble. The world is full of theorists to-day. Canada is full of theorists. We have them in the pulpit, we have them in our college halls, we have them among the ranks of the farmers, we have them among the ranks of labor, we have them among the ranks of other classes, and it is quite possible we have one or two among the ranks of the manufacturers. (Laughter.)

"I believe that this splendid address of the President's, and for which I am sure he will receive our heartiest commendation and our thanks and congratulations to the fullest possible extent, as I say, is based on common sense and sound experience, as our life insurance men say. The things that are unstable need to be criticized in these days, and there is no greater stabilizing influence throughout the whole of Canada than the Canadian Manufacturers Association, and I

believe, gentlemen, the time has come when we must not be afraid to take our part in national life by bringing everything to the national standpoint. We must stand together for the things we know will mean honesty, sincerity, success, and all that is worth while not only to us as manufacturers, for we have no selfish ends in view, but the entire people and the entire interests of the country we all love to the fullest possible extent."

Appreciation of Mr. Howard's Work

MR. J. R. SHAW (Woodstock): I have very great pleasure in seconding Mr. Parson's motion. When we elected you, sir, as our President a year ago we knew well that we were electing a man among men, and that in our new President we would have an officer of whom we could all be proud. I, as an active member of the Canadian Manufacturers Association, sometimes think that the rank and file of our Association do not properly appreciate the vast amount of work that falls upon the executive officers of the Association; not only work, but the time and expense that these officers give to the Association work. Our membership is numerous, as stated, 4,061. So great is the membership and so widely distributed is the membership that of necessity our work must mainly be carried on by committees, the Executive Council, and the Executive Committee. The member of the Association who is actively at work in Association work does appreciate what is being done by the Association, but those members who merely pay their fees, never attend any of the meetings, and are consequently never elected to office, are deriving advantages from that membership which I repeat again I do not think they adequately appreciate.

"It has been my experience again and again to meet manufacturers who are members of the Association, but who know so little about the work of the Association that they are not taking advantage of the benefits that can be realized from the Association. Our various departments are officered by men of the very first rank. As business men we know that you cannot get service without paying for it, and by paying fair salaries we attract to our service men of ability, capacity and industry. Those of us who are merely manufacturers and members of committees and what not, know that were we not backed by this extremely able and efficient staff that the work would not be carried on in the efficient manner in which it is. (Hear, hear.) At the same time, sir, all successful businesses must be headed by captains of great capacity, and in you, sir, during the past year we have had such a captain.

"When you were asked to leave your own business, sir, and go to Washington to work for the country, the Government made no mistake in its selection—(applause)—and we were all proud of you, sir, as our President, and proud of the work that you were able to do for our common country.

"You will, of course, in the order of affairs, lay down your duties of office at this, our annual meeting, and the work will have to be taken up by your successor. We, however, will never forget your kindness and the genial and fair manner in which you have presided over the destinies of the Association during this very trying reconstruction year. It has been a trying year, and it has been trying and hard work for you, sir. We beg to thank you, and in seconding the motion I want to add to Mr. Parsons' resolution, and say that we members of the Association thank you from the bottom of our hearts for the great work that you have done during the past year, and our only hope is that in the years to come we may have Presidents that will prove even half as good as Tom Howard." (Applause.)

Words of appreciation were also expressed by Mr. Thomas Roden, Toronto, and Mr. H. G. Wright, Hamilton, after which the Vice-President, Mr. J. S. McKinnon, put the motion, which was carried with applause.

Name of Division Changed

Amendment to By-laws Changes Name of Pacific to British Columbia Division

Hereafter the Pacific Division of the Association will be known as the British Columbia Division. This change was the only alteration in the by-laws authorized at the annual meeting. The amendment was moved by Mr. Edwin Tomlin, and seconded by Mr. J. H. Macdonald. It was carried without opposition.

General Work of the Year is Reviewed

Important Matters That Come Under the Jurisdiction of the Executive Committee are Outlined—Progress of Made-in-Canada Campaign —A Year of Very Widespread Activity in Many Lines is Disclosed

Report of the Executive Committee

DURING the year your Committee had to deal with the problem of financing a rapidly expanding organization; and in such cases experience proves that there is a tendency for expenditures to be greater than receipts. Six hundred and sixty-two new members have joined the Association since the last annual meeting, and it was necessary to give them the services of the Association. Moreover, the decision at the last annual meeting to administer the Association through five divisions required additional expense. Your Committee acted on the assumption that it was the chief duty to provide necessary service. The Association was created to provide service, and only by furnishing service to its members can it remain in existence.

Receipts and Expenditures

The total revenue of the Association for the year amounted to $122,320.85; the cost of operation was $127,099.31; leaving a deficit of $4,778.46. Of the total revenue 43 per cent. was spent on Divisions and Branches, the remaining 57 per cent. on maintaining the special and technical services of the head office.

Industrial Canada

A 25 per cent. increase in printing costs in the early part of the year endangered the usual financial surplus from INDUSTRIAL CANADA, but, in spite of this heavy handicap, the Publishing Committee is able to report a surplus for the year of $8,166.37, as compared with $8,996.62 for the previous year. The editorial features of INDUSTRIAL CANADA have also been improved and enlarged so as to inform the members of the Association's work, and also to provide special articles dealing with industrial problems.

Canadian Trade Index

The *Canadian Trade Index* was published by the Association in March, last. Three features were added in this edition which will be of great convenience to the users of the book; a continuous alphabetical list giving the correct name and address of every manufacturer appearing in the classified section, together with the various lines, branches, export representatives, trade marks, brands, cable addresses and codes of the firms where this information has been available; a French Index of headings with corresponding English headings which appear in classified order in the classified section; and a limited edition with the Spanish Index similarly treated.

Furthermore, over two thousand new headings have been added, many of them descriptive of goods not previously made in Canada. The names of the firms appearing in the Index for the first time number between two and three thousand, making a total of about nine thousand five hundred.

The circulation of the 1920 edition has been greatly enlarged, and will reach over eight thousand five hundred copies. In Canada, besides being supplied to the members of the Canadian Manufacturers Association, it has been placed in the possession of architects, engineers, purchasing agents, boards of trade, industrial commissioners, and Government officials. All Canadian Trade Commissioners abroad have been supplied with copies, and it will be in the hands of banks, officials, trade organizations and British consuls throughout the world.

In spite of the increased cost of publication, increased free circulation and enlarging the size of the *Canadian Trade Index*, your Committee are able to report a small surplus of $166.89, after paying compilation, publishing and distributing costs amounting to $27,447.24.

Made-in-Canada Campaign

INDUSTRIAL CANADA accepts no advertising other than that of Canadian manufacturers. It is, therefore, probably the most sincere exponent of the "Made-in-Canada" doctrine. The *Canadian Trade Index* by listing Canadian manufacturers and their products presents the only complete and official record of manufactures produced in this country. During the past year the Association carried on an extensive "Made-in-Canada" campaign. The co-operation of public bodies and other organizations was solicited, and in most cases secured. A special circular was issued to engineers and architects asking them to specify Canadian material in Canadian contracts; and, conversely, our members were asked to employ Canadian engineers and architects when such a course was possible. Representations were also made to the Government and the various Legislatures urging them to purchase "Made-in-Canada" goods for all Government requirements, and pointing out that such a course was especially desirable in view of the adverse exchange. Various women's organizations have passed resolutions advocating the purchase by women of goods produced in their own country. Exhibitions of "Made-in-Canada" goods were promoted at home and abroad. It is gratifying to report that labor papers gave strong support to the campaign, and advised the purchase of goods made by Canadian workers. Your Committee also desire to express thanks to the press for their efficient co-operation in the campaign.

Federation of British Industries

On recommendation of your Committee the Association has become affiliated with the British Federation of Industries, an organization of British manufacturers in the United Kingdom which corresponds to our own. By this arrangement the British Federation of Industries does certain work for our Association in the United Kingdom, and in return we do certain work for them in Canada. The British Federation of Industries is the largest and most completely organized Association of manufacturers in the world. It has over 17,000 members, who are very carefully classified into groups and sections. There is little doubt that the remarkable recovery of Britain's trade is due largely to the splendid organization and work of the British Federation of Industries.

London, England, Representative

At the last annual meeting a suggestion was made and referred to your Committee that the Association should appoint a representative in London, England. While your Committee concede the desirability of such action, nothing was done owing to the lack of funds.

Resolutions of Last Annual Meeting

The resolutions passed at the last annual meeting were issued in pamphlet form, and distributed widely. A special deputation of manufacturers visited Ottawa on August 5th, 1919, and presented these resolutions to the Prime Minister and other members of the Cabinet. At this meeting special reference was made to the resolution asking for the creation of a Permanent Tariff Board, and to that advocating the extension of Imperial preferential tariffs.

The Alberta Industrial Development Association

The Alberta Industrial Development Association, an organization of the business men of the Province of Alberta, has done considerable work in bringing to the attention of the public the resources of that Province. A congress was held in Alberta last August, and at the request of the Alberta Industrial Development Association the members of the Canadian Manufacturers Association were circularized, asking them to attend. Owing to various circumstances only a small number of members were able to accept the invitation, which was regrettable, in view of the fact that a great number of the important industries of the United States were represented. This year we were able to co-operate to a greater extent with this Association, and have attended their meetings in Medicine Hat, Lethbridge, Calgary and Edmonton en route to the annual general meeting.

Exhibitions

The Trade Sections Department of the Association made a special study of exhibitions last year in the hope of increasing the sale of Canadian-made goods at home and abroad. Reports were made and furnished the membership at large on the following exhibitions:

(*a*) The British Industries Fairs, to be held in London, Birmingham, and Glasgow in 1920.
(*b*) A national exhibition to be held in Pretoria, South Africa, in March and April, 1920.
(*c*) A sample Fair to be held in Brussels, Belgium, in April, 1920.
(*d*) A Canadian exhibition to be held in Agricultural Hall, London, England, 1921.
(*e*) British Empire exhibition to be held in London, England, 1921.
(*f*) A permanent exhibition to be held in London, England, 1921.
(*g*) A floating exhibition to be sent to South American ports.

As for Canadian exhibitions, information was furnished to our members in regard to well-established and familiar exhibitions, and particular attention was drawn to the annual circuit of exhibitions held in the Prairie provinces at the following points: Calgary, Edmonton, Saskatoon, Regina and Brandon.

Trade Commission to China and Japan

An official suggestion was made to your Committee that a Commission, consisting of one representative from each of the Boards of Trade of Vancouver, Winnipeg, Hamilton, Montreal and Toronto, and one representative from the Canadian Manufacturers Association, should visit China and Japan for the purpose of securing information as to the possibility of increasing trade between Canada and those countries. Negotiations were opened with the Boards of Trade mentioned but little support was secured for the proposal, with the result that your Committee have deferred action until some future time, when possibly more interest may be taken in the proposal.

Tour—Maritime Provinces

A meeting of the Executive Council, which was attended by many of the members of Council from western points, was held in St. John, N.B. on October 1st of last year. After the Council meeting a number of members of Council and officials of the Association visited every industrial centre in the Maritime provinces, and attended meetings which had been specially arranged at these points. The result of this tour was very satisfactory from every standpoint, furnishing the opportunity for personal contact with the members in the Maritime provinces and also for adjusting a number of difficulties for local members.

Imperial Press Conference

The Imperial Press Conference will be held this summer in Canada and will be attended by representatives of leading journals from all the countries of the British Empire. The Association is represented on the Organizing Committee, which will arrange their tour in Canada, and advantage has been taken of the opportunity to place before them information and statistics concerning Canadian industry.

Fuel Supply

Your Committee have given considerable attention during the past year to the grave insecurity of the present fuel situation, especially in Central Canada, which is almost entirely dependent on the United States for hard and soft coal. The Committee have determined to discover whether it is possible or not to develop in Canada a supply of fuel of various kinds which will be adequate for the country's needs. A special committee has been appointed to study this problem, but its investigations are not yet completed.

"Made-in-Canada" Train in France

Your Committee considered a proposal forwarded by the Department of Trade and Commerce to arrange for a train loaded with "Made-in-France" goods to tour Canada, and also for a "Made-in-Canada" train to tour France. After securing the views of a number of our members, and also expert advice, it was decided to advise the Minister of Trade and Commerce that the Association approved and welcomed the suggestion that a "Made-in-France" train should tour Canada but that the Association did not think it feasible to organize a "Made-in-Canada" train for France at the present time.

Postal Act and Newspapers

The attention of your Committee was drawn to a proposed amendment to the Postal Act increasing the rates of second class postal matter, which includes all publications, and introducing the principle of the zone system, placing a higher postal rate on publications circulating beyond a three hundred mile radius. The increase proposed within a three hundred mile radius was from one-quarter cent to one cent per pound, or four hundred per cent.; and beyond the three hundred-mile radius from one-quarter cent per pound to two cents per pound, or eight hundred per cent. increase. The Association, on the advice of your Committee, communicated with the Government saying that while it was evident that the Post Office must secure more revenue for carrying second class matter, any increase in postal rates found necessary should be made on a gradual basis so as not to jeopardize the publishing industry. It was pointed out further that the introduction of the zone system tends to sectionalize publications, which is most undesirable in a sparsely settled country where national publications perform a real service by keeping various sections informed of events and opinions throughout the entire country.

Divisions

Your Committee believe that the action of the last annual general meeting in dividing the Association into five divisions for administrative purposes has been fully justified. By the

arrangement matters which are of interest only to the members resident in a division, are dealt with by the Divisional Executive Committee, and matters which concern the membership at large are referred to the head office.

Divisional organizations have been practically operating for some time in the Maritime provinces, the Prairie provinces and British Columbia; and during the past year the Ontario and Quebec divisions have been operating for some months.

Export Trade

Your Committee had a great deal to do with the Canadian Mission in London and the Canadian Trade Commission in Ottawa, and beg to record their very keen appreciation of the valuable work done by these organizations to increase the export trade of this country.

Under the chairmanship of Mr. Lloyd Harris, the Canadian Mission in London was instrumental in making very large sales of Canadian products in the United Kingdom and other European countries, being aided materially by various credits granted by the Dominion Government.

The Canadian Mission in London has now been replaced by the Overseas Branch of the Department of Trade and Commerce of Canada, under the direction of Mr. W. C. Noxon, who was the chief assistant for the Canadian Mission in London. The Overseas Branch will co-operate with the Canadian Trade Commissioners in Europe and with the High Commissioner in London. There will be this important difference, however. The Overseas Branch of the Department of Trade and Commerce will not make sales or purchases nor negotiate contracts for firms or individuals, but will function largely as an information and publicity bureau for Canada.

It is gratifying to report that the goods marketed abroad for Canadian manufacturers during the existence of the Canadian Mission in London gave very general satisfaction, and, although hundreds of millions of dollars' worth were sold, this Association received only very few complaints. These complaints were promptly investigated in Canada, and in the majority of cases were without foundation.

Industrial Research

Your Committee regret that the Dominion Government has not yet seen fit to establish a bureau of standards. Other manufacturing countres have long established bureaus wherein processes and materials used in industry are studied by experts. Representations have been made at intervals to the Government advocating action on this subject, and representatives of the Association appeared before a special committee of the House of Commons in June, 1919, to give evidence in favor of the establishment of a bureau of industrial research.

The House of Commons re-appointed a Committee to study the question of scientific research in March of this year, and it is most important that some concrete results should be achieved in the near future.

Technical Education

This Association deserves most of the credit for whatever technical education is now provided in Canada. For many years the Association kept up a constant agitation for this particular type of education and was largely responsible for the Royal Commission on Technical Education, which toured America and Europe in 1909-10. The splendid technical schools which are now in existence throughout Canada are due in a great measure to the support and encouragement afforded by members of this Association. The Dominion Government is to be commended for passing the Technical Education Act, which provides the sum of $10,000,000 to be expended on technical education in graduating amounts beginning with $700,000 in 1920, increasing by $100,000 each year till 1924, and reaching $1,100,000 from 1924 till 1929. Allotments cannot exceed the amount spent on technical education by each province during the year. As technical education is a necessary factor for industrial development, it is most desirable that not only the best teachers and schools shall be provided, but also that an efficient research system shall be maintained to keep abreast of industrial progress in other countries.

General Work

In the above report your Committee have only touched upon a few of the more important matters dealt with during the past year. There is not sufficient time at an annual meeting to describe the less important matters and the great amount of detail work accomplished by your Committee, who are practically the Board of Directors for a business which extends all over the Dominion, and covers every subject concerning manufacturing. Those members who serve on divisional and branch committees realize how business local to the division accumulates between meetings. The work of the head office, during this year and last, has been unusually heavy, owing to the new problems caused by the readjustment of the country from war to peace activities. The records show that Council and the various committees and subcommittees held 277 meetings in the head office alone since this time last year. A large number of circulars were issued from the head office in connection with the regular departmental work. In an Association such as ours the technical services of the Association as well as a considerable part of the general work of the Association must be transmitted through the mails by circulars to our members, the majority of whom cannot secure such information by personal interviews. Consequently this is one of the most important features of the Association's work. The following list contains some of the circulars issued from the head office during the past year, and indicates the wide field covered by the departments:

Bill of Lading—Joint Rail and Ocean Form; New Service to Newfoundland; Rates on Iron and Steel Articles; Export Trade—General and Special; S.S. Service to Antwerp; Questionnaire— *re* industries; Alberta Industrial Development Association; Bankruptcy Act; Coal Shortage; National Industrial Conference; S.S. Service—Canada to South America (West Coast); S.S. Service—Canada to South America (East Coast); Company Licensing Cases; Free Commercial Reports (Foreign); Dominion Fire Prevention Association; Victory Loan, 1919; Revision of the Canadian Customs Tariff; Canadian Atlantic Ports to Scandinavian Ports; Delays to L.C.L. Shipments; United States Government Tax on Freight Charges; Safety—Industrial and General; Canadian Industries Exhibition; Coal and Coke Shortage; "Made-in-Canada" Campaign; Shortage of Power; Group Life Insurance; Closer Trade Relations with the West Indies; "Blue Sky" Laws; Statistics Act, 1918 Census of Industry; Workmen's Compensation Act; Combines and Fair Prices Act; Business Profits War Tax Act; Exhibitions—Home and Abroad; Weighing of Freight Traffic; Treaty of Peace—collection of debts.

The Association has so many vital matters in hand at the present time, and others are coming up to be dealt with, that your Committee believe that next year will be a most important one in the history of our organization and therefore urge members to give the Executive Council and all committees their encouragement and support. All of which is respectfully submitted.

T. P. HOWARD, *President.*

In reading the report, the General Secretary explained that it had been printed about a week or ten days before the financial report which had been revised in some cases by the auditors.

The motion to adopt the report was moved by the president, seconded by Mr. J. S. McKinnon, the vice-president, and there being no discussion, the motion was put to the meeting and carried.

The Financial Affairs of the Association

Deficit of $4,611 Reported for the Last Fiscal Year—Offset by Surplus of $8,686 Earned by INDUSTRIAL CANADA—Association's Investments Remain Intact With Higher Amortized Value

The Treasurer's Statement

IN calling upon the General Manager to read the Treasurer's Report for 1919-1920, the President said, "I would like to say one word with regard to the Treasurer's report which Mr. Walsh is going to read. Unfortunately, Mr. John F. Ellis, our treasurer, through ill-health, has not been able to attend the convention nor will he be able to again accept office. Mr. Ellis is one of our past presidents and one of, if not, the oldest member in the organization. He joined the Canadian Manufacturers Association in 1878, the year of the famous National Policy, and has been a constant attendant and hard worker and one of the best and finest types of Canadians that has ever been in our Association. (Applause.) In the absence of Mr. Ellis, I will ask Mr. Walsh to read his report.

The General Manager, Mr. J. E. Walsh, then presented and read the financial statement as follows:—

Toronto, May 19, 1920.

The President and Members,
Canadian Manufacturers' Association, Inc.,
Toronto.

Gentlemen,

We have audited the books and accounts of the Association for the year ending 30th April, 1920, and attached hereto please find Balance Sheet, Revenue Account, etc., duly certified to by us. We have verified the Cash and Bank Balances and have examined the Investments, as shown in Schedule E.

Yours faithfully,

WILTON C. EDDIS & SONS.

Report is Adopted

MR. J. O. THORN (Winnipeg): "In moving the adoption of the financial statement, I desire to say that Mr. John F. Ellis, our treasurer, has been a tower of strength to our Association and has looked after our interests in every possible way and we exceedingly regret that owing to ill-health he is unable to be with us. I have very great pleasure in moving the adoption of the financial statement."

MR. J. R. SHAW (Woodstock): "I have pleasure in seconding the motion."

There being no discussion, the motion to adopt the financial statement was then put and carried.

Labor Matters to the Fore During the Year

More Attention Being Given by the Association to the Subject of Industrial Relations—A Review of the More Important Happenings of the Year, Including the Labor Conferences at Ottawa and Washington

Report of Industrial Relations Committee

As the Industrial Relations Committee was only created at the last General Meeting, this is the first report on the work of this department of the Association.

Origin of the Committee

The department of the Association was created and a committee appointed to supervise it, because the Executive Council felt that the present and future relations between employers and employees in the various lines of industries should be made a subject of the most careful study and investigation, in order to secure the best co-operation among all those engaged in manufacturing.

Although this subject had been dealt with by the Association in a general way from time to time during previous years, the necessity for special study was clearly indicated when the labor sub-committee of the Reconstruction and Development Committee, appointed by the House of Commons, passed a resolution on March 19, 1919, recommending the appointment of a commission to make an exhaustive inquiry on Industrial Relations. Following this recommendation, the Privy Council on April 4, 1919, appointed the Royal Commission on Industrial Relations, under the chairmanship of the Hon. Chief Justice Mathers. This commission commenced its inquiry at Victoria, B.C., April 26th, 1919, and completed its tour in Ottawa, June 12th, of the same year. Between these dates the Commission held 70 sessions in 28 industrial centres, extending from Victoria, B.C., to Sydney, N.S., and took evidence from 486 witnesses.

This Commission consisted of the chairman, two representatives of the public, two representatives of employers, and two representatives of labor. Among other recommendations of this Commission was one suggesting that a National Industrial Conference be convened in Ottawa at an early date. Acting on this recommendation, the Minister of Labor called the "National Industrial Conference" in Ottawa during the week of September 15th-20th. The work of the Industrial Relations Committee in preparation for the National Industrial Conference commenced in the head office of the Association at a general meeting of the Committee on July 30th of last year, and continued until the opening of the Conference. Thirty-eight delegates were appointed by the Association to represent the following industries:

Shipbuilding.
Packing.
Woollens.
Lumber and Timber.
Chemicals and allied products.
Pulp and Paper.
Steel and Iron.
Garment Making.
Printing, Publishing and Bookbinding.
Glass and stone products.
Vehicles.
Milling.
Food Products.
Cottons.
Rubber.
Tobacco.
Oils, Paints and Varnishes, and
Miscellaneous.

There were present at the Conference representatives of the Dominion Government and the Provincial Government, an equal number of delegates representing the interests of employers and employees in all branches of industries, and a third group which appeared on behalf of the public.

The employers' and employees' group together numbered 176. The third group numbered 34, and, in addition to manufacturing, employers were represented in the following industries:—

Lumbering.
Fishing.
Railways and Telegraphs.
Building and Construction.
Wholesale and Retail Trade.
Mining.
Banking.

After various subjects on the agenda had been debated, committees were appointed by the Conference to bring in resolutions on the following subjects:—

1. Industrial disputes legislation and other labor laws.
2. Hours of labor.
3. Minimum wages legislation.
4. Employees' right to organize, the recognition of labor unions, and the employees' right to collective bargaining.
5. The proposed establishment of joint industrial councils.
6. State insurance against unemployment, sickness, invalidity and old age.
7. Proportional representation.
8. Other features of the report of the Royal Commission on Industrial Relations.
9. Consideration of any other proposals which may be introduced bearing on the relations of employers and employees.

At the conclusion of the Conference, the following resolutions were submitted by the above mentioned committees, and dealt with in the manner indicated:—

Industrial Labor Laws

That the advantage of uniformity in the laws relating to the welfare of those engaged in industrial work in the several provinces of the Dominion of Canada be brought to the attention of the Government of Canada and of the governments of the several provinces, respectively; and, that this National Industrial Conference suggests the following as a means towards the end desired, namely:

The appointment of a board composed as follows:—

1. As respects the Dominion:

(*a*) A representative of the Government.
(*b*) A representative of the employers.
(*c*) A representative of the employees.

2. As respects each of the Provinces:

(*a*) A representative of the Government.
(*b*) A representative of the employers.
(*c*) A representative of the employees.

And that the Dominion Government be requested to ask the Government of each of the provinces to select or have selected representatives in respect of the provinces as above set forth.

This resolution was adopted unanimously by the Conference.

Proportional Representation

Believing that there are defects in the system of Electoral Representation in Canada, which defects are stated by the Royal Commission on Industrial Relations to be a cor

tributory cause of social and political unrest, this Conference welcomes the declaration of the Prime Minister on behalf of the Government that a Speaker's Conference will be called to investigate the merits of the Proportional System, and urges that such action be taken without delay.

This resolution was adopted unanimously by the Conference.

Joint Industrial Councils

Your Committee is of the opinion that there is urgent necessity for greater co-operation between employer and employees. We believe that this co-operation can be furthered by the establishment of Joint Industrial Councils. Your Committee does not believe that it is wise or expedient to recommend any set plan for such Councils.

We, therefore, recommend that a bureau should be established by the Department of Labor of the Federal Government to gather data and furnish information whenever requested by employers and employees or organizations of employers or employees, and that whenever it is desired to voluntarily establish such councils, the fullest assistance should be given by the bureau.

This resolution was adopted unanimously by the Conference.

State Insurance Against Unemployment, Sickness, Invalidity and Old Age

This Committee unanimously endorses the recommendations of the Royal Commission on Industrial Relations that a Board or Boards be appointed to inquire into the subjects of State Insurance against unemployment, sickness, invalidity and old age.

For the effective carrying out of the above this Committee recommends:—

1st. That such Board or Boards shall be representative of the interests participating in this Conference, viz., the Government, the public, the employer and the employee, and shall include a representative of the women of Canada.

2nd. That in order to collect necessary data, the Government shall forthwith attach to the proper branches of the Labor or other departments concerned experienced investigators, who shall do the necessary research work, and furnish to the Board at the earliest opportunity the results of their investigations.

3rd. That the Government shall set a time limit for the receipt of the report and recommendations as to the advisability of enacting legislation.

4th. While this Committee has been appointed to consider only the questions of state insurance against unemployment, sickness, invalidity and old age; it respectfully recommends that the subject of "widows' pensions" be added.

This resolution was adopted unanimously by the Conference.

Minimum Wage Laws

Whereas it is considered expedient that minimum rates of wage should be fixed throughout Canada for women and children, whether employed at a time rate or according to any other method of remuneration;

Whereas minimum wage laws for women and children have been enacted in five and are now in operation in four of the provinces;

Therefore, be it resolved that this Industrial Conference recommend to the Governments of all those provinces, which have not adopted minimum wage laws for women and children, the speedy investigation of the necessity for such laws and if so found, the enactment of such legislation.

It is further recommended that the various provinces throughout the Dominion adopt a uniform law and method of application, but that in all cases the minimum of wages for women and children is to be determined from time to time, due regard being given to the local living conditions.

It is the opinon of this Conference that the Dominion Government should appoint a Royal Commission, composed equally of representatives of labor, employers, and the public, to investigate wages to unskilled workers, and issue a report.

Representation has been made to the Committee that the remuneration paid female school teachers in one of the larger provinces of the Dominion is so low as to discourage the employment of the talent necessary to the proper education of its citizens. Your Committee recommends that the various Provincial Governments be asked to investigate such conditions in the respective provinces, to the end that the children of all provinces of the Dominion have equal educational opportunities.

This resolution was adopted unanimously by the Conference.

Miscellaneous Resolutions Reported By Committee No. 9.

Land Speculation and Housing.—That this Conference, recognizing that much industrial unrest, economic loss and social suffering has resulted from land speculation, poor and insufficient housing, and high rents, heartily commends the action of the Dominion and Provincial Governments and their united efforts to improve housing conditions, and to provide facilities for the proper and satisfactory housing of our people, and recommends increased co-operation of, and investigation by, the Dominion and Provincial Governments to find a satisfactory solution of the problem.

Equal Opportunities in Education.—That this Conference endorses the recommendation of the Royal Commission on Industrial Relations, as to the necessity of the extension of equal opportunities in education; and, in view of bringing about this reform;

That the Government of each province in Canada be asked to establish compulsory education for full time at least up to and including the fourteenth year, and for part time in cities and towns for the two ensuing years; and

That in all provinces, education in all grades should be made free, so that the child of the poorest paid worker be given the opportunity of reaching the highest educational institutions.

Freedom of Speech and the Press.—That we unanimously endorse paragraph 70 of the report of the Royal Commission, as follows:

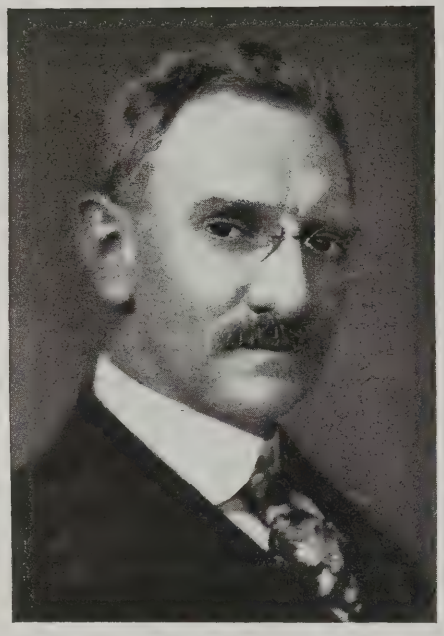
(70) The restrictions placed upon the freedom of speech and the liberty of the press, and the denial of the right to read such literature as any portion of the public demanded, was given as one of the principal causes of the present industrial unrest. We have no comment to make upon the policy of the Government in this respect. During the war it was necessary, in the interests of the whole country and of the Empire, that individual liberty should in many directions be restrained, but we believe that restrictions should not be imposed upon either the freedom of speech or the freedom of the press, unless such restrictions are urgently demanded in the interests of the peace of the whole community. We recognize that no person has a right to do anything that is liable to incite the people to commit unlawful acts. A line must be drawn between liberty and license, but care must be taken to avoid creating the impression that the restraints imposed upon the freedom of speech or the liberty of the press, are intended to prevent criticism of legislative or Governmental action.

Employment and Unemployment.—First. That, in the opinion of this Conference adequate provision by public works or otherwise, should be made by the Federal, Provincial and Municipal Governments in connection with all interests represented at this Conference to avert any serious unemployment crisis which might occur during the ensuing eight months;

Second. That the various interests represented at this Conference adhere strictly to the employment policy agreed

upon by the Provincial Governments, which aims at the centralization of labor supply and demand in one agency.

Third. That provision be made for immediate and continuous survey of available and prospective employment, and for adequate employment machinery to direct unemployed workers to employment available.



All the resolutions submitted by Committee No. 9 were adopted unanimously by the Conference.

Subjects on which no Agreement was Reached

On the following three subjects of the agenda no agreement was reached, and the resolutions submitted by the various parties were simply recorded in the proceedings of the Conference.

1. Hours of Labor.—(*a*) The following resolution was returned by the delegates of employers:

Resolved that appropriate Government Commission, composed of an equal representation of employers and employees

C. H. Carlisle
Goodyear Tire & Rubber Co., Ltd., Toronto
Chairman, 1919-20 Industrial Relations Committee
Re-elected Chairman, 1920-21

of the various industrial, producing and distributing industries, should be appointed to undertake investigations as to the adaptability of the hours of labor principles of the Peace Treaty to the different industries of the country, and to report as early as possible.

(*b*) The following resolution was returned by the delegates of employees:

That we agree with the recommendations and findings of the Royal Commission on Industrial Relations, and urge the adoption of an eight-hour day by-law throughout the Dominion, with due regard and recognition of the Saturday half-holiday where same prevails, and, if possible, extension.

In industries subjected to seasonal and climatic conditions, such as farming, fishing and logging, if it can be established by investigation that the operation of such a law is impracticable, then exemption shall be granted such industries from the operation of the law.

(*c*) The following resolution was returned by delegates representing the third party:

We approve of the principle regarding employment and hours of labor set forth in the Treaty of Peace, and in paragraphs 50 to 53, inclusive, of the Report of the Royal Commission, and would recommend that the Governments of Canada enact legislation providing for such in all industries where it is now established by agreement, at the earliest opportunity, and, after due investigation by a commission, composed of representatives of employers and employees, representing the various industries, legislation be enacted by the Governments of Canada providing for the same to be extended in all industries where it can be applied, having due regard to the curtailment of production and distribution.

Right of employees to organize; Recognition of labor unions; Collective bargaining.

This was the second subject of disagreement:

(*a*) The following resolution was returned by the representatives of the employers:

(*a*) Employers admit the right of employees to join any lawful organization.

(*b*) Employers should not be required to recognize unions or to establish "closed shops." Employers insist on the right, when so desired, to maintain their plants as "open shops," by which they mean that no employer should discriminate against any employee because of the latter's membership or non-membership in any organization, and no employee should interfere with any other employee because of the latter's membership or non-membership in any organization.

(*c*) Employers should not be required to negotiate, except directly with their own employees or groups of their own employees.

(*b*) The following resolution was returned by the delegates representing the employees:

Your Joint Committee, to whom was referred item No. 4 of the revised agenda, viz.:

Consideration of:

(*a*) Employees' right to organize;
(*b*) Recognition of labor unions, and
(*c*) The right to collective bargaining;

respectfully submit the following report, with recommendations, for your favorable consideration:

(1) With a view to effecting and maintaining harmonious relations between employers and employees, this Conference declares the following principles and policies, and urges their adoption by all employers relative to their respective employees:

(*a*) The right of employees to organize.
(*b*) The recognition of labor unions.
(*c*) The right of employees to collective bargaining.

(2) In these recommendations, without changing the generality of their terms:

(*a*) The right of employees to organize means the right of employees to organize or form themselves into associations for lawful purposes.

(*b*) The recognition of labor unions means the right of employees, or their duly accredited representative or representatives, to recognition of their employer or employers, for the purpose of mutually arranging rules and regulations governing wages and working conditions.

(*c*) "The right of employees to collective bargaining" means the negotiation of agreements between employers or groups of employers and employees or groups of employees, through the representative or representatives chosen by the respective parties themselves.

Entering into agreements and bargaining collectively with an association or union of employees does not mean recognition of the "closed shop" unless the agreement so provides.

(*d*) "Employer" or "employers," as used in clauses 1 and 2 means any employer or employers of any industry, and of Federal, Provincial and Municipal Governments.

(3) That the Federal and Provincial Governments be urged to enact legislation applicable to industries within their respective jurisdiction, to make it unlawful for any employer who shall discharge or refuse to employ, or in any manner discriminate against employees merely by reason of membership in labor unions, or for legitimate labor union activities outside of working hours.

Government Employees

The third subject of disagreement was the recommendation of the Royal Commission on Industrial Relations that

the findings of the Commission be put into effect on all work controlled by the Government when the principles of democratic management can be applied.

(*a*) The following resolution was returned by the delegates representing the employers:

That the undersigned members of your Committee beg leave to report that the matter referred to them does not, in their judgment, come within their province, but that it is entirely a question between the Government and their employees concerned.

(*b*) The following resolution was returned by the delegates representing the employees:

We concur in the recommendations of the Royal Commission on Industrial Relations that the findings of the Commission should be put into effect in all works controlled by all Government bodies where the principle of democratic management can be applied.

We further recommend that employees of all Government bodies should be entitled to the right of appeal under the Industrial Disputes Act, so long as that Act remains upon the Statute of Canada.

We further recommend that the wages and working conditions of employees of Governments should not be less favorable than those which now exist for similar workers in the employment of private individuals or corporations.

(*c*) The following resolution was returned by the representatives of the third group:

The representatives of the third group on this Committee believe that in so far as the findings of this Conference approve, and such findings are to the benefit of the public weal, that the suggestions of the Royal Commission should be put into effect in all departments and works controlled by the Government of this country.

A copy of the complete report of the National Industrial Conference was sent to all members of this Association.

In accordance with the recommendation in the first resolution, a committee was convened at Ottawa on April 26th, 1920, by the Minister of Labor, for the purpose of trying to co-ordinate the labor laws of Canada. This committee, after sitting a week, has adjourned to meet again in September. A summary of the work done appears in the report of the Legislation Committee.

The Conference was held in the Senate Chambers, Ottawa; Parliamentary procedure was followed throughout; the discussion was moderate and reasonable in tone; much valuable information on the subjects at issue was published; and the general result of the Conference was that it tended to steady the industrial situation and to make all classes in the country realize that their common interests lay in the promotion of the national welfare.

International Labor Conference, Washington

The Association was asked by the Minister of Labor to nominate a representative of the employers of Canada and five advisers to attend the first International Labor Conference provided by the Peace Treaty, which was held in Washington, D.C., during the month beginning October 29th, 1919. The Association nominated Mr. S. R. Parsons, past President of the Association, and five advisers, who attended the Conference, with instructions to be guided by the position taken by the employers of Canada at the National Industrial Conference held in Ottawa, September, 1919. The items on the agenda at the Conference were as follows:—

1. Application of the principle of the eight-hour day or forty-eight hour week.
2. Question of preventing or providing against unemployment.
3. Women's employment:
   (*a*) Before and after childbirth, including the question of maternity benefit.
   (*b*) During the night.
   (*c*) In unhealthy processes.
4. Employment of children:
   (*a*) Minimum age of employment.
   (*b*) During the night.
   (*c*) In unhealthy processes.
5. The extension and application of the International Convention, adopted at Berne in 1906, for the prohibition of the use of white phosphorus in the manufacture of matches.

Two representatives of the Government, one representative of the employers, and one representative of the employees, attended the Conference from the following countries: Argentine Republic, Belgium, Canada, Czecho-Slovakia, Denmark, Finland, France, Great Britain, Greece, India, Italy, Japan, Netherlands, Norway, Panama, Peru, Poland, Portugal, Serbe-Croate-Slovens, South Africa, Spain, Sweden, Switzerland, Jugo-Slavia.

The Governments only were represented from Bolivia, Brazil, Chile, China, Colombia, Ecuador, Guatemala, Haiti, Nicaragua, Paraguay, Persia, Salvador, Siam, Uruguay, Santo Domingo, Venezuela.

The Government and employers only were represented from Cuba.

The United States was not represented in any way.

The proposal submitted to the Conference for an 8-hour day and a 48-hour week provide these hours of work in all industrial establishments, but not in commerce or agriculture, nor for transport by sea nor inland waterways. The provisions did not apply to persons holding positions of supervision or management, nor persons employed in a confidential capacity. Hours might be exceeded in case of accident—actual or threatened—or in case of work to be done to machinery or plants. Where, by the nature of the work it must be carried on continuously by a succession of shifts, hours might be lengthened up to, but not exceeding, 56 in the week on the average. Pay for overtime shall not be less than one and one-quarter times the regular rate.

Mr. Parsons, representing the employers of Canada, strongly opposed the establishment of the 8-hour day or 48-hour week by international law, in a speech which made a profound impression on the Conference, the main points of which are summarized as follows:—

"1. While in many industries the eight-hour day is already in operation, especially in the building trades and in manufacturing, where the work is laborious, yet the general application of the shorter working day would, according to actual experience, greatly lessen total production.

"2. At the present time, when the Government of the country is calling upon manufacturers to increase their output and exports in order to meet heavy national obligations, nothing should be done which would tend to hinder them in their efforts.

"3. Only by increased production can the cost of living be reduced to all classes. To ignore this fundamental truth is to blind our eyes to actual facts.

"4. While having regard to world-wide interests, it must be remembered that Canada is a young and undeveloped country. To attempt to put her upon the same footing as old world countries, with entirely different conditions, is like placing a young and vigorous giant on the same footing as a man advanced in life. We should have the opportunity of living our own life and managing our own affairs to suit our circumstances. If we can achieve more than others as a nation it is surely not only our privilege but our duty to do so. Why should our national life and development be dwarfed? Compulsory reduction of hours militates against the establishment of new and small industries, and if the workman is to be hampered in his effort to rise, a serious blow is struck at the national life of a young and rapidly developing country.

"5. An attempt was made in the eight-hour day committee of this Conference to include in the draft convention all purely commercial undertakings, such as wholesale and retail stores, banks, etc. This proposition did not carry a majority in favor of it, but will be considered again at a later conference. It has also been announced that agriculture has already been included in the programme of some countries proposing to come under this legislation. Evidently what is aimed at ultimately is an attempt to drive

all the workers of the world like a flock of sheep into the eight-hour pen, regardless of the world's requirements. It is not suggested for a moment that the general acceptance of the eight-hour day will settle permanently our social and industrial problems, including hours of work.

"6. Under the proposed legislation Governments will be called upon to deal with economic questions to a much greater extent than ever before. It is quite conceivable that influences are likely to be brought to bear upon politicians from one direction or another in connection with such legislation and the administration thereof which would not make for national soundness or prosperity. There is much truth in the statement 'that government is best which governs least.'

"7. Employers of Canada, representing all employing classes, at a national industrial conference in the City of Ottawa in September last, considered this question and agreed unanimously in a resolution calling upon the Government to appoint a commission on which employers and employees should be represented, to study the possible application of the eight-hour day to all branches of industry. If it can be demonstrated, after such study, that the eight-hour day is sound economically as applied to Canada, and in the interest of all classes, including the workers, I feel safe in saying that the manufacturers—and I believe also the employers generally—will be glad to co-operate in bringing it into being. Meantime, I have no option but to oppose the legislation as per draft convention before this conference.

"8. It is generally recognized that unless the United States accepts similar legislation, it would be placing an unfair burden upon Canadian employers, and the country at large, to be bound by the terms of the proposed convention."

The final vote on the eight-hour day resolution was: For, 82; Against, 2 (employers' delegates from Canada and Norway).

Each state ratifying the above convention regarding the hours of work agrees to bring provisions into operation not later than July 1st, 1921. Relaxation as to length of hours as to particular industries, as to the date of application, are made in the case of Japan, British India, Greece and Roumania. The convention does not apply to China, Persia, and Siam, which will be considered at a later conference.

The Draft Convention concerning Unemployment, the provisions of which the states ratifying same agree to bring into operation not later than July 1st, 1921, provides:

1. For the prompt and systematic despatch of statistical information to the International Labor Office by each state ratifying the Convention.
2. The establishment of free public employment agencies, with committees including representatives of employers and workers to advise regarding the manner in which same shall be operated.
3. States which have established systems of Unemployment Insurance shall, upon terms agreed upon between the members concerned, make arrangements whereby workers belonging to one state and working in the territory of another shall be admitted to the same rate of benefits of insurance as those obtained for the workers belonging to the other state.

The states ratifying the "Draft Convention Concerning the Employment of Women Before and After Childbirth" agree to bring its provisions into force not later than July 1st, 1922. The convention applies to industrial or commercial undertakings, except those in which only members of the same family are employed. Employers in industrial undertakings are required to keep registers of all persons under the age of 16 years employed by them, showing dates of birth.

The states ratifying the "Draft Convention Respecting Night Work of Young Persons Employed in Industry" agree to bring the provisions of the Convention into force not later than July 1st, 1922. It provides that young persons under 18 years of age shall not be employed during the night in any industrial undertaking other than one in which only members of the same family are employed, with the exception that those over the age of 16 only may be employed on work which, by reason of the nature of the process, is required to be carried on continuously day and night, in the following industries:

(*a*) Manufacture of Iron and Steel.
(*b*) Glass Work.
(*c*) Manufacture of Paper.
(*d*) Manufacture of Raw Sugar.
(*e*) Gold Refining Reduction Work.

The term "night" signifies a period of at least eleven consecutive hours, including the interval between 10 o'clock in the evening and 5 o'clock in the morning. Provision for the relaxation of the restrictions regarding young persons between the ages of 16 and 18 is made in the case of emergency, and there are also special provisions covering lignite mines, the baking industry, and work in tropical countries.

In addition to the Draft Conventions, the following recommendations were made by the International Labor Conference to the states signatories to the Peace Treaty.

1. That measures be taken to prohibit the establishment of employment agencies which charge fees, and, where such already exist, to permit their operation under Government license only, and that all practical measures be taken to abolish such fee-charging agencies as soon as possible.
2. That the recruiting of bodies of workers in one country, with a view to their employment in another, should be permitted only by mutual agreement and after consultation with employers and workers in each country concerned.
3. That an effective system of unemployment insurance, operated either by the Government direct or through Government subventions, be established.
4. That the execution of all work undertaken by public authority be co-ordinated, with a view to reserving such work as far as possible for periods of unemployment.
5. That reciprocity of treatment, as to the benefit of laws and regulations for the protection of workers and to the right of lawful organization, shall apply to foreign workers the same as to native workers.
6. That arrangements should be made for the disinfection of wool infected with anthrax spores, either in the country exporting such wool, or, if that is not practicable, at the port of entry of the country importing such wool.
7. That, in view of the danger involved to the function of maternity and to the physical development of children, women and young persons under the age of 18 years be excluded from employment in certain lead and zinc processes, and that the employment of women and young persons under 18 in certain other allied lead industries, be permitted only under certain enumerated and well-defined restrictions.
8. That each state, which has not already done so, should establish, as soon as possible, not only a system of efficient factory inspection, but also, in addition thereto, a Government service especially charged with the duty of safeguarding the health of the workers, and which will keep in touch with the International Labor Office.
9. That each state that has not already done so should adhere to the International Convention adopted at Berne in 1906, on the Prohibition of the Use of White Phosphorus in the Manufacture of Matches.

Of the outstanding subjects brought up at the Conference, which did not materialize into either draft conventions or recommendations, the following are worthy of special note, in view of the extraordinary and unreasonable suggestions contained in them.

1. Abolition of private ownership of land.
2. International regulation of distribution of raw material.
3. International regulation of ocean freight rates.
4. The recommendation to all governments of the necessity of adopting suitable legislation in order to establish universal compulsory labor in keeping with individual aptitudes, and within the limitations required by a proper regard for health and human life.
5. In the Committee of Unemploment a determined effort was made to submit a draft convention, providing that, up to the age of 18 years, young workers of both sexes would be required by law to receive a compulsory, professional, complementary, or technical, education of at least 200 hours

per year, time devoted to such courses to be allowed to such workers off their regular hours, without any decrease in pay therefor. This proposal was vigorously opposed by the employers' group, who compromised on a recommendation to the various states that measures be taken to provide facilities for technical education to all desiring to avail themselves of such. After the compromise recommendation was approved, the sponsors for a draft convention of more extended form, asked that the subject be allowed to drop, and that it should not be brought before the Conference. The subject was, therefore, not brought before the Conference and does not appear in the proceedings.

The length to which certain representatives at the International Labor Conference are prepared to go in the matter of international legislation is indicated by the following subjects which were introduced at various times, but on which no action was taken at this Conference:

1. Introducing of a legal system of exemption from attachment of workmen's wages.
2. Prohibition of the use of the militia in labor conflicts or strikes.
3. Absolution of trade organizations from all responsibility for acts of individuals belonging to such organizations.
4. Legal recognition of trade unions as the only bodies with which to deal on all questions regarding skilled workers.
5. Application of 8-Hour Day to Agriculture.
6. Appointment in each country of a representative of the International Labor Office, to keep in touch with trade unions, and see that the decisions of the International Labor Conference are efficiently carried out.
7. Establishment of pensions for the aged and incapacitated.
8. The reduction of hours below that decided upon by the 1919 International Labor Conference.
9. Provision for a regular annual vacation for all employees.
10. Prohibition of the use of white lead in house-painting operations.
11. Prohibition of the use of mercury in felt hat making.

No action has been taken yet by the Dominion Government towards putting into effect in Canada any resolutions passed at the International Labor Conference.

General Work of the Industrial Relations Committee

Your Committee have made an arrangement with the National Industrial Conference Board of Boston, Mass., to secure the right to republish certain reports obtained by the National Industrial Conference Board at great labor and expense. An example of this kind of report was a special survey made by experts of the Board of the industrial councils existing in the various plants in the United States. A summary of this report was published in INDUSTRIAL CANADA.

Your Committee also beg to report that a considerable number of factories in Canada have established industrial councils. The simplest form, and that which apparently finds the most favor, is a joint committee, consisting of representatives of the management and the employees. This committee is usually divided into sub-committees, which study such subjects as wages, production, hours of labor, conditions of the plant, and suggestions to improve processes of manufacture. Your Committee believe that, in so far as such councils awaken the interests of employees and make them feel that the prosperity of the individual plant adds to their own welfare, they are to be commended.

Your Committee have also secured and circulated such documents as the statements of principles of the United States' employers, Labor Platform of Australian employers, and other documents of a similar nature.

Organization and Work of the Department

Your Committee believe that the Industrial Relations Department can best function by pursuing the type of work outlined in this report. They do not feel that it is the province of this department to interfere in any way with local strikes or disputes. A report, embodying the views of the Committee on these points, has been approved by the Executive Council.

Labor Conditions

Your Committee are convinced that the radical and unreasonable elements of labor have lost a great deal of ground during the past year, and are being discarded by the moderate elements, who realize that they and the employers are mutually concerned in the productive organization of the country, and that their interests can best be served by consultation and co-operation rather than by disagreements and strikes.

All of which is respectfully submitted.

C. H. CARLISLE, *Chairman.*

J. T. STIRRETT, *Secretary.*

J. E. WALSH, *General Manager.*

Report is Adopted

The motion to adopt the report of the Industrial Relations Committee, which was read, in part only, by the General Secretary, was moved by Mr. J. O. Thorn, Winnipeg, and seconded by Mr. H. G. Wright, Hamilton.

MR. J. R. SHAW (Woodstock): "Mr. President, of course this report will be unanimously adopted, but the portions of the report that have been skipped by the Secretary, because they had been previously published, deal in the main with the work that was performed by Mr. Parsons for us at Washington. The thanks of this Association should be extended to Mr. Parsons for going to Washington, and so ably representing us at this great international conference. I only rise for the puprose of calling the attention of those members who may not have been familiar with the situation to this fact. At the international conference at Washington which followed the national conference at Ottawa Mr. Parsons was the representative of the Association, and our nominee. He was appointed by the Government, and was there officially as the representative of Canada. Still, at the same time he was our nominee, and he went there to represent us, and he did it most effectively, and with great credit to the Canadian Manufacturers' Association."

MR. G. W. MCLAUGHLIN (Oshawa): "Mr. Chairman, I would like to add my appreciation. I am very much in accord with the sentiment expressed by the previous speaker, Mr. Shaw, of Woodstock. During those very serious days I followed the events as they transpired at Ottawa, as a Canadian citizen as well as a manufacturer, and I am sure I was highly gratified at the very exalted position, the high moral tone and the breadth of view that was manifested by Mr. Parsons in connection with that very important matter. It seems to me that his handling of it placed it upon a very high stand, and we as members of this Association are under a very considerable debt of gratitude to him for the way in which he dealt with the entire situation, and also to the other members who have made up this report of the Industrial Relations Committee. It has been one of the very important matters that has come before the Association during the past year, and I think we are all very highly pleased with the way in which the different representatives of this Association conducted themselves throughout those entire negotiations, and as a member of the Association, I am in very hearty accord with the remarks made by Mr. Shaw."

Tribute to B.C. Delegates

MR. J. S. MCKINNON (Toronto): "Mr. President, will you permit me to say a few words. The two previous speakers have referred to the splendid work done by Mr. Parsons at Washington. Would you allow me to draw your attention and the attention of the Convention to page one of the report, and to the National Industrial Conference at Ottawa. I would like to bear testimony to the work done by the representatives for British Columbia and the City of Vancouver at the industrial conference held in Ottawa during last September." (Applause.)

The motion was put to the meeting and carried.

THE PRESIDENT: "It was my pleasure, gentlemen, at one of our meetings held in Toronto to acknowledge Mr. Parsons' services. We all felt that something should be done that he would not forget the service he had rendered to the Manufacturers Association. It took the form of an illuminated address which was presented to him, but I do think that this meeting, being in annual convention, should, while in convention, confirm what was done at the Council meeting. It has therefore been moved by Mr. Shaw, seconded by Mr. McLaughlin, that a vote of thanks be passed to Mr. Parsons. I ask your wishes. Those in favor?"

The motion was carried with applause.

THE PRESIDENT: "May I also express to Mr. Thomson our thanks for the work he did with us in Ottawa. I had, will I use the word, the pleasure of attending that Conference, and I can support the remarks Mr. McKinnon has made. To put it very plainly, Mr. Thomson worked like a horse, and a good many others did also."

MR. J. P. THOMPSON (Vancouver): "Mr. Chairman, on behalf of the other delegates who went to Ottawa, may I say that we went there to do our duty—our duty by British Columbia and by the Canadian Manufacturers Association as well as to the other side of the house, and we did it as we thought best in our words and actions."

Mr. Parsons Thanks the Meeting

MR. S. R. PARSONS (Toronto): "Mr. President and gentlemen: I am sure I am deeply grateful for the motion of appreciation which you have passed in regard to the services which to a limited extent, a very limited extent, I was able to perform in connection with the International Labor Conference in the City of Washington last fall. Very much might be said and very much of interest to the members of this Association, especially those who live in the West and who perhaps had not the opportunity of hearing the report which was presented when I returned from Washington. This is not the time, however, for making any extended remarks, and I would simply say to you this, that on a number of leading questions which came up, all the delegates to the Conference were united—matters which concerned the working of women and children, the bettering of the conditions of those who were employed in factories in the different countries of the world, and humanitarian projects, which, of course enlisted our sympathies to the fullest possible extent.

"We could not agree, however, upon the question as to which we disagreed at Ottawa, namely, the eight-hour day. Fortified as I was by the views of the employers at the National Conference at Ottawa, I had, of course, to object to the eight-hour day. Now I am sure, like other employers, I was misunderstood perhaps in regard to this. I may say that in my own plant we have the eight-hour day. We have also working conditions that are very satisfactory on account of the fact that we have in existence a co-operative committee dealing with wages, hours, and conditions of work, and all such matters; we have also a system of bonuses. But what we felt was this, that a universal eight-hour day, considered to-day in the light of the shortage of production the world over, was a thing which would be a calamity coming upon any country, and especially a new country like Canada that should not only produce to satisfy our own interests, but produce for all the world. Therefore I feel sure that in opposing this, as we did, that the employers of Canada generally of course were with us fully and completely.

"I would just like to say another thing, and that is that, while it appeared that we were hopelessly in the minority, as we were, in fighting against the eight-hour day, it should not be forgotten that the United States of America was not officially represented at that Conference; and we all know from the discussions that have taken place in the Senate of the United States that no matter what may be done there—and it is my own view that the United States will yet ratify the Treaty of Peace; I hope this will be the case, and if so there will be reservations which will mean that they are not tied; in fact they have refused absolutely in these reservations which have been brought forward to be tied in matters of immigration, of labor, of traffic in drugs, and all other domestic questions, so that I am persuaded that the United States will be with us in this matter of the eight-hour day. Therefore, while we seemed to be standing alone, we were standing for the United States as well as for Canada."

Insurance Committee's Work for the Year

A Review of Fire Losses for 1919—The Use of Automatic Sprinklers Increasing—Judge Masten's Report Considered—The Group Life Insurance Plan—Objections to the Taxation of Unlicensed Insurance Companies

Report of the Insurance Committee

At the last Annual Meeting your Committee reported that available statistics showed Canada leading the world in fire waste.

Statistics furnished by *The Monetary Times*, Toronto, which has made a careful study of fire waste over a period of years, indicate that in 1918 fire cost Canada 241 lives and about $32,000,000, exclusive of the lives and property lost in forest fires.

In 1919 statistics compiled by the *Monetary Times* show a slight improvement so far as loss of life is concerned, and a decided improvement so far as the loss of property is concerned: 225 lives were lost and $23,000,000 worth of property was destroyed by fire in Canada, exclusive of forest fires.

In 1918 the fire loss of the United States for each person of the population was about $3 per year. For Canada it was nearly $4. For 1919 the United States loss is slightly less than $3, and that for Canada is $2.90. Taken together, United States and Canada still lead the world, and the contrast between the fire waste of the North American Continent and that of Europe is marked. The average annual fire loss of the leading countries of Europe before the war was between 30 and 35 cents per person per annum. Consequently the present fire waste of the North American Continent is about ten times that of the principal nations of Europe before the war. When the enormous loss of life and property through forest fires is added to this total, the total destruction is appalling.

Automatic Sprinklers

Your Committee are gratified to be able to report that the installation of automatic sprinklers is increasing, which your Committee thinks will have a greater effect than any other measure in reducing the loss of life and property through fire. Without going so far as to advocate compulsory installation of sprinklers, your Committee strongly recommend that everything possible be done through education to encourage their use.

During the year your Committee forwarded a suggestion to the Canadian Bankers' Association that banks should loan money as generously as possible to manufacturers for the purpose of installing sprinkler equipment. It was pointed out that such action would be to the benefit of the banks, since the value of the property would be actually increased, and the danger from fire would be reduced to a minimum. The President of the Bankers' Association issued a circular to all banks in Canada, commending our suggestion to the sympathetic consideration of all branch managers. Your Committee was consulted by the Department of Insurance of the Dominion Government in regard to its proposal to establish an inspection service in connection with the Dominion Fire Prevention Association. The Superintendent of Insurance pointed out that in 1918 insurace premiums exceeding $38,000,000 were paid by property-owners to fire insurance companies operating in Canada, which was a very heavy burden to bear. The Department is now sending engineers to survey properties, make recommendations and supply estimates, with a view to lessening the hazard of fire and consequently reducing the insurance rate. This service is offered, without cost, as part of the general campaign of the Government against fire waste, and places no obligation on property-owners taking advantage of it.

Judge Masten's Report on Insurance

Your Committee referred at length at the last Annual Meeting to the report made by the Hon. Mr. Justice Masten, who was commissioned by the previous Ontario Government to inquire into the insurance laws, other than life and marine insurance, of the Province of Ontario. It was reported at that time that his findings justified the representations made by this Association before the Commission. Since the last Annual Meeting the Association has asked the Government of the Province of Ontario to give effect to the findings of this report. In order that the Ontario Superintendent of Insurance may be given a free hand, the Government has decided not to bring down any legislation this year on Judge Masten's report, but the Superintendent has promised to give the representations of the Association, now in his hands, very careful consideration. Although Judge Masten's investigation was limited to the Province of Ontario, it was dealt with at length in the report of the last Annual Meeting, and is referred to again this year because there is no doubt that any law enacted as a result of the Commissioner's findings will influence the insurance legislation of other Provinces.

Your Committee strongly approve of the following recommendations made in the Commissioner's report:

(1) That there should be some form of control by the Province of all rate-making organization, with power to the Superintendent or a specially appointed tribunal to inquire, mediate and report in respect of charges against such rate-making organizations of unfairness or discrimination.

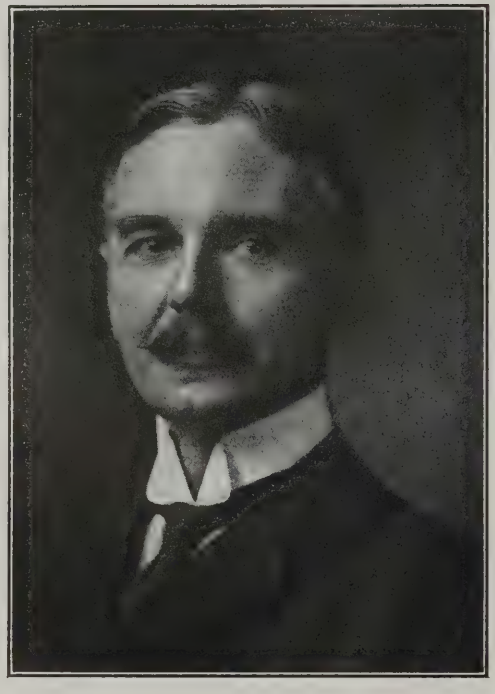
(2) That insurance companies should be required to keep records in such a way as to classify all business transacted so that the profit or loss on each class of risk may exercise an effect on the insurance rate of each class.

(3) That any attempt to interfere with the freedom of unlicensed competition is strongly deprecated, particularly in view of the large measure of control exercised by the Canadian Fire Underwriters' Association. Any tax imposed on the assured in respect of business placed with unlicensed companies would, to a great extent, nullify the advantage of such unlicensed competition.

(4) The appointment of a Board of business men and experts to co-operate with the Fire Marshal and make recommendations which may be given the force of law with respect to building regulations and fire prevention generally.

Group Life Insurance

Your Committee are pleased to report that final action has been taken in regard to group life insurance. Discussion on this subject was opened with the Government in a letter from the Insurance Department of the Association to the Government, dated September 19th, 1917, arising out of requests from several members for information.



Your Committee continued to investigate the subject and to gather all possible information and statistics relating to it.

On April 24th, 1919, the following resolution of your Committee was approved by the Executive Council:

"That the Insurance Committee proceed to take the necessary steps to have the Insurance Act amended so as to provide more satisfactorily for the transaction of group life insurance in Canada."

In accordance with the above instructions received from Council, your Committee asked the Department of Insurance to provide the necessary facilities for the transaction of industrial group life insurance in Canada.

Your Committee beg to report that the various obstacles and objections to group life insurance have now been removed and that it is possible for life insurance companies

H. W. Fleury
J. Fleury's Sons, Aurora
Chairman, 1919-20, Insurance Committee

to insure groups of employees in this country without examination and at considerably lower rates than have been hitherto available.

Your Committee believe that the only form of insurance which is practicable on the group plan is the one-year renewable term insurance. All other forms are found to be too expensive to be borne by the employers alone. There is no equity under an annual term policy unless its renewal is maintained, which accounts for the low premiums charged. No medical examination is required of the employees, providing that a group of at least fifty is insured. The advantages of group life insurance have been proved in the United States to be very great. It has the effect of doing away with a great many labor troubles, discouraging strikes and generally improving the morale of the employees. An employer of labor can, to a large extent, dictate the terms of the contract. He may insure employees for the amount of their annual wages or for an arbitrary amount. A favorite plan in the United States is to start the insurance at, say, $500 per employee and increase the amount by annual increments, thus providing a reward for continuous service. It is usual not to insure any employee until he has been a certain length of time, say three or six months, in the manufacturer's employment. This has been found to do away to some extent with the problems of casual labor. The rates charged are extremely low, but, of course, increase each year with the age of the individual employees.

Group life insurance is scarcely yet out of the experimental stage. Some of our members who have tried it endorse it strongly; others are doubtful of its benefits, and a few condemn it. The Association has taken the position that, as a number of our members wanted this type of insurance, it should try to provide the facilities for its transaction.

Proposals to Tax Unlicensed Insurance

The Association, on the advice of your Committee, opposed any suggestions or proposals to place a tax on unlicensed insurance, either by the Dominion or Provincial Governments.

The imposition of such a tax would undoubtedly have the effect of eliminating that competition which has proved so beneficial to the interests of the Canadian policy-holders. The imposition of any tax whatever would seriously diminish the value of such competition, which is even now scarcely adequate to enable insurance buyers to obtain equitable rates and conditions.

The value of this competition can hardly be exaggerated. It has not only been responsible for the maintenance of reasonable rates, but has been a most important factor in the reduction of Canada's appalling fire waste. It is only by practical encouragement that Canadian property-owners can be brought to eliminate as far as possible the hazards of fire. It would surely be unjust to deprive such property-owners as do adopt efficient fire protection methods of any part of the advantage derived from their care and expenditure.

The amount of revenue which would be derived from a tax on unlicensed insurance would be very small, indeed. It can certainly not be calculated on the volume of insurance now placed abroad, for the simple reason that, with the possible exception of the insurance placed with New England Mutual companies and reciprocal insurance exchanges, the tax would effectually prevent the transaction of insurance with companies not licensed. Still excepting the New England Mutual and reciprocal business, the average reduction from tariff rates obtained by placing insurance abroad cannot greatly exceed 15 per cent. In some cases, such as lumber yards, the reduction obtained from unlicensed Mutual companies is higher, but that is offset by the fact that large amounts of insurance on industrial plants are placed at a much smaller reduction, and, in some cases, the actual tariff rate is paid. Practically the only class of unlicensed insurance which would survive the tax would be that placed in the New England Mutuals, the rate on which is so low that very little revenue, indeed, would be produced. Assuming that insurance to the extent of $160,000,000 (about half the total unlicensed insurance) is placed with New England Mutual companies, a tax of 15 per cent. would yield a revenue of less than $25,000. As already stated, the great bulk of the balance of unlicensed insurance now in existence would be allowed to expire for lack of incentive to seek competition. The result of the tax would, therefore, be the destruction of unlicensed competition, without any adequate competition in the way of revenue. Licensed tariff companies already control eighty per cent. of the total insurance on property in Canada, so that any lessening of competition would result in a virtual monopoly. This would seriously

affect every policy-holder in Canada, since the very existence of the competition benefits alike those who take advantage of it and those who do not.

It is very strongly the opinion of this Association that insurance is not proper subject for taxation. Insurance is not in any sense a commodity. An insurance policy is a contract under which the insurer agrees to pay a financial indemnity in the event of certain conditions arising. The taxes paid by licensed insurance companies cannot be considered as a tax on insurance. Such taxes are very properly imposed for the privilege of carrying on a profitable business and hamper the insurance companies to no greater extent than the taxes paid by other business firms. A tax on unlicensed insurance, however, would be paid by the individual policy-holder. The banks are subject to taxation for the privilege of carrying on a profitable business. Would it not be as reasonable for them to seek legislation imposing a tax on all money borrowed from foreign countries? It must not be lost sight of that, while the transaction of insurance with unlicensed companies involves the sending of considerable sums of money out of Canada in premiums, a great deal returns through the payment of losses. Indeed, some unlicensed companies claim that the transaction of insurance in Canada during a period of years has resulted in a direct loss to themselves.

The Dominion Superintendent of Insurance stated emphatically that the tax in question had been suggested entirely with a view to revenue, and not as a measure of protection for licensed companies, and he added that he fully realized the value of the existence of competition. The great percentage of insurance transacted by the licensed companies proves, of course, that they are not in need of protection, and it is with pleasure that this Association notes the Superintendent's acquiescence in this view. The Association, therefore, need only repeat its earnest conviction that the harm done to the community as a whole through the imposition of a tax on persons taking advantage of the existing competition would very much more than offset the comparatively trifling revenue which such a tax would produce.

Insurance Department Services

Your Committee desire to point out that our Insurance Department, which is managed by Messrs. Willis, Faber & Co., Limited, a well-known firm of insurance brokers, gives varied services to our members in any part of Canada, including the examination of policies, suggestions as to contracts, confidential reports regarding the standing of insurance companies, and general advice on insurance. During the past year the Insurance Department has given service to members on 384 occasions, and has been consulted by about 300 members in all.

The following table shows the various kinds of service given by the Insurance Department and the number of times each kind of service was given:

Examination of policies and policy wordings	87
Rates	95
Automatic sprinkler equipment	18
Standing of companies	23
Inspection of service	63
Construction advice	38
Boiler inspection law	32
General	19
Group life insurance	9
Total	384

All of which is respectfully submitted.

H. W. FLEURY, *Chairman.* J. T. STIRRETT, *General Secretary.*
J. E. WALSH, *General Manager.*

Report is Adopted

In the absence of the chairman of the Insurance Committee, Mr. H. W. Fleury, the foregoing report was read by the general secretary. It was thereupon moved by Mr. Henry Bertram, Dundas, seconded by Mr. C. G. Robson, Edmonton, that the report be adopted. There being no discussion, the motion was put to the meeting and carried unanimously.

Legislation Committee Covers Wide Field

Immense Amount of Legislation, Both Dominion and Provincial, Comes Under Consideration—Divisions Now Handling the Work Pertaining to the Provinces —Details of the Various Measures Introduced in the Legislatures This Year

Report of Legislation Committee

YOUR Legislation Committee has pleasure in submitting its report on the work of the Legal Department for the past year, in the hope that the results secured will prove beneficial.

FEDERAL

Company Licensing Cases

Upon the combined application of a number of Dominion Companies specially interested, His Majesty's Privy Council has granted leave to appeal in the three test cases which were instituted by the Association for the purpose of testing the validity of the company licensing laws of the Provinces of Saskatchewan, Manitoba and Ontario. The three cases have been ordered by their Lordships to be consolidated in one appeal, the effect of which will be to make the cases practically a reference on the whole subject of company licensing, so that it is likely a broad judgment will be obtained determining the questions arising not only on the particular Acts in question but also on the Acts of the other provinces.

In view of the appeal, naturally no serious attempt has been made in any of the provinces to enforce the licensing Acts as against Dominion Companies.

Should the final decision be unfavorable it is the intention of your Legislation Committee to take steps to arrange a conference of executive heads of the various Governments with a view to arrive at a working arrangement, having regard to an equitable division amongst the appropriate Government departments of the fees for incorporating and licensing companies. The vexed question of Dominion and Provincial incorporations might possibly be solved were the Dominion to pay over to the provinces interested the fees which are obtained by the incorporation of companies having head offices in those provinces.

Taxation

One of the problems with which your Committee has been concerned is the constant effort of the Provincial Governments to secure revenue from extra Provincial sources, not only in the case of Company licenses but also in stock transfer taxes, income taxes and other forms of imposts. It is considered good Provincial financing to make outsiders pay, partly of course, because they can offer no effective resistance. Thus Provinces undertake to tax Companies not only on the capital employed in the Province but on their paid-up, or even their authorized capital, regardless of the fact that a portion of it may be used outside the Province. The result of this is that the whole capital of a Company is subject to taxation many times over by different Provinces. It is obvious that such a tax incidence is not only unjust but produces untoward results from an economic standpoint. Incidentally, of course, the Provinces are confined to taxation "within the Province," and it is arguable that this means persons and property in the Province, and that a Province has no power to tax either persons or property outside the Province.

Sooner or later, there will have to be some allocation of, or reciprocity in, the exercise of the powers of taxation as amongst the different Provinces, and perhaps as amongst the different parts of the Empire. Your Committee are hopeful that with the settlement of the questions in the company cases, more progress may be made in the adjustment of the fiscal powers of the Provinces in other branches. This subject will receive the continued careful consideration of your Legislation Committee.

Bankruptcy Act

After discussion in the Canadian Parliament during two sessions and preliminary preparations extending over several years, a Federal Bankruptcy Act was passed in the 1919 session, which may be regarded as a factor in the readjustment incidental to the war. During the course of the Bill, our Legal Department, through our Ottawa office, kept in close touch with the Government and with other public bodies upon the subject, with a view to safeguarding the interests of manufacturers, and we are glad to state that we were able to introduce very important amendments which are incorporated in the Act and which will contribute to the greater protection of creditors, in line with the legislation of other countries.

Amongst these amendments we particularly urged the adoption of provisions for proper accounting by, and discharge of, trustees in bankruptcy, and procured the enactment of effective clauses providing that unclaimed dividends shall be deposited by the trustee with the Receiver-General of Canada, to be afterwards available to creditors entitled thereto, with accrued interest thereon.

The Act provides that a creditor or several creditors together, knowing a debtor to be insolvent and unable to collect his account, and having a claim of $500, may apply to the courts to have the debtor adjudged a bankrupt. The whole circumstances of the case will be passed upon by a judge of one of the courts which have been constituted by the Act, courts of bankruptcy to carry out the provisions of the Act. The court may dismiss the petition of the creditor, may stay the proceedings, or may grant an order, as the circumstances warrant. In the past, when a recalcitrant debtor has refused to make an assignment under the assignments acts, the only course the creditor had was to issue a writ, obtain judgment and issue execution; the result was that every creditor had to follow suit in order to protect his interest and the unfortunate debtor was loaded down with costs, the estate being distributed by the sheriff *pro rata* to those creditors only who had taken action.

The Act also provides for the discharge of an honest debtor who has turned over his assets for the benefit of his creditors, relieving him from a load of debt that he has been unable to pay. Machinery is provided by which a debtor may make application to the court for a discharge from his liabilities; all persons interested in the case may appear before such court, and, after hearing all the evidence, the judge will decide whether the debtor shall receive his discharge power being vested in the court to refuse the discharge absolutely, or it may suspend for a time the discharge, or it may grant a conditional discharge, say, until the debtor has paid fifty cents on the dollar, or by requiring the debtor to consent to judgment being entered against him for any balance

owing at the date of the discharge, such balance to be paid out of future earnings or after-acquired property. Some of the things that will militate against a debtor obtaining his discharge, are that his assets at the date of the assignment were not of a value equalling fifty cents on the dollar of the unsecured liabilities; that the debtor has omitted to keep proper books of account; that the debtor continued to trade after knowing he was insolvent; that the debtor has failed to account satisfactorily for loss of assets or deficiency of assets to meet his liabilities, or has brought on his bankruptcy by speculation or by unjustifiable extravagance in living, or by gambling, or by culpable neglect of business; that the bankrupt within three months of the assignment has given an undue preference to any of the creditors, or that he has been bankrupt before, or has been guilty of fraud, or fraudulent breach of trust. There will be no difficulty for an honest debtor who has turned over all of his assets to his creditors, to obtain his discharge; the Act is framed to protect such a debtor and to penalize the fraudulent one.

The new Act will become operative on 1st July next, when the old assignment acts of the various provinces will become non-effective.

Meantime, an amending Bill has been introduced in the present session by Mr. S. W. Jacobs, K.C., Montreal, providing: (1) that a trustee must deposit in a separate bank account the proceeds of each estate; (2) for the payment of remuneration to inspectors for services to bankrupt estates, and (3) rescinding the penalties in the original Act against improper petitions in bankruptcy. These amendments were suggested by mercantile and financial interests and present no objectionable features.

Your Legal Secretary on 9th August last, issued a special circular to our members, explanatory of the special features of the new Act.

It is believed that the facilities the new Bankruptcy Act will have secured for the trade of the Dominion in the economical realization of the funds of the bankrupt on a uniform basis through the whole of Canada and their fair and equal application to as great an amount as possible to the payment of his debts will become increasingly appreciated with greater experience of the operation of the Act.

Patents and Copyrights

The amount of invention, improvement and advance in the great variety of industries of a country are proportionate to the encouragement given by the laws of that country. Such laws should be framed to give the greatest possible protection and encouragement to the inventor, while at the same time, not infringing upon the rights of the public. To bring into the world a new idea is to make a step in advance of existing conditions. A step in advance, in any industry, is important, generally to the entire public, both as affecting the particular industry and as an incentive to other advances.

Recognizing these facts, the Minister of Trade and Commerce has introduced a Bill in the present session to amend and consolidate the acts relating to patents of invention. Your Legal Department promptly submitted copies of the Bill to various manufacturers believed to be interested, and took counsel with several Patent Attorneys, who are members of the Association. With the information thus obtained, the Legal Department prepared a brief which was submitted personally by your Legal Secretary to Mr. Geo. F. O'Halloran, K.C., Commissioner of Patents, Ottawa, on 13th ult. After discussion, the Commissioner intimated that the suggested amendments would be adopted. It is believed that when the new Bill is enacted, it will be a great advance on any previous legislation on the subject in Canada.

A Bill has been introduced in the present session by Sir George Foster to establish a uniform period of copyright protection. It further extends copyright protection to gramaphone records, films and lithographs. Protection is also provided for the works of Canadian authors throughout His Majesty's Dominions.

Combines and Fair Prices Act

Pursuant to a recommendation of the committee appointed to inquire into the high cost of living, the Canadian Parliament, in last session, passed an Act creating a Board of Commerce, to consist of three commissioners, each appointed by the Governor in Council for a term of ten years, their whole time to be devoted to the duties of their office. The Board

Sam Harris
Harris Litho. Co., Toronto
Chairman, 1919-20 Legislation Committee

is charged with the general administration of the Combines and Fair Prices Act, 1919, which was enacted to provide machinery for the investigation and restraint of combines, monopolies, trusts, and mergers, and to restrain the enhancement of prices of commodities.

The price-fixing profit-limiting inquisition created by this Act, is a more or less logical development of the war with its call for sacrifice, and its appeal to the people to subject themselves without complaint to the will of a few individuals. Arbitrary interference with the business of the country and with the right of individuals to agree upon price, could only culminate in lessened production and advancing prices.

Doubts having meantime arisen as to the status and powers of the Board of Commerce, the Board submitted a stated case to the Supreme Court of Canada to determine whether in fact Parliament had power to create the Board of Commerce. A copy of the stated case being served on the Association and other representative bodies, your Legal Department instructed Mr. W. N. Tilley, K.C., as Special Counsel, to represent the Association on the argument. The

Supreme Court of Canada adjourned on 25th March without handing down judgment, and it is understood that the Court desires to hear Counsel again before final judgment is handed down.

Uniformity of Commercial Law

It has long been generally recognized that the independent action of the various Provincial Legislatures has resulted in a diversity of legislation which, especially with regard to commercial law, raises a serious obstacle to commercial intercourse between different parts of the Dominion, and is a source of embarrassment to British and foreign merchants doing business in Canada. In the United States, where a similar but perhaps more complicated situation exists, work of great value has been done for the past twenty-eight years by the National Conference of Commissioners on Uniform States Laws.

The obvious benefits resulting from the meetings of the State Commissioners in the United States suggested the advisability of similar action being taken in Canada, and on the recommendation of the Council of the Canadian Bar Association several of the provinces passed statutes providing for the appointment of commissioners to attend a conference of commissioners from the different provinces for the purpose of promoting uniformity of legislation in the provinces.

The second annual meeting of the Conference took place in Winnipeg on the 26th, 27th, 28th and 29th days of August, 1919, when consideration was given, *inter alia*, to drafts of model statutes relating to the following subjects:

(1) Bulk sales.
(2) Conditional sales.
(3) Fire insurance policies.

These drafts will again be presented for consideration at the next meeting of the Conference, and meantime, the drafts will be considered by all interested parties.

The Conference also considered and adopted the reports of Committees on the following subjects:

(1) Legislation drafting.
(2) Sales of goods and partnership.

The English Sales of Goods Act, 1893, has been adopted in New Brunswick and Prince Edward Island, as a result of the first meeting of the Conference. This statute is now in force in all the Provinces of Canada, except Ontario and Quebec. A Sale of Goods Act founded on the Sale of Goods Act, 1893, has, however, been introduced by Hon. W. E. Raney in the present session of the Ontario Legislature, in connection with which certain practical suggestions were made by your Legal Department and acknowledged by the Attorney-General.

The English Factors Act, 1889, has also been adopted in New Brunswick, and is now in force in six provinces. The adoption of these statutes at the instance of the commissioners of these provinces, is worthy of note, as being the first legislation passed as a direct result of the meeting of the Conference.

Statutes have been passed in some of the provinces providing both for contributions by the provinces toward the general expenses of the Conference and for payment by the respective provinces of the travelling and other expenses of their own Commissioners who receive no remuneration for their services. It is hoped that similar statutes will be passed by the other provinces.

It should be stated that the appointment of commissioners does not bind any province to accept any conclusions arrived at by the Conference, and that such uniformity of legislation as may be secured by the labors of the Conference will depend upon the subsequent voluntary acceptance by the Provincial Legislature of the recommendations of the Conference.

Your Legal Department purposes to keep in close touch with the work of this Commission, and it is possible that practical suggestions may be made from time to time which will not only be of assistance to the Commission but of special benefit to the Canadian Manufacturers' Association.

Co-ordination of Labour Laws

At the National Industrial Labour Conference, held in Ottawa, last September, provision was made for the appointment of a committee to investigate the possibility of co-ordinating the labour laws of the various provinces. This committee was constituted as follows: One representative from the employers; one representative from labour; one representative from the general public.

These three formed the Dominion section of the committee. The remainder of the committee was constituted by a similar representation from each of the provinces.

All the various provinces, except Prince Edward Island, which is not industrial, agreed to nominate representatives and participate in the Conference.

The Executive Council nominated Mr. J. G. Merrick, Secretary of the Employers' Association of Toronto, as the representative of the employers on the Dominion Section—the Ontario Division nominating Mr. Sam Harris, Chairman of your Legislation Committee, to act as employers' representative for Ontario on this committee.

The employers were fortunate in their selection of representatives—Mr. Merrick being a lawyer of many years' experience in labour legislation, and Mr. Harris as a manufacturer, having had broad practical experience of industry.

The Committee was informally opened at Ottawa on April 26th, by the Honourable G. D. Robertson, Minister of Labour, who narrated the steps leading to its creation.

It was agreed that the press be excluded from the sessions and that all reports for the press be given out by a committee, representative of the employers and employees. Consideration of unifying labour legislation was taken up in the following order: (*a*) Workmen's Compensation; (*b*) Factory Legislation; (*c*) Regulation of Mines; (*d*) Minimum Wage Legislation. All these questions were first referred to the sub-committees for consideration and report, then considered by the Committee as a whole.

There was a strong disposition on the part of the labour representatives at the commencement of the session to stir up criticism of the British North America Act and the consequent rights of the Dominion and Provinces, and to have the Committee discuss the functions of Government, with a view to making any amendments suggested apply through Dominion Government action instead of Provincial Government action, so that by one enactment, the whole of the country could be covered. The employers' delegates, however, strongly opposed the discussion of constitutional questions, which is the particular province of the law officers of the Crown.

As a special report on the work of this Committee is to be submitted to the Convention by the Chairman of the Legislation Committee, it is unnecessary to refer to the subject here in further detail, except to premise that any effective plan of co-ordinating industrial legislation as between the Dominion and the Provinces will be of vast benefit to all.

PROVINCIAL

The following is a summary of the matters which have more immediately engaged the attention of the Divisional Legislation Sub-committees during the year:

Ontario Division

(*a*) *Workmen's Compensation.*—The year 1919 was the fifth year of operation of the present Act. The returns for

the year, the first after the close of the war, show considerable readjustment but less falling off in the general volume of industry than might have been expected.

Ontario was, with the exception of Quebec, which passed a Workmen's Compensation Act in 1909, the first province to introduce a Workmen's Compensation Act. The other provinces, with the exception of Prince Edward Island and Saskatchewan, were quick to follow the example of Ontario.

The Ontario Workmen's Compensation Act was drafted and recommended for adoption by the Hon. Sir William R. Meredith, C.J.O., Royal Commissioner. It was passed substantially as recommended by him and came into force on 1st January, 1915.

The Canadian Manufacturers' Association, representing 2,100 Ontario industries and employers of labour, employing approximately 400,000 workers, is in favor, as it has been from the outset, of a humane and liberal measure for the compensation of workmen injured by accident, and their dependents.

A comparison of the compensation benefits provided by the Ontario Act with those provided by the Acts of other jurisdictions shows that, with only the possible exception of Manitoba (which is not a manufacturing province) the scale of compensation as provided by the Ontario Act is very much higher than that provided by any other Province or State.

In Ontario compensation is paid during the entire period of disability of the worker, or in case of his death, until the death or remarriage of the widow, while in most of the States the period during which compensation is paid terminates at the end of 300, 400 or 500 weeks. Another respect in which the Ontario Act compares most strikingly with the different American Acts is in the matter of medical service. Under the Ontario Act the Board is enabled at the employers' expense to pay for medical aud surgical aid and hospital and nursing services without limit as to length of time or as to amount. In the United States, on the other hand, while 42 of the 45 States provide medical service, all except five of these 42 limit the amount of the medical service to be furnished by the employer.

Further, the maximum payment provided in Ontario of $21.15 per week (payable if necessary for life) is (except Manitoba) the highest compensation on this continent, the next highest being $20.83, which is provided by the California Act. In all other States, the scale of compensation is much lower than in Ontario and moreover the amount of compensation is limited to a fixed aggregate amount.

The above-mentioned scale of compensation, namely 55 per cent. of the average earnings with a maximum of $2,000, was only decided on after the most exhaustive study and a most patient hearing of both sides of the question extending over three years (1910 to 1913). (See page 15 of Chief Justice Meredith's Final Report.) It is not to be forgotten that though it is five years since this scale was fixed it cannot be said to be out of date in the way that a price fixed five years ago would be. In other words it is a percentage—and a percentage on something which has not stood still, namely wages. If, therefore, the ground for the present demand is the increased cost of living, the answer is that the rise in wages has at least kept pace with the general rise in prices. The effect of this on the working of the Compensation Act is clearly seen in the fact that the amount paid for compensation and medical aid in 1919 was $4,192,859.93, as compared with $3,883,994.84 in 1918 (an increase of $308,865.09), though the total number of cases in 1919 was only 44,280 as compared with 47,848 (a decrease of 3,568) in 1918. This increase in the amount paid, while the number of accidents was reduced, was due to the increased benefits under amendments to the Act and increased wages. A further point in connection with the increasing burden constituted by the provisions of the Act may perhaps be brought out most clearly by quoting a sentence from the final report of Chief Justice Sir William Meredith. (See pages 5 and 6.)

"I agree that the ultimate burden of paying the compensation under such a law as is proposed falls upon the community and that whatever the employer has to pay whether directly by way of compensation or if he insures against his liability by paying insurance premiums, forms part of the cost of that which he produces and is added to the selling price."

Another point which your Committee brought to the attention of the Government was that every improvement in the lot of the urban as compared with the country worker must have the effect of intensifying the tendency, already so well marked, to drift from the country into the town. Unless the Government are prepared to bring the farming industry within the scope of the Act—and there is no logical reason (as Chief Justice Sir William Meredith pointed out in his final report) why it should be left out; they ought not, it was urged, to do anything to increase a drift into the towns, which is literally alarming.

Your Committee, having ascertained that a Bill containing drastic amendments to the Act was to be presented in the present session of the Legislature, several conferences were held between the Committee and the Toronto Branch Executive, who jointly arranged for a deputation to wait upon the Provincial Cabinet on the subject, when the deputation was promised that a copy of the contemplated Bill would be submitted for the consideration of the Committee, before presentation to the House.

Meantime, your Legal Department prepared a brief for the information of the members of the Cabinet, pointing out that a comparison of the compensation benefits provided by the Ontario Act with those provided by the Acts of other jurisdictions, showed that with only the possible exception of Manitoba (which is not a manufacturing province) the scale of compensation as provided by the Ontario Act is very much higher than that provided by any other Province or State.

Some of the more radical proposals of the amending Bill are:

1. An increase from 55 per cent. to 75 per cent. in the compensation rate.
2. A minimum rate of $12.50 per week.
3. Increased allowances for widows and children, viz., from $30 to $40 and from $7.50 to $10.
4. Making all increases applicable for the future to all cases now on the pension list.

These amendments will mean a direct increase of 36.3 per cent. in the present compensation, and will necessitate a great increase in the rate of levy on the industries now in operation, which will be obliged, under the retroactive feature of the Bill, to provide not merely for their own pensions but for the trail of pensions left behind by munition works and other industries which have done business from time to time since 1915, but have now been wound up.

Your Committee offered no opposition to increasing the allowances for widows and children.

We strongly urged that this Act is one for the compensation of the workmen; that is, men who work. It is not an Old Age Pensions Act, neither is it an Unemployment Insurance Act, and it was urged that the proposed changes were conceived to a large extent in the spirit of old age and unemployment insurance measures. However desirable these features might be, the Committee submitted that they should be furnished at the expense of the State in the first instance, and should not be incorporated in a measure

of industrial insurance, which is for the compensation of workmen, injured through accident, during their employment.

But the strongest criticism of the Bill was on the score that it would have the effect of increasing the danger of malingering. Even with the 55 per cent. scale, there is a considerable tendency to malinger, particularly, of course, among the boys and girls and the single men. To increase the scale to 75 per cent. is, obviously to intensify this tendency.

Finally it was urged that, before such far-reaching changes are made, there should be a thorough investigation of, and report on, the actual working of the present Act. A survey of 62 out of some 2,500 cases has already been made by the Board, with the result that it was found, to quote the Board's report for 1919, "there is an opportunity for every disabled worker (provided he is willing to seize it) to earn wages which, with his pension on 55 per cent. basis, will bring his earnings to a parity with what they were at the time of the injury."

No action should be taken, it was urged, until this survey had been extended to cover the entire 2,500 cases.

During the past year, a great deal of work has been done by the manufacturers of the province, with a view to eliminating the hazards of industry and making conditions more safe for the workers.

It is reported by the Accident Prevention Association that the manufacturers have shown a great readiness to comply with any recommendations made by the inspectors, and that in not a single case, during the past year, has there been refusal to carry out the suggestions made.

(*b*) *Assessment Act.*—For the past four or five years the City of Toronto, supported by other municipalities, has been urging a change in the Assessment Act, that would permit municipalities to tax income derived from dividends from industrial and mercantile concerns. Neither in the House nor in the Municipal Committee, however, did the project receive any favor. But, times have changed and the Municipal Committee has now accepted a Bill favored by Toronto, that will make all such dividends subject to municipal taxes.

Your Ontario Legislation Sub-committee, in co-operation with the Canadian Credit Men's Association, strenuously opposed the amendment before the Board of Control, and through your Legal Secretary, instructed Mr. A. C. McMaster, K.C., as Joint Special Counsel, to appear before the Municipal Committee. It was argued that the amendments discriminated against industrial and mercantile concerns and tended to drive capital from the province, but the Municipal Committee of the Legislature was obdurate.

The committee, in thus voting to add substantially to municipal revenue, accepted another proposal that will balance the increase to some extent. Hereafter, if the House endorses the stand taken by the committee, householders will receive exemption upon income up to $2,000. At present the exemption is $1,700 and the non-householders will be exempted up to $1,000 instead of up to $700. The exemption will not end there, however, for another bill to give a further exemption of $200 on each child under eighteen in the householders' family, was approved.

Quebec Division

The work of the Quebec Legislation Sub-committee during the past year has been considerable in volume. Much of the special details of the work, however, fell upon the shoulders of those members whose manufacturing interests were peculiarly affected by legislation which was introduced both before the House at Ottawa and in the Provincial Parliament at Quebec.

Overshadowing all the legislation which contained objectionable clauses, which were brought down in these Houses were the restrictions and demands made upon the manufacturing community by the Board of Commerce. During the year, history-making and celebrated arguments were carried on between this Board and various sections of the manufacturing interests.

The most important of these was perhaps that between the Board of Commerce and the textile manufacturers. This arose out of the issuance of a questionnaire which contained many objectionable clauses and caused the textile industry no little concern all over Canada. The Montreal textile people were particularly active in this matter and were later joined in their efforts by kindred manufacturing interests in the textile trade. The results of the efforts on the whole were satisfactory, but their final culmination is yet to be seen.

The latest work of the committee was that in connection with Bill No. 27, The Food and Drugs Bill, introduced in the House by Hon. N. W. Rowell, K.C., M.P. The results attained by the Montreal manufacturers affected by this bill doubtless crowned all previous efforts during the year, at Ottawa, of this character. They in co-operation with the Ontario manufacturers of similar lines put up a splendid and winning fight, which removed many of the objectionable clauses from the bill entirely, and deleted portions of other clauses not conducive to the welfare of manufacturers of lines affected.

The Quebec Division, through its Legislation Sub-committee, took a great interest in several measures going through the Provincial Parliament, chief among which was the bill introduced by Hon. L. A. David, Provincial Secretary, for the creation of a commission to draft a new civic charter for the City of Montreal. The Division demanded of the Government that it be given a representative on this commission. This the Government, however, refused to do, but gave the Division a fairly satisfactory assurance that the interests of the manufacturers of Montreal would be safeguarded in the drafting of the new proposed charter.

One or two more or less serious matters of difference between members of the Association over contracts, in different parts of Canada, were brought to the attention of the committee of the Quebec Branch, which co-operated with the Legal Department, head office, with a view to effecting settlements, and in every instance such efforts were successful.

Maritime Division

(*a*) *Workmen's Compensation.*—A Bill has been introduced at the Nova Scotia Legislature amending the Workmen's Compensation Act, providing for an increase in the amount of compensation from 55 to 66⅔ per cent., also increases in the pensions payable to the dependents in the case of a death. Representations will be made opposing this general increase.

(*b*) *Nova Scotia Accident Prevention Association.*—The Maritime Division has been successful in promoting an Accident Prevention Association in Nova Scotia, under the provisions of Section 80 of The Workmen's Compensation Act, the constitution of which is considered very favorable from the employers' standpoint and has been approved by the Compensation Board. Unity of executive control is effected by placing the administration under the Divisional Secretary of the Association.

(*c*) *Safety Work.*—"Sections have been organized for the metal trades and the lumbering and woodworking industries. A code of 'Rules and Regulations' for the metal trades was considered and adopted at a recent meeting of the section. This code has since been approved by the Workmen's Compensation Board and is now enforceable on all the industries

in the metal trades. It is anticipated that meetings will be held in the near future in an endeavor to organize 'sections' for the other classes under the Act."

A "field organizer" has been engaged to devote his whole time to visiting all sections of the province, to explain the organization and work of the Association to the individual employers, and in an endeavor to impress them with the necessity for actively co-operating in the prevention of accidents. Success in Accident Prevention Work depends entirely upon the interest displayed by the individual employer. If he is not a real convert as to what can be accomplished, a whole army of inspectors and safety engineers can not attain satisfactory results. In Nova Scotia the first object of our campaign is to interest the individual plant managers. When we get their support we are confident that something tangible can be done.

(*d*) *Minimum Wage for Women.*—An Act has been passed at the present session of the Nova Scotia Legislature providing for the appointment of a board of five members, to establish minimum wages and hours of work for women employed in factories and shops.

(*e*) *Development of Power.*—A Bill is now before the New Brunswick Legislature, which, if passed, will give the Government the right to take over and develop any water power site. There are a number of valuable sites from which power can be obtained, some of which it seems are being held for speculative purposes, and it is anticipated that the passing of the proposed Bill will assist towards the early development of some cheaper power in New Brunswick.

(*f*) *Factories Act.*—A Bill to amend and consolidate the New Brunswick Factories Act has been presented to the House. The chief new feature is that the Workmen's Compensation Board is given authority to make rules and regulations, governing the conditions in the factories, and to take action towards the enforcement of same.

(*g*) *Taxation of Unlicensed Insurance.*—A Bill entitled "An Act Respecting the Taxation of Certain Companies and Associations" has been presented to the New Brunswick Legislature. If the Bill passes as it now reads, certain clauses dealing with the taxation of insurance companies will prohibit the unlicensed insurance companies from doing business within the province. Opposition is now being worked up with the hope that certain amendments will be made.

(*h*) *Programme N.B. Federation of Labour.*—The New Brunswick Federation of Labour presented a very comprehensive programme at the present session of the New Brunswick Legislature. We were fortunate in procuring a copy a few days after it was presented, which afforded the employers the opportunity to prepare and present a brief dealing with the separate items, before any action was taken by the Government. As far as we can ascertain it has not yet been decided just what features may be brought up in the form of Bills for the House to consider.

Pacific Division

Discussion and action by the Legislation Sub-committee of the Pacific Division of the Association has taken place during the past year on the following principal matters, which can be roughly subdivided under the headings of Dominion legislation and Provincial legislation.

(*a*) *Armstrong Bill.*—After due consideration, it was felt that the object of this Bill, viz., the bringing under the jurisdiction of the Railway Commissioners of all inland and coastwise shipping, if attained, would not be in the best interests of industry in this Province. Consequently this division was placed on record as opposed to such legislation, and proper steps were taken to obtain concerted opposition to the Bill from other influential sources in the Province outside of the Association.

(*b*) *Business Profits Tax Act.*—Strong opposition has been expressed by this division to the re-enactment of this Act by the Dominion Government, and efforts to secure a similar expression of views from Boards of Trade in every section of the Province have been entirely successful.

(*c*) *Permanent Tariff Commission.*—This division has concurred in the policy of the Association in endeavoring to secure the appointment of a permanent, expert, non-political tariff board, and has been equally successful as in the matter of the Business Profits Tax Act, in securing expressions of approval of this policy from the majority of the Boards of Trade of the province.

(*d*) *British Columbia Minimum Wage Legislation.*—Certain findings made under the Minimum Wage legislation enacted in this Province in 1918 were found, in operation, to work greatly to the disadvantage of a considerable number of the members, and it is gratifying to be able to report that largely through the persistent efforts of this division important modifications have been made to the regulations governing the employment of women in the general manufacturing industry of the Province; notably in the matter of apprentices, this latter phase of the question being particularly vital to manufacturers in this Province, where the supply of female help is not so plentiful as in other parts of Canada.

(*e*) *Workmen's Compensation.*—The British Columbia Workmen's Compensation Act was amended at the last session of the Provincial Legislature, providing for certain increases in the scale of compensation to dependents of those killed or permanently disabled in industry. Taking into consideration present living conditions, and in view of the fact that the proposed increases would not materially affect the rate of assessment on industry, this division decided not to offer any opposition to the amendment to the Workmen's Compensation Act.

(*f*) *Health Insurance.*—A Commission presided over by the Chairman of the British Columbia Workmen's Compensation Board was appointed by the Provincial Government, and held hearings throughout the Province during the early part of this year for the purpose of securing expressions of opinion as to the desirability and practicability, or otherwise, of enacting legislation providing for Mothers' Pensions, Maternity Insurance, Health Insurance and Public Health Nursing.

In view of the unanimous recommendations of the Industrial Conference on these matters, this division decided to make no official representations before the Provincial Commission. The opinion of the Legislation and Executive Committees of the Division, arrived at after numerous discussions, was expressed in the following terms:

"Whereas the subject matter of Health Insurance as applicable to Canada will be investigated by a board appointed by the Dominion Government in response to request of delegates of National Industrial Conference, held September, 1919;

Therefore, we defer placing ourselves on record either as being opposed or in favour of such legislation until we have been privileged to peruse evidence produced by such investigation, to enable us to give intelligent consideration and expression of opinion on these important questions."

(*g*) *Health Insurance.*—The Legislation Sub-committee gave expression to these views at an interview which was arranged with the Premier of the Province in regard to these matters, and a copy of the foregoing resolution was also placed in the hands of various members of the Legislature.

At the time of writing a Bill is before the British Columbia House providing for Widows' Pensions, and will in all probability be enacted. No legislation on the other points dealt with by the Industrial Conference or the Provincial Commission will be considered this year.

(*h*) *Amendment to British Columbia Factories Act.*—It having come to the attention of the Legislation Sub-Committee that certain interests proposed to have introduced in the Legislature an amendment to the British Columbia Factories Act reducing the legal working hours in this Province from 48 to 44, the matter was promptly taken in hand and appropriate representations made to the Government as to the views of the manufacturers on the subject and the effect such legislation was likely to have on industry and production in this Province, where the legal hours of labor at the present time are shorter than in other localities with which the British Columbia industries come into direct competition.

As a result of the interview between representatives of this Division and the Government, we are assured that the interests of the manufacturers in this Province will receive first consideration by the Government before the introduction of such legislation as that proposed.

(*i*) *Proposed Eight-Hour Day in Lumber Industry.*—An Act was introduced in the British Columbia Legislature at the present session making eight hours the maximum working day in all branches of the lumber industry of this Province. Such legislation, if enacted, and particularly that feature of it prohibiting overtime employment, would have had a most serious effect on our members engaged in lumber, pulp and paper, and box manufacturing, and this Division co-operated promptly with other organizations in the Province in the preparation and presentation to the Government of the manufacturers' views in opposition to the bill in question.

It is gratifying to be able to report that the representations made have had the desired effect, the bill having been decisively defeated in the House.

(*j*) *General.*—From the foregoing it will be seen that the facilities offered through the Association have been exercised chiefly in work of a "preventative" nature, experience having proven that if proper steps are taken to combat, and, where possible, forestall, radical and destructive legislation, introduced in the greater number of cases from selfish motives or through ignorance, the thinking majority may be trusted through the natural development and progress of society to evolve sane and constructive legislation which will be fair to all concerned.

Prairie Division

1. *Alberta.*—The Legislature amended the Workmen's Compensation Act so as to provide benefits equal to those granted in Manitoba to-day. That is 55 per cent. to injured workmen and $20.00 per month to widows and $5.00 per month to children.

2. *Saskatchewan.*—The Saskatchewan Legislature at its recent session passed an Act to create a Bureau of Labor and Industries to gather information and public statistics regarding employment, hours, labor difficulties, labor organization, relations between capital and labor, conditions of employment, resources of Saskatchewan, and industrial development. The bureau will open and maintain employment agencies and administer the Factories Act. The Building Trades Act, the Electrical Workers' Act, Employment Agents' Act, the Mines Act and the Minimum Wage Act of the province.

An amendment was passed to the Factories Act limiting the hours of employment for youths, young girls and women in factories to forty-eight hours per week, and authorizing the Lieutenant-Governor in Council to make regulations for the construction and operation of elevators, hoists and dumb waiters. The amendment also provides that any person under sixteen years of age shall not operate an elevator for the carriage of passengers.

3. *Manitoba.*—A Workmen's Compensation Act has been passed by the Manitoba Legislature providing for the administration of compensation to workmen through a state fund to be collected and administered by a commission. This Act increases the compensation paid to injured workmen from 55 per cent. to 66⅔ per cent. It reduces the waiting period from six to three days. It increases the pensions paid to widows and children from $20.00 and $5.00 per month, respectively, to $30.00 and $7.50 per month. The allowance for funeral expenses is increased from $75.00 to $100.00. This Act will go into force on January 1, 1921.

An amendment to the Electricians' License Act was again introduced, providing for the cancellation of Clause 14, which was included in the original Act at the request of this branch, under which the chief engineer in a factory is empowered to make repairs to plant equipment. Except for this clause, licensed journeymen electricians would have to be brought into the plant to make minor repairs, involving delays in production, with consequent higher costs. The Law Amendments Committee finally stated that it was not the intention to cancel Clause 14.

A Temperance Act Amendment was introduced at the last session, providing for the purchase of alcohol for manufacturing purposes through a Government vendor in quantities not exceeding ten gallons at one time, and restricting the sizes of the packages in which the manufactured product containing alcohol could be marketed. A committee from the branch waited upon the Law Amendments Committee and pointed out that when a similar practice has been invoked in another province manufacturers have to pay 50 per cent. more for their alcohol than it could be obtained for from the distillers. Strong objection was, therefore, taken to purchasing from or through a Government vendor, although the committee expressed its willingness to assist the Chief Inspector administering the Temperance Act, to keep a proper record and check of all alcohol used for manufacturing purposes. It was also shown that the quantity of ten gallons was insufficient and impracticable; that the alcohol was usually purchased from distillers in bond; that the Inspector of the Inland Revenue Department would only release an original package at one time, and that the alcohol was actually mixed with other ingredients under the supervision of the Inland Revenue Inspector. In fact, in some cases, the duty was paid on the product which was manufactured under his supervision. At the suggestion of the Attorney-General, a conference was arranged with the Chief Inspector of the Temperance Act and an amendment was drafted to enable manufacturers to import any quantity of alcohol for manufacturing purposes in bond and secure a permit from the Chief Inspector to store while being used in manufacturing. Restrictions as to the size of the bottles in which toilet articles and flavoring extracts could be put up, namely 2½ ounces, were also cancelled.

The Industrial Conditions Act was passed at the session of 1919, but labor refused to nominate representatives for appointment of the Joint Council of Industry, but with the passage of an amendment at the last session specifically recognizing the right of employers and employees to organize for any lawful purpose, they have done this, and the board has been appointed. It consists of Dr. C. W. Gordon, Messrs. John Stovel, H. B. Lyall, W. B. Simpson and E. Robinson.

The Joint Council has had no applications placed before it as yet. It is felt here that under this amendment, it is desirable that all employers should reach some mutually satisfactory arrangement with their employees under which negotiations between them shall be conducted, and when

With the C.M.A. on Tour

In this picture of what President Howard facetiously described as Walsh, Howard & Co.'s Travelling All-Star Troupe may be observed such well-known figures as R. L. McIntyre, Toronto; F. W. Stewart, Montreal; H. L. Rous, Toronto; T. P. Howard, Montreal; J. S. McKinnon, Toronto; J. E. Walsh and S. R. Parsons, Toronto

this is done the Joint Council of Industry will not likely interfere therewith, providing a majority of the workmen can agree thereto.

Representation in Legislature

Your Legislation Committee feel that some attention might well be given by the Convention to the fact that while manufacturing is, next to agriculture, the great basic industry of Canada, the number of persons either in the Dominion Parliament or the Provincial Legislatures who can in any sense be taken to represent the manufacturing industry is wholly disproportionate to the importance of the industry. Your committee has been particularly impressed with this fact during the last year, when more than once legislation of a most radical and pronounced type has been introduced in the various Houses. It is not to be expected that others will safeguard the interests of manufacturers should the latter fail to look after their own interests.

General Work of the Department

The above comprise some of the more important matters dealt with by your committee.

A large number of matters of lesser importance, legislative and executive, have been the subject of consideration and action.

All the Parliamentary bills, federal and provincial, over 600 in all, also Orders-in-Council, and other technical documents, were examined by the department, some of the subjects being reviewed by the Legal Secretary in INDUSTRIAL CANADA for the information of our members, as well as being the occasion of extensive correspondence with manufacturers and others.

In addition to keeping in touch with legislative activities throughout the Dominion and endeavoring to protect the interest of manufacturers in the broader spheres, the department over which your Committee presides has enjoyed a year of greatly increased activity in advising members in the special branches of commercial law, taxation and other problems, to which it has been devoted. The department is also finding an increased field of activity in advising and co-operating with our other departments, and there is every prospect of a considerable enlargement of the work of the department during the coming year.

The constant co-operation of our Ottawa office in legislative matters during the year has greatly facilitated the work of the Legal Department, and all calls made upon our divisional sub-committees and secretaries have been promptly and efficiently met.

All of which is respectfully submitted.

SAM HARRIS, *Chairman.*

H. MACDONALD, *Legal Secretary.*

J. E. WALSH, *General Manager.*

Discussion of Report

The report of the Legislation Committee was read by the Legal Secretary, Mr. H. MacDonald. It was thereupon moved by Mr. J. A. Reid (Fredericton), seconded by Col. Gartshore (London) that the report be adopted.

MR. THOS. RODEN (Toronto): "Mr. Chairman, I think it is to be regretted that Mr. Sam Harris, the chairman of this committee, is not with us. As evidenced by this report Mr. Harris and his committee have done yeoman service for this Association, and have had the able assistance of Mr. Macdonald as our Legal Secretary. I believe our Association owes a very great debt of gratitude to the chairman of that committee, and the committee and Mr. Macdonald, when we consider the wide activities that have been evidenced by this report, and when we consider the time which it takes to get results. For many years we have advocated uniformity of bankruptcy laws, and they have only just been obtained; we co-operated very earnestly in the Workmen's Compensation Act, and now it is showing evidence of successful operation which will reflect credit not only on manufacturers, but on employees; and while it is difficult sometimes to reconcile the differences that exist between the ambitions of certain elements and the representatives of the employees, it is gratifying to know that the operation of this Act has been so scientifically co-operated in by all the elements in the industrial as well as the employing section in this country. The accident prevention act work has been carried on as the outgrowth of the Workmen's Compensation

Act, and that is of immense benefit not only in preventing accidents, but in developing a more humane spirit in the conduct of business. I believe, sir, we should recognize the importance of this committee and appoint our very best representatives in every locality and in every province to study the legislation that is going through the different Governments, and to see as far as possible that they are made uniform."

MR. R. L. MCINTYRE (Toronto): "Mr. Chairman, I, too, wish to express my appreciation of the services of this committee, and particularly those of the chairman. I want to speak especially of that section of the report which refers to the Compensation Act. I fear that when a new Act on compensation is put into force in any province (I speak of my own experience in Ontario) that employers have, at least in the early stages, taken a wrong viewpoint, and probably, shall I say, a wrong attitude. I feel that that was the case in Ontario. When the Act came into effect we were inclined to simply throw our employees on the Act—those of us who had more accidents than some of the others. That, I fear, was our practice or custom for a time. We have certainly long since learned that was a very great mistake, and I wish to advocate that wherever a compensation act is enacted, we should at once take a greater interest in connection with looking after the injured. May I suggest a system for those industries that are liable to greater accidents, and who have a sufficient number of employees to warrant the system, and that is that special first aid should be inaugurated at once and where it will warrant it.

"Then another feature of the work should be to follow up the injury. Just because there is a Board appointed to look after the employees and administer the Act, that does not, in my opinion, relieve the employer from certain responsibility, and it is a very great advantage to the employer as well as to the employee that that should be followed up. The system we have is that every day our nurse visits every single one who is injured, calls on them every day, and it saves the time of the doctor in attending them. It insures their more speedy recovery and brings them back to work."

MR. S. R. PARSONS (Toronto): "I am sure we would all like to give expression to our appreciation of the splendid report of the Legislation Committee. It sets forth very clearly the enormous amount of work which has been done by this committee, and the chairman and secretary are to be especially congratulated, I think, on the character of their work during the past year. If, gentlemen, we had no other report before us at this annual meeting than this, I am sure you will see it is worth the fees which each individual industry pays to the Association to have this work alone carried on, so important has it been. I feel if in some way we could get all our members to appreciate the splendid work carried on by our Association in the various departments and through the various committees that they would have a much clearer understanding of what the Association does for them individually and collectively.

"There are just two points I would like to call attention to in this report. On page 21 under 'Manitoba' it states: 'A Workmen's Compensation Act has been passed by the Manitoba Legislature providing for the administration of compensation to workmen through a state fund to be collected and administered by a Commission.'

"This, it appears to me, might be misunderstood. It is a state fund in the sense that the state takes care of it, but it is not a state fund in that it comes from the state, because it does not. Therefore, it appears to me it is not properly characterized as a state fund. I think that ought to read 'A state fund to be collected from employers and administered by a Commission.' I would like to suggest that to the Secretary as a change.

"Then on page 22, under the heading 'Representation in Legislature.' I think we will all agree with what is stated there, but at the same time, as an Association, I feel that we all deplore what might be termed class working or class representation or class domination, and we ought, I think, to do everything to discourage this in connection with our legislatures and governments. For, gentlemen, if the time comes when other classes are going to represent themselves rather than represent all the interests of the country involved, then it seems to me that the manufacturers will have to get into the game as well. It would be a deplorable thing, I think, if we should do anything which would mean that it could be said that we have a manufacturers' group in any legislature like perhaps the labor men have, or perhaps like the farmers have. It does not conduce to that orderly and fair development of our country through legislation that we all so much desire, and national unity, the thing we stand for here, there, and everywhere as an Association will never be produced by legislation of the classes; and therefore I feel that while we might give expression to our views, at the same time we should deplore class working and class legislation, and should seek through our Association in all the different provinces in which we work to bring about a state of affairs which would mean that the representatives in our parliaments or legislative assemblies should represent the people generally, and that we have a real democracy in that respect." (Applause.)

MR. C. G. ROBSON (Edmonton): "Referring to page 20 with regard to Alberta, it says, "The Legislature amended the Workmen's Compensation Act so as to provide benefits equal to those granted in Manitoba to-day. That is 55 per cent. to injured workmen, and $20 per month to widows and $5 per month to children." Fifty-five per cent., I think, is quite correct. As I understood it, they formerly were receiving $20 a month and $5 a month for children, and that was increased to $30 and $7.50. There was also eliminated from the Act the maximum of $2,000 under the Compensation Act I think I am correct in that because I gave considerable study to it at the time."

MR. J. O. THORN (Winnipeg): With reference to the Compensation Act of Manitoba, that Act does not give the employers of that province the right to form under the Act accident prevention associations the same as you have in the Province of Ontario. It may interest you to know active steps have been taken by the Manitoba branch to apply for an amendment to that Act at the next session of the Manitoba Legislature whereby we hope to have incorporated in the Act a section similar to the section in the Ontario Act which would give us the right to form accident prevention associations."

Report is Amended.

THE VICE-PRESIDENT (Mr. McKinnon): "Gentlemen, you have heard this very exhaustive report, and I think we should and appreciate the splendid work Mr. Harris and his committee have done. Would it be the wish of the mover and seconder, Mr. Reid and Col. Gartshore, to have the last paragraph stricken from the report, so as to make it conform more to the ideas presented in the address of the President?"

MR. J. A. REID: "With the consent of my seconder, I would amend the original motion by eliminating this paragraph.

Col. Gartshore gave his consent.

The Vice-President then put the motion as amended, that the report be adopted with the elimination of the paragraph headed, "Representation in Legislature," which, on a vote having been taken, was carried, and the report of the Legislation Committee as amended was declared adopted.

Transportation Affairs Bulk Largely

A Review of the Railway and Ocean Transportation Situation—Problems That Have Come Up For Solution During the Year—Changes That Have Taken Place With Regard to Freight Rates and Classification

Report of the Transportation Committee

DURING the past year your Committee has given close attention to the various transportation questions, and begs to report as follows:

Transportation Situation in General

Railways.—Looking at the financial side of the different railways in Canada shows a rather peculiar situation. The Canadian Pacific Railway, in its Annual Report, shows a surplus of $844,249.00, after payment of fixed charges and the usual preference and common stock dividends. This surplus has been placed in reserve to meet the special taxation imposed by the Dominion Government, which ended in 1919. This surplus, of course, shows a decline from former years, which fact is due principally to increase in operating expenses account of the large wage awards. It might also be well to point out that this surplus represents only a very small percentage of the gross earnings.

The Grand Trunk, in their Annual Report, show a net surplus of £1,141 15s. 1d. This, added to the balance accredited to net revenue account as of 31st December, 1918, makes a total of £49,248 5s. 3d. carried forward to the next year's account.

The Canadian National Railways have a deficit of $33,000,000.00, not including the Grand Trunk Pacific. That road has a deficit of $14,000,000.00, making a total for the Canadian National Railways of $47,000,000.00. The Honorable J. D. Reid, when he presented this matter to the House, did not treat the Grand Trunk Pacific as a portion of the Canadian National Railway System, so the $33,000,000.00 may possibly be the amount to be considered.

In the United States the railway companies were handed back to their private owners on March 1st, 1920, under legislation known as the "Transportation Act, 1920," which, among other things, provided that the carriers should receive a net return equal to 5½ per cent. of the aggregate value, plus not more than one-half of one per cent. of such aggregate value, to make provision for improvements, betterments, or equipment, chargeable to capital account. The railway companies' position in the United States is such that they find, in order to secure this return, they must receive an increase in rates.

The Act above referred to also provides that the Interstate Commerce Commission, in determining the value, may group the carriers. At a hearing in Washington, before the Interstate Commerce Commission, at which the shippers' and railway companies' representatives were present, it was decided to group the carriers into three large groups, known as the Eastern, Southern and Western territories, or comprising approximately what is known as the Official Southern and Western classification territories. The carriers' representatives have since placed before the Interstate Commerce Commission and National Industrial Traffic League, in a general way, how much additional revenue they require in order to secure the return referred to.

The following are the percentages:

Eastern Territory	30.43%
Southern Territory	30.951%
Western Territory	23.91%

In the Eastern territory the carriers have made a request to the Commission for an increase in the class and commodity rates, except on bituminous coal, other than lake cargo and tide water coal, on a percentage basis. On bituminous coal it is proposed to advance the rates from certain basing groups of origin, the same percentage as other freight, the same amount to be added to each related group in cents per ton.

In the Southern territory an advance of 31 per cent. has been asked on class and commodity rates, except coal, coke, cement, plaster, lime, sand, etc., which are to be increased specific amounts per ton.

In Western territory they have requested an increase of 23.91 per cent. on all class and commodity rates. Hearings in regard to this question commence on May 24th at Washington.

Undoubtedly our Canadian railways will follow very closely this proposal for increase in rates in the United States. The National Industrial Traffic League have opposed any advance in switching rates, suggesting the matter should be left entirely to local communities for adjustment. They have also suggested that any proposed increase should take into consideration a realignment of all rates, so as to restore the relationship existing prior to the 25 per cent. increase.

The equipment situation is very acute at the present time, as the carriers have not been buying new equipment, and that which they have has been to a certain extent wearing out, so that there is a shortage of equpiment to handle the traffic, both in the United States and Canada. Steps have been taken by the Canadian lines to offset this condition, the C.P.R. having recently contracted for quite a number of cars, both freight and passenger.

Ocean Carriers.—There is a world-wide shipping programme in progress. Recent figures show that the United Kingdom is building ships at a greater rate than the United States, notwithstanding that the United States in the past few years have built an enormous tonnage. Canada has also made great strides in shipbuilding, and has created a Government-owned and operated merchant marine, which will total by 1921 some sixty odd ships. These activities in shipbuilding should undoubtedly result in the opening up of new trade routes, and a decline in ocean rates. In fact, so far as the latter is concerned, there has already been a decline in certain trade routes.

Car Service

Car Supply.—The question of securing cars, particularly for movements of freight to the United States, became rather critical in the early part of the winter. This was due in part to the fact that the Canadian lines issued instructions that they would not allow their cars loaded to points in the United States on account of the fact that the American lines were retaining all Canadian cars sent to them. This situation was placed before the Canadian Railway Association, who in turn placed it before the Department of Railways and Canals. The matter was also taken up by the Department of Railways and Canals and the Canadian Railway Association with the Railroad Administration at Washington. Reports recently re-

ceived would indicate that this situation is becoming relieved and Canadian cars are beginning to come back in greater numbers than formerly.

Claims

Collection of.—During the year, the Department, among its many other duties, has had to deal with a number of claims for loss, damage and overcharge. The total amount of these claims is $47,213.83. Of this amount $18,357.58 has been collected, $1,996.07 has been declined, and there is still pending $26,860.18. As the members will probably know, these claims are usually those which claimants are unable to collect. It is safe to say, therefore, that the amounts collected were amounts which they might not ordinarily have secured. If these same claims were placed in the hands of a lawyer for collection, it is safe to say the charge would be about 10 per cent. From this it will be seen that this very small part of the services furnished by the Transportation Department is worth a good portion of the expense.

Carriers' Liability for Loss from Cars Loaded on Private Sidings.—The Board of Railway Commissioners and the Superior Court of Montreal have recently rendered decisions affecting the liability of the carrier in regard to carload shipments loaded on private sidings, and sealed with private seals. Your committee has considered this question and instructed the Department to give it careful investigation, with a view of developing further facts, in order that they may be placed before the proper parties. The members who have cases affecting liability, which they intend to place before the courts, should advise the Department, so that the claimant can be supplied with full assistance in dealing with questions of general character.

Special Articles in "Industrial Canada."—The articles which appeared in INDUSTRIAL CANADA, issues of December, January and February, and our Circular calling attention thereto, created considerable interest, and it is hoped that all members will study these articles and follow out the suggestions contained therein. It is believed, if this is done, a good deal of the trouble in collecting claims will be eliminated.

Coal and Coke

Supply and Distribution.—The strike of the coal miners, which commenced early in November, created a very serious condition in connection with the supply of coal, and particularly coke, The Department was not called upon to give very much assistance in connection with the question of coal, as this was being handled chiefly through the various administrations. However, as regards foundry coke, there is no question but that the assistance of the Department was instrumental in having the distribution of this commodity kept out of the control under which coal had been placed.

Contracts of Carriage

Bill of Lading.—The Interstate Commerce Commission in a decision rendered early in 1919, ordered into effect on August 8th, 1919, a new uniform bill of lading for domestic shipments, and a new form for export shipments. Certain non-federal controlled roads secured the postponement of this decision through injunction proceedings in New York District Court. The question has since been referred to the Supreme Court, and a decision may be expected in the near future.

Livestock Contract.—In February, this year, the question of uniform livestock contract for use on Canadian lines was again brought forward by the Board of Railway Commissioners. This question has been before that body for a great numer of years; in fact we have never had a contract based on a thorough consideration of all the facts. It was the desire of the Chief Commissioner to secure full information in regard to this question from the standpoint of present conditions. On the 10th and 11th of February, 1920, hearing was held and this Association represented by the General Manager and Counsel. It is expected that a decision in regard to this question will be published in the near future.

Demurrage

Average Agreement.—The Board of Railway Commissioners recently issued a judgment in connection with the question of average agreement, which was applied for by the Association several years ago. The judgment declines our application on the grounds that a man has no right to any compensation beyond the time actually used in unloading the car. In addition to this, it was also pointed out that the average agreement was discriminatory in that it could only be used by the larger consignees having the facilities to quickly unload cars.

Charge on Private Owned Cars Stored on Railways' Tracks.—Early this year tariffs were issued by the carriers providing a charge of 50c per day to cover storage of private-owned cars on railway companies' tracks. The tariff was so worded as to indicate that these cars would be assessed the amount over and above the regular demurrage charges. The question was placed before the Canadian Freight Association, who immediately issued instructions to withdraw the charge.

Free Time, Export Traffic.—Effective January 1st, 1920, all lines joined in the arrangement at North Atlantic Ports for the establishment of a free-time period, fifteen days, on export traffic and guarantee of the steamship companies to assume demurrage when they were responsible therefor.

Liability for Charges Accruing Due to Strikes in Consignee's Plant.—The labor difficulties at Winnipeg last May resulted in the tying up of a lot of cars on the sidings of consignees, and in the yards of railway companies for a considerable period. The railway companies billed the various consignees with these charges. The question was then taken up and it was agreed by the Canadian Freight Association on behalf of the carriers that the charge would be $1 per car per day, rather than the sliding scale in effect at the time. The contention of the consignees was that they should not be compelled to pay any demurrage, as it was absolutely impossible through no fault of theirs, to unload these cars. The matter was placed before the Board of Railway Commissioners, and they ruled that as the carriers were agreeable to $1 per car per day they were willing to accept that basis.

This question again came under consideration in connection with a case brought up by a member at Welland in the shipbuilding business. The question was submitted to the Board of Railway Commissioners on April 20th, and decision is expected in the near future.

Export Trade

Rates from Maritime Provinces to Montreal.—Members in the Maritime Provinces took up with the Department the question of establishing export rates on commodities moving from that territory to Montreal during the summer period, in order that they might be placed on an equality with members located in Ontario, or on a similar basis to members in Montreal who used the winter ports of St. John and Halifax. The question was given careful consideration, and the railways established several rates. They intimated, however, that they did not wish to establish a general scale, as there did not appear to be at the time very much traffic involved. Assurances were given that where a member can show that they have business in view, the railway company will give every consideration to the establishment of a rate.

Ocean Rates.—In report of the Committee at Toronto last year, the ocean rate situation was spoken of, and it was stated indications were there would be a drop in these rates in the spring of 1920. Late information received on this

subject indicates that this condition is developing in all trade routes, except United Kingdom and Spain. In the English shipping circles it is felt that the highest level of freight rates has been reached, and there is now likely to be a pronounced downward tendency. Very few time charters are being entered into, which is a clear indication of the present situation, and what may be expected for the future.

Steamship Service.—During the year the Canadian Government Merchant Marine have extended their services, and now four boats are in the service between Vancouver and Australia and New Zealand, as well as services to South America, West Indies and United Kingdom. The Elder-Dempster Co. have also inaugurated a service to West African ports. The Canadian Government Merchant Marine are considering the question of opening a service between Pacific Coast ports and West Coast of Mexico, South and Central America.

In connection with the establishment of services from the Pacific Coast to Australia and New Zealand and West Coast of Mexico, etc., the committee appreciates the efforts put forward by Mr. Dalton, Secretary of our British Columbia Division.

Freight Charges

Three Per Cent. Tax in United States.—Early in October, 1919, The Treasury Department of United States Internal Revenue issued decisions in connection with the regulations governing this tax, requiring the filing by shippers in the United States of temporary exemption forms, supplemented by certificate of exportation. Considerable confusion arose in regard to this question, and the matter was eventually taken up with the Treasury Department of Washington by the National Industrial Traffic League, who secured the cancellation of these decisions, allowing the movement of traffic from United States into Canada, provided such traffic was covered by through bill of lading, without the necessity of filing any forms.

Freight Classification

Applications.—A number of applications have been considered by the Department during the past year. The following have been disposed of:

Bumper guards or rails.
Graphite.
Pump jacks.
Tub stands.

while the following are still under consideration:

Boots and shoes—rubber, felt and leather.
Cocoa shells.
Filing cases and supplies.
Gelatine.
Ladders, swings, baking and ironing boards.
Machines, washing, with water motor.
Staples, wire.
Steel vats, cheese.
Trucks, warehouse.

Proposed.—The Canadian Freight Association have only submitted one Supplement during the past year, proposed Supplement 13 to Classification 16. A few items in this Supplement were considered at a meeting in Montreal in January, and certain modifications arranged for members. The Supplement is now before the Board of Railway Commissioners for its approval, and will probably be placed in effect at an early date.

New Classification in United States.—Consolidated Classification No. 1, which combines the various items and ratings contained in the Official, Western and Southern Classifications of the United States, was allowed to take effect on January 1st, 1920. This document, while it still contains different ratings for the different classification territories, is practically uniform as regards the wording of the items, and the conditions regarding packing, etc. The rules in this classification are in practically every case general. That is, they apply all over the United States. It is interesting to note that rule 10, the mixed carload rule, is to a great extent similar to old rule 10 of Official Classification, and allows the shipment in mixed carloads of all traffic at the highest carload rate and highest minimum weight. This is also similar to the rule in effect in Canadian Freight Classification 16, between points in Eastern Canada.

Freight Rates

Class Rates.

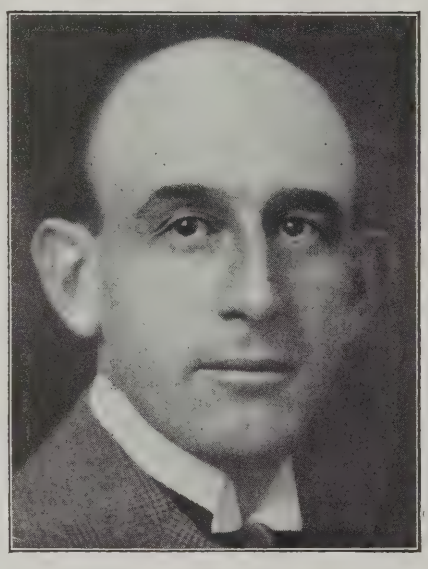
(*a*) Between points in United States (Central territory) and points in Eastern Canada:

The Canadian lines have been for some years endeavoring to secure a more scientific basis of class rates applying on business moving from points in the United States, roughly, west of Pittsburg and Buffalo to Chicago and north of the Ohio River to points in Eastern Canada and in the opposite direction. Accordingly, they filed a tariff effective on February 29th, 1920, embodying what they consider an equitable and reasonable readjustment. The effect of this readjustment was to materially advance some points, notably Montreal from Pittsburg, and reduce others, notably rates to points north of Toronto.

(*b*) From Vancouver to points in British Columbia and Prairie Provinces:

A readjustment of these rates has been given careful consideration. It would appear that the judgment of the board in the western rates case conflicts in two sections. In one place it is stated that the rates from Vancouver to points in British Columbia and the Prairie Provinces should be on the same ratio as those rates applicable from Fort William to points in the Prairies and British Columbia. In another section of the same judgment a comparison is submitted, showing the rates which the board desired placed in effect in accordance therewith. These rates, however, are not on the same *ratio* from Vancouver as from Fort William. The question has been given careful consideration, submitted informally to the Board of Railway Commissioners and the railway company, but as yet it has been impossible to satisfactorily dispose of it. Further efforts are being made, however, to secure disposition at an early date.

(*c*) Joint rates between C.P.R., G.T.R., and C.N.R. in Eastern Canada:



The Board of Railway Commissioners issued Order No. ..... requiring the railway companies, effective October 1st, 1919, to publish joint class rates on the basis of one line rates plus certain arbitraries. The railway companies failed to carry out this order, and three days after the effective date applied to the board for postponement and further consideration of this whole question. The board accordingly set the question down for hearing, at which the Association was represented. At that time, the railways intimated that in view of the Grand Trunk being taken over by the Canadian National Railways, this order should not become operative, as the conditions would be materially changed, and might accordingly require a difference of treatment. The board, under date of.....issued Order No....., rescinding its former order. It is stated that this is done for the purpose of clearing the records of the board. The question to be held in abeyance pending some arrangements *re* the Grand Trunk.

Commodity Rates.—Special commodity rates in connection with different commodities were considered by the Depart-

ment during the year. The following list and general idea of the territory covered will show what is involved:

Agricultural implements, eastern to western Canada.
Barytes, Connaught to Toronto and Montreal.
Canned goods from canning centres in Ontario to points east of Montreal.
Ferro Silicon, from Welland, Thorold, Ont., and Shawinigan Falls, Que., to consuming centres in eastern Canada.
Agricultural limestone from Kirkfield, Ont., to various points.
Iron and steel from Selkirk, Man., to points in eastern Canada.
Leather from tanning centres to various warehouses in eastern Canada.
Logs from various points in New Brunswick to Moncton.
Paper from various paper mills to consuming centres in eastern Canada.
Rubber boots and shoes, from eastern Canada to Vancouver.

It might be well to point out, in connection with agricultural implements, that a very material reduction was made in rates from eastern Canada. In fact, the rates were placed on the same basis as those applicable from Chicago.

Burton S. Harris
Massey-Harris Co., Limited, Toronto
Chairman, 1919-20, Transportation Committee
Re-elected Chairman for 1920-21

In regard to the rates on paper, it would be well to point out that this involved a proposal of the railway companies to materially increase the rates on various lines of paper. The question was given careful attention, and the carriers' proposal considerably modified.

Railway Legislation

Canadian National Railway Act.—In the last session at Ottawa, the Government passed the Canadian National Railway Act. This Act was referred to in the report of the Committee last year. One of the clauses in this Act places the Government Lines under the jurisdiction of the Board of Railway Commissioners. However, this cannot become operative until the Governor in Council issues an Order in Council, transferring the management of the Government Lines to the Canadian National Railways. This has not as yet been arranged, so that Canadian Government Railways are not as yet under the jurisdiction of the Board of Railway Commissioners.

Railway Act, 1919.—This Act became effective in July last year, and in some respects improves the power of the Board of Railway Commissioners. These features have already been dealt with and members are fully aware of the changes.

House of Commons Bill No. 3.—This Bill, having for its purpose the placing of water carriers under the jurisdiction of the Board of Railway Commissioners, has been submitted by Mr. Armstrong, member for East Lambton. This is similar in its purpose to that of Bills which have been submitted on numerous occasions in the past few years. The Association has opposed the passage of such a measure, as it would be very detrimental to our members, in that it would remove the only competitive rate situation which we have at the present time.

Special Services and Arrangements Incidental to Transportation

Milling in Transit of Grain.—The proposed increase in the stop-off charge from one to two cents per hundred pounds, referred to in the last report as having been postponed by the Board of Railway Commissioners, is still under suspension. The millers requested that they be allowed to enter their submissions, and counsel was retained for this purpose. Owing to other engagements, however, he was not able to prepare the brief on this question until recently. It is expected that as soon as this brief has been filed with the Board, this whole question will be given immediate consideration by that body.

In eastern Canada, the railway companies, after hearing before the Board of Railway Commissioners, were allowed to place in effect new rules governing the keeping of records, etc., in regard to milling in transit of grain. So far no complaints have been received as to difficulties experienced in keeping of these records.

Refrigerator and Heated Car Service.—By decision recently handed down by the Interstate Commerce Commission, a new tariff, known as "Perishable Protective Tariff No. 1," has been allowed to take effect, with certain modifications from proposals made by the railway companies. The new tariff, in a number of cases, advances the heated car charge.

The heated car service charges in Canada were recently increased by one-half cent per car per mile. This action was taken after full consideration by the Board of Railway Commissioners, and in view of the evidence submitted it was shown that the actual cost of this service in some cases was higher than 1½c. per car per mile.

Dressing, Sawing, Kiln-drying or Sorting Lumber.—The carriers proposed to make considerable changes in the rules and charges governing this service, but after giving the matter full consideration, a meeting was held in July, between carriers and shippers, and the carriers promised to take the matter under further consideration. As yet nothing has been done towards interfering with the rules.

Telegraph and Telephone

Telegraph.—The telegraph companies made an application to the Board of Railway Commissioners for an increase in their tolls. From the figures which they supplied, it would appear they were justified in asking for an increase. As to the amount, however, this question was left with the Board of Railway Commissioners. Certain features in regard to the blanket charge in Ontario and Quebec were elaborated upon. It is expected the Board will rule on this question at an early date.

Telephone.—The telephone companies' application for increase in rates was given consideration by the Board of Railway Commissioners and an increase granted, although somewhat modified from that shown in the application.

Terminal Facilities and Services

Local Switching.—Notwithstanding the statement of the former Chief Commissioner, that the carriers should not change the basis of local switching rates, they were nevertheless allowed to place in effect on November 1st, 1919, new local switching rates, making very radical departures from practice formerly in effect, involving as well a general increase in all the rates. The number of special items which have had to be added to the tariff since that time have proven, beyond a doubt, that the claims made by the shipping public were in accordance with the facts.

Siding Agreements.—Agreements on behalf of the Iona Gypsum Company, Iona, N.S., and Miller Bros., Glen Miller, have been considered during the year. The Department was able to give assistance in connection with the Iona siding in the way of having the work on the siding completed. In connection with the siding at Glen Miller, the question was that of rental, and a very material reduction was secured through the fact that the siding was originally constructed under conditions which did not admit of the higher charge.

Weighing

Track Scale Allowances.—The Board of Railway Commissioners issued a decision in connection with the question of track scale allowances. This matter has been before that body since 1911. At that time the carriers proposed to eliminate all allowances and provide only an allowance of 500 pounds on stakes, etc. These tariffs, however, were postponed, and the Board held numerous hearings, securing considerable information from both the carriers and the shippers. It was admitted by the shippers at the time of the hearing that 800 pounds would possibly cover the maximum in some cases so far as they were concerned, whereas the carriers thought the maximum should not exceed 500 pounds. It is interesting to note that the Order of the Board allows on certain commodities a maximum of 650 pounds. Generally speaking, however, the maximum is 500 pounds. The tariff containing these new allowances has now been published, to take effect on May 25th.

Express

Classification.—The Department was instrumental in assisting certain manufacturers in securing a reduction of one-half class in the rating on incandescent lamps shipped by express.

The express companies have recently suggested that the rating on millinery, and other light and bulky goods, subject to Rule 16 of the Express Classification, be advanced to three times first class. They are now rated first class. The question is under consideration at the present time with the millinery trade.

Increase in Rates.—The Board of Railway Commissioners allowed, effective September 1st, an increase in the merchandise rates covering express traffic, disallowing the application of the express companies for increase in the so-called commodity rates, which apply principally to foodstuffs. In addition to the above, the decision also established an allowance to be made at points where cartage service is not maintained, as well as establishing a basis for the delivery limits. Another feature was the question of stating the rates in tariffs. The Board adopted the proposal of the express companies to arrange the rates in what are known as block tariffs.

It has recently come to the attention of the Department that the express companies contemplate applying to the Board of Railway Commissioners for a further increase in their rates. It is understood they intend to ask for an increase in their commodity rates, which was denied them in their former application. It is claimed that they have not secured anywhere near the amount they expected from the increase allowed by the Board.

BURTON S. HARRIS, *Chairman.*

S. B. BROWN, *Asst. Manager, Trans. Dept.*

J. E. WALSH, *General Manager.*

Adoption of Report

The report of the Transportation Committee was read by the General Manager, Mr. J. E. Walsh. Referring to page 12 of the report, and to the heading "Railway Legislation," Mr. Walsh said: "That, of course, is confined entirely to the old Intercolonial Railway. It was not under the jurisdiction of the Board of Railway Commissioners, although the Government have power under this Act to pass an Order-in-Council, and I think possibly a resolution will be introduced before we adjourn asking that such action be taken. The Canadian National Railway is, however, under the control of the Board of Railway Commissioners."

THE VICE-PRESIDENT: "You have heard this splendid report of the Transportation Committee. It has been moved by Mr. A. Davis (Newmarket), seconded by Mr. A. D. Ganong, St. Stephen, N.B., that this report be adopted. If there is no discussion, gentlemen, I will put the motion"

MR. F. J. CAMPBELL (Windsor Mills): "I don't know if it is in order, but in regard to the scarcity of the car supply, there are times when the railways give instructions for cars to be sent to the West for grain, and I think it is series 101,000 they sent up. We had some of those cars in our yard recently, and wanted to load for Winnipeg, and the railways refused to allow us to load these cars, although they were going to the West for grain. Does not that seem unreasonable? Has any attention ever been called to that, Mr. Walsh?"

MR WALSH: "Cars are usually sent West about July for moving grain."

MR. CAMPBELL: "Shouldn't they be sent loaded if possible?

MR. WALSH: "They are very anxious to get loads if they can. That is one of our difficulties in connection with the moving of coal. They encourage the movement of coal from the head of the lakes in order to get loads for their cars West, but I think the situation is improving very materially in regard to cars."

The Vice-President then put the motion to adopt the report of the Transportation Committee, which, on a vote having been taken, was carried, and the report declared adopted.

The Ontario Cement Co., Limited, Brantford, are dismantling their plant at Blue Lake and moving the equipment to Beachville. They expect to have their mill at the latter point in operation in the early fall.

The Townsley Manufacturing Co., Limited, manufacturers of lightning arresters, ventilators and barn equipment, Brandon, Man., are increasing their capital in order to enlarge their plant, as they are finding it too small for their requirements. They have sold sufficient stock to enable them to start immediately on the enlargement.

Tariff Situation Thoroughly Discussed

Official Records Show That There is Not One Country in the World To-day Making Any Pretension to Industrial Development That is Without a Protective Tariff—Where Canada Stands in Tariff Matters

Report of the Tariff Committee

YOUR Committee submits as a preface to this Annual Report, a summary of the more important tariff legislation in various industrial countries of the world during the past year.

Following the armistice, industrial countries, especially those that had been engaged in the war, took precautions to safeguard their home markets against a deluge of foreign goods, in order that their demobilized soldiers and war workers could secure employment in their own countries.

In the United Kingdom import embargoes that had been in effect during the war were continued and increased, with the result that manufactured goods from other countries were practically barred out of the United Kingdom. Later, this system was relaxed in respect to the products of the British Overseas Dominions entering the United Kingdom; and, recently, the majority of the remaining restrictions were removed. The United Kingdom, notwithstanding statements to the contrary, is not a free trade country. She now applies various protective duties, and has a measure before Parliament designed to prevent dumping, arising from exchange depreciation or other causes. During his budget speech in the House of Commons on April 19th last, the Honorable Austen Chamberlain, Chancellor of the Exchequer, stated that the United Kingdom had raised during the year ending March 31st, 1920, the sum of £149,360,000 from customs duties imposed on goods imported into the United Kingdom. That is, every resident of the United Kingdom paid a customs tariff tax on the average of about $16 last year. In Canada last year the average per capita tariff tax, including the war tariff, now removed, was about $23, or, without the war tariff, about $19.50. Yet, some people describe Great Britain as a free trade country and Canada as a high tariff country.

In other leading European countries protective tariffs were considerably increased. France increased her tariff rates during the past year, on most goods, by amounts varying from ten to three hundred per cent.; and as late as April 28th, 1920, she announced a new and extensive list of prohibited imports. Italy, Switzerland, Austria, Spain, Roumania and the Balkan States have made general increases in their tariffs. Present despatches show that still higher protection is being provided in most of these countries, and especially in France, Italy and Spain.

The most recent example of an increase in tariff protection is afforded by Australia. Previous to the war, Australia had a protective tariff of a moderate type, and imported a great deal of manufactured goods in payment for the exportation of her raw materials; consequently, her manufacturing industries did not reach a high stage of development. The result was that Australia suffered severely during the war because, owing to her isolated position, she could no longer import from Great Britain and those other countries the manufactured goods which she had been in the habit of getting. She is determined that this experience will not be repeated, and that she must build up her own industries. To this end a tariff was introduced on March 24th, 1920, which is highly protective in character.

In South America, all countries have tariffs designed not only for the purpose of producing revenue, but also to provide a reasonable measure of production for home industry. Japan has now in operation a high protective tariff. As for British countries outside the United Kingdom, all have tariffs that are protective in character, with the exception of Eastern countries, such as India and the Strait Settlements, which almost wholly operate under revenue tariffs.

Official records show that there is not one country in the world to-day making any pretentions to industrial development that is without a protective tariff. Further, while the statistics showing the collections under these tariffs are not yet available, your Committee makes a conservative statement of fact in saying that the Canadian customs tariff as it stands to-day is not a high tariff, and that in comparison with tariffs of other countries it is very moderate.

The total value of all free importations into Canada during the fiscal year ended March 31st, 1920, was $370,872,966;

The total value of all dutiable importations into Canada during the same period was $693,643,211;

The total amount of duty collected during the said year was $187,520,613;

Included in the foregoing is the customs war tariff duties, which, for the said year, amounted to a total of $31,369,296;

The average rate of duty, including the war tariff, on all dutiable importations was 27.03 per cent. over the same period;

The average rate of duty on all dutiable importations, less the customs war tariff collections, was 22½ per cent.;

The average rate of duty, including the war tariff, on all importations, free and dutiable, for the same period, was 17.61 per cent.;

The average rate of duty on all importations, free and dutiable, after deducting the customs war tariff collections, was 14.66 per cent.

On the 18th day of May, 1920, the customs war tariff rates were completely removed by Parliament. While the leading industrial countries of the world were increasing their tariffs, Canada reduced her general tariff by 7½ per cent., and her British preferential tariff by 5 per cent. Surely, in view of the world-wide increase of tariffs, the national welfare of Canada requires the remaining safeguards provided by her customs tariff as it now stands.

The reasons that have led other industrial countries enumerated above to maintain or increase the protection afforded by their tariffs to their own countrymen are the same reasons that convince your Committee of the wisdom of maintaining adequate safeguards for Canadian industry, agriculture, industrial workers, business men, and all other classes of the population. Under this policy Canada has grown in the last forty years to be a great industrial country. At the present time over two million Canadians depend directly on the factories of Canada for their living. This

year the value of goods made in Canadian factories will be about four billion dollars. When we include those engaged in businesses and professions which depend entirely or in part upon manufacturing for their welfare, we find that over one-half the population of Canada get their living directly or indirectly from the factories of Canada. When it is considered that eighty per cent. of all the products of Canadian farms is consumed in Canada, it follows that the agricultural population is also vitally concerned in the prosperity of Canadian factories. Agriculture is in the most flourishing condition to-day that it has experienced in its entire history in this country. Statistics, although valuable, are unnecessary to prove this statement. It is a truth beyond dispute, and all citizens of Canada rejoice that it is a truth. It has been argued that our remarkable industrial growth has tended to direct rural population to the cities and towns, but those who advance this argument do not attempt to explain the fact that the same complaint is heard in the British Isles and other countries which have widely varying fiscal systems. In any case, it is more desirable to have Canadians leave the country districts to work in Canadian cities than in United States cities, where they were forced to go in large numbers before the establishment of the National Policy, which was the foundation of our industrial system.

This Dominion's tariff legislation, designed for national development, must be affected by the fact that every great industrial nation to-day throughout the world operates under protective tariffs. Each of these countries fences its borders by protective laws for the purpose of safeguarding the interests of its own industrial workers. With every great trading nation guarding its own commercial interests by protective customs tariffs, it would be impossible for Canadian factories to continue in existence without a tariff which would secure to them a large output for the domestic market. The natural resources left in the world seem to be growing smaller, and Canada has more left than the majority of other countries. Consequently, it seems reasonable that we should try to develop our raw material and carry it to the most advanced stage of manufacture before exporting it, in order to provide work for our own people, and to produce the largest national wealth.

The Fathers of Confederation, for the purpose of developing this Dominion and connecting it more directly with other British countries, sought to consolidate our interests on the lines of trade moving east and west within the Dominion.

Since the beginning of our history, Canadian transportation system has run east and west, forming one of the links connecting this country and other countries of the British Empire. We have invested hundreds of millions in our east and west transportation system; and free trade between this country and the United States would inevitably deflect a great proportion of traffic north and south, to the benefit of United States transportation and a consequent loss to Canadian transportation.

The overwhelming commercial weight of the United States, coupled with our geographical position in relation to that country, must be considered in framing all trade legislation affecting this Dominion's national growth and development. That country, with a population of 110,000,000, buys from this country of 8,000,000 people only about one-half the value of the goods which it sells us. Our exports to the United States and imports from the United States each year since 1907 follow:—

Value of Imports from United States.		Value of Exports to United States.	
Fiscal Year.	Amount.	Fiscal Year.	Amount.
1907 (9 mos.)...	$155,943,029	1907 (9 mos.)...	$79,021,480
1908	210,652,825	1908	113,520,500
1909	180,026,550	1909	92,604,357
1910	223,501,809	1910	113,150,778
1911	284,934,739	1911	119,396,801
1912	356,354,478	1912	120,534,634
1913	441,141,562	1913	167,110,382
1914	410,786,091	1914	200,459,373
1915	428,616,927	1915	215,409,326
1916	398,693,720	1916	320,225,080
1917	677,631,616	1917	486,870,690
1918	791,906,125	1918	441,390,920
1919	746,920,654	1919	477,745,659
1920	802,096,817	1920	464,029,273

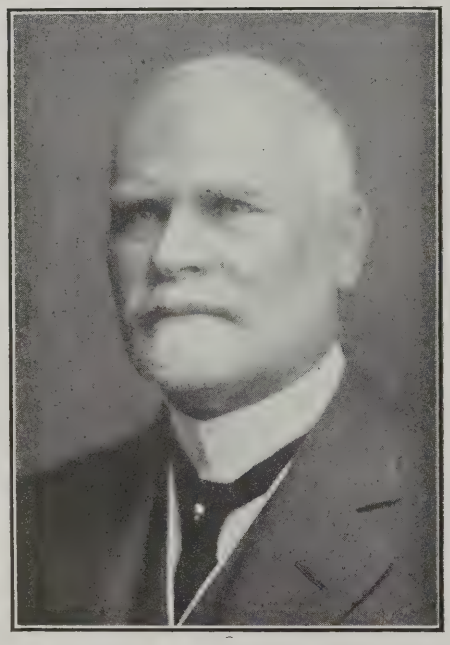
Last year each inhabitant of the United States bought $4.21 worth of Canadian goods, while each Canadian bought $102.62 worth of United States goods.

The United States, even under the present customs tariff, which represents the policy of the United States low tariff (Democratic) political party, still highly protects those industries which need such protection as a safeguard for development; and we must not forget that even those manufactured articles which now enter the United States free of duty will probably be protected if the Republican party is returned to power. Thus, no Canadian industry can afford to make investments based on the possibility of access to the United States markets. All investments of Canadian industries must be made primarily with the view to east and west trade within the Dominion, and to export trade with other British Dominions which favor British products with tariff preferences. It is the Canadian tariff which has caused large numbers of United States industries to establish branch factories in this country; and these branch factories now number over six hundred and employ over 87,000 Canadian people.

The policy of this Association to-day is what it always has been, viz.: There should be a Canadian customs tariff adequate to conserve and develop our natural resources, to encourage the exportation of our raw materials in the most advanced stages of manufacture, to attract immigration, to safeguard present industries and investments, to encourage the establishment of new industries, to provide employment for the Canadian people, and to continue the development of Canada as a great country within the British Empire.

Tariff Revision

The Canadian customs tariff was revised last in 1906-7. During thirteen years of great industrial development, including the war period, many inequalities crept in which should be removed. It must be remembered, too, that manufacturers are heavy importers of such articles as materials, equipment and machinery which are subject to revenue duties, and consequently pay a great portion of the total duties collected. As it has been the custom of Governments to revise the tariff every ten years, our tariff revision is more than three years overdue, and the tariff should be revised as soon as international industrial conditions approach reasonable stability.



In regard to tariff revision, the Association recorded its position in the following resolution passed at the last annual general meeting:

"Whereas, demands are made at frequent intervals by various sections of the Canadian people for radical changes in the Canadian customs tariff, and

"Whereas, such demands prevent the determination of the settled policy that is necessary for the development of industry and trade, and cause depression in business, unemployment, and imperial invested capital, and

"Whereas, it is of vital importance that all industry should have reasonable assurance of stable conditions which will not be adversely and suddenly disturbed by unexpected and imperfectly considered tariff legislation;

"Therefore, be it resolved, that the Canadian Manufacturers Association in annual meeting assembled in Toronto, on June 12th, 1919, respectfully urge the Dominion Government to appoint a permanent tariff board, acting in an advisory capacity to the Government, which will make a scientific study of the Canadian customs tariff and the tariffs of other countries with whose products Canadian producers are forced to compete, familiarize itself with costs of production at home and abroad, investigate the nature and probable national effect of all requests for tariff changes, and endeavor to frame a tariff that will serve the best interest of Canada, and thus assure the harmonious and all-round development of the country."

Hon. E. J. Davis
Davis Leather Co., Limited, Newmarket
Chairman, 1919-20, Tariff Committee

Your Committee submits that this is a reasonable attitude to take in regard to the proposed revision in the interests of all concerned.

Proposed Tariff Changes

Although the Association is a non-political body and includes within its membership manufacturers of various political parties, your Commttiee feel it their duty to draw attention, as a matter of information, to the following official tariff policies which have been declared by the organizations indicated—

(1) By the Canadian Council of Agriculture:

"Therefore be it resolved that the Canadian Council of Agriculture, representing the organized farmers of Canada. urges that, as a means of remedying these evils and bringing about much needed social and economical reforms, our tariff laws should be amended as follows:

(*a*) By an immediate and substantial all-round tariff reduction of the customs tariff.

(*b*) By reducing the customs duty on goods imported from Great Britain to one-half the rates charged under the general tariff, and that further gradual, uniform reductions be made in the remaining tariff on British imports that will ensure complete free trade between Great Britain and Canada in five years.

(*c*) That the reciprocity agreement of 1911, which still remains on the United States' statute book, be accepted by the Parliament of Canada.

(*d*) That all foodstuff not included in the Reciprocity agreement be placed on the free list.

(*e*) That agricultural implements, farm machinery, vehicles, fertilizers, coal, lumber, cement, illuminating fuel and lubricating oils be placed on the free list, and that all raw materials and machinery used in their manufacture also be placed on the free list.

(*f*) That all tariff concessions granted to other countries be immediately extended to Great Britain.

(*g*) That all corporations engaged in the manufacture of products protected by the customs tariff be obliged to publish annually comprehensive and accurate statements of their earnings.

(*h*) That every claim for tariff protection by any industry should be heard publicly before a special committee of parliaments."

(2) The Tariff resolution carried at the convention of the Liberal party in Ottawa, on August 6th, 1919:

"That the best interests of Canada demand that substantial reductions of burdens of customs taxation be made with a view to the accomplishing of two purposes of the highest importance;

First—Diminishing the very high cost of living, which presses so severely on the masses of the people;

Second—Reducing the cost of the instruments of production in the industries based on the natural resources of the Dominion, the vigorous development of which is essential to the progress and prosperity of our country.

That to these ends wheat, wheat flour and all products of wheat; the principal articles of food; farm implements and machinery; farm tractors, mining, flour and saw-mill machinery and repair parts thereof; rough and dressed lumber; gasoline, illuminating, lubricating and fuel oils, etc.; nets, net twines and fishermen's equipments; cements and fertilizers, should be free from customs duties, as well as the raw material entering into the same.

That a revision downwards of the tariff should be made whereby substantial reductions should be effected in the duties on wearing apparel and footwear, and on other articles of general consumption (other than luxuries) as well as on the raw material entering into the manufacture of the same.

That the British preference be increased to fifty per cent. of the general tariff.

And the Liberal party hereby pledges itself to implement by legislation the provision of this resulution when returned to power."

British Preferential Tariffs

Your Committee during the past year have been governed by the following resolution which was adopted by the Canadian Manufacturers Association at its last annual convention:

"Whereas, Canada was the pioneer amongst British countries in providing customs tariff preferences for imports of British products, and

"Whereas, the policy of customs preferences, designed to develop and consolidate Imperial ties of sentiment and trade, is now finding favor with other British countries and is being advocated by them, and

"Whereas, the British tariff preferences provided by the Dominion of Canada are more extensive than the preferences provided in the fiscal policy of any other British country;

"Be it resolved that the Canadian Manufacturers Association in annual meeting assembled in Toronto on June 12th, 1919, earnestly petition the Dominion Government to exercise its influence to hasten the adoption throughout the Empire of substantial customs preferences for Empire products, corresponding to the preferences now provided in the customs tariff of Canada."

In June last, the 5 per cent. war tariff, which has applied since early in 1915 against imported goods produced in British countries was completely removed by Parliament.

This 5 per cent. war tariff on British goods was a war-time measure and its removal followed quickly after the termination of hostilities.

The British tariff preference and exchange conditions unite to encourage importations into Canada form the United Kingdom. Their shipments to us for January, February and March, 1920, respectively, were in each month greater in value than in any previous month in the past history of this Dominion. For over twenty-three years the customs tariff of this Dominion has provided substantial preferences to the products of British countries—averaging one-third lower than the customs duties payable on similar goods of foreign production. Canada was the first British country to adopt the preferential tariff principle. The benefits of this pioneer work will not reach full achievement until the policy is generally adopted throughout the British Dominions. New Zealand is the only country so far that has reciprocated whole-heartedly the spirit of the Canadian preferential tariff system. British South Africa and certain of the smaller British West Indies have granted minor preferences on a limited list of British products. But the desire to develop and maintain, to strengthen and consolidate, to foster and increase the national ties between British Dominions now seems to be tending surely toward the general adoption of preferential tariffs for British goods. The United Kingdom, in respect to her dutiable schedules, has extended tariff preferences to the products of the British Overseas Dominions, effective September 1st, 1919. The South African Government has announced that its tariff will be revised upward, and recent despatches state that there will be a wider margin of tariff preference for the products of British countries. In announcing the recent tariff changes in the Australian Commonwealth Parliament, the Minister of Customs stated that his Government was taking power to extend the Australian tariff preferences to British Overseas Dominions; and now Jamaica, Ceylon, British India and Malta, which never before expressed encouragement toward the principle of tariff preferences, are engaged upon the study of their schedules with the aim of extending preferences to the products of other British Overseas Dominions. In this connection, attention is drawn to the following table which shows the purchases and sales made by Jamaica with Canada, the United Kingdom and the United States:

Jamaica's purchases from Canada, the United Kingdom, the United States and other countries, are in the following ratio:—

	1877	1887	1897	1907	1917
	%	%	%	%	%
Canada	13.9	6.6	7.2	5.5	6.7
United Kingdom ...	50.7	62.0	46.7	47.4	19.5
United States	31.6	28.3	43.3	43.6	70.1
Other countries	3.8	3.1	2.8	3.5	3.7

Jamaica's sales to Canada, the United Kingdom, the United States, and other countries, are in the following ratio:—

	1877	1887	1897	1907	1917
	%	%	%	%	%
Canada	.005	1.31	1.11	7.88	15.03
United Kingdom ...	79.46	38.62	25.97	22.37	45.20
United States	15.04	43.93	57.96	55.60	28.22
Other countries	5.31	16.12	14.93	13.12	11.25

It will be seen from the foregoing that Jamaica's purchases from British countries have been steadily dwindling. Over 70 per cent. of her requiremnets are now purchased in the United States. On the other hand, the sales of Jamaican products to British countries have been steadily increasing, so that now the greater proportion of her sales are to British countries. The products of any British country entering Jamaica are subject to the same rate of duty as would apply on like goods entering Jamaica from the United States. On the other hand, Jamaican products entering Canada are admitted throughout at the lowest British preferential tariff rates provided in the tariff of Canada.

On the whole, prospects seem bright for the general extension of British preferential tariff systems throughout British countries. Such an arrangement amongst British Overseas Dominions would correspond with the policy followed between the United States and United States' overseas countries, including Cuba. A similar policy is followed toward their respective possessions by France and Italy, and was followed by Germany.

Tariff preferences would overcome the handicaps upon the exports of Canadian products. Import duties as collected in Australia apply upon higher values, in many instances, in respect to shipments from Canada, than upon like shipments from the United States. The tariff of Australia consists largely of percentage duties. These duties are assessed upon the value of imported goods as sold for home consumption at the time and place whence shipment is made directly to Australia, plus freight thence to the port of exit from the exporting country, and the whole, plus ten per cent. New Zealand appraises importations similarly for duty purposes. South Africa appraises importations on the same basis, but without adding the ten per cent. The home selling price in Canada is higher on a large number of groups of commodities than the United States' home selling price on like goods, caused by our higher manufacturing costs, owing to revenue duties on imported materials, equipment and supplies of a kind not obtainable here. Thus, goods shipped from Canada into such British Overseas Dominions are assessed duty on a higher valuation than would apply on like goods shipped thereto from the United States. This results in a larger sum in duties being payable on the same goods shipped from Canada than would be payable on the same goods shipped from the United States. But, as already stated, tariff preferences would overcome these handicaps, while allowing each great British State to build up its own self-supporting fiscal system.

Dumping Due to Depreciation in Exchange

Your Committee point out that the War Measures Act will automatically be repealed when peace is finally signed and proclaimed. The result will be that a foreign country, in which there has been a great depreciation in exchange, may be able to dump manufactured goods in Canada at less than the cost of production of similar goods in Canada, notwithstanding that duty is assessed on the par value of the currency of such country.

Your Committee has recommended that the Government should take the necessary power to restrict the importation, by prohibition, or the payment of counter-balancing fees under license, of all, or of specified goods produced in a foreign country, on being satisfied that the depreciation in foreign currency is likely to cause sales in this Dominion of the products or manufactures of that country, in substantial quantities at prices considerably below those at which similar articles manufactured in this Dominion can be sold.

Value for Duty; Depreciated Foreign Currencies

When sterling in New York was at $3.69 the tariff of Canada against British goods was practically eliminated; and only the enormous world demand for the products of United Kingdom factories, under conditions which clearly are temporary, prevented the flooding of our markets with shipments of goods from the United Kingdom. Evidence of

this fact is found in the imports from the United Kingdom for January, 1920, which exceeded in value all such importations in any previous month of our history. As sterling falls in New York the conditions are accentuated. And if the value of sterling were determined for duty purposes by the exchange rate, customs duty would be collected on lower values than the fair market value of the goods as sold for "home" consumption in the United Kingdom. This would be contrary to the Customs Act of Canada; but if the concession could be, and were, granted, the loss in customs revenue would be very great. Moreover, it cannot be contended that transactions for "home" consumption in the United Kingdom are appreciated in price to the extent or in correspondence with the depreciated value of sterling in Montreal. This can be realized at once by consideration of our own condition for transactions in general for "home" consumption in Canada are not appreciated in price to the extent or in correspondence with the depreciated value of the Canadian dollar in the United States. The basis of sterling, the franc and the lira, still is gold, and it is to the interests of Canadian importers that there should be a settled basis for the valuation of imported European goods. If the rate of exchange were to be allowed in calculating the value for duty, it is probable that no two importers of the same goods would pay the same amount of customs duties. Thus, there would be all sorts of invidious discriminations.

The action of the Customs Department of Canada in placing the same par valuation on sterling exchange which the United Kingdom attaches thereto in respect to sales for "home" consumption in that country, does not destroy, as some erroneously contend, the effect of the British Preferential Tariff of Canada. Examples of actual transactions will make this clear. With sterling in New York worth $3.69, the Canadian dollar in New York being at a discount of 13½ per cent., the value of the pound sterling in Montreal is $4.18. On this basis the customs duties, and laid down cost in Canada, on a direct importation from the United Kingdom into Montreal, as compared with a like shipment into the United States and reshipment thence to Canada, would be as follows:

From United Kingdom Direct to Montreal.

1,500 lbs. tissue paper, £200; par value, $973.00.		
Duty at 15%, British Preferential Tariff, on the par value of the pound	$145 95	
Freight and insurance, say	7 00	
Actual cost in Canadian money, with sterling at $4.18	836 00	
		$988 95

From United Kingdom into United States and Reshipped thence to Canada.

1,500 lbs. tissue paper, £200; converted at $3.69	$738 00	
United States duty at 30%	221 40	
New York brokerage or commission, say	45 00	
Freight and insurance, say	7 00	
	$1,011 40	
If reshipped to Canada, ex U.S. Customs Bond, the General Tariff Rate would have to be levied on this sum of $1,011.40.		
Canadian duty on $1,011.40 at 25%, plus 7½% War Tariff	$328 57	
Dumping duty	151 65	
Freight, New York to Montreal, say	7 00	
Exchange, 13½% on $790.00	106 65	
Laid down cost in Canada		1,383 87
Difference in favor of making direct importation from United Kingdom to Montreal		$394 92

ANOTHER CASE.

From United Kingdom Direct to Montreal.

1,000 yds. woollen cloth at £1 per yd.; par, $4,860.00.		
Duty at 30%, British Preferential, on the par value of the pound	$1,458 00	
Actual cost in Canadian money, with sterling at $4.18	4,180 00	
Freight, insurance, etc., say	100 00	
		$5,730 00

From United Kingdom into U.S. and Reshipped thence into Canada.

1,000 yds. woollen cloth at £1 per yard; converted at $3.69	$3,690 00	
United States duty, 35%	1,291 50	
New York brokerage or commission, say 5%	184 50	
Freight, insurance, etc., to New York	100 00	
Duty paid, fair market value in New York	$5,266 00	
If reshipped to Canada, ex U.S. Customs Bond, the General Tariff Rate would have to be levied on the sum $5,266.00.		
Canadian duty on $5,266.00 at 35%	$1,843 10	
Dumping duty, 15%	779 90	
Exchange, 13½% on $3,974.00	556 51	
Freight, New York to Montreal, say	100 00	
Laid down cost in Canada		7,234 01
Difference in favor of making direct importation from United Kingdom to Montreal		$1,504 01

ANOTHER CASE.

From United Kingdom Direct to Montreal.

20,000 yds. unbleached cotton fabric at 1 shilling per yd., £1,000, or (par) $4,860.00.		
Duty at British Preferential Rate, 15%.	$729 00	
Actual cost in Canadian money, with sterling at $4.18	4,180 00	
Freight, insurance, etc., say	100 00	
		$5,009 00

From United Kingdom into U.S. and Reshipped thence to Canada.

20,000 yds. unbleached cotton fabric, £1,000; converted at $3.69	$3,690 00	
United States duty at 20%	738 00	
New York brokerage or commission, say 5%	184 50	
Freight, insurance, etc., to New York	100 00	
Duty paid, fair value in New York	$4,712 50	
If reshipped to Canada, ex U.S. Customs Bond, the General Tariff Rate would have to be levied on the sum of $4,712.50	$4,712 50	
Canadian duty at 25% on $4,712.50	1,178 00	
Dumping duty	706 80	
Exchange at 13½%	536 49	
Freight, New York to Montreal, say	100 00	
Laid down cost in Canada		6,495 79
Difference in favor of making direct importation from United Kingdom to Montreal		$1,486 79

The Canadian Customs appraisement of importations from the United Kingdom, according to par value of sterling, cannot be evaded by shipment of such British goods into the United States and reshipment thence into Canada. If any overseas goods are shipped into the United States and subsequently reshipped into Canada, the Canadian Customs, under the law as it stands, has to appraise such goods according to the duty paid, open market, usual home selling price for consumption in the United States. Thus, the cost

of goods from the United Kingdom, plus carriage, insurance and other charges into the United States, including the United States duty and the profit which would accrue if sales were made in the United States, have all to be added together to arrive at the value for duty of such shipments from the United States into Canada. Also, such importations into the United States have to be entered at the general tariff rate instead of British Preferential Tariff rate. The result is that British goods cannot be shipped into the United States and reshipped into Canada except at a loss when compared with the laid down cost of like goods shipped direct from the United Kingdom into Canada. The provision in the Custom law of Canada referred to in the foregoing is Section 50, as follows:—

"The Governor in Council may provide that in the cases, and on the conditions to be mentioned in the Order in Council, goods *bona fide* exported to Canada from any country, but passing in transitu through another country, shall be valued for duty as if they were imported directly from such first mentioned country; provided that goods which have been entered for consumption or for warehouse, or which have been permitted to remain unclaimed, or which have been permitted to remain for any purpose, in any country, intermediate between the country of export and Canada, shall not be considered as in transitu through such intermediate country, but shall be treated as goods imported from such intermediate country, and be valued and rated for duty accordingly."

The regulations founded on this section appear in Customs Memorandum No. 1097-B.

If the depreciation in sterling were to be allowed for Customs duty purposes, the same principle would have to apply to importations into Canada from the allied countries and also to importations from late enemy countries. Thus, a change from the present Customs requirements, to an allowance for exchange conditions, would promote sales in this country from late enemy countries, more than from any other country.

The German mark has a par value in Germany of 23.8 cents, but is worth about one cent in Canadian money. Allowing exchange as outlined would result in an article which sells in Germany for 1,000 marks ($238) being appraised by the Canadian Customs at one cent per mark, or $10. A case in point: One grade of German lead pencils were sold for export before the war at 26 marks per gross (equal to $6.18 in Canadian money). Within recent weeks they have been offered at the same price of 26 marks to Canadian merchants. If exchange were allowed, these pencils, if imported now, would have to be appraised by the Customs at about 26 cents per gross, instead of $6.18; but 26 cents would scarcely buy the graphite used in their manufacture.

On the foregoing principle, goods purchased in Russian roubles should be appraised by the Canadian Customs as valueless, because the Russian rouble has no exchange value.

The adoption by Canada, for Customs revenue purposes, of this basis for the nominal valuation of goods from late enemy countries, would give to the products of those countries the most advantageous Customs tariff privilege for shipment into Canada that could possibly be extended to those countries by their greatest friend and ally. No single act of this country could be more pleasing to Germany than a change in our Customs law that would allow importations from Germany and Austria to be appraised to the exchange value of the German mark or the Austrian crown.

Australia absolutely prohibits importations from late enemy countries.

On January 14th, Australia issued a proclamation prohibiting the importation into the Commonwealth of:

(1) Goods manufactured or produced in or brought directly or indirectly from Germany, Austria-Hungary, Turkey or Bulgaria. Goods shall be deemed to have been manufactured or produced in Germany, Austria-Hungary, Turkey or Bulgaria, if more than 5 per cent. of the invoice value thereof has been derived from labor of persons resident in any of those countries, and the onus of proof of the country of manufacture shall be on the importer;

(2) The terms "Austria-Hungary" and "Turkey" mean those countries as existing before the war.

New Zealand likewise prohibits such importations.

The Dominion Government now has no power to prohibit or restrict importations from late enemy countries. To do this there would have to be an Act of Parliament, now that the War Measures Act has lapsed. And it is extremely improbable that any such prohibition would be authorized by Parliament.

Importations into European countries from North America are subject to the handicap of prohibitory adverse exchange rates. But an illustration of how these countries still further impede shipments from America appears in a recent order of the French Government. In this order France protects her markets by ruling American currency as being appreciated instead of her own currency being depreciated. Goods costing $1,000 in American money would have a par value of 5,208 francs. But France appraises such an importation at 11,600 francs for duty purposes. This raises the ad valorem tariff rates of France 123 per cent.

The United Kingdom applies the same rule on importations into that country from the United States and Canada.

It is a fact that in none of the European countries has there been appreciation in costs corresponding to the depreciated value of their currency in relation to the American dollar. And if such depreciation were allowed for duty purposes by this country in the appraisement of the currency of the exporting European country, the goods would not pay duty upon their true fair market value as sold for home consumption in the country of export. But the Customs law makes the value for duty of importations into Canada the fair market value as sold for home consumption in the country of export.

The exchange provisions appearing in the Customs Act of Canada were designed to meet the conditions in those countries whose currency standard is silver, such as Mexico, India, China, etc., where the value of the currency fluctuates in correspondence with the fluctuation in the price of silver.

When one considers that the depreciation of these currencies in relation to our money is so great as to far more than offset the Canadian Customs duty on imports, it is ridiculous to contend that the Customs provisions destroy or attempt to destroy the British preference and the difference in present exchange values.

Marking Country of Origin on Imported Goods

The Executive Council, on the recommendation of your Committee, has asked the Dominion Government to amend the customs regulations so as to provide that each and every manufactured article imported into Canada from any other country, including countries of the British Empire, shall be clearly marked so as to indicate definitely the country of origin.

It is recommended that the above regulation should be so worded as to strengthen the present Canadian customs regulations as to "marking", by adding provisions similar to the

following regulation in the United States' Tariff Act of 1913, which deals with the same subject:—

"F. Subsection 1. That all articles of foreign manufacture or production, which are capable of being marked, stamped, branded, or labeled, without injury, shall be marked, stamped, branded or labeled in legible English words, in a conspicuous place that shall not be covered or obscured by any subsequent attachments or arrangements, so as to indicate the country of origin. Said marking, stamping, branding, or labeling shall be as nearly indelible and permanent as the nature of the article will permit.

All packages containing imported articles shall be marked, stamped, branded, or labeled, so as to indicate legibly and plainly, in English words, the country of origin and the quantity of their contents, and until marked in accordance with the directions prescribed in this section no articles or packages shall be delivered to the importer.

Should any article or package of imported merchandise be marked, stamped, branded, or labeled, so as not accurately to indicate the quantity, number, or measurement actually contained in such article or package, no delivery of the same shall be made to the importer until the mark, stamp, brand, or label, as the case may be, shall be changed so as to conform to the facts of the case.

The Secretary of the Treasury shall prescribe the necessary rules and regulations to carry out the foregoing provision."

The Budget

An analysis of the taxation proposals, including the tariff changes contained in the budget submitted by the Minister of Finance to Parliament on the 18th May, 1920, with necessary observations and explanations, was forwarded to the membership by special circular on May 25th.

Orders-in-Council and Rulings

Notice of changes in customs regulations as effected by Orders-in-Council or by customs rulings have always been sent promptly to members primarily interested. In addition, full announcements have appeared in INDUSTRIAL CANADA each month.

During the year the Tariff Department, in co-operation with members concerned, has handled a large number of questions before the Department of Customs as to customs tariff interpretations, of questions as to value for duty of imports, of matters requiring new statistical classification, of customs seizure charges, the return of duties overpaid, and the settlement of drawback claims. Members are again reminded that the Manager of the Tariff Department is available to all members for consultation and assistance in respect to any customs matter, either foreign or domestic. In this connection it is gratifying to report that the facilities of the Tariff Department for advising on foreign tariff rates, invoice forms, etc., have been extensively used during the past few months.

All of which is respectfully submitted.

E. J. DAVIS, *Chairman.*

J. R. K. BRISTOL,
Manager, Tariff Department.

J. E. WALSH, *General Manager.*

Discussion of Report

The report of the Tariff Committee was read by Mr. J. R. K. Bristol, manager of the Tariff Department. Referring to the matter of customs on page 17 of the report, Mr. Bristol said: "I might state this provision in the Customs law is the only protection which Canadian wholesalers have under our system of government, and were it not for this provision, I am confident the Canadian wholesale trade, instead of being handled by Canadian wholesalers, would be handled by United States wholesalers and jobbers."

The report was received with applause.

MR. S. R. PARSONS (Toronto): "Mr. Chairman, I rise to move the adoption of this splendid report which we have heard with such great interest this afternoon. It appears to me that nothing could have been suggested which has not been included in that report to make clear our tariff arrangements in Canada. I think that Mr. Bristol, as manager of the Tariff Department, deserves the congratulations of this whole Association, not only on account of the splendid work which he has done throughout the years of his connection with that department, but for the particular work which has engaged his attention more than that of any other officer in preparing this report. It is certainly not only very interesting, but I think it answers in detail the criticisms that have been made throughout this country against the manufacturers and against the tariff.

Removal of the War Tax

"I am particularly glad that there is a reference to the removal of the 7½ and 5 per cent. war tax. It has been stated by certain newspapers in this country that that war tax was put on at the instigation of the manufacturers. That is an incorrect statement. The manufacturers had nothing to do with the imposition of that war tax. They accepted it just as they accept loyally any other pronouncement of the Government in connection with taxes; and it has been said that there was very serious objection on the part of certain manufacturers to the removal of that 7½ and 5 per cent. tax. Now, I think I am safe in saying, so far as the Association knows, there has been no such objection. (Hear, hear.) I would like to make that very plain and specific, because only the week before last a very influential newspaper in Canada came out with the statement that there was great opposition on the part of manufacturers to the removal of that 7½ per cent. war tax. and it may be possible that here and there a manufacturer, who is handling only certain Canadian raw materials, benefited by that extra war tax, but, generally speaking, considering the fact that very large quantities of raw material are imported, and that the war tax applied on raw materials which is less than on finished products, manufacturers were not benefited, and speaking feelingly, some of them had to stand a considerable loss on account of that imposition.

"There are one or two other suggestions made in the report, or rather they grow out of the report, and one of them seems to be this: In the public mind to-day there is a feeling that if the duties were decreased or removed there would be just so much less of a tax on our commodities. Now, it is a false view. So much money has to be raised in one way or another in this country, an enormous amount as we know now on account of our war obligation. Now, if we don't raise the money through duties, we are going to raise it in some other way, and I think we should point out to a lot of our friends who are agitating just now for the removal of the duties, or for a very large decrease in them, that it means they have to pay so much more through some other direction, some other channel; and as one who believes in the tariff and who has been assailed by many of the newspapers, and called a high protectionist and all the rest of it, which I never was, but I believe in a reasonable protection for industry which we cannot get along without—I say this, it is our duty to make clear this point that the removal of customs' duties would mean that through other channels we will have to pay very much higher taxes than we are now doing.

"Let us apply it to the farming population. The farmers of this country in population we will say are about one-half

of the whole. It has been figured out by those who have gone into statistics very clearly that, under the present customs duties, the farmers pay only from three-fifths to two-thirds as much as other classes in the community under that tariff. Now then, if the present tariff were removed the farmers would not be not only contributing their share through the customs duties; but we all know how difficult it is to get returns from the farmers by way of the Income Tax. I am right in saying so far the farmers of this country have not paid one per cent. of the Income Tax. In the United States, a country which is more thickly populated than our own, and where the Income Tax is more readily applied and more easily collected, it has been stated by the *New York Times*, that the farmers of the country have not paid more than one-half of one per cent. of the total Income Tax. That is pretty much the case in Canada. Therefore, if there be a removal of the duties which are not paid through the customs, the farmers of this country would have very little to pay.

"Now, I don't believe that that is what the farmers are aiming at at all. I believe the farmers, generally speaking, are willing and ready and anxious to contribute their fair share of all the taxes in the country, and therefore the thing that strikes me about it is that many of them are being misled, their leaders trying to make it appear that a condition exists whereby the manufacturers of this country have a tariff which enables them not only to make a profit but whatever the tariff rates are, to make that in addition just to put into their own pockets. That has been suggested over and over again. We know that is not the case; and we know that while here and there some manufacturers are making a considerable amount of money just as here and there, some farmers are making a considerable amount of money, yet the vast majority of manufacturers are only making a very, very reasonable and moderate profit, and, if it were not for the help which is afforded them by the tariff which now prevails, many of them would have to go out of business; and I feel therefore that the report which is before us to-day and which sets forth so clearly the exact position with regard to the tariff is the finest pronouncement we have ever made, and I hope it will be circulated throughout this entire country. Coming from the East to the West here our mouths have been closed and to some of us it has been a bottling up, I will tell you, that we didn't like very much, but we felt it was the wise thing to do. Now, however, Mr. President and Mr. Chairman, I take it for granted that we are no longer tied up and that we can speak freely, and I hope the pronouncement which we will make as manufacturers in this annual meeting will be of such a nature that it will help to settle and convince people throughout the country that we are not tyrants, we are not robbers, we have as much the interests of all classes of the people at heart as we have our own interests, and what we desire is, first of all, national revenue, and, secondly, employment of all men in this country."

MR. J. S. MCKINNON (Toronto): "Gentlemen, you have heard this very splendid report that has been presented by Mr. Bristol and I think a debt of gratitude might be expressed to the Hon. E. J. Davis, the Chairman of this Committee, for the splendid work he has done in connection with it. While we can pass this report, if it is your wish, I think we should all take it home and study it very carefully and properly digest it. Is there a seconder to Mr. Parson's motion?"

MR. PARSONS: "Before the motion is seconded, will you allow me to say it has been suggested that the figures which I gave now as having been prepared by certain statisticians, that the farmers contributed two-thirds to three-fifths of the amount of the tariff only related to this, that for instance the other classes of the population paid 100 per cent., whereas the farmers of the population throughout their territory, on account of the particular lines which they purchased, only paid three-fifths to two-thirds. I haven't the figures with me, but I have them and they have been very carefully compiled. I don't know whether I have made that clear now or not, Mr. Chairman, but I hope I have; if not I would like to make that clear."

MR. F. J. CAMPBELL (Windsor Mills): "Mr. Chairman, I have much pleasure in seconding Mr. Parsons' motion. There is no department, I believe, in the Association that is worthy of more unstinted praise than the Tariff Department, and the work of Mr. Bristol.

"There is just one thing that I would like to call attention to, and it may be worth while to eliminate a small clause. This clause is on page 12 of the report, and it reads 'The home selling price in Canada is higher on a large number of groups of commodities than the United States' home selling price on like goods, caused by our higher manufacturing costs, owing to revenue duties on imported materials, equipment and supplies of a kind not obtainable here.' That might give ground to those who wish to argue that the tariff is not an unqualified benefit to the manufacturers of Canada, and furthermore, a considerable proportion of our increased cost is caused by the fact that our markets have not yet grown to the proportions that enable us to specialize as closely as in some larger centres, and the increased cost is not entirely due to those import duties."

MR. BRISTOL: "May I state, Mr. President and gentlemen, the sentence referred to on page 12 of the report is beyond any question of doubt a statement of fact. There are many manufacturers whose principal material must be imported, and that material is subject to revenue duties. There are many manufacturers who must import practically all their machinery and equipment, and those importations are subject to duties ranging from 27½ to 35 per cent. In the operation of their plant they must, particularly in a central province like Ontario, import bituminous coal for fuel purposes on which the duty is 53 cents per ton, and in those respects their costs of production are raised as compared with the cost of production of like goods in the United States, where living conditions about correspond to our own. In that way the Canadian manufacturer who is in the class referred to in the sentence, cannot produce his goods and sell them at a price corresponding to the productive cost and selling price of like goods in the United States."

MR. F. W. STEWART (Montreal): "In regard to this matter, perhaps the business I am connected with would demonstrate that very clearly, and to a certain extent I think Mr. Campbell's point is well taken. In a business such as ours, possibly it is necessary for us to import 80 to 85 per cent. of the materials we use because they are not manufactured in Canada. We have been bringing in a large percentage of this material since we established a plant in the Dominion of Canada, and we brought the goods in, paid the duty on them and manufactured the article and we ship out from our Canadian factory at the same price as in the United States. I am glad to make that statement to confirm the statement which Mr. Parsons has just made in regard to Canadian manufacturers taking advantage of the duty and taking as long a price as they can. I do not believe we are alone in working along such lines. In fact, I come in contact with many manufacturers all over the country, and I have yet to find a manufacturer who is in any way endeavoring to take advantage of the duty which is paid on goods coming into this country. I am very glad to be able to make the statement so that the people of this country will have an opportunity

(*Continued on page* 221.)

Big Gain Made in Association Membership

Six Hundred and Sixty-two New Members Join During the Year, Producing a Net Gain of 531 and Bringing the Total Membership up to 4,061—Results by Provinces enumerated and Distribution Indicated

Report of Membership Committee

YOUR Committee take pleasure in reporting that 662 new members joined the Association since the last annual general meeting.

The Association began the year on May 1st, 1919, with a membership of 3,530. The applications received and passed totalled 662; resignations accepted numbered 131, bringing the total membership on April 30th, 1920, up to 4,061, a net gain of 531 for the year, as compared with a net gain of 141 for the year 1918-1919.

The results by provinces for the past year are indicated as follows:

	New Applications.	Resignations.	Net Gain.
Ontario	273	67	206
Quebec	182	17	165
British Columbia	63	14	49
New Brunswick	56	4	52
Nova Scotia	34	1	33

The general work of your Committee was conducted by means of circulars, correspondence, and personal canvass of members of the staff. The special membership work was done chiefly through the national membership campaign held during the week of December 1st last. On that date, the campaign, which had been carefully organized during the preceding month, opened simultaneously all over Canada. Special committees had been formed in all the principal centres, in which the list of prospects had been carefully revised and distributed among members who had kindly promised to do some personal canvassing. The results of this splendid co-operation of the members, and the assistance furnished by them, made the campaign a great success. Members in a great many localities entered into the spirit of the campaign with enthusiasm and did a great deal of personal work.

H. A. Telfer
Telfer Bros., Limited, Toronto
Chairman 1919-20, Membership Committee

It is interesting to know that the Association has grown to its present size practically within the last twenty years. Though the history of the Association dates from 1872, it was largely a provincial organization until 1899, when it was decided to broaden its scope. At that time its membership was only about 300. The Association was incorporated by Act of Parliament in 1902. By 1905, the membership had grown to 1,604; by 1910, to 2,450; by 1915, to 3,098; and during the last five year period the membership has increased to 4,061.

It is gratifying to report that, of the 131 resignations accepted, none resigned because of dissatisfaction with the policies or administration of the Association. These resignations were due to such causes as amalgamations, discontinuing manufacturing operations, and failures.

The actual cash collections from fees for the year ending April 30th, 1920, amounted to $133,395, being an increase of $46,920 over the previous year.

The loss in revenue from resignations amounted to $2,015. On the other hand, the additional fees secured from new memberships amounted to $16,280.

The following table shows the distribution of the membership in each Province and the amount of fees paid by each class:

	$10	$15	$20	$25	$35	$50	$75
Ontario	338	436	165	344	313	199	147

Your Committee are glad to be able to report increasing interest in the "100% campaigns" for membership. The

object of such a campaign in a community is to secure every eligible manufacturer as a member of the Association. At the present time a considerable number of industrial communities have a "100% membership" in the Association.

As the most effective method of securing members is through the personal effort of present members, your Committee respectfully urges that individual members consider it their duty during the coming year to induce non-members to join the Association.

All of which is respectfully submitted.

H. A. TELFER, *Chairman.*

J. T. STIRRETT, *General Secretary.*

J. E. WALSH, *General Manager.*

Report is Adopted

The report of the Membership Committee was read by the General Secretary.

Mr. A. D. Ganong moved, seconded by Mr. J. A. Reid, that the report of the Membership Committee be adopted.

THE PRESIDENT: "I would like to urge on the members one thing, let those that are present keep up the good work and let us have one hundred per cent. all over. Unity is strength and we need it."

MR. J. B. THOMSON (Vancouver): "May I ask that British Columbia be changed to 188?" (applause).

MR. STIRRETT: "I may say this report, to enable it to get out here in time, had to be printed about a month ago and these members have come in since that time."

The President put the motion to adopt the report of the Membership Committee, which, on a vote having been taken, was carried and the report declared adopted.

Presentation to C.P.R. Officials

A Pleasing Incident

ONE of the pleasant incidents of the annual banquet on the evening of June 9 was a presentation made to Mr. W. B. Howard, District Passenger Agent, C.P.R., Toronto, and his assistant, Mr. Price, in recognition of the splendid way in which they had looked after the comfort and welfare of the excursion party. The subject was introduced by Mr. T. P. Howard, with the following tribute:

"I have a very, very pleasant duty to perform this evening. As we came across the continent from Montreal (in fact some of our members came from the Maritime Provinces), and came to Toronto and straight through the Rockies to your City of Vancouver, we had one gentleman on board who was largely responsible for the success of our venture—very largely responsible, I might say, wholly responsible, for the pleasure we had. The service which has been given to us by the Canadian Pacific Railway is something that those who were with us on the train do not need to be told anything about. I refer particularly to my good friend and namesake, Mr. W. B. Howard. There was only one single, solitary thing that ever made Mr. Howard cross, and he said 'darn' when, after coming 2,000 odd miles, we pulled into Edmonton eight minutes late. In consequence and as a mark in some small way of the appreciation of this travelling all-star troupe, conducted by Messrs, Walsh, Howard & Company, Limited, on this continental tour—I think the idea originated with the ladies; they suggested we should in some way acknowledge our appreciation and our thanks to Mr. Howard—and, sir, it is my pleasure to do so. In consequence I have been asked, sir, if you would be good enough to accept on behalf of the troupe this small presentation in the hope that on our way back we will not lose that eight minutes." (Laughter).

Mr. T. P. Howard then presented Mr. W. B. Howard with a gold watch for himself and a pendant for Mrs. Howard.

MR. W. B. HOWARD: "Mr. Ex-president and namesake. ladies and gentlemen: Had I known that something like this was going to happen I won't say I would have been conspicuous by my absence, for that would not have been the truth, but I would have been not altogether unprepared. But, we live and learn. It is not the first time I have been unprepared, but I hope it will be the last, like the colored man who was sentenced to be executed and just before being executed was asked if he had anything to say and he replied, 'This certainly am going to be a lesson to me.' (Laughter).

"I am sure if the party that came with me enjoyed my presence on this trip half as much as I have enjoyed their presence, I am perfectly satisfied. Speaking of the question of transportation, of course I don't know anything else. A C.P.R. man lives, eats and sleeps and sometimes talks C.P.R. I don't propose to discuss the question to any great extent, suffice it to say that we are trying to-day to give what the public appreciates, and that is service. That is what we have tried to give you on this trip. The Canadian Manufacturers and the Canadian Pacific Railway or any transportation company are in partnership. The manufacturer depends upon the railways for efficient transportation. On the other hand the railways depend upon the manufacturer for his business to transport, and on the public generally for its support and patronage. On such depends its life and existence. A railway whether Government-owned and operated, or privately-owned and operated is still a public utility. Its employees are public servants, and railway employees do well to remember the latter. In fact we seldom are allowed to forget it. I don't want to say any more. I suppose if I had been given a little warning I could say more and could have made perhaps a better speech than some people have made that I have heard (laughter), but I want to again thank you for your kindness."

MR. T. P. HOWARD: "I had almost forgotten when I got up awhile ago that Mr. Howard had with him an assistant. We want to thank Mr. Price. He is also the right sort and is on his way to a great deal bigger position in the C.P.R. than he has to-day, or I have missed my guess. (Applause). It is not altogether Mr. Price's fault. I had him with me for one year in Washington. That is why he is getting on so well. However, Mr. Price, on behalf of the train, I want you to please accept their thanks for your courtesy and kindness."

MR. PRICE: "Mr. Howard and gentlemen, I think I am taken more unawares than Mr. W. B. Howard was. All I can say is, Thank you, I appreciate it very much." (Applause).

Work Done for the Promotion of Trade

What Has Been and is Being Done by the Association to Assist Members and Others in Developing Trade Both at Home and Abroad Through the Compilation and Dissemination of Information Bearing on Commerce and Industry

Report of Commercial Intelligence Department

OWING to a constitutional change made at the last Annual Convention, this is the first time that your Commercial Intelligence Committee has had the honor of reporting to the Annual Convention.

As the Department over which the Committee exercises supervision has been in operation since 1915, some time was necessarily spent by your Committee in confirming or changing existing practises and in evolving definite lines of policy for the successful and effective operation of the Department. It has been the aim of your Committee to inaugurate constructive plans that will enable trade sections, affiliated Associations, and individual members to participate in movements brought to their attention. At the same time your Committee realizes the importance of keeping the Department abreast of the times with regard to information on the economic situation in Canada as related to her industries and to put it in a position to place detailed information at the disposal of members.

On this first occasion of reporting probably it will not be taken amiss if some brief account of the general lines of work is given before dealing specifically with the more important questions considered during the year.

The work of the Commercial Intelligence Department is extensive in scope and varies in character from minor enquiries about minute particulars connected with different businesses to the negotiation of working arrangements with other bureaus of information. Commercial organizations, and Government Departments and Commissions, particularly the Department of Trade and Commerce, the Dominion Bureau of Statistics, and the Canadian Trade Commission.

The information bureau work brings the Department into touch with the general public and the non-manufacturing part of the business community and many members of the Association receive through ordinary business channels many enquiries for their products as a result of this connection. In practically all these cases the Department does not appear, but nevertheless direct service is thereby maintained for the benefit of the membership. The basis for this work has been the compilation of the Canadian Trade Index, which calls for an enormous amount of changing, adding, and rearranging to ensure the production of an adequate source of information.

On account of the records and classified information maintained by the Department, gleaned from many sources, coupled with the previous experience of the staff, the Commercial Intelligence Department, perforce, occupies the position of a service department to other departments of the Association and, when the occasion is important enough to demand it, as much as a week of the time of almost the whole staff is devoted to preparatory or organizing work in connection with many of the general Association activities.

As an indication of the practical use to which a close survey of the progress of individual industries can be put, it has been possible for your Committee during the past year to increase the revenue of the Association by over $6,000, through a careful readjustment of fees. The Canadian Trade Index will also show a profit, which will be augmented by sale of additional copies.

Among the important questions receiving the consideration of your Committee were the following:—

Export Trade.

This falls naturally into a number of subdivisions as:

Trade Enquiries.

Trade enquiries were received from abroad, direct from our numerous correspondents, and through the Department of Trade and Commerce, and the Canadian Mission in London.

These were circulated, after careful scrutiny, as widely as possible by mail or through the columns of INDUSTRIAL CANADA. In all, over 400 enquiries were dealt with from nearly every quarter of the globe, and furnished opportunities to Canadian manufacturers to get information as to markets for their lines, and often resulted in the placing of business.

Investigation of Foreign Markets.

Where it was desirable to procure information confidentially as to the extent of foreign markets for special lines of Canadian-made goods and to ascertain competitive conditions and other particulars, enquiries were conducted, using the facilities of the Department of Trade and Commerce, supplemented by communication with our own correspondents, which often resulted in information of material value being placed at the disposal of members.

Agents and Merchants Visiting Canada.

Very frequent interviews are given to agents and merchants visiting Canada, with a view to handling lines on commission in their respective countries or in making purchases for resale. Practically all of these men, many of whom were prominent in the business life of their own communities, were put in touch with Canadian manufacturers who might be in a position to do business with them. Whenever practicable, information as to business conditions was gathered from these men, and our list of correspondents for future enquiries was thus augmented.

Commercial Reports.

During the past year your Committee has been deeply interested in increasing the existing facilities for the receipt of reports on the financial and commercial standing of all classes of business houses outside of Canada and the United States. It succeeded in arranging to supply these reports free of charge to members, in place of the former arrangement under which they cost $2.50 each. The net result has been that more of these reports have been called for in a month than were previously asked for in a year, and the saving to individual members by the inauguration of the new plan totals over $1,150.00. These reports are constantly kept on file, and the list is being added to continuously.

Export Circular.

There was a very gratifying response to the circular issued recently, asking for replies to a questionnaire dealing

with numerous points of interest to exporters or intending exporters. These replies have been fully tabulated and indexed in such a way as to give a bird's-eye view of the requirements of those members who submitted replies. The information thus obtained has already been used confidentially for the benefit of many members, and will continue to be useful in developing further export trade.

Improvement of Inter-Imperial Channels of Trade.

This subject was brought to the attention of the Committee by a variety of existing conditions, by reason of which it was felt that the free movement of commodities between the various parts of the Empire was being impeded either by the placing of export and import sales agencies in the hands of business men in countries not in the Empire, or by lack of direct steamship connections. Your Committee reaffirmed one of the basic principles of this Association's action, namely, the stimulation by all practicable means of the easy interchange of commodities produced within the Empire, and has instructed the Department to give every possible assistance to movements tending in this direction. It may be noted that citizens and organizations of other parts of the Empire, even if they are temporarily located elsewhere, are doing their share to assist in this project, as indicated by the proposal to establish or to rejuvenate British Chambers of Commerce in New York and San Francisco, and by the establishment of branches of British import and export merchant houses in Canada, India, South Africa and Australia.

Canadian Trade Index.

The 1920 edition of the Canadian Trade Index has just recently been distributed to all members of the Association, so that its character and scope will once more be recalled to those attending this Convention. The details of compilation and business management, through long usage, are under the supervision of the Publications Committee, and a special report will be submitted covering this phase. The compilation and editorial work, however, was done by the staff of the Department, whose work is supervised by the Commercial Intelligence Committee, and the wide range of information received from the unpublished schedules forms an increasingly valuable part of the classified records of the Department.

Great care is taken to see that copies of the Trade Index find their way into the hands of the purchasing agents of manufacturers, railways, mining companies, wholesalers, department stores, institutions and Government departments, and a carefully selected list of importers and commercial organizations in all the principal countries of the world. The discussion of the uses of the Canadian Trade Index has formed the subject of a number of conferences with various branches of the Purchasing Agents Association of Canada, and by this means a very useful and practical method of propagating the "Made-in-Canada" idea has been worked out.

Investigations Concerning New Products.

On numerous occasions the Dominion Bureau of Statistics, at the instance of this Department, has made special investigations into the production or importation of various commodities. These investigations have frequently revealed much more effective information than is or can be published broadcast. The work of the Bureau has been supplemented and checked in each of these cases by special work of the Department in gathering information from the wholesale trade and from large consumers. A concise statement of the results thus obtained is passed on confidentially to the enquirer, without disclosing any individual source of information. This information is supplied largely to two groups: Canadian manufacturers seeking new lines to manufacture and United States' manufacturers who are making a *bona-fide* effort to establish a plant in Canada. In similar connection, with the co-operation of the Tariff, Transportation and Legal Departments of the Association, information as to questions involving their expert assistance is supplied, as well as data as to labor supply and conditions, and possible sites and locations. The Department co-operates with any recognized organization which may be in a position to acquire and furnish useful information about local conditions and is operating to increase the industrial capacity of Canada.

Housing.

Closely related to the question of establishing new industries is the ever pressing problem of housing. The Commission of Conservation of the Dominion Government recently undertook a survey of those industries, formerly situated in the downtown districts of the larger cities, that have moved out to suburban sections or into small towns. The purpose of this survey was to determine the reasons for this movement, and more particularly to ascertain its relation to the solution of the housing problem. In this study a great number of towns and cities were visited, full information as to the changes that had taken place being furnished to the Commission by your Committee. A report on the whole situation has been produced for the use of the Commission, and the Housing and Town Planning Division has been enabled to suggest plans to various municipalities, based scientifically on their local conditions, coupled with the experiences through which other municipalities have passed.

Engineering Index.

Your Committee was seized of the importance of enabling the members of the Association to get a review of the arti-

cles or theses on technical subjects that are being published in a wide variety trade and technical papers, books and magazines, particularly since the range of these is so wide that it is impossible otherwise for these members to have more than a small fraction of them come under their personal observation. Arrangements are now being concluded to have selections made of the subjects and methods of treatment of these technical articles and published in INDUSTRIAL CANADA, together with particulars as to where the articles or publications may be obtained.

These questions are dealt with in such a comprehensive way that some of them will be of great interest to many other manufacturers than those engaged in purely mechanical trades.

Graphic Exhibits of Canadian Industries.

Your Committee has had under consideration the question of assisting in the development of graphic exhibits of Canadian industries. By this is meant an assembly of materials on commodities, showing the various stages of manufacture or the different materials and parts entering into the construction of such a commodity as an automobile, a heavy machine, or a fine carpet. Your Committee has in mind the use of the principal exhibitions now established in Canada as the functions at which to display such exhibits.

It is becoming more and more evident that much more must be done in Canada to acquaint the Canadian public with the scope and character of Canadian manufacturing enterprise. It has long been recognized that visual observation is much to be preferred as a means of education to the printed word, and in this case it has the advantage of being much more permanent, and the exhibits are placed before the public in its most receptive mood.

In considering the goods that might form such exhibits, no thought has been entertained of including such goods as are now exhibited in the rented booths and spaces, or to interfere in any way with an individual's right to exploit his own product under his own name, except in so far as it may be necessary to include an odd line or article to complete some cycle of exhibits.

A skeleton outline of various exhibits has been drawn up, and before the time for the preparation of the 1921 exhibits has arrived, sections of the Association, and members not allied to sections, will receive the result of your Committee's work in this direction, for their consideration and possible action.

All of which is respectfully submitted.

E. HOLT GURNEY, *Chairman.*

ALEX. MARSHALL, *Manager, Commercial Intelligence Dept.*

J. E. WALSH, *General Manager.*

Report is Adopted

The foregoing report was presented by the General Secretary with the following explanation: "Although there has been a Commercial Intelligence Department in the Association for some time, a committee was appointed for the first time at the last annual meeting to revise the work of the Department, and this is the first report that has been submitted as a separate report. The work of the Department is to keep a list of the articles manufactured in Canada and the firms which make them. This is published from time to time every three years in the *Canadian Trade Index*, which has just been published. This shows that there are 8,500 articles made in Canada, an increase of over 2,000 since three years ago when the last *Canadian Trade Index* was published. The Department also tries to get information in regard to where Canadian goods can be sold, and co-operates with the Government and other bodies and notifies our members where there are opportunities to sell goods. At the same time it tries to tell the members where they can get materials that they need in their manufacture.

"The report is before you and the president suggests that, owing to the amount of work which has to be done, that it be taken as read with this explanation."

THE PRESIDENT: "Is that satisfactory?" (Consent given).

It was moved by Mr. C. G. Robson (Edmonton), seconded by Mr. R. L. McIntyre (Toronto), that the report of the Commercial Intelligence Committee be adopted.

The president put the motion which, on a vote having been taken, was carried and the report declared adopted.

Proceedings During Election of Officers

Several Congratulatory Speeches are Delivered by Members—Incoming and Out-going Officers Express Their Appreciation of Honors Conferred—Message of Felicitation to Mr. J. F. Ellis, on His Retirement

At the fifth business session on the morning of Wednesday, June 9th, the report of the Nominations and Resolutions Committee was presented, being read by the General Secretary. The name of Mr. John S. McKinnon, Toronto, was placed in nomination for the presidency; that of Mr. W. S. Fisher, St. John, for first vice-president, and that of Mr. John R. Shaw, Woodstock, for second vice-president. Mr. McKinnon being absent from the hall at the time, the floor was taken by Mr. Shaw, who said in part:—

"Gentlemen, I appreciate the honor of being elected your second vice-president very much, and I can see that the Nominating Committee have had in view the geographical situation, Mr. Fisher being in the Maritime Provinces. It is proper that these offices should be distributed, because we can assist each other and obviate certain long trips that the officials might have to make otherwise. My office of second vice-president will be a sinecure, with such an efficient President as John S. McKinnon, of Toronto, and Mr. Fisher in the east. As chairman of the Ontario Division, however, I recognize that I will have some work to do."

The New President Speaks

Mr. McKinnon, having in the meantime entered the hall, now took the chair amid applause, and said: "I would like to thank you sincerely for the honor that you have conferred upon me. I can assure you, gentlemen, I feel the responsibility but, with the Executive Committee and Council that I know I will be surrounded with, I feel that they will share in a very large part the responsibility of this national organization. Whether or not we realize it, I believe that men do appreciate the esteem and confidence of their fellows. And in this regard I would like to assure Mr. Howard that he has that esteem, regard and affection which we all appreciate so much. (Applause.) The work that Mr. Howard has done during the past year has placed the Association under a very deep debt of gratitude to him. We have had splendid presidents in the past, but I believe no man could fill the chair with greater credit to himself and with more honor to the Association than Mr. T. P. Howard." (Applause.)

Thanks to Mr. Howard

At this juncture Mr. J. B. Thomson, Vancouver, chairman of the British Columbia Division, rose to propose a vote of thanks to the retiring president. He said in part:—

"Mr. Howard's tenure of office has been during possibly the most troublous year in our Canadian history, the first year of reconstruction. Many problems have presented themselves, and Mr. Howard (my own personal acquaintance with him only dates back practically for twelve months, although I have followed him in public life and in the press reports) has taken a great part for his country during the war in his work at Washington. He also took a great part, where I met him more particularly, in the work of the Ottawa conference. While our good friend, Mr. Shaw, was the leader, Mr. Howard was there and saw that every one of us did the work and saw there was nothing passed up. I have, therefore, great pleasure, Mr. Chairman, in asking this Association to go on record as showing the great appreciation they have for Mr. Howard's services." (Applause.)

Mr. A. D. Ganong (St. Stephen, N.B.): "Mr. Chairman, I would like to say just one word in regard to the Canadian Manufacturers' Association. I feel sure that a great many of our members, both those from the smaller concerns and those from the larger ones, have never appreciated the benefits of this Association. It undoubtedly has been of great benefit to the larger manufacturers, but I do not think a great many of the smaller concerns appreciate how much benefit they receive in an indirect way. I had one illustration of that, because in one of the branch organizations we put a thing through to the benefit of our members which saved us a great many thousand dollars in one year. While that result might have come in time, that one item alone will a great deal more than repay all we have ever paid or all the time we have ever given to the Manufacturers' Association; and I think a great deal of the work that is done brings an indirect benefit that amounts to thousands of dollars to all of us, but, because it is indirect, we do not see it. These benefits are larger according to the work done, and I feel sure every single member of this Association has benefited greatly this year by the amount of work Mr. Howard has put into the Association. We all know how difficult it is for us to get the time off to attend the meetings, but Mr Howard took the time to come down through the Maritime Provinces, to the great benefit of the Maritime Provinces and to the benefit of this Association.

"Further, I would like to say that, as President, a great many of us have met Mr. Howard, and I am sure everyone feels he has greatly enriched his acquaintance when he has met Mr. Howard. I have very much pleasure in seconding this vote of thanks to Mr. Howard." (Applause.)

The President hereupon put the motion, which was carried with applause.

Mr. Howard Responds

Mr. T. P. Howard: "Mr. Chairman and gentlemen, Mr. Thomson and Mr. Ganong, I thank you most sincerely for your kind expressions. I feel that we have accomplished considerable during the past year, but I don't feel that we have accomplished half what we should have accomplished. I think there is a whole lot more we might have done if we had had the time to really get at it, but you have got to realize that when you elect somebody as president of the organization, you elect a man that is busy; he gives what time he can, but he can't devote all his time to it. It is very true I have been, in the interests of the Association, from coast to coast this year. Last fall we went down to the lower provinces and we are at the Pacific Coast to-day. Our membership campaign was a success, and I am going to say right now that our campaign for a proper fund to put us where we belong, is assured—I feel certain it is assured, and that it will also be a success.

"I have had a thought in mind, and I have spoken to several members about it. I think Mr. Walsh has it on his list, and I have spoken to our President about it, and I am quite sure it will be carried out. That thought is that I think there should be a permanent officer who would be able to represent the President of this organization, somewhat along the lines of Mr. Emery in the National organization

of the United States. When Stephen Mason gets a request to speak before any large body he has not the time to travel all over the continent, and Mr. Emery or somebody else does it for him."

MR. J. R. SHAW: "What is Mr. Emery's title in the National Association?"

MR. HOWARD: "He is counsel. I suggested that he be assistant to the President or something of that kind. I have had four or five invitations this year to address Canadian Clubs in different parts of the Dominion and I have not been able to accept them because I couldn't afford the time and also devote the time that I did devote to the Association. I think that is one thing we should very closely investigate

W. S. Fisher
Enterprise Foundry Co., Sackville and St. John, N.B.
Elected First Vice-President, 1920-21, Canadian Manufacturers Association

and see if something of that kind could not be worked out. As to the work that has been done, and there has been a lot of work done, I really feel that the credit is due to Mr. Walsh and those at head office, and to my very worthy assistant, Mr. McKinnon, who has been, I might almost say, a joint president, because he has done everything in his power to assist me. I would like very much, in accepting your thanks, to thank Mr. McKinnon and also Mr. Walsh and the staff generally, for the very excellent work they have done; and while I am, what shall I say, relegated to the ash-pile as an ex-president, if I can in any way advance the interests of the Association or be of any service in any way whatsoever, you will always find T. P. to the fore. I thank you, gentlemen." (Applause.)

MR. F. J. CAMPBELL (Windsor Mills): "It is with peculiar pleasure I have heard Mr. Howard remark that if this Association can call on him in any way he would like them to do it. With some few notable exceptions, officers that take an active part in the Association rise to high office and then feel, as Mr. Howard has said, they are relegated to the ash-pile and cease to take as close an interest in the working of the Association, as it would be to the benefit of the Association to have them do. We have with us a very notable exception to that, and I hope Mr. Howard will be one of them and not feel, because he has passed through office, that we need not look to him for advice, counsel and help." (Applause.)

Retirement of Mr. Ellis

Continuing the reading of the report of the Nominating and Resolutions Committee, the General Secretary said: "Your committee report with the deepest regret that the present Treasurer, Mr. John F. Ellis, of Toronto, owing to ill-health, would not consider re-nomination this year. Mr. John F. Ellis joined the Association in 1878, and has always taken a very active interest in the organization. He served as a member of Council and various committees, and in 1898 was elected president of the Association. Your committee have much pleasure in recommending that he be elected a life member of the Association by a unanimous vote of this annual general meeting."

MR. S. R. PARSONS (Toronto). "Mr. President and gentlemen, I am exceedingly pleased at the suggestion of the Nominating Committee. I did not know that it had in view what it has now suggested. It has come to me for the first time, but I am particularly pleased that the Association should be asked to do honor to one who has given so much time and thought and has honored the Association throughout all the years nearly of its history. Mr. John F. Ellis has been an outstanding figure in all our work and in all our relationships, either with the Government or with the public. He has been a man in whom the members of the Association have had the fullest confidence. He has given unstintedly of his own best work, thought and time, to promote the interests of the Association. He is a gentleman in whom we are personally interested because of the fact that he has such an attractive personality. We feel he is a friend and we recognize in him that he is a man who draws out and attracts to himself the best that is in each one of us in our thought of him; and so to-day I rise as one of the old guard to express my very great satisfaction with the suggestion of the Nominating Committee, and to move that this Association elect Mr. John F. Ellis to life membership in the Association."

MR. T. P. HOWARD (Montreal): "Might I have the pleasure, as ex-president, of seconding that motion, Mr. Chairman? We all know Mr. Ellis, and I can't add anything to what Mr. Parsons has said."

The President put the motion which, on a vote having been taken, was declared carried, with applause.

THE PRESIDENT: "If it is your pleasure, gentlemen, this information will be wired to Mr. Ellis to-day?" (Hear, hear.)

Election of Treasurer

The name of Mr. Thomas Roden, Toronto, was then presented as the Nominating Committee's choice of Treasurer, and the list of officers and committees, as published on page 245 of this issue of INDUSTRIAL CANADA, was read.

On motion of Mr. R. L. McIntyre, Toronto, seconded by Mr. A. D. Ganong, St. Stephen, N.B., the report was adopted.

At a later juncture, Mr. Roden was introduced to the meeting, and said in part:—

"Mr. Chairman and gentlemen, during his lifetime dear old Mr. Booth gave us splendid service for many years, and

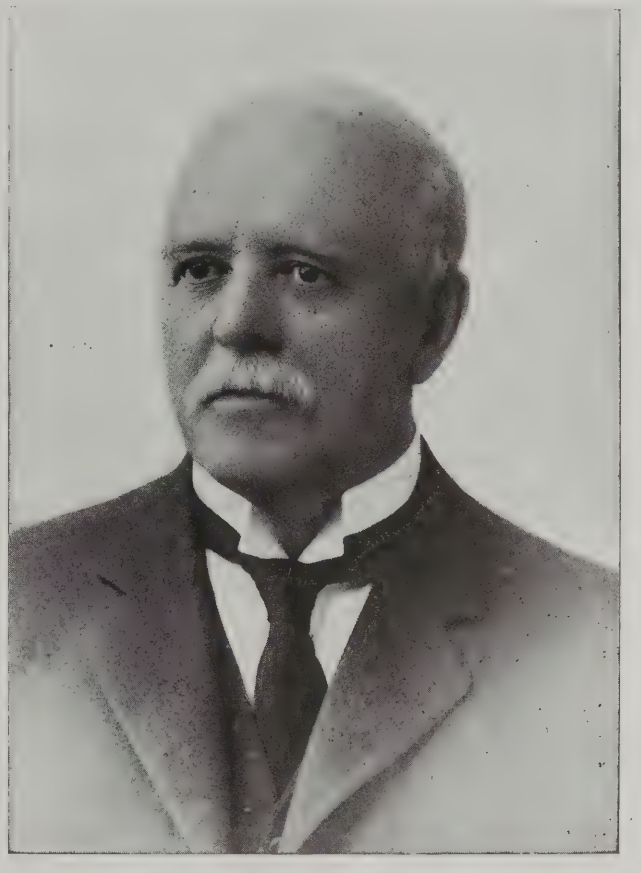
Mr. Ellis has now retired on account of bad health. I am hopeful I will not be afflicted in like manner, but that I shall have the same spirit as Captain Dollar had, that although I might be 70, I have twenty years left in me yet.

"I want to assure you, gentlemen, I appreciate the honor very much, and I also appreciate the responsibility. As I stated before, I have been connected with this Association for over twenty years, and every year has been one of added benefit to myself for the opportunity of co-operating and mixing with the gentlemen I have had the pleasure of meeting.

"As our President has stated, it is a very responsible position, and I believe that I am to have very many friends on my return journey. They want to travel with the Treasurer. I don't know whether they are going to put any bogus cheques on me or not, that is something I will have to be very careful of, to say nothing of the ladies.

"As you know we are almost starting on a new era of activity in this Association by the tremendous extension of our departments, and I want you gentlemen to realize that, with the increased benefit that you will obtain from the Association, you cannot have this for nothing; and while I have been one of the most active opponents of any advance in rates for years, because my view at all times was we should try to build up the Association to the largest number, I am convinced when we give the service contained in the programme as outlined yesterday by our manager, Mr. Walsh, which is of such an extensive character, when that service is rendered by the Association, we must recognize we have to face a larger membership fee to enjoy those benefits and privileges. It has always been stated that the fee we have charged for membership in this Association has been ridiculous, and I have accepted the onus of appearing in a ridiculous position in trying to defend the fees we have charged. But, as I stated, it was done with the object of as much as possible bringing in a large number of manufacturers in the hope that the smaller manufacturers, with this growing country, would grow larger and larger and eventually we would be able to soak them for a big sum on their larger business. There are some things that have to be remedied, but perhaps we might leave them to subsequent meetings."

Resolutions of Thanks



Thanks of the Association Tendered to Various Persons and Organizations for Courtesies

The following resolutions of thanks were carried by the annual general meeting:—

Moved by Mr. T. P. Howard, Montreal, retiring President, seconded by Mr. John R. Shaw, Woodstock, Ont.:

Resolved, that the Canadian Manufacturers' Association, in annual general meeting assembled at Vancouver, B.C., on June 9th, 1920, tender its hearty thanks—

1. To His Worship, the Mayor of Vancouver, for the generous hospitality so kindly extended by the city.
2. To the President, officers and members of the Vancouver Board of Trade for their kindly welcome.
3. To the president, officers and members of the Rotary and Kiwanis Clubs for their hospitality.
4. To the president, officers and members of the Women's Canadian Club, Vancouver, for the delightful entertainment they have tendered to the ladies attending the convention.
5. To the Vancouver, Terminal City and Jericho Country Clubs for extending the privileges of membership.
6. To the transportation companies which have provided such excellent services for our benefit.
7. To the management of the Vancouver Hotel for their courtesy and for the consideration shown for the comfort of the delegates.
8. To the Canadian Press, Limited, for the careful arrangements made in regard to the distribution of our reports.
9. To the Press of Vancouver for the full and impartial manner in which they have reported the Convention proceedings.
10. To the Press of Manitoba, Saskatchewan, Alberta and British Columbia for the great amount of valuable information they have published in regard to the Association and industrial development generally.

John F. Ellis,
Barber-Ellis, Limited, Toronto
Who has retired from the position of Treasurer for reasons of health

11. To the mayors of the following cities, which entertained us so well en route to the Convention: Winnipeg, Brandon, Regina, Moose Jaw, Medicine Hat, Lethbridge, Calgary and Edmonton.
12. To the chairman, officers and members of the British Columbia Division for their generous entertainment and for the excellent arrangements that have contributed so much to the success of this meeting.

Led by Mr. F. W. Stewart, the members present gave three cheers for Mr. J. B. Thomson, Chairman of the British Columbia Division.

MR. J. B. THOMSON: "Gentlemen, I appreciate very much the way you have shown your appreciation of what we have done, because it was only our duty and our privilege, and the happiness, I think, has probably been more ours than yours." (Applause.)

Resolutions Adopted by Annual Meeting

Important Declarations are Made With Regard to a Tariff Board, Imperial Preferential Tariffs, Scientific Research, Cable Service, Metric System and Several Other Matters Affecting Business

FOLLOWING the election of officers, the Nominating and Resolutions Committee submitted for the consideration of the meeting six resolutions as follows:—

1. Tariff Board

Whereas, demands are made at frequent intervals by various sections of the Canadian people for radical changes in the Canadian Customs Tariff; and

Whereas, such demands prevent the determination of the settled policy that is necessary for the development of industry and trade, cause depression in business and employment and imperil invested capital; and

Whereas, it is of vital importance that all industry should have reasonable assurance of stable conditions which will not be adversely and suddenly disturbed by unexpected and imperfectly considered tariff legislation;

Therefore, be it resolved, that the Canadian Manufacturers Association, in annual meeting assembled in Vancouver, on June 9th, 1920, respectfully urge the Dominion Government to appoint a permanent Tariff Board, acting in an advisory capacity to the Government, which will make a scientific study of the Canadian Customs Tariff and the tariffs of other countries with whose products Canadian producers are forced to compete, familiarize itself with costs of production at home and abroad, investigate the nature and probable national effect of all requests for tariff changes, and endeavor to frame a tariff that will serve the best interest of Canada, and thus assure the harmonious and all-round development of the country.

2. Imperial Preferential Tariffs

Whereas, Canada was the pioneer amongst British countries in providing customs tariff preferences for imports of British products; and

Whereas, the policy of customs preferences, designed to develop and consolidate Imperial ties of sentiment and trade, is now finding favor with other British countries, and is being advocated by them; and

Whereas, the British tariff preferences provided by the Dominion of Canada are more extensive than the preferences provided in the fiscal policy of any other British country;

Be it therefore resolved, that the Canadian Manufacturers Association, in annual meeting assembled in Vancouver, on June 9th, 1920, earnestly petition the Dominion Government to exercise its influence to hasten the adoption throughout the Empire of substantial customs preferences for Empire products, corresponding to the preferences now provided in the customs tariff of Canada.

3. Franco-Canadian Customs Tariff

Whereas, the Franco-Canadian Customs Tariff Convention will terminate about June 19th, 1920; and

Whereas, it is highly desirable that the friendly trade relations between France and Canada should be improved by a new Custom Convention, whereby direct shipping may be promoted and French markets opened which, owing to the high general customs duties of France, would otherwise remain closed against numerous Canadian products, both agricultural and manufacturing, and on the other hand desirable markets may be opened in Canada for various French products not made or produced in Canada;

Be it therefore resolved, that the Canadian Manufacturers Association, in annual meeting assembled in Vancouver, on June 9th, 1920, earnestly petition the Dominion Government to negotiate a new Franco-Canadian Customs Tariff Convention as soon as conditions become opportune.

4. Scientific Research

Whereas, the Special Committee appointed by the Dominion Government to consider the development in Canada of Scientific Research, has made the following recommendations to Parliament at the present session:—

1. That a National Research Institute for Canada, endowed with the functions and of the character indicated in the foregoing, be established in the vicinity of Ottawa, on a site fifty acres in area, of easy access and conveniently located for water, gas and electric power supply.
2. That the first building to be erected for the institute should be of the best modern construction suitable for laboratory work, and of such dimensions as to provide accommodation for some years to come.

3. That there be appropriated by Parliament $500,000 for the purchase of the site and the construction of building; $100,000 for the scientific equipment of the institute, and $50,000 for salaries and maintenance during the first year of its operation.
4. That legislation be enacted at this session to provide for the establishment of this National Research Institute and the government of the same."

Therefore, be it resolved, that the Canadian Manufacturers Association, in annual general meeting assembled at Vancouver, B.C., on June 9th, 1920, endorse the above recommendation of the Special Committee and urge the Dominion Government to give effect to this recommendation as soon as possible, and urge that the Government provide for research work in the various provinces which will be related to the work of the central institute at Ottawa.

5. Cable Service

Whereas, the cable service from Canada to various countries of the world is far from satisfactory at the present time, owing to delays and other causes;

And whereas, prompt and efficient cable service is absolutely necessary for the transaction of modern business;

Be it therefore resolved, that the Canadian Manufacturers Association, in annual meeting assembled at Vancouver, B.C., on June 9th, 1920, request the Executive Council to take the necessary steps to ascertain what can be done to improve the cable service from Canada to various countries and to co-operate with the Government and commercial organizations in conducting such investigation.

6. Metric System

Whereas, the advocates of the Metric System of Weights and Measures are making strenuous attempts to substitute the Metric System for our present system;

And whereas, the Metric System has not been adopted by the United States, Great Britain and many other leading commercial countries;

And whereas, any change or any suggestion of a change in our system of weights and measures would seriously interfere with production, which is so essential at the present time;

Be it therefore resolved, that the Canadian Manufacturers Association, in annual meeting assembled at Vancouver, on June 9th, 1920, record its determination to oppose any attempt to substitute the Metric System of weights and measures for the present system in use in Canada.

Resolutions Adopted

It was moved by Mr. W. H. Miner, Montreal, seconded by Mr. C. G. Robson, Edmonton, that the report of the Resolutions Committee be adopted. This was carried.

Other Resolutions

Three other resolutions, forwarded by the British Columbia Division, were next considered and dealt with separately. The first, moved by Mr. J. O. Cameron, Victoria, and seconded by Mr. Edwin Tomlin, Victoria, dealt with the question of arbitraries on lumber shipments from Vancouver Island. It read as follows:—

Whereas, sawmills located on Vancouver Island are charged 1½ cents extra freight on lumber products shipped to Prairie points above Vancouver rates;

And whereas, it is the sense of this convention that said differential so charged constitutes a discrimination against the lumber industry on Vancouver Island, and should be discontinued;

Be it therefore resolved, that the Canadian Manufacturers Association, in annual meeting assembled in Vancouver, B.C., on June 9th, 1920, instruct the Executive Council to investigate the situation and endeavor to secure relief.

The motion having been put by the President, was declared carried.

Country of Origin Regulations

The second resolution, moved by Mr. E. W. Hamber, Vancouver, and seconded by Mr. Hugh MacLaren, Vancouver, dealt with the country of origin regulations. It also was carried. It read as follows:—

Whereas, the bulk of the world's manufactured goods or the raw materials forming the basis of same, are produced in the British Empire;

And whereas, the furtherance of this policy will constitute a temptation to foreign manufacturers to take advantage of the preferential treatment accorded imports from different parts of the Empire;

Be it therefore resolved, that the Canadian Manufacturers Association, in annual meeting assembled at Vancouver, B.C., on June 9th, 1920, request the Government of Canada to supplement the present declaration of country of origin which accompanies all imports, by the requirement that such imports, particularly of manufactured goods, be marked or have affixed to them in an unmistakable manner an indication to the ultimate consumer of the country in which they were manufactured.

Trade Commissioners' Service

The third resolution, moved by Mr. F. E. Burke, seconded by Mr. O. Phillips, was also carried without discussion. It was worded as follows:—

Whereas, the Department of Trade and Commerce of Canada maintains in various parts of the world offices in charge of trade commissioners, whose chief duty it is to assist in building up the Canadian export trade;

And whereas, we believe that the maintenance of permanent exhibits of samples of Canadian products would be of great assistance to the trade commissioners in familiarizing purchasers abroad with this country's products;

And whereas, we believe that at the present time full advantage in this respect is not being taken of the possibilities of the trade commissioner service on behalf of Canadian manufacturers;

Therefore be it resolved, that the Canadian Manufacturers Association, in annual meeting assembled at Vancouver, B.C., on June 9th, 1920, request the Department of Trade and Commerce to provide trade commissioners at the earliest possible moment with facilities for the proper display of exhibits of such Canadian manufactured goods as there may be a market for in the various countries to which the trade commissioners are accredited;

And further, that this Association, on behalf of its members, undertakes to do everything possible to assist the Government in securing and shipping the necessary exhibits.

The Sale Tax

A resolution, moved by Mr. F. W. Stewart, Montreal, and seconded by Mr. Ed. Burns, Toronto, was next presented, as follows:—

That whereas, the tax on articles, as collected from the consumer through the retail merchants, is liable to have a detrimental effect on the sale of such articles taxed;

And whereas, the manufacturers' articles will unquestionably be seriously affected by the non-sale of such articles;

And whereas, the operation of these factories under such conditions will be so affected as to necessitate running on short time, thereby throwing thousands of employees out of work, which would be a very serious condition to create;

Be it resolved, that the Canadian Manufacturers Association, in annual general meeting assembled in Vancouver, June 9th, 1920, ask that the Federal Government be requested to give the enforcement of these taxes the most careful consideration before doing so, and if possible to so amend the bill that the revenue which will be derived from this source be derived in such a manner as will assure the continuance of prosperous business conditions throughout Canada, and so affect the business of the country to as small a degree as possible.

Should Have Constructive Policy

MR. THOS. RODEN (Toronto): "I am heartily in sympathy with the sentiment expressed in that resolution, but I think it has not been properly prepared. We are, as you know, manufacturers of a luxury, and I think before we criticize we should have some constructive policy to suggest to the Government in lieu of their present methods of taxation. I would like that resolution referred to the Executive for further consideration. I think the principle should be adopted or accepted by the meeting or convention assembled here, but the text of the memorial might be left to the Executive to word in such manner that it would be a recommendation of some practical application.

"In our trade we had a meeting with the Government only two weeks ago, and recommended to them that in lieu of the variable taxes they are imposing upon us as manufacturers of jewelry, glassware and so forth, that a general over-tax might be put on as a substitute, which would simplify the work of the storekeepers and eliminate a great deal of extra expense.

"I think points of that kind should be more definitely explained in any memorial we might present to the Government, so that they would recognize we have given intelligent consideration to the problem, not only of the people involved in collecting the tax, but also to those of the Government in checking them up. To-day the operation of this tax will be faced with a tremendous amount of evasion which it will be impossible for any government to check up or even for the person to check their own business. It is left in the hands of the clerks, who, if they are friendly to their customers, will try in every possible way to avoid this tax. That is one of the psychological conditions that always develop under direct taxation. Before we present any memorial to the Government, it should be a memorial stating our case and recommending some intelligent method of remedying the conditions."

MR. T. P. HOWARD: "In regard to this resolution which has just been written out, I would suggest that we pass it in the main as it stands, subject to being revised by Mr. Stewart and his seconder in conjunction with the Resolutions Committee.'

MR. J. H. SHERRARD (Montreal): "I entirely agree with Mr. Roden. I think before passing this there should be some attempt made to instruct the Committee who will deal with it to make definite recommendations. If there is one association in all Canada that should avoid making negative recommendations, it is the Canadian Manufacturers Association. (Applause.) A constructive body surely should be able to make some recommendation that is positive, and I do feel that the recommendations of the Association have perhaps not received as much consideration at Ottawa as they deserve, because they have been largely negative. Mr. Roden suggests a re-sale tax. I have heard it estimated by men who know how to get at these figures that if a one per cent. tax was made on all sales outside of farmers' sales, which could not be collected probably, it would amount to a little over $150,000,000 a year to the Canadian Treasury. I don't know whether those figures are right, but I think they are nearly so, and I think the Canadian Manufacturers Association should undertake to make constructive recommendations when they make any recommendations."

MR. F. W. STEWART (Montreal): "In drafting the resolution very roughly it was with the idea of bringing the matter to the attention of the members assembled here. I did not wish to make any recommendation as to what the Government should do to offset the revenue coming in from this particular tax. It was with the idea of bringing the matter before the members here to-day and it was with the idea in mind of bringing to the attention of the Government how serious the situation is, so far as I can gather. I am only too delighted to hear the remarks of Mr. Roden and Mr. Sherrard this morning in regard to making a memorial of a definite kind to the Government in regard to possibly collecting the revenue which they desire through another source. I did not know it would be the desire of this meeting to go that far, and I am very gratified indeed that there are those who consider we should do so, because I am absolutely of that opinion myself. In coming through from Toronto to Vancouver, in the different places where we have stopped from time to time, I have made it my business to consult the merchants, and I find that the imposition of this tax is having a very serious effect on business all the time, and the question in my mind has been whether it is going to adjust itself automatically, and if it does, how long will it take to so adjust itself. If that length of time is extended for any period, I am of the opinion that it is going to force a great many merchants out of business. That is a situation which I think we should discuss and consider very seriously because, if that is going to take place it is going to disrupt the industrial conditions of the whole country from coast to coast. I am only too glad as far as I am concerned, and I believe the seconder of the resolution will agree with me, that the suggestion which has been made by Mr. Roden and confirmed by Mr. Sherrard should be adopted by this meeting."

THE PRESIDENT: "To get this properly before the Association, by-law 31 on page 11 says that every resolution before being presented to the annual meeting must be submitted to the Resolutions Committee. In view of the importance of the matter and the suggestion of Mr. Howard would it not be well to refer this to the Resolutions Committee so that it may be taken up by them?"

MR. F. W. STEWART: "That was my intention when I drafted the resolution."

The suggestion of the President was adopted.

Business Profits War Tax

MR. J. R. SHAW (Woodstock): "I have a resolution which was before the Resolutions Committee and I wish to speak to it just for a moment. It is in respect to the business profits war tax. You are all aware that there were practically two classes of industries during the war period, or possibly three, those that suffered very very much by decrease in volume of business and by debits to their profit and loss account for a series of years, those who were engaged in war work and made large profits, and those who engaged in munitions.

"The resolution introduced by the Minister of Finance makes some change in respect to the Business War Tax by increasing the percentage that the concern is allowed to make from seven to ten per cent., but it still handicaps those businesses which lost money during the war. The output of a number of these businesses was decreased from a half to a third, and consequently when the war was over, their businesses jumping tremendously, they made very substantial profits during this year and the year previous, and got into the excess war profits class. My contention is, and it is that of every man whom I have ever spoken to about it, that before the amount is arrived at subject to tax on, that the debit to profit and loss should first be taken care of. If a business has a debit to profit and loss, it goes without saying that business has not paid dividends, because dividends can only be paid out of profits; and it seems to me a monstrous thing that a Government should tax a business which has not been able to pay its shareholders anything for four or five years. I have, therefore, with the approval

of the Resolutions Committee, to move the following resolution:—

Whereas section 1 of the resolution moved in Parliament by the Finance Minister in respect to the Business War Profit Tax reads as follows: "That the profits earned in any business during any accounting period ending in the year 1920, which do not exceed ten per cent. per annum upon the capital employed in such business, shall be exempt from the taxes prescribed by the act."

Resolved, that the Canadian Manufacturers Association, in annual meeting assembled, respectfully suggest to Parliament that said section be amended by adding thereto the following words after the word "Act": "but that in any business where there exists a debit balance to profit and loss account, this debit balance shall be deducted from the net earnings for the period and that the remainder shall be the amount on which the tax shall be paid."

I move that resolution, seconded by Mr. T. P. Howard.

The PRESIDENT put the motion which, on a vote having been taken, was declared carried.

The Late K. W. Blackwell

Vice-President of Canadian Steel Foundries, Limited, Passed Away in Montreal

A man prominent in the Canadian steel industry passed away in Montreal on June 11 in the person of Mr. Kennet William Blackwell, vice-president of Canadian Steel Foundries, Limited, and director of the Canadian Car & Foundry Co., Limited, the Pratt & Latchworth Co., Limited, and several other companies. Mr. Blackwell was a son of the late Thomas E. Blackwell, first general manager of the Grand Trunk Railway Co. He was born in England, but came to Canada early in life. Educated at Bishop's College School, Lennoxville, he was apprenticed as a mechanical engineer in the G.T.R. shops, Point St. Charles. He was later appointed mechanical superintendent of the G.T.R., with headquarters at Belleville, and became successively mechanical superintendent of the Chicago and Grand Trunk and the C.P.R. In 1882 he went into the manufacturing business under his own name, making railway car springs, etc. This business eventually became the Montreal Steel Works, Limited, of which he was president and managing director. The company was absolved by the Canadian Car & Foundry Co. under the name of the Canadian Steel Foundries, Limited. Among other interests, Mr. Blackwell was vice-president of the Merchants' Bank of Canada. He was a past president of the Canadian Society of Civil Engineers and a prominent figure in building up the steel casting industry in Canada.

Canada's Trade Prospects With the Orient*

A Market of Enormous Potentialities Awaits the Canadian Merchant and Manufacturer in China and Japan — The Centre of the World's Commerce Moving Westward to the Pacific Coast — Valuable Experiences in Foreign Trade

By CAPTAIN ROBERT DOLLAR

IT is a great pleasure to see so many here from the Eastern Provinces. I claim some connection with the Eastern Provinces myself. When I was a boy and up to the time I was a young man, I worked in the Ottawa Valley, but like a good many more I learned there of what Horace Greeley told us, "Go West, young man, go West," and I started for the West, and I kept going until I got east again. I got as far as Singapore. Then I turned back.

The subject which has been given me is foreign trade with the Far East. The trend of commerce started away in the Far East, and it has been coming West ever since. It started in Persia and then went to Phoenicia, then to the Roman Empire, then to Spain, and finally into the Atlantic, centring in Great Britain, in London, the commercial centre. I am going to make a statement, and that is that the great centre of the world's commerce is going to be on this Pacific Ocean. That requires a good deal of explanation or else some of you might laugh at such a suggestion. But what would you have thought before the time of Columbus when the Phoenicians had the centre of the world's commerce in the Mediterranean if some one there had prophesied that the centre of the world's commerce was going to go into the Atlantic. They would have locked him up for a lunatic because there was nothing discovered on this side of the Atlantic at that time. Now, when I make the statement that the centre of the world's commerce is going to be on the Pacific Ocean, it does not seem quite so strange as it would without that explanation.

Foreign Trade a Necessity

We all admit that foreign trade is a necessity to this or any other nation. No nation has ever become truly great without foreign commerce. Canada is especially interested in this, and I am glad to see so many from the Eastern Provinces here taking an interest in this subject. I just came from a Convention that was held in San Francisco, where 2,500 of the biggest merchants, manufacturers and bankers of the United States met to consider this subject primarily, the question of the Pacific Ocean trade. It was something new to a great many of them. They had always been thinking of the Atlantic trade from eastern cities, but they came out here and got their eyes open to the Pacific coast on this side of the continent.

Here is something I don't like to tell you, but I am going to—I am not going to mince matters in what I am going to say. Some things I am going to say will be very encouraging and some very discouraging. I looked up the statistics of what our ships have carried into the port of Vancouver, and for the purpose of seeing where those products were going. I discovered that two per cent. of all the tonnage that we brought into Vancouver went to Eastern Provinces, 16 per cent. of it was landed here in Vancouver, some of that found its way to the Eastern Provinces, but the most of it found its way to the United States. I learned that 82 per cent. of what we brought in went direct to the United States. Now, gentlemen, that is not right. You see what dangerous ground we are treading on. Supposing an embargo was declared against this country by the United States, how long would our vessels run if you give them 82 per cent. of the cargo we are carrying? So it is up to the merchants of Canada to do something.

I will tell you another thing that is worse than that. I have traced a good deal of that 82 per cent. to see where it has been going. It has been going to Chicago, Cleveland and Buffalo, and I am blessed if a good deal of it didn't find its way by export into Canada. That is, instead of the Canadian merchant going to the source of supply and buying what he required of raw material for his manufactures, he allowed other merchants to go over there and buy it and bring it into the United States, and then he went to the United States and bought it instead of going directly to the source of supply in the Far East and bringing the freight direct to the factories in Canada. I think there is food for thought in that, and I hope you will take that into consideration. I am not going to tell you anything about what I have read in books, or what someone else has told me. I am going to tell you what I have learned by the hard knocks of personal experience.

An Analysis of Goods Imported

Now, all are interested in foreign trade. I am sure the working men are. What are the farmers going to do with their surplus products if they do not sell to foreigners? As manufacturers you all understand that. Your bankers also, and merchants, and especially shipowners will appreciate it.

In looking over the commodities that came in two of our steamers recently from the Far East I found there were 153 different commodities coming in here. On those same steamers going outward I found that there were 304 different commodities. Now there is no person in this room that is not directly interested in some of those commodities, either coming in or going out. So that every one of you are interested in this subject.

That ships are a necessity we all know, but a ship must have a return cargo. If it doesn't, you know what happens —you will pay double freight; but if a ship can get a cargo in and a cargo out, then they can carry commodities very much cheaper than if they only get cargoes one way. Just to give you an idea of how that works out, before the war we were shipping a good deal of lumber from the mills here to the eastern states, and we couldn't get any cargo back here. What did we do? We took and engaged cargoes of either coal or kerosene—case oil principally was the cargo—and took those to the Far East to Singapore, Manila and Batavia, and got cargoes there to bring here to Vancouver. So that our ships, every time they took a cargo of lumber to the eastern states, went completely around the world, but they were loaded. Therefore, we were able to carry all the commodities we carried at a lower rate of freight.

True Commerce to Buy and Sell

We must buy and sell. True commerce is to buy and sell. Some years ago I was trying to make a bargain with the Chinese Government to purchase a lot of pig iron and iron

*An address delivered by Captain Dollar at the first session of the Annual General Meeting, Vancouver, June 7, 1920.

ore from them. We came to a deadlock. You know we fellows are not quite able to deal with the Chinese; they are just a little bit smarter than we are; and to try to close the thing up the Government officials, headed by the ministry, gave me a banquet, and before we went into the banquet they said, "We will go in a private room and see if we can't get together." I told them that unless they could reduce the price it would be impossible. They said, "We can't reduce the price." I said, "Then it is no use talking." But as we were going to go out I gave them a parting shot—sometimes you manage to say the right thing at the right time, and sometimes you don't, but that time I happened to do it. I said, "I have brought over a great deal of commodities to your country here and I have never taken a dollar of Chinese money out of it. I have always brought commodities. We are bringing more now than we can buy, and the object I had in view was that instead of taking your gold out of your country I wanted to take commodities." The Premier said, "Mr. Dollar, sit down." They all sat down, and of course, I won't tell you what they said because I didn't understand a word they were saying, but finally he said to me, "Mr. Dollar, we have tried to frame a proper answer to that proposition that you put last, and we have totally failed, and we are going to give you the iron and iron ore at your own price."

Of course, if we can't bring the commodities, then we have got to bring the gold. So that when we take Canadian manufactured goods from here and take them into a foreign country, we either bring gold or bring other commodities, and it is far better to bring other commodities than gold because then it gives the raw material for manufacturing.

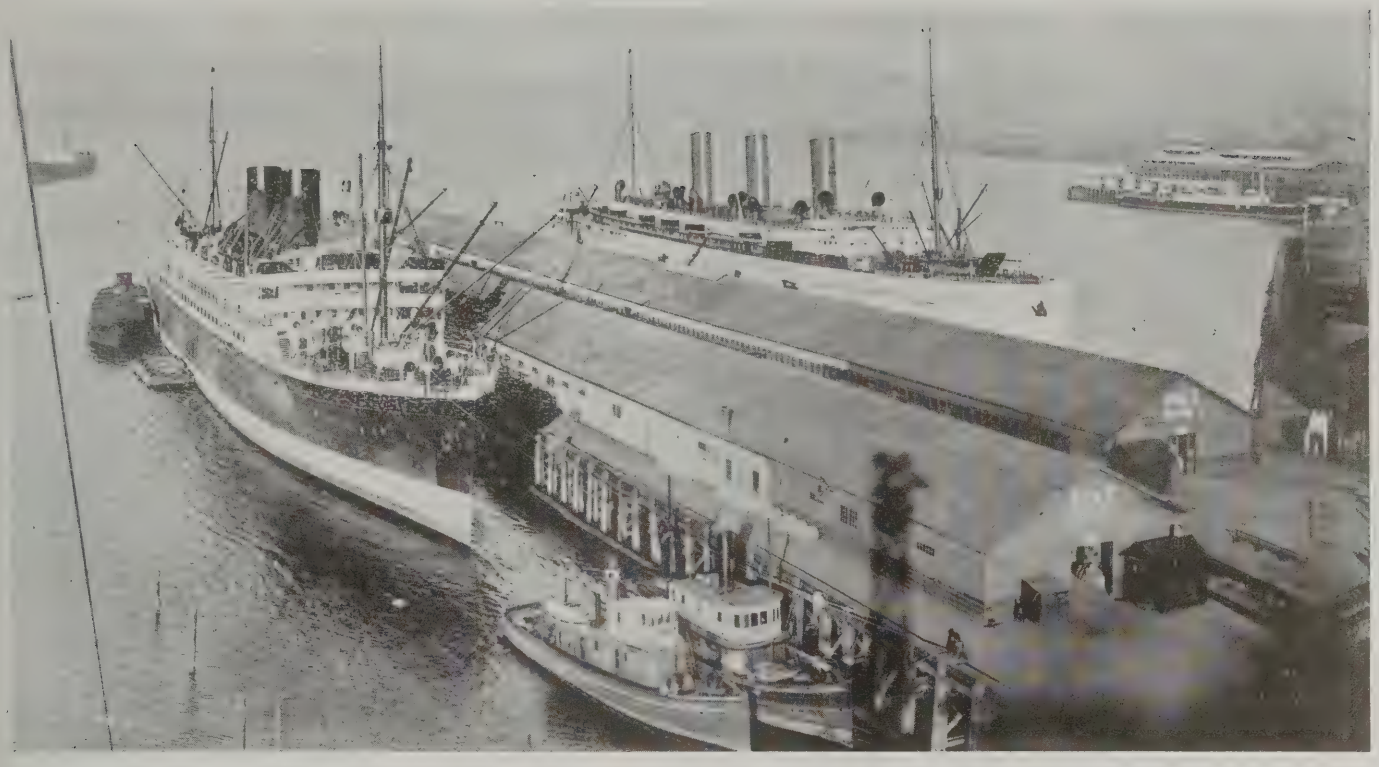
Six Months' Production Adequate

I suppose the same condition probably exists in Canada as it does in the United States. The Secretary of Commerce stated recently that the factories in the United States can produce all the product that would be required and consumed in the United States in six months every year. Therefore six months products of the factory, if they are kept running full, have got to go foreign from the United States. I suppose probably it is about the same with you gentlemen. If you want to increase the output of your factory you can't increase it beyond the domestic requirements, but you can increase it indefinitely if you ship foreign.

A good many people have a habit of saying, Well, the Government should do it. The Government can help a little, but they can do very very little. We have got to do it ourselves. To illustrate that, on one of our ships there was a fellow who was considerable of a bully; he had beaten up about everyone he tackled until he came to one man, and he was a little bit afraid of him, and he reserved him to the last. He said, I will go in the ship and take off my clothes and come out and fight him, and when he got in there he thought he would pray to the Lord, and he said, "Now, Lord, this is the first time I have ever prayed to you, and it will be the last time, and he says, I don't ask any favors of you, don't want any, but all I ask is, don't you help the other fellow, and it will surprise you how quick I will do him up." (Laughter.) So if the Government would only leave us fellows alone, we don't need much help (it is good to have a little help), and not attempt to tie our hands, we will be like the sailor, we will do the job.

We are having a great deal of trouble about cables. I think that your organization will do a great deal of service if you could help to get better service from the cables. It is almost ridiculous that a cable to the Far East takes two weeks to go and two weeks to come back. Something should be done about that. They are taking action in the United States, and your action here would help a good deal. It makes it almost impossible to do business.

Now, all foreign trade is acceptable, and I don't wish to depreciate any foreign trade that is going to European nations or to South or Central America, but I are going to talk more particularly of the trade across the Pacific Ocean. This Pacific coast here about 75 years ago, did any of you ever think what it was? It was a wilderness; there was nothing here but Indians. Now, when you come to look at it, all along this coast and see what has been accomplished in that time, you can see the grit and get-up of the people that have come over to this western coast. And you are facing about a billion people when you look out on the Pacific. You are on the shores of the Pacific and on the other side of it, there is about a billion people, and you can see what commerce you eastern gentlemen are getting direct from this billion of people. I just want to impress that on you. It might be said, Well, they have an old civilization there, what can we do there? To be sure the civilization was as in the time of Christ; it is the same in the interior of China to-day, but a revolution is taking place from the old to the new.



Coming Centre of World's Trade.

I said that the centre of the world's commerce would be transferred to the Pacific, and I don't think it will be so long. But to convince you of that fact it will be necessary for me to give you some reasons, and I will try and give you some. Fifty-three years ago the first steamer crossed the Pacific. I am not going to bother you with many figures, but I would like if you would keep this in your mind. Twenty-six years ago 77,000 tons of freight were carried from this coast to the Asiatic coast, and the freight that went westward-bound was 7,000 tons. That is, we exported only from this whole coast here 7,000 tons 26 years ago. Those are the figures from the Government statistics, and they are correct. Twenty years ago—a radical change had taken place inside of six years—there were 237,000 tons of shipping engaged on this coast at that time. That was when it commenced. In 1919 the entrance and clearances on this coast were 39,000,000 tons. I wish you would try and keep that in your mind. Twenty-six years ago there were 77,000 tons; less than 80,000 tons was the entire tonnage; and in 1919 the clearances of the ships were 39,000,000 tons, and that did not include any shipping that went direct from the Far East and through the Panama Canal. That is clearances on this coast here.

Possibilities of Future Growth

Now some of you that are good at figures—it gets beyond me; I can't figure; I don't know how to figure; but if you would figure what the commerce would be in 20 years hence if you figure on the same ratio; I say it is beyond me, I haven't got head enough for that, but you figure out and see, if the same ratio only continues, is not my statement pretty near right? Why, the Atlantic wouldn't be in it. There is no reason that it shouldn't continue; there is every reason why it should increase instead of decrease. Therefore I say to you manufacturers that are manufacturing in the eastern provinces, isn't it about time you were coming over here and starting manufacturing here to be in the swim when all this commerce is going? (Applause.) If you want to get into this business you can, but I want to tell you, gentlemen, there is nobody I know of that is going to present it to you on a silver platter; you have got to go after it.

Just to give you an idea what ridiculous efforts are being made to get trade over there, I see tons and tons of literature over in China (I have made 20 odd trips to China, and I know what I am talking about), there are tons and tons of catalogues and literature in the various consulates there

A Glimpse of Vancouver Shipping

An every-day scene along the waterfront of Vancouver, showing trans-pacific liners at the Canadian Pacific Railway Company's Pier A.

printed in the English language for the Chinese. What would you think of the Chinese trying to introduce their wares over here and they flooded Canada with pamphlets in the Chinese language? (Laughter.)

Should Know the Country.

Another thing it will be well to get familiar with and study the conditions over there. I was talking in the Chamber of Commerce of Seattle, and I told them I had attended a meeting of the Chamber of Commerce at Hankow, which is the geographical centre of China, and I tried to get them to send a representation over to the Alaska-Yukon Exposition they were going to hold there, and there was a venerable old gentleman got up, and what he said was translated to me, and he said, Where is that place that you call Seattle? And when I said that, there was a titter went all around the room, as much as to say, any man that don't know where Seattle is he doesn't amount to very much. I said that gentleman didn't happen to come from Hankow, he happened to come from the city right across. It was a walled city, about 55 miles around, and about 750,000 people in it, and it was a capital, and I said, Now, Mr. Chairman, I will ask if some of you Seattle men who are well posted here will just hold up your hands that know the name of that city. There wasn't a hand went up. I went on with my talk, but when I got through a gentleman got up in the hall, and said, Mr. Chairman, I don't propose to let Mr. Dollar leave this hall until he tells us the name of that blooming city. It is the city of Wuchong, the capital of Hupeh Province. It shows how little we know about even the large cities of China.

While I shall talk more particularly about China, yet I will say a few words about Japan. It has about 90,000,000 of people now, and Commodore Perry opened the ports of Japan to world's commerce 66 years ago. But on the 50th anniversary, 15 years ago now, I happened to be in one of the ports that was opened, and they had a big celebration. There were only two of us English speaking people in the town, and there was a big crowd of Japanese there. In the centre of the largest street they had a great big oil-painting of Commodore Perry shaking hands with the Mikado. They didn't shake hands much because he threatened to blow them off the face of the island. It was rather a joke to see that. We went up into a park at quite an elevation above the town, and there they had a representation of a steamer, a very good representation, made of canvas, and there was an inscription on it, and I asked a Japanese friend to interpret it to me, and it was this: "Thirty-five years ago this was our entire steam marine, that we had at that time, and this vessel was presented to the Mikado by Queen Victoria. To show you what improvement we have made in those few years, please turn around." You turned around, and you looked down the hillside, and there was the great battleship fleet of Japan that in a few days or few months after annihilated the great Russian fleet. I never saw a better illustration than that of the progress that Japan had made in that time. To me it was wonderful.

To Get Chinese Trade.

Now to get trade in China you have got to go for it. I want to tell you right now it is a man's job, don't send a boy before yourself. The trade can be got there, it is there if you want it, and I want to tell you good people of Canada that you are going to want it, and want it so darned bad that you won't know which way to turn. There are at least 400,000,000 people there, and more; I think it is nearer 500,000,000. The possibilities of business over there are completely beyond my comprehension, and I have gone pretty much over China and seen from year to year the progress that has been made and the development that has been made, and it is completely beyond me. I give it up. Nearly three years ago I bought a piece of land in Shanghai, and I built a wharf and warehouse, and I told my son, Now, if we build this wharf this way and the warehouse there, that will do us for at least five

years, probably ten. I went back there and my son said, Father, you didn't know what you were talking about. I have doubled the size of the wharf and warehouse, and still it is too small. That shows what little I knew. I thought I did know what I was talking about because I had made a study, but it goes clean beyond my comprehension the way this business is increasing over there.

The purchasing power of the people will have to be increased over there, and that is being accomplished quite rapidly. The Chinese have declared a boycott against the Japanese, and they have been short of a good many manufactured articles, and they have started to manufacture their own goods over there to a very great extent, and that is increasing the purchasing power of their people to a very great extent. There are fifteen large cotton mills which have been erected during the last two years in China that I know of. Fifty per cent. of the entire population of China goes barefooted, not from choice, but from necessity, and you can just imagine what commerce would be created if even their own people could get better clothing, and every one of them shoes and stockings.

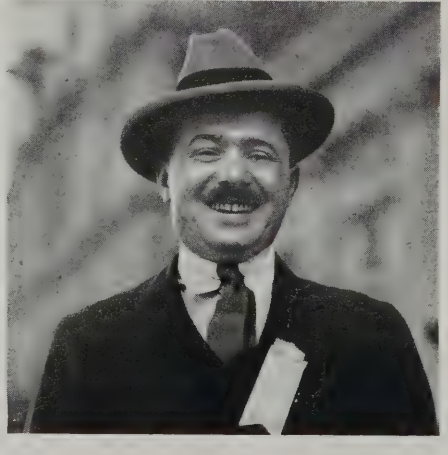
To give you a little better illustration of the progress that is being made over there, the post office returns come nearer telling the truth, I think, than anything else. Seventeen years ago the post office handled 20,000,000 pieces of mail. In 1909 they handled a little over 700,000,000 pieces of mail. That gives you a better idea probably than anything else I can say. Then seven or eight years ago Hong Kong was the second seaport in the world; it was next to London. It has gone back now; I think it is about fourth place.

China is the second largest buyer of cotton cloth in the whole world. What we are doing now might interest you a little bit. We are carrying over a great deal of raw cotton to Japan, and we are carrying back manufactured cotton cloth and landing it right here. We are carrying the raw cotton over and bringing cotton cloth back. I should not kick, I am getting the freight both ways, but I am just telling you. Then they produce all the food their people can eat—four or five hundred millions of people—and they have some to spare. All the minerals you can think of are there, and they are in abundance. The United States have been getting more oil from the Asiatic coast than from any other part of the world during the war. China produces half the antimony that is produced in the whole world. We are bringing antimony in our ships over to this country.

When I have told you about all this, don't think the whole thing has been monopolized. There is lots of room over there for you, lots of it, and you will not crowd anyone out, but if you go over there you will develop a business. The business is there for the developing. When we started running here to Vancouver, the C.P.R. were running the only steamship line that was running. You would have thought when we began coming in here in competition with them we would have taken some of their freight from them. We never took one ton of freight from the Canadian Pacific. Their ships are running full and ours are running full. We developed the trade we are getting, and you can do the same if you go over there. (Applause.)

I spoke to you about Hankow. It is on the Yangtse River. One-eighth of the human family live on that mighty river and its tributaries. That is almost incredible, but it is a fact. Just to give you an idea of it, the Province of Szechwan is about 1,700 miles from the ocean, and we have just started to run a couple of steamers through the gorges or rapids of the river to Chungking, which is 1,700 miles from the ocean. That province has 70,000,000 of people, and that is the only communication they have with the outer world, and our ships only carry about 600 tons of freight, so that you can imagine the prospect there would be there. They are not living in poverty by any means; there are lots of rich people, and they manufacture and produce everything that they use. They drilled for oil there before the Christian era; and they have been evaporating salt with petroleum for centuries and centuries before the Christian era.

Let me just say a word about myself. I think that there is about 20 years more work in me yet. (Applause.) I am going to give that work to the developing of that commerce. I am only 76 years old, and I think you will say I am right when I say there is 20 years' more work in me. So I think that should be some encouragement to some of you gentlemen to go to it and get that trade. I am not trying to sell you a gold brick, I am not asking you to go there and do anything but what I have done myself, and I only hope you will have as much success as I have had, and not any more, and you will be a very happy lot of people. (Applause.)



Vote of Thanks to Captain Dollar

At the conclusion of Captain Dollar's address, Mr. F. W. Stewart, Montreal, moved a hearty vote of thanks, and suggested that the address be printed in INDUSTRIAL CANADA.

Policy to be Followed in the Coming Year*

The Development of Export Trade to be Vigorously Promoted—The All-Round Development of Canada's Resources to be Prosecuted—Men of the Association to Measure up to the Requirements of the Day

By JOHN S. McKINNON

President, 1920-21, Canadian Manufacturers' Association

WE have heard during the last few days something of the work that has been done by the Canadian Manufacturers Association during the past year. I would like for a few minutes to give you some little idea of the policy that will be followed during the coming year. It is impossible to enunciate at this time the full policy of the Association, but there are a few items that I would like to draw to your attention. One of the matters with which the Executive will busy itself this year is the development of the export trade of Canada. (Applause.) This Association extends from the Atlantic to the Pacific, and, while the Atlantic seaports will have their full share of attention, I can assure you gentlemen that the Pacific ports will come in for their due share as well. We must have trade with other parts of the world. South America demands our attention. We must have a greater Canadian merchant marine, and some of that marine should be built in British Columbia. (Applause.) Matters of new trade routes will be investigated. Inland transportation in Canada has been very well looked after, but I believe that when that freight is brought to the seaboard there is a great lack of facilities. That is a matter that will receive the attention of your Executive. The seaports of this country must be developed, and the port of Vancouver, which seems to be the natural port of the Pacific in Canada, I can assure you, will have extra attention during the coming year. (Applause.)

All-round Development of Canada

The policy to continue the all-round development of Canada will be continued. The national resources of this country must be developed, and that to the highest possible degree. Anything that can be manufactured in this country must be manufactured here, and very little raw material exported. We want the finished product produced in this country. (Hear, hear.) If this is done, greater employment will be found for our people. In order to do this, gentlemen, we must have scientific research and technical education. The result will be a great improvement in the quality of Canadian-made goods.

The Association is not in any manner sectional, but will devote itself to the development of all Canada. It will re-assert the position that it takes that it believes the time has arrived for the appointment of a scientific tariff board in Canada.

This great Province of British Columbia—when we arrived at the border a few days ago a message was received that the latch strings of the province were hanging out, and I can assure you we have found that to be the case. That telegram was reprinted and posted in every car in the train. When we came through these mountains, magnificent in their grandeur, one would think there was the home of the gods where man seemed so insignificant and nature seemed so majestic, and one can well think that the sweet singer of Israel said: "I to the hills will lift mine eyes, from whence doth come mine aid." We hope that the cattle on the thousand hills will be yours; that the valleys will be filled with peace and plenty; that your forests will continue to supply the needs of mankind; that your mines will disclose their hidden secrets; that your rivers will teem with the fish which the world needs so badly, and on this whole Pacific slope the industries will thrive as we would like to see them.

The Race We Sprang From

The scenery of this province is wonderful, A sail on English Bay and up Howe Sound with the hunting dog and the sleeping beauty, and a little further along, overlooking all this and pointing to the Pacific, the lion-guarded gateway to the Orient. (Applause.) It is nothing new if we look out across the Pacific. We all spring from that race, from that tight little island which, in the 15th and 16th centuries, owing to the increase of its population, found that its people were driven over the seas in order to find a source of livelihood, and these days produced a Raleigh, and a Drake and a Cooke, and later a Fraser, a McKenzie and a Strathcona.

In the days that I have mentioned first, in the days of Raleigh, an event took place to which we do not pay, I believe, enough attention because, ladies and gentlemen, it was in those days that the foundation of the great British navy was laid. (Applause.) The men of those days seemed to have the natural gift for colonization and discovery. The reward was that Britain owned and occupied one quarter of the earth's surface. This, as in the past, excited the envy as well as the covetousness of some nations, and four different times the supremacy of the British Navy has been challenged in the last five hundred years. In the 16th century the most powerful monarch in Europe was Philip the Second; he had brought almost every monarch to his feet, but he looked to the north and thought that he would like to conquer England, and so he sent the Spanish Armada, and we know with what result. That was the beginning of Philip's downfall. In the 17th century Holland thought she would challenge the authority of Great Britain upon the seas, and met with a similar fate to Philip. About one hundred years later Napoleon challenged the supremacy of Britain upon the seas, and while he met his absolute defeat upon the field of Waterloo, his power was crushed by the British Navy in the battle of Trafalgar. (Applause.) And then we come down another hundred years or so and what do we find? Great Britain standing for civilization. We find another nation building a navy. In the year 1914, on August 4th, a date that has been written deeply upon the heart of every man and woman of this generation, we find again, for the fourth time, that the British Navy was challenged; and Germany was the assailant at this time upon one side, greed and ambition upon the other; and as Brutus said to Cæsar, "Because he was ambitious, therefore we slew him," so the Allies said to Germany, because of your greed and ambition, therefore you are slain. (Applause.)

Britain has never, upon one occasion, been the aggressor. She has defended her people in every part of the world. She

* Inaugural address of the new president at the annual banquet, Vancouver, June 9. 1920.

has abolished piracy and suppressed the slave trade, she has established freedom and liberty and civilization and always helped the peoples to self-government, showing that it is possible for the greatest autonomy to be given and at the same time strengthening the bonds of union between the Motherland and the Overseas Dominions. The history that I have tried to trace in these few minutes shows the bonds of the great British Empire. Gentlemen, does it not lead up to the natural and logical conclusion that the time is about ripe for an Imperial preference. (Applause.) As our forefathers looked out over the seas, so we stand in this magnificent city of Vancouver and look out upon the Orient, with its unlimited trade, and I believe that the men will be found who will measure up to the occasion, and Canada will get a rightful share and place in that world trade upon the Pacific.

But what of the future? This country wants what is best for the whole of Canada. We have a large country with a small population, and what we require, ladies and gentlemen, at this time, is men and women of faith, men and women of courage, and men and women of vision. I believe the Canadian Manufacturers Association will produce the men that are wanted in that particular line of activity. I believe that they will measure up to all that is expected of them, and we know the difficulties that they were met with when war was declared, and we know how they met them. We know the difficulties they met when peace was declared, and during the period of reconstruction which we have passed and are passing through, and I think they have measured up to everything that could be expected of them. And so, I say, let us have faith in the future of our country, and this above all, "To thine own self be true and it shall follow as the night the day thou canst not then be false to any man." I believe, gentlemen, that we have no difficulty in believing that Canada in the future will take her full share and full place in the nations of the world.

British Columbia's Industrial Position*

Exceptionally Favorable Climatical Conditions—Transportation Facilities and the Progress of the Shipbuilding Industry—The Rapid Development of General Industries in the Province.

By J. B. THOMSON

Chairman, Pacific Division, C.M.A.

I AM going to deal a little with the situation of industry in British Columbia. While comparatively speaking a young man, I have seen a good deal of life in the Far West. It is over thirty years ago since I stepped off a train at New Westminster, with my parents, coming through as a school-boy from Scotland. Since that date I have made my home on the coast in British Columbia. A little better than half that period I have resided in the City of Vancouver, so I can say I have witnessed many changes in that city and in the various towns in British Columbia which I have frequently visited. The spirit of optimism has at all times prevailed in the citizens of this Province. A few pessimists would drift in amongst our population from time to time, but the controlling force being so optimistic for the future quickly assigned them to oblivion by showng them that unless they were there to boost and work for the best interests of British Columbia, their welcome would be much greater in other parts of the world than within the Province of British Columbia.

Industrial Growth in Its Infancy

We are a new province as compared with the eastern provinces, and consequently our industrial life is very much in the class of an infant as compared with the older provvinces, such as Ontario and Quebec. Nature has been very profuse in distributing her gifts and has given us a great many resources which only await development through the hands of industry to make British Columbia the most important province in all Canada.

I need not refer first to the exceptionally favorable climatical conditions we have here. I feel sure that even in your short stay our weather has demonstrated to you the advantage of living in what many term "God's Country." From an industrial standpoint, in many industries, climate is of immense advantage. To be able to carry on industry for twelve months in the year under favorable conditions from a weather standpoint is an asset to be reckoned with. Our seaboard has been given a lavish share of natural harbors which are navigable and open every day in the 365 days in the year. The situation of the City of Vancouver must be only too apparent to all of you. Its position with reference to the possibilities of export trade to the Orient and our other neighbors, such as Australia and New Zealand, places it in a position against which at a very early date competition in many lines will be impossible, and the necessity will come for our friends from the East to locate their industries on our shores, if they intend to take advantage of the world's markets which await us, and which have been so ably put before this convention by Captain Robert Dollar and Mr. Bryan, our Canadian Trade Commissioner. I feel, after listening to those gentlemen, there is no member of industrial life present here but will see that he can find a market for his product in the Orient and trans-Pacific countries.

We have regular lines of steamers plying to China and Japan. The C.P.R. have a very efficient service in the large "Empresses," which cross the Pacific, and also other vessels. The Dollar Company have a freight service to China. The Canadian-Australasian Steamship Line maintain a regular service to New Zealand and Australia. There is now to be a regular steamship service from Vancouver to India, and this opens up great possibilities for trade through this port. With the regular service, cotton mills might be established here. They would have no difficulty in keeping their industry supplied with raw cotton, and with an all-water freight service both ways should be in a very good position to compete for trade in an export way as compared with Eastern United States obtaining their raw cotton from the South. It is said the annual crop of cotton to-day in India is second to that of the United States and represents upwards of seven or eight million bales.

Dealing with British Columbia's present position to cope with the export business, it would be interesting to note that, as a port, Vancouver already is a very important factor in the commerce of Canada. I asked our good friend Mr. Peters

*Speech delivered at the Annual Dinner at Vancouver, on June 9, 1920.

Where Pacific Shipping Congregates

This is a panoramic view of the marine railway and dock of Yarrows Limited, at Esquimalt, B.C. On the cradle in the foreground are two whalers undergoing repairs. Alongside the dock to the left are the steamers "Princess Maquinna" and "Princess Adelaide" of the C.P.R. Coast Service; the G.T.P.S.S. "Prince Rupert" and the S.S. "Arabian". To the right is the big C.N.R. car ferry, "Canora."

of the C.P.R. if he could give me some information with reference to deep-sea vessels which have entered our harbor from the first day of January to the 31st of May. Mr. Peters gave me the following information, which shows that, without consideration at all of oil tankers, but dealing only with ocean liners crossing the Pacific, we have had forty-six vessels come into our harbor and forty-five leave it during the first five months of the year. When one considers the magnitude of carrying capacity of these vessels and what they represent in wealth, it can be readily seen that the growth of the harbor of Vancouver and its importance in the shipping industry must have the eyes of the world upon it.

Variety of Products Imported

If one visited the docks when these vessels are discharging, they would be struck with the products which are coming from across the seas, and which in many instances are travelling east to our neighbor to the south to be manufactured for the requirements of their population, and in some instances for the requirements of our Canadian population. The place where the finished product should be made in the case of these raw materials should be right here in British Columbia. The finished product should be shipped to the consumer, rather than the raw material. Surely economy could be effected here.

Before passing from shipping, I would like to call your attention to what has been accomplished in British Columbia in the ship-building industry. It was not until 1916 that anything on a large scale was attempted in ship-building. In that year twelve vessels of 2,500 tons dead weight capacity, known as auxiliary schooners, were built. Six of these were built by the Wallace Shipyards of North Vancouver, and six on Vancouver Island. All these ships were launched in 1917 and put to sea. In 1917 the big yards which we now have of J. Coughlan & Sons were commenced on False Creek, and great steel steamships of 8,800 tons dead weight were put under construction. Ship-builders in other parts of the Dominion predicted failure for this new industry, but I think the record which has been attained by the Coughlan Yards in the building of so many of these large steamers and the compliments which have been paid them have shown that the predictions were far from being correct. The optimism shown by the Coughlans has been well rewarded in the compliments which have been paid them with reference to their ships when put to sea.

During the year 1917 the Wallace Shipyards of North Vancouver went into steel construction, and they contracted for the building of three ships of 4,700 tons dead weight. The first Wallace ship of steel was the *War Dog*. She went to sea during 1918, and was used by the Imperial Munitions Board, and later sold to Italian interests. The *Alaska* was the first ship launched by the Coughlan Yard, early in 1918, when she went to Europe and sailed through the mine-studded waters of the North Sea, the Atlantic and the Mediterranean, until the termination of the war, when she was taken over by Norwegian interests. In 1919 the steel yards of Vancouver and North Vancouver supplied nine ships, Coughlans launched five and the Wallace Yards launched four. The Imperial Munition Board's contract of ten 8,800-ton ships was completed by Coughlans, and the company also placed an 8,100-ton steamer in the water for the Canadian Government.

Wooden Shipbuilding

In the wooden yards, twenty steamers of 3,000 tons each were constructed, and twenty of 1,500 tons were launched on the order of the French Government. At Coquitlam a 2,800-ton Greek ship was built and launched, while in the Chaolberg Yards in Victoria two 1,600-ton schooners were built to Norwegian order. We are still keeping up the good work in shipbuilding on this coast. Many people thought on the termination of the war, shipbuilding would cease as far as British Columbia was concerned. Such is not the case. So far in 1920, Coughlans have launched three Government ships of 8,100 tons and two of 8,700 tons. In addition to this, Coughlans have set a record so far as all Canada shipbuilding is concerned by laying down the first big ship to company order. This vessel was sold before construction had been commenced to Swedish interests. Last month the company launched the steamer *Margaret Coughlan*, to company order This steamer will be operated by the company and be one of several ships to be operated by this enterprising firm. It is interesting to note that only a few weeks ago a third keel laid by the company was sold to Swedish interests.

Wallaces have launched one steel ship this year for coast

ing trade, the *Chilkoot*, and their yards have been busy doing repair work. Two new steel shipyards were started in British Columbia last year on account of orders for Government ships, one at Prince Rupert by the Prince Rupert Dry Dock Co., who are building two 8,100-ton ships, and one at the Victoria Machinery Depot, where launchings are expected to take place this summer. Wallaces are now working on two steel ships, of 8,400-ton dead weight capacity, for the Dominion Government. Coughlans are now constructing two 8,400-ton Government ships, and an 8,800-ton vessel to company order, also one smaller ship for Swedish interests.

Progress of Shipbuilding

Since steel shipbuilding commenced in British Columbia in 1917, 171,700 tons have been built, Coughlans having constructed 138,000 tons. The wooden yards during the period of activity built 214,200 dead weight tons, and in this industry two yards are now busy. Returned soldiers have undertaken the construction of wooden schooners in the Victoria yards. The B. C. Marine is building a 600-ton steamer for the Union Steamship Co., and is now engaged on a 200-foot auxiliary schooner to special type and design, for the services of the Hudson's Bay Company in the Arctic.

The steel ships brought a general approximate price of $190 per ton, and represented a total of somewhere in the neighborhood of $32,630,000. The wooden French and Imperial Munitions Board ships averaged a cost of $205 per ton, and the approximate amount received for them would be in the neighborhood of $43,911,000. The total for this industry in British Columbia for the past three years would be somewhere in the neighborhood of $75,534,000.

	Wood, tons	Steel, tons
1917—Victoria, 6 ships	15,000	.....
N. Vancouver, 6 ships	15,000	.....
1918—Coughlans, 6 ships	.....	52,800
Wallace, 3 ships	.....	14,100
Wooden, 34 ships	87,600	.....
1919—Coughlans, 5 ships	.....	43,300
Wallace, 4 ships	.....	18,800
Wood, 43 ships	96,000	.....
1920—Coughlans, 5 ships	.....	41,900
Wallace, 1 ship	.....	800
B. C. Marine (wood), 1 ship	600	.....
	214,200	171,700

Approximately, as far as I can learn at the present time, in the shipbuilding industry in British Columbia, about 6,000 men are employed, so you can readily see, from the figures which I have submitted with reference to shipbuilding, that, as well as having harbors, we are in a position here, if called upon, to supply the ships requisite for export and import trade through the Pacific Coast.

The Extent of Industrial Development

We have, as already mentioned, immense raw resources represented in our natural mineral wealth, our timber, fishing and agricultural products. In this province, with agricultural areas properly developed, we should be able to raise a sufficiently large quantity for all requirements of a very much increased population, and also be able to have a good surplus for export. We have also, as no doubt many of you have noticed on your trip through the Rockies to the Coast, very large water powers which are undeveloped, and which, if harnessed for industry, would make manufacturing comparatively easy as compared with many other parts of our continent. I am not going to deal with past history regarding industry as applicable to those raw resources—as some of the speakers who are to follow me this evening on the programme are better qualified to do that than I am—and you will have the advantage of listening to the opportunities which present themselves to you from them. However, there are a few figures which I obtained from the Workmen's Compensation Board that I think are of great interest to all of us as manufacturers. These figures, I think, can be taken as very accurate, and show to what extent industry is being conducted in British Columbia, and what amount of money is being distributed through our pay-rolls to the citizens of our province. It must be borne in remembrance that the pay-roll calculated in this way deals only with those who benefit under the Workmen's Compensation Act, and not what might be termed salaried employees of many of our industrial firms in British Columbia.

	Pay Roll	Employees
Lumbering, sawmills, shingle and lath mills, pulp and paper mills, creosoting works, and logging railways	$30,000,000	25,000
Lighter forms of wood-working, planing mills, sash and door factories, etc.	2,500,000	3,000
Coal mining	10,000,000	8,000
Metal mining, reduction of ores and smelting, quarrying, brick-manufacturing	6,500,000	5,500
Iron and steel manufacturing, rolling mills, iron or brass products, machine shops, etc.	4,000,000	2,500
Lighter forms of manufacture, paints, shoes, flour, power-laundries, warehousing	9,000,000	9,000
Building and construction generally, wooden or steel shipbuilding, pile-driving, etc.	30,000,000	20,000
Electric light and power plants, N.E.S..		
Steam or electric railways, etc., N.E.S..		
Telephone of telegraph systems, N.E.S.		
Gasworks, N.E.S., motion picture machines, etc.	4,000,000	4,000
Navigation, stevedoring, wharf operations	3,000,000	2,000
Canadian Pacific Ry. and Cons. M. & S. Co. of Canada, and their subsidiary companies	8,000,000	5,500
Grand Trunk Pacific Railway Company and their subsidiary companies...		
Canadian Northern Railway Company and their subsidiary companies..		
British Columbia Government		
Municipalities		
Canning or packing fish, fishing, fish oil, and fertilizing manufacturing.	13,000,000	15,500
Kelp collecting		
Explosive manufacture, fireworks, fuses		
Chemicals, N.E.S.		
Retail employees		
Great Northern Railway		
Dominion Government		
	$120,000,000	100,000

It is interesting to state that the Workmen's Compensation Board have an average monthly collection from industries of British Columbia of approximately $100,000, while for medical aid purposes they collect $15,600. It is also interesting to note the average wages, as shown to be paid in the various industries in British Columbia, by figures obtained from the Board, which are as follows:—

Logging	$5 19	Railways, steam	5 35
Saw mill	3 92	Stevedoring	4 65
Shingle mills	4 70	Navigation	3 92
Paper manufacturing	4 80	C. P. Ry.	4 58
Coal mining	5 22	Con. M. C. & P. Co.—	
Metal mining	4 89	Smelting	4 32
Machine shop	4 51	Metal	4 17
General construction	5 43	Grand Trunk Ry.	5 05
Shipbuilding, steel	5 05	Can. Northern Ry.	4 32
Shipbuilding, wood	5 57	Government	4 24
Street railways	4 65	Canneries	5 52

The Workmen's Compensation Board are also responsible for the figures that some 564 new industrial concerns have come into existence in the Province of British Columbia during the first four months of the year. These figures only represent industries which come under the scope of the Workmen's Compensation Act, so it is quite evident that industrial development at the present time is growing very quickly in this province.

Dealing with Vancouver as a port, we must not forget the fact that the natural course for export of the western provinces' grain must be eventually through this port. The Government have been alive to this situation, and we have today in Vancouver a terminal elevator with a capacity of 1,879,000 bushels. Compared with the total elevator capacity

of the Dominion, British Columbia's share of it is very small, but the terminal elevator we have here guarantees for the future the movement of a large proportion of the crops. Test shipments have been made to Europe *via* the Panama Canal route, and reports are that the grain arrived in splendid shape. With the movement of grain through this port, establishment of kindred industries, such as flour mills, are within the easy round of possibility.

As a further showing of the development of Vancouver, I think the figures from the clearing house of bank transactions is a very good source of information. If one refers to the bank clearings for the year 1902, they will find, for the twelve months, they reached the sum of $54,467,549. Every year, from that date until the present, has shown a steady increase, the total for 1919 reaching the princely sum of $654,913,208, which is practically twelve times greater than 1902. Nineteen hunderd and nineteen set a new example for bank clearings in the City of Vancouver, but 1920, if it keeps up the record of the past five months, will show another big advance over 1919, as I find that the average monthly clearings have run approximately $70,000,000 for the five months. For the month of May, which has just been completed, the bank clearings were $71,884,569, so that you see one month's business of this city represents a great deal more than the total year of 1902.

The budget which has just been delivered has brought home to us the fact that, as citizens, we are responsible for $1,935,946,312.85 of a net debt. We must meet the obligation on this debt and, to make payment, develop our industries. We must, of necessity, take advantage of the opportunity to develop our raw resources and manufacture the products thereof to as near a finished article as is possible, and must select establishment of industry with a view to the economy of production, so that we can go to the foreign markets of the world and compete in the export business. We cannot hope to pay this debt by passing the buck from one to the other. We must get the other fellow's dollar.

Sir Henry Drayton ably pointed out that we are importing too much from our neighbors to the south; hence the adverse exchange. We must make it our aim and object to develop our industries to the fullest capacity, and thereby it will be necessary to increase our population. The debt, if applicable to a population of say twelve or fourteen million people who are producing, instead of as it is at present eight million, would not be such a serious problem. Mother Nature's natural storehouse provides us with the wherewithal to become a creditor nation at a very early date, if we grasp the opportunity. It is the duty of every one of us, as it was during the war to defend our country, to use our very best efforts to relieve the burden that has been placed upon us as citizens, so that it may not fall heavily upon those who have to follow after us, and I feel sure every member of the Canadian Manufacturers Association individually recognizes his duty, and will do his best.

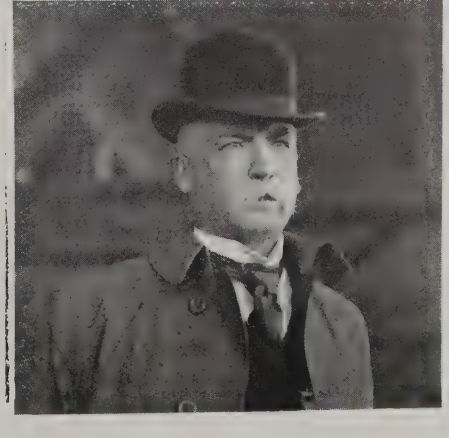
Tariff Situation Thoroughly Discussed

(*Continued from page* 199.)

of knowing what the Canadian manufacturer really is doing. To a certain extent, what Mr. Campbell has said is correct as far as our line is concerned, but in possibly a great many of the cases the situation is as it is outlined in the report."

MR. J. B. THOMSON (Vancouver): "Following out Mr. Stewart's remarks, I think a very important feature has been brought out. With reference to the large cotton mills in Canada, I think you will find at all times the Eastern cotton mills, during the past year, have been selling at a lower price than you could import goods from England, and they did not take advantage of the situation.

"There is another point in connection with this tariff question that up to the present time has not been brought out in the report. I don't know whether I can convey it without the correspondence I have, properly, but take a concrete example. Say a Canadian goes over to France to purchase ribbons as against the Belding Paul people who manufacture, and he has to pay duty on the value of home consumption in France which is on a very much depreciated franc, but that makes it almost impossible for him to import ribbons as against a London salesman selling to Canada. That London buyer goes over to France, buys his ribbons and pays for them on the depreciated franc and sells a certain quantity on the London market, establishing a price on the London market in ribbons, and when he exports to Canada he uses his home selling price, while he has to pay duty on the value of the franc. At the same time his exchange with Great Britain is on the depreciated franc, and he really pays on a much lesser amount than he should in that way. I think if that is figured out you will find it is a hard blow to those dealing in ribbons in Canada."



The motion to adopt the report was carried and the report of the Tariff Committee declared adopted.

Industrial Future of British Columbia*

As the Pioneers Could Scarcely Have Foretold the Rapid Expansion That Has Taken Place Already, so There is Ground for the Greatest Optimism When Looking to the Future—The Wonderful Progress That Has Been Made to Date

By G. G. McGEER, M.L.A.

BIDDEN by your invitation to a discussion of British Columbia from an industrial point of view, and "forbidden" by express direction to make a political speech, I appreciate, in trying to reconcile orders with propriety, the perplexity of the little maid who, though ordered to learn to swim, was yet adjured "now go my darling daughter, hang your clothes on a hickory limb but don't go near the water," for, Mr. Chairman, I can assure you that to leave out of this discussion the spice of our delightful political activities is somewhat the same as trying to learn to swim without water, and I can assure you, adds somewhat to the difficulties of the occasion.

I appreciate in addressing this gathering, representative as it is of the great business interests of the Dominion, that it is essential to avoid any mere glittering generality, high-sounding phraseology or any appeals to pure emotionalism, but I trust that you will pardon me, if, during my remarks, I appear to be overly optimistic in being too willing to anticipate the future, for while I can get along without making a political speech, I cannot help being a British Columbian, and no British Columbian can live without optimism. (I have no doubt that you have been advised about, and warned against, that optimism from time to time by your creditmen).

In my instructions I have been given to understand that I may touch lightly on our history; that I may say something of the industrial position that we now hold, and that I have a *carte blanc* order to discuss, without limit or reservation, the existing possibilities for future development.

A Review of Past Progress

The time at my disposal permits me but the briefest reference to our history, delightful, interesting and inspiring though it is. I only wish to touch upon the outlook as it might have appeared, to the adventurer and pioneer of other days. When we look back at some of the adventurous spirits who carried out the first exploratory expeditions to our shore and who came in search, as you are well aware, of the mythical North-West passage, could it have been possible that they would have thought of the change that a few short years would make? I wonder if, in 1778, when Capt. James Cook finally decided that no such passage existed, the veil of the future could have been drawn aside, permitting him to see the solution of that problem of a passageway to the East in the stupendous work of another band of equally intrepid and daring men—the construction of the Canadian Pacific Railway. This not only solved the problem of the North-West passage, but did something even greater than that for, by the laying of over 3,000 miles of steel rails, the men who forced that undertaking through in the face of overwhelming obstacles, united the people of the Dominion of Canada by bonds that never can be broken and made possible the development of the Empire's greatest colony to what it is to-day.

Was it possible, do you think in 1793 that Sir Alexander Mackenzie, the first white man to sight the Pacific, via the overland route, which he did in the vicinity of Bella Coola, had the faintest idea of the hundreds of thousands of souls that were to follow in this short space of time, the trail that he had blazed?

In 1808, when Sir Simon Fraser, whose monument looks out of its cold bronze eyes from its site in the ramparts of New Westminster City, across that river that bears his name, and which at that time he discovered, do you think it was possible that that great adventurer and visionary genius, even in the wildest flights of his imagination, could conceive of anything of the potentialities of the river and the land that he made known.

Completion of the C.P.R.

In 1885, when the last spike was driven and rail connection between East and West was complete, the builders of the greatest railroad ever undertaken had just cause to be proud of the achievement. Do you think that they foresaw the future as it has been disclosed? I am inclined to the opinion that, great as their expectations may have been, there was not a man in that whole magnificent undertaking who realized for a moment the success with which the future would crown the undertaking, or even dreamt of the value of the resources, or the industrial possibilities as they have come to be known to-day, of that land the railroad opened to the people of the world.

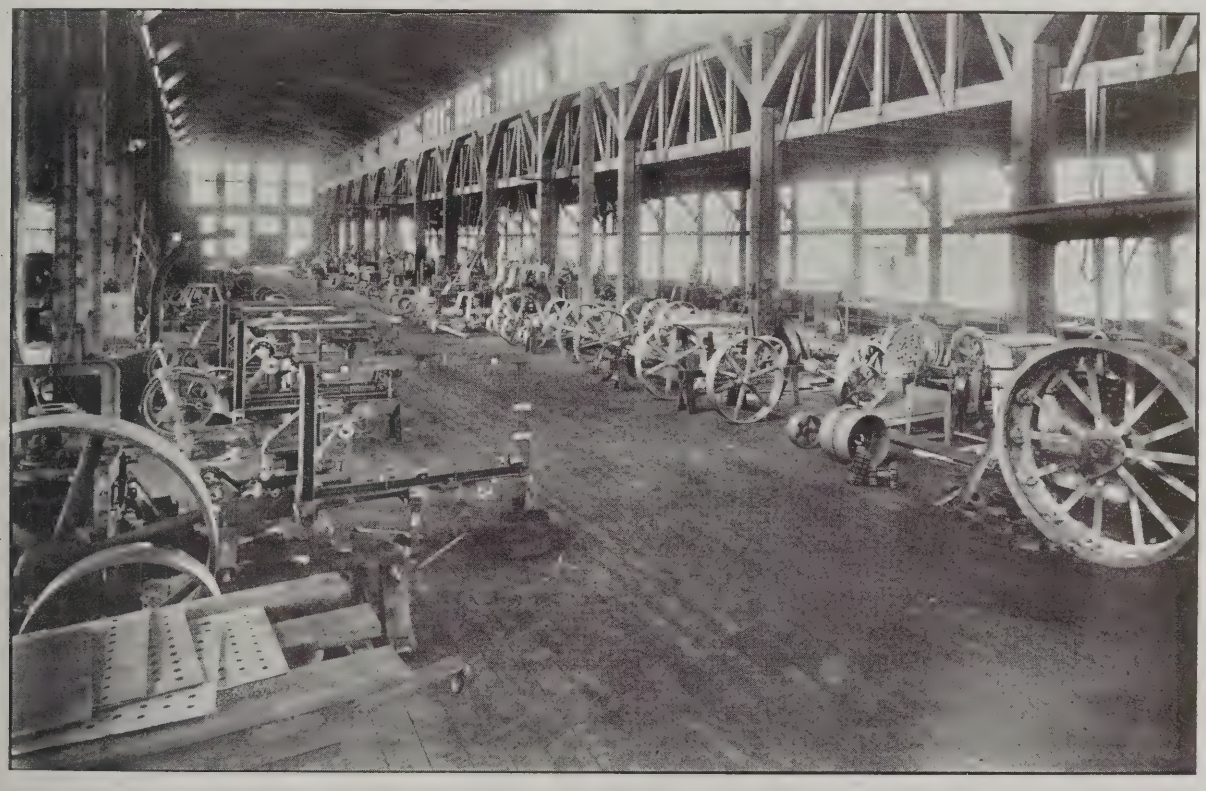
Do you think that a passage from Montreal to Vancouver in 92 hours was even possible as a conception in any of their minds, or do you think the erection of this magnificent building as a part of the hotel system of that railroad, of the extension of their transportation system across the Pacific, and the operation of such boats as the *Empress of Asia* or the *Empress of Russia*, were possible of conception at a time when some of the leading statesmen of the Dominion were predicting that the undertaking would end leaving "two streaks of rust" across the Canadian West as a monument to the folly of the proposal?

Mr. Chairman, so it is down every step of the wonderful story of the development of the Canadian West, the future has always justified the daring and has always vindicated the optimist who worshipped at her shrine.

Justification for Optimism

I am just making one or two references to the past with a view to justifying the work of the pioneer of to-day and that is the work of the men who are pioneering the development of a great industrial community. In the beginning we had the explorer, and following in the wake of the explorer in British Columbia, as in every other part of Canada, came the fur trader. And up till the time of the discovery of gold in the bars of the Fraser River and in the Cariboo, fur trading was the sole occupation of the few white men in the country, but in the fifties the discovery of gold brought to the West a flood of immigration and the immigrant of that day was the argonaut of old; he was the soul of optimism, and his spirit has never been eradicated from this country and never will be.

*Speech delivered by Mr. McGeer at the annual dinner of the Association at Vancouver, on June 9, 1920.



It was then that mining was added to the list of industries. The boom that followed the discovery of gold, as it always does, brought many more seekers than were successful and many were compelled to find employment elsewhere, and as there were no manufacturers available with a pay-cheque, we had in that early day the first "back to the land movement" and incidentally added another industry to the list, namely, agriculture. And so the community of British Columbia slowly commenced to take form and its members lived and thrived and kept on living, I am satisfied, mostly on hard work and optimism.

The next great step forward outside of the creation of the colonies of Vancouver Island in 1849, and British Columbia in 1858, and their merger in 1866, into the Province as it is to-day (which features, of course, I am not permitted to discuss because it may be said that it would savour of politics), was the construction of the Cariboo Road which connected the interior with the coast, and which was the precursor of the railroads of to-day. Then in 1885 the Canadian Pacific Railway was completed and a new era dawned in British Columbia, but it was not until the gold discovery in the Klondike in the last nineties that the Province of British Columbia came to be known as having possibilities and potential wealth in other sources that would equal if not surpass her mining possibilities, and probably it would be correct to say that the true development of industrial British Columbia does not go back beyond 1900.

In 1898, the year of the Klondike rush, the population of the City of Vancouver, including all of its environs, was 21,000. In 1902 it had increased to 45,000. To-day it is estimated that the City of Vancouver and its environs has a population of at least 173,000 white people and 15,000 orientals. The population of British Columbia has grown from 178,500 in 1902, until to-day it has reached the grand total of 445,000.

From that time on, in connection with the industrial growth of the community, sweeping and exhaustive investigations have been made into the extent, value and the uses to which they can be put of all our natural resources. Our timber has been surveyed and classified; our minerals have been prospected and developed; our water powers have been estimated; our agricultural lands have in a general way been examined and experimented upon; our coal areas have been and are being developed and, with the knowledge that these investigations have given us, we stand in British Columbia to-day, no longer in the position of the speculator, but on the contrary the possibility and extent of our industrial development is now a known factor. This knowledge has been responsible, during the last twenty years, for a remarkable industrial development, and great though that development has been I think I will be able to show you that few countries can offer to the settler, the investor or the manufacturer such advantages as he may find here. This is a country of 385,855 square miles; it has a population of less than half a million; there are mountains stored with exhaustless treasure; forests, vast and primeval; and rivers that loitering or tumbling run wanton to the sea, providing power in abundance for the manufacturer, and in many instances natural highways from the interior to the coast. An even climate above a fertile soil yields to the husbandman almost every product of the temperate zone. Of the essentials of industry, water, power, coal, mineral, timber and agricultural products, we have them all in abundance, situated on 750 miles of coast-line whose harbor and trade possibilities are unexcelled.

Tapping this store of wealth from the East are three great transcontinental railways to say nothing of the connections that are made with the great American railway system to the south of us, and on the west the ocean provides a highway to the markets of the world. In our coast

A British Columbia Industry

Scene in the plant of the Heaps Engineering Co. at New Westminster, which was visited by the C.M.A. party

waters, in our rivers and lakes, there abounds a wealth of food fish sufficient to feed the people of the whole Dominion. From this assured and permanent advantage is growing an amazing system of industries, which is attracting attention from every quarter of civilization. Such, sir, is the picture of this province. Such, sir, is the source of inspiration that gives to the British Columbian his spirit of optimism.

British Columbian Forest Wealth

The survey of our forest wealth by the officials of our Provincial Government places our total stand of merchantable timber at 400,000,000,000 feet board measure. The three-year survey made by the Board of Conservation for the Dominion Government, placed that estimate somewhat lower and I think gave it at 366,000,000,000 feet. The annual growth is estimated at over 5,000,000,000 feet, while the total cut to-day is much less than 2,000,000,000 feet, thus showing that our cut is only a little over one-third of our annual growth. In 1903 the cut of lumber did not exceed 320,000,000 feet, but in 1910, however, the cut had jumped to 1,040,000,000 feet; in 1919 the cut mounted to 17,583,290 feet, and there is a substantial increase estimated for the year 1920. A comparison of the figures for the last four years of the value of the forest products created by the timber industry will give some general idea of the value of the asset to the Province and its steady increase in volume:

1916	$35,500,000
1917	48,400,000
1918	54,162,000
1919	70,000,000

This Province within its boundaries contains more than half of the total stand of timber in the Dominion of Canada, and without touching our enormous reserve, we can increase our production almost three-fold. With the growing demand for timber, and timber products, the world over, we can look forward surely to a steady annual increase in this great basic industry, and it will develop, as it grows, all of the attendant industries necessary for the manufacture of tools, machinery, equipment and supplies which are used in the lumber camps, in the mills, and the manufacturing plants that constitute the timber trade. We can look forward to the developing of a great merchant marine for, in such a land, a merchant marine has always an inexhaustible supply of cargo outward bound.

The Pulp and Paper Industry

In 1910 we manufactured no pulp or paper in British Columbia. To-day this pulp and paper industry is firmly and definitely established as a part of the industrial life of the Province. We have at Powell River, Ocean Falls and Quatsino Sound, three of the largest pulp and paper mills in the world, and last year the value of the pulp industry was $12,254,000. Of the two essentials of this industry—pulpwood and water-power—there is an abundance. The water-power on tide water alone is estimated at 1,000,000 horse-power, while the supply of pulpwood is practically inexhaustible. The world shortage of pulp and paper, to say nothing of the rapidly developing Eastern trade, is sufficient indication of the existence of a market for all that can be produced. And besides the three large mills that I have spoken of, there are already smaller ones in existence and several others are, I believed, projected. If our wealth of timber and wood were all that we had, our industrial prosperity would be assured, but that is not all by any means. The mineral industry is equally as great.

To date the mountains and creeks in the Province have produced $640,000,000 worth of minerals of all kinds. To-day the mineral industry employs over 13,000 men and annually distributes approximately $16,000,000 in wages. This industry has produced for every man, woman and child in the Province the sum of $141.00, the highest per capita production on record. Figures are always fascinating and, when one follows the record of the growth of the mineral industry down from the year 1852, we cannot but be conscious of a feeling of pride, for the statistics disclose one long story of a never-ceasing but always successful effort to wring from nature the treasures she has so carefully stored within the bowels of the earth. And in the year 1918 the mineral wealth produced totalled $41,780,000. When you consider that figures in face of the fact that our mineral reserves are barely scratched some idea of the possibilities of future development may be appreciated.

Vast Mineral Production

In the year 1918 the total production of copper amounted to 61,483,754 lbs., and yet in the Province of British Columbia we have no copper refinery. The Britannia Mine on Howe Sound, not 25 miles from where we sit to-night, is the largest copper mine in the British Empire, yet, Mr. Chairman, its ores are smelted at Tacoma, in an alien and a foreign land. All along the coast-line as you travel northward are properties in different stages of development—some small and some large—until you come to the Granby property some 650 miles north of here. Since the opening of this mine in 1914, it has outstripped all others as a copper producer. The smelter provided for the smelting of the ores is the second largest in the British Empire. In the year 1918 they produced 29,697,376 lbs. of copper. The Copper Mountain property just outside of Princeton, the property of the Canadian Copper Corporation, is just commencing its producing activities. Its capacity is 30,000 lbs. of copper per day and no doubt will become one of the large producers. This, sir, is the story of copper, and had I the time I could tell you equally as wonderful a story of the development of the mining of gold, silver, lead and zinc.

If you will turn your attention to the Kootenays in the south-eastern portion of the Province, you will find amongst a host of others the largest silver, lead and zinc mine of the world, the property of the Consolidated Mining Company, whose fully equipped smelters are located at Trail. The new camps at Stewart and Alice Arm, while as yet not proven, are giving every indication of producing mines that will be equivalent of any that have already been discovered in this country, and particularly the silver values are being looked to with exceptional expectation. With this enormous industry distributing as it does in the purchase of supplies, in the purchase of machinery and equipment, and in the payment of wages, enormous sums, it is not difficult for me to impress upon the manufacturers here present the quantities of material that must be manufactured to keep such an industry going.

We have by dint of perseverance and hard work proven the Province of British Columbia to be a great mineral country. We have experienced remarkable growth in the development of that industry, but who is there here that can say that we have not the right to look forward to a growth of which our present condition is but a mere indication of its extent and value? At least I think that I am safe in saying that there are few countries, certainly no Province in the Dominion of Canada; and I know of no other place that offers to the miner and the mining promoter, or to the manufacturer a future of opportunity so great and so varied. There is hardly a form of mineral, with the exception of tin that has not been found in quantity; there is no building

View Along Waterfront, New Westminster

One of the spots visited by the C.M.A. party during their trip to New Westminster on June 9

material which we have not got; our reserves of iron and coal have been pronounced by experts of exceptional value. For many years it has been considered an essential to the true development of the industry of British Columbia that we should have facilities for the manufacturing of pig iron and steel. It is true that those who have predicted this as an essential necessity may have been anticipating the future too willingly, but there is no question but that the time is rapidly coming when not only will such an institution be an essential necessity but will be a practical possibility.

Enormous Coal Reserves

The coal areas of British Columbia contain reserves of coal amounting to approximately 76,000,000,000 tons. The greater percentage of the total coal deposits of the Dominion of Canada exist in the Province of British Columbia and in the sister Province to the east of it. The coal fields of Vancouver Island, the Nicola Valley and the Crow's Nest are all substantial producers, while the anthracite coal fields in the North in the Ground Hog coal country have presented indications of great possibilities as soon as transportation facilities develop, and these deposits are within 90 miles of tidewater.

Recently very extensive discoveries have been made of valuable deposits of iron. In the White Water country in the Chilcoten District, I understand some 50,000,000 tons of ore have been located that is particularly easy of mining and suitable for making pig iron and steel. This is only one of several deposits of high-grade iron ore known to exist.

This gives some slight indication of the possibilities of industrial activities in the mineral reserves of the Province, but the reference I have made to those possibilities is very slight as compared with what might be properly said about them.

To the manufacturer who looks askance at the rising cost of fuel, the water powers of British Columbia must appeal as nothing else possibly could. The volume of water power in British Columbia is 2,500,000 24 horse power, and while, of course, many of these water powers are as yet not developed, the time will come when they will be developed and when they are developed and operating, as they will be, the manufacturer will have the definite assurance that he will be supplied with the cheapest power in the world. If we were dependant upon our forests and our mineral wealth, I think it would appear to you that we would be well taken care of, but these great assets are only incidents in the distribution that the divine hand of Providence has made of wealth and substance in this land.

In the year 1918, the value of our fisheries almost equalled that of all the rest of the Dominion of Canada combined, amounting to $27,282,223. There have been abuses in the development of that industry from which the country will suffer and against which proper precautions must be taken, yet at the same time it must be remembered that up to the present time our deep sea fisheries have hardly been touched. There may be one trawler operating between the 49th parallel and Alaska and, if there is, that is all, but there is an opportunity which unquestionably will be taken advantage of, to exploit the deep sea fisheries, and when that day comes the fisheries of this Province will then, and then only, come into their full and true proportion. In 1918, during the food shortage a trawler, known as the *James Carruthers*, was operated over a period of 151 days, making in all forty-nine trips. The approximate catch was 2,000,000 lbs., consisting of sole, flounders, witch brill and other food fish of the flat variety. The wages that the men netted, including board, was approximately $2,000 cash or over $3.00 per day.

Agricultural Growth of Province.

I have given you an insight in the development of our industrial community in the field of timber, in the field of mineral and in the field of fisheries, and I just want to draw your attention for a moment to the agricultural growth of this Province. There are many who come to this country who go away with the false impression that the Province of British Columbia is a sea of mountains, that it has a few mines and a few fisheries and a few lumber camps and little else. Nothing could be further from the truth, and for fear any of you here to-night may be mistaken in that particular conclusion I want to refer to the growth of our agricultural industry. In 1892 we had a home production of all agricultural products amounting to slightly less than $2,000,000. In every year from that date forward till to-day there has been a marked and steady increase. While in that year we imported some $2,659,000 worth of agricultural pro-

ducts, which was more than we produced. In 1910, we had practically equalled our importation with our production, when we produced $14,000,000 of agricultural products and imported $15,000,000. Slowly but surely that development continued until in 1918 we produced $49,444,000 worth of products and our importations were a good deal less than half of that amount, or $21,905,446. Last year, 1919, was a banner year. We produced $65,398,556 worth of products and imported but one-third of that amount, or $22,734,000. Can I hazard the prediction here to-night that some day in the not too distant future the Province of British Columbia will become a great exporter of agricultural products? The total area of land of the Province of British Columbia is 226,186,570 acres; of this, a goodly portion is made up of mountains and lakes and waste land, but available for agricultural production there is in this Province 26,618,000 acres of land, or 10 per cent. of the whole, of which area there has been taken up 2,540,000 acres of land, or about 11 per cent. Of this land taken up, there is at the present time under cultivation 414,000 acres of land, or 16 per cent. of the total taken up, as of the area available for agricultural purposes only 1.8 per cent. is used. That our land will rapidly come under cultivation from now on I am certain is a fact, and already a large immigration seeking agricultural land has, since the close of the war, begun to arrive within our borders. If you will travel out to the delta of the Fraser and travel that wonderful valley, you will find the finest dairying, mixed farming and small fruits and berry-growing area imaginable, and the same can be said of much more of the lower mainland and Vancouver Island.

Development of the Interior

If you travel into the interior plateau, of which Kamloops is the largest city, you will find a country from 200 to 300 miles wide, stretching from our southern boundary northward over 700 miles suitable at all times for cattle and sheep-raising, and in many places you will find it suitable for grain-growing, alfalfa and mixed farming of the most intensified order. You will find the country opened up and developed to a remarkable degree; you will find that country dotted with lakes and well supplied with water from sparkling rivers and streams. You will find a remarkable system of highways and roads; you will find, throughout, innumerable towns and villages, while as yet small, all started on the highway to greater growth and development.

Bordering on the Okanagan Lakes you will find the wonderful fruitlands of the Okanagan Valley. The growth of the fruit industry is one of the remarkable features of the west. Fruit lands of the interior are taking second place to none, and just in that connection, in 1911, the production of fruit was $878.181 and see what has happened in the short period of time that has elapsed to date. From less than one million dollars the industry has grown in eight years to a production of $7,772,774, or an increase of almost a million dollars per year.

The value of the exported fruits in the year 1911 was $185,000. The value of the exported fruit in this Province in 1919 was over five millions of dollars. To-day the farmer has passed the pioneering stages. As the volume of production has increased, he has gradually overcome the difficulties that beset him in the beginning. You will find now his co-operative organizations such as the creamery, and the fruit and vegetable cannery; you will find in existence the condensed milk factory, and the jam factory, and you will find organizations created for the marketing of his produce no matter what it is. His transportation difficulties are being rapidly overcome. The general scheme of transportation is a very extensive one, for besides the three great railways to which I have already referred, there are many branch lines, tapping the richer localities and valleys. The Kettle Valley road which crosses the southern part of the Province extending to Nelson on the Kootenay Lakes, and the Pacific Great Eastern extending from Vancouver north-eastward to Fort George, which will be completed this year, serve a tremendous area of the Province.

The System of Highways

Supplementing this rail communication is a system of highways now in course of construction, which will give, when completed, a system of roadways constituting in all some 17,000 of miles. When the work is finished you will be able to motor from Vancouver to practically any part of the Province. You will be able to travel through the Fraser River Canyon along the route of the famous Cariboo road, and from there you will be able to motor through the Crow's Nest Pass to Alberta, or northward to the pleasure resort at Banff in the heart of the Rockies, or you will be able to travel northward through the Cariboo country to Fort George and from Fort George westward to Hazelton. You will appreciate what this will mean to the settler and the interior points of settlement, to say nothing of what it will mean to the intending settler and the tourist. Such a system of highways bids fair to make Vancouver one of the tourist centres of the North American continent.

In a country such as this, where the industrial wealth annually produced from its natural resources alone totals in the vicinity of two hundreds of millions of dollars, when it is realized that all of this has been accomplished in the last 20 years by a population of less than half a million people, surely it is not necessary to elaborate upon the possibilities for industrial activity which here exist.

You will find in this Province a prosperous and hospitable people. You will always find much of the spirit of the earlier pioneers, and while you will find the same old optimism and the same old spirit of fortitude, I make bold to hazard the statement that there are none here to-night who are able to anticipate what the industrial future will unfold during the next quarter of a century. We believe that we are but at the beginning and we feel that there is no limit to the possibilities of our growth and expansion.

A Province of Great Possibilities

I have taken up considerable of your time, but if I have been successful in placing the facts and figures which I have given before you in such a way as to merely court a further investigation by yourselves, I am content to feel that my time has been well spent, and what I wish to impress upon you gentlemen here to-night from other parts of this great Dominion, that the Province of British Columbia is the part of Canada with the greatest of possibilities; that the success of its development depends upon the energy and the ability of the captains of industry of this land. As the adventurers and pioneers of other days have shown the way and blazed the trail to this then far-off country, the pioneers of industry during the last 20 years have opened the door to the possibilities of her future industrial greatness.

The General Manager of one of the largest and most important departmental stores in Australia is visiting Canada and is desirous of meeting manufacturers who are interested in export to Australia. His firm buys and imports goods of almost every description. Information may be secured at Commercial Intelligence Department, Canadian Manufacturers Association, Toronto.

Scott, chairman of committee and Mrs. J. J. Banfield. The figures to the left and right of the group are Mrs. H. M. Ramsay and Mrs. J. B. Thomson.

Premier Oliver's Address at Opening Luncheon

History and Resources of British Columbia Sketched in Picturesque Language at Board of Trade Function on Monday, June 7

HON. JOHN OLIVER, Premier of British Columbia, in addressing the members of the Canadian Manufacturers Association at the luncheon given in their honor by the Vancouver Board of Trade, Monday, June 7, spoke against time and without reference to notes. In the few moments allotted to him, however, Hon. Mr. Oliver gave welcome to the coast province to the visitors, reviewed the industrial history of the country in recent years and sketched in picturesque language the possibilities of the future.

In his opening remarks the speaker deplored the fact that he was confined to a few minutes. He was not used to making short speeches, he said, and thought that it was unfortunate that he was called upon to condense his speech, as it would not permit of him adequately dealing with the tremendous opportunities of British Columbia.

Continuing, the premier said, "One of the difficulties we are faced with here in this province is that our raw materials are shipped away, either in their natural state or only partly finished. This makes a great difference, as for instance pig iron is only worth a few cents a pound, but when manufactured into fine watch springs is worth many thousands of dollars a pound. We are in the position of having the raw materials, which we ship away, obtaining a price comparatively small in proportion to the finished article, and then we buy back the manufactured product at an advanced price. This is not right. In doing it we are robbing ourselves. We have not been making the most of our opportunities and resources.

"What we want and what we must have is Canadian goods manufactured from Canadian resources for the Canadian people. Not for the people of the West, or those of the East, but for the people of the whole of the Dominion."

Continuing, the premier told of the increase in the production from the soil of British Columbia, quoting figures to substantiate his declaration, that British Columbia was fast becoming less dependent for her foodstuffs on imports. He told of the development in mining, of the opening out of new mineral zones, and of the potential wealth of the hills. What was required was proper development. "There are vast coal areas in this province, and yet we are importing fuel oil where we should be making use of pulverized coal in place of oil," he commented.

He had recently returned from a visit to the interior, said the premier, and he pictured in forceful language his impressions of the journey. Leaving the main line of the C.P.R. at Hope he had crossed through the Coquhalla Pass, a district where new mines were being located, to the Similkameen Valley. Here at the town of Princeton were coal mines, and beyond, up the valley were productive orchards, while four miles away was Copper Mountain where more than ten million tons of copper ore had already been blocked out. Passing over to the Okanagan Valley he was in the midst of the fruit country, where there was an increasing population of happy and industrious settlers. Beyond he went to the Kootenay country with its ore deposits. This country was rich in minerals and products of the soil. He described the expansion of the smelting plant at Trail. Here, for the first

time in British Columbia, the copper taken from the mines of the province was to be finished. Other smelters had either shipped the matte away across the border to be refined, or had taken one more step in the process, that of manufacturing blister copper before sending the product to New Jersey for completion. At Trail the copper would be taken in as ore and would be turned out as copper rods, ready for the market. It was expected that eventually, bars and sheets would be milled at the plant.

With a wealth of detail the speaker described the lumbering activities of the province, and in doing so referred to the possibilities existing for the establishment of wood-working industries. He also hinted at the waste when he said that while the return from the forests for the past year had been approximately $70,000,000, it had required the cutting of 1,758,000,000 feet board measure to bring about this return.

The available timber reserves of British Columbia totalled 366,000,000,000 feet, according to the estimate of the Conservation Commission, said the speaker; but the Provincial Forestry Department had calculated it as 400,000,000,000 feet. The annual growth was about 5,000,000,000 feet, and the annual cut about one-third of that amount.

The premier explained that he had pictured the resources of the province in order to show that there was every reason to expect a largely increased population, so necessary to manufacturing, as well as to point out the opportunities existing in British Columbia.

"Speaking about iron," he exclaimed, "We really do not realize what we have in this province. We knew that we had big deposits of iron ore, but thought we could not secure hematite for fluxing it. Recently, however, great quantities of bog iron have been located, and before you manufacturers return to hold another convention here we shall have iron and steel industries in operation."

J. F. Mackay
Willys-Overland, Limited, Toronto
Chairman 1919-20 Publishing Committee

Turning his attention to the canning industry, the premier pictured the progress made in this industry in recent years, and then exclaimed:

"What is the matter with British Columbia going into the sugar beet industry?"

He went on to explain that there were unmeasured stretches of land in the province available for such an industry. The big central interior, he said was crying out for settlement. There were great areas of grazing land on which the foot of domestic animal had never been placed, while countless hills offered pasture for hundreds of thousands of sheep, the wool of which could be used in the manufacture of cloth in the province.

While much had been said of the depletion of the sockeye salmon runs of British Columbia, continued Hon. Mr. Oliver, a great deal more could be said of the development of the fisheries along other lines; of the great catches of ground fish, halibut, cod and other members of the finny family; of the whaling stations and of the new industry just starting, that of manufacturing leather from the hides of sharks.

There were many industries in British Columbia he said, naming a few of them, but there was need for a great many more. He illustrated this by reference to the pulp and paper manufacturing possibilities of British Columbia.

Future of Paper Industry.

"You in the east," he said "and all over the continent are suffering from a shortage of paper, and particularly newsprint. In British Columbia we have millions of acres producing pulp wood. We have several big plants at work on the Coast making pulp and paper, but they do not supply the whole market. There is room for many more pulp and paper plants. In the interior of this province there are opportunities for the establishment of these industries. Take for instance at two points. There is Quesnel. Rivers and lakes stretch through the great central part of British Columbia along which there grows an abundance of pulp wood, which can be easily and cheaply transported for hundreds of miles to Quesnel by water. There is ample hydro-electric power available on development. There is sulphur in the province, while in the mountains are available large quantities of the finest talc, almost pure, which can be used in the manufacturing of the better grades of paper.

"At Prince George there are similar opportunities. There are several rivers along which the finest kind of pulp wood can be floated to mills at that place. There is available water power, and in fact all that is required is the machinery and labor."

In again welcoming the convention to British Columbia, the premier said, "You have a very important and responsible part to play in the building up of the Dominion, but in building up a great industrial nation of Canada due consideration must be given to the human element, for conditions have changed. I have no quarrel with Capital. It is necessary, and if properly used it is a great reserve of power for good. Capitalism is a friend of mankind when it is properly directed, but there exists a need of educating the minds of people to the necessity for economic production and the bringing about of more harmonious relations between all classes of the community.

"Wealth," continued the premier, "is not the proper standard of success. There is something greater than wealth. It is service, and the true standard of success is service. If unrest is to be done away with a new sentiment must be manufactured in the minds of men and women—not the sentiment of dollars, but the sentiment which calls for the utmost in service."

Trade Possibilities on the Pacific Coast*

A Summary of the Great Natural Resources of British Columbia—How These Resources Will be Utilized in the Coming Year in the Development of Trade With Eastern Canada, the Orient and Other Parts of the British Empire

By J. O. CAMERON

Cameron Lumber Co., Limited, Victoria

BEFORE launching out into the field of speculations on what great trade possibilities are to be realized during the next ten years, some reasons for my faith should be given.

The whole of the Pacific coast of Canada is within the Province of British Columbia, whose area is 355,855 square miles—thirty-seven thousand square miles larger than the combined area of the States of Washington, Oregon and California. Its coast line, everywhere made irregular by bays, estuaries, inlets and arms, which form numerous safe harbors and ports, is thousands of miles in extent.

Under the heading of forests, I can tell you that the best estimates available give the area of standing timber at one hundred and eighty million acres. It is recognized that the timber is of a superior quality and of large size, and that this province has the largest compact area of forest on the North American continent. Estimates prepared by the Forestry Branch give the quantity of merchantable timber at about three hundred billion board feet.

Up to the present there has not been cut during any one year as much as two billion feet, which includes all the timber taken out of the forests, viz.: pulpwood, poles, piles, mining props, hewn ties, as well as logs for the lumber mills, which is less than 1 per cent. of the total stand. The Annual Report of the Forestry Branch of the Province, recently issued, shows that the value of the timber products for the year 1919 was $70,285,094, leading all other basic industries

British Columbia has a considerable area of agricultural lands as well as her tremendous territory of standing timber. A small percentage of her agricultural lands is being utilized.

Value of Agricultural Products

The Honorable Mr. Barrow, Minister of Agriculture, has recently issued a report giving the value of the products of the agricultural industry for the year 1919, which shows the very considerable sum of $65,384,556, being a very close second to the value of the products of the forests. While the area of land suitable for agriculture is reduced by the mountains and lakes, nevertheless the valleys and arable land along the sea shore are fertile and productive. These areas will be best utilized divided into small farms of ten and twenty acres, which can be brought to a high state of cultivation. All such places will make the most delightful homes, as, besides the charming climate, they will have the advantage of sublime scenery, being always in sight of towering forest-clothed mountains and beautiful lakes and streams.

The mines of the Province have long served to add to the wealth of her people. The important minerals produced are gold, silver, copper, lead, zinc, and many others in small quantities. The reports of the Department of Mines for the year 1919 show the value of these minerals gained from the mines during the year amount to $20,095,057. The principal items being: Copper, $8,631,205; silver, $3,871,063; gold, $3,216,865; lead, $1,658,121; zinc, $2,717,803.

Coal deposits of great extent exist in many sections. Only three districts, however, have so far been systematically prospected and worked, namely, the Crow's Nest Pass, the Nicola Valley, and the East Coast of Vancouver Island. Records in the office of the Minister of Mines show a total production of 2,504,000 tons during the year 1919. All of the coal developed is bituminous of a good grade.

Extensive developments of ore are found in a number of places. Mr. Kindeman in his report to the Department of Mines states that there are deposits of magnetite in the valley of the Gordon River near Port San Juan, at several places in the vicinity of Barclay Sound, at Head Bay and Nootka Sound, all on the west coast of Vancouver Island; at Klaanch River, near Alert Bay, and near Quinsan River on the east coast of Vancouver Island; also on Texada Island. There are large supplies of good limestone on Texada and Vancouver Islands, and none of the deposits are far from the coal mines of Vancouver Island.

Water Teeming with Fish.

The waters surrounding the Islands and rippling through the straits, in and out of the estuaries, inlets and sounds, driven on and drawn back by the ever-changing tides, are everywhere teeming with fish.

The reports given out from the office of the Honorable Commissioner of Fisheries show that the value of the fish taken during the last year for which reports are all made up, was $21,051,711.

While discussing the products of the sea, it is not amiss to mention the fact that wide areas have a thick growth of kelp. This plant has been found to be useful for various purposes, but a process has recently been perfected for converting it into good cow food. If this should prove to be what is claimed, the industry of gathering the kelp and working it into cattle food will prove to be a very large one.

Large deposits of clay and shale suitable for making brick, tile and other clay products, are found in many localities, some of which are being worked. Mountains of rock suitable for making cement also exist, and two large cement works are located on Vancouver Island near the city of Victoria. The abundance of coal and opportunity for shipments by water give unexcelled promise of great trade developments in the clay products and cement.

The Province's Water Powers.

There are many other natural resources and basic industries which might be mentioned and described were the time sufficient, but I will only refer to one other, which is of so great importance that any description of the resources of the Province omitting it would be far short of a description of her natural resources. I refer to the great water powers now developed and yet to be developed. The actual development of this great natural asset up to the present time amounts to about three hundred thousand horse-power.

Now, having briefly referred to the great natural resources of the country, and shown the present state of the development thereof, it is my purpose to direct your atten-

*Address delivered at the annual banquet of the Association Vancouver, June 9, 1920.

tion to the future, and endeavor to show you some of the great industries which should, and no doubt will be established during the next decade.

Trade between our Pacific coast and the other provinces of the Dominion will increase more rapidly than ever before. There are now in operation three great transcontinental railways, two being Government-owned, and the other the great C.P.R. system, which is no doubt the greatest of all privately-owned railway systems; so that the means of transportation of all products and commodities is therefore most complete. The full power of this Association should be constantly exerted to force upon Canadians the habit of using Canadian raw products in their factories, and being sure that the manufactured articles they buy are from Canadian factories. I am quite aware of the campaign which has been carried on by this Association for a long time with that object, and can only say "keep up the good work."

Needs of the Prairie Provinces.

The three provinces occupying the great grain-producing prairies are growing rapidly in population and otherwise, and therefore are needing lumber, shingles and other building materials in increasing quantities year after year for their new improvements. They are finding that they must depend on the forests of British Columbia to supply their necessities. In years past the lumber mills of the United States supplied considerable part of all the forest products used in the prairies provinces. The U.S. mills used that section as a dumping place for their surplus production. Now there is no longer any surplus production, and probably never will be again. To prove the correctness of this conclusion it is only necessary to quote the words of the Honorable Mr. Meredith, Secretary of Agriculture for the United States, used in his report to the United States Senate. He said, "Scarcity of timber in the Eastern States is by no means the only cause of high prices. But the fact remains that three-fifths of the original timber of the United States is gone, and that we are using timber four times as fast as we are growing it."

In view of such a condition in the United States, it is reasonable to suppose that very shortly there will not be any lumber or other forest products to be spared from that country for the Canadian needs; therefore, the people of Manitoba, Saskatchewan, and Alberta will look to British Columbia for their lumber. Also Ontario will likewise have to ship larger and even larger quantities of her lumber requirements from the Pacific Coast.

The great forests are here ready for the axeman. The production of lumber, shingles, boxes, paper and in fact all commodities derived from the forests, might well be twice in quantity what they are. And if Canadians will adopt the principle of using Canadian products, the whole will be required for home consumption, which will really be the condition within four or five years, or in fact just as soon as the mills can be established with the capacity to supply the demand.

The prairie and Ontario lumber dealers have been unable to get their requirements supplied from the British Columbia mills for the past year or more, and as a result have had to make up the shortage from the United States mills, or go without. The natural growth of the forests of British Columbia would reproduce annually twice the present cutting of timber, so that the quantity standing would not be depleted; provided the ravages of forest fires can be reduced to a minimum, and care is taken to give lands only suitable for forest growth a chance to reforest.

No doubt you have all noticed with considerable interest the fight which has been going on between the newspapers and latterly the Government, and some paper manufacturers in Canada, wherein the Government undertook to prevent the selling of paper in the United States until the domestic demand should be satisfied. With timber suitable for pulp and paper standing thickly over thousands of square miles in close proximity to great undeveloped water-power sites, up and down this Pacific Coast, it hardly seems reasonable that capital will be much longer wanting for the development of such sections, and thereby remove the complaint made about the great shortage of print paper. Many new lumber and shingle mills will be erected to take care of the increasing demands for building materials; also some large paper mills will be constructed within the period under consideration.

The only thing standing in the way of more rapid development along those lines at present, is the fact that capital is timid about venturing into any form of industrial institution. The capitalist considers himself between two fires; on one side the labor organizations demanding more and more for themselves and insisting that the share of capital shall be less and even less of the earnings of all industries; on the other, the governments are needing ever increasing sums of money, and are constantly looking for sources from which such needs can be supplied; and it seems that it has come to be considered that the easiest means for procuring same is by taxing the industries; therefore, the man with money to invest hesitates about putting it into an industry. However, when the taxing powers take another look around and begin drawing from the idle capital, we shall no doubt see more people willing to take a chance on investments in industries for supplying the nation's wants.

Of the total production of 1,758,329,600 feet of lumber during 1919, by the mills of British Columbia, only 109,000,000 feet were exported by water, of which amount the United Kingdom took about 65,000,000 feet. The quantity of water borne shipments would have been much larger but for the fact that there were no bottoms to be had. The Canadian Shipping Board will soon have in operation in the Pacific a respectable fleet of first-class merchantmen, making regular sailings to Australia, New Zealand, China, India, so that regular shipments of forest products can be made to all those countries.

New Ocean Services

The Canadian Pacific Ocean Service, Limited (C.P.R.) already have established a steamship service between Vancouver and the Far East, by putting into commission six steamships of an aggregate of sixty thousand tons, with three sailings per month. Such a service will inevitably bring about a large trade between the millions of Asiatic people and the people not only of British Columbia, but of the whole of Canada. The City of Vancouver will, by the very necessity of location and conditions, become a great busy port, through which will pass hundreds of thousands of tons of merchandise annually. Already she is waking up to the task which will be imposed upon her right soon, by getting under way the construction of great docks and other extensive works and harbor improvements.

Other cities of the Province are not intending to lea the whole of this ocean-borne traffic to be handled in Vancouver alone. The Dominion Government has recently completed the construction of a breakwater just without the entrance to the Victoria inner harbor, and within the protection of the great breakwater two docks have been built with sufficient berthing room for four of the largest-size ships. Also wharf buildings for storing and taking care of the cargoes, all connected with the railway tracks, which with the outer wharves privately owned, and the inner wharves owned by the C.P.R., the Grand Trunk Pacific a

other private concerns, all put the city and port of Victoria in a most excellent position to handle all incoming cargoes, and dispatch the merchandise on to its destination. The port of Victoria must of necessity continue to grow in importance. Cargo carriers will soon be more plentiful, and the markets of all the countries bordering on the Pacific will be open to British Columbia forest products.

With the full development of the timber and pulp of the Province, which must inevitably soon be accomplished, this will give employment to thousands of hands, and be sufficient in itself to keep the coast section in a prosperous condition; however, no such thing as having to depend on one industry can happen here where nature has yielded her favors so bountifully. As has been hinted before, the undeveloped iron deposits constitute the great hidden treasure which will be found and added to the other natural bounties to complete the industrial supremacy of our Province.

Possibilities of an Iron Industry

One of the alluring possibilities for increasing the trade of this coast is to be found at Campbell River on Vancouver Island, where there is a promising deposit of iron ore, very near the Campbell River Falls, which Mr. G. R. C. Conway, in his description of the water powers of British Columbia, says, "is capable of a development of 150,000 horse power at an economical figure." Before the passage of another ten years some promoter, with a broad vision, will have that water power harnessed and put to work, converting by electric energy the iron ore into merchantable "pig." Thereafter, this Province will take first rank in the production of iron and steel, as well as in lumber, fish, coal, and copper. Then will follow the establishment of shipyards, where will be built ships for all nations, and many other industries using iron and steel.

In a great many localities where great industries are established the water is bad, the climate is too hot or too cold or perhaps both, or there is something else wrong, so that it is only endurable as a place of residence because it is necessary for the operators and employees to be there to look after their work. They would all leave if they could. No such thing is true on this coast.

An entirely unbiassed description of the climate is given by Mr. Watson Griffin in his pamphlet prepared for the Department of Trade and Commerce, entitled, "Canada the Country of the Twentieth Century." He says:

"The climate of all the British Columbia islands and the coast lands is greatly affected by the warm water of the Japan current and the winds that blow off it, so that the winters are very mild and moist. Snow seldom falls, and when it does come never stays long. Soft, warm, moisture-laden winds also blow up the long inlets of the sea, which extent many miles inland and along the river valleys, losing their moisture as they go inland, but retaining sufficient heat to greatly moderate the climate of the central and northern plateau. The most northern islands, and the mainland coast opposite them have a milder climate than Scotland; while the climate of the southern mainland coast and Vancouver Island resembles that of the south-western counties of England."

And again, touching on the subject of trade possibilities of British Columbia, the same author, under the heading "A Manufacturing Province," says:

"The farms, the forests, the mines and the fisheries of British Columbia will give employment to a large population; but one of the most important industries in the future will probably be manufacturing. With numerous water powers, great supplies of coal, all the metallic minerals, and immense forests of the finest timber, no country is better suited for iron-making and wood-working industries; while the climate is especially adapted to the manufacture of textiles. It is well known that a moist climate is most favorable to the successful manufacture of the highest grades of cotton and woollen goods, and there are many points along the coast admirably suited to textile manufactures. Immense areas of land are suitable for sheep raising. Raw cotton can be imported from the Southern States, Brazil, Australia, or India, and wool from New Zealand."

The development of the trade of our coast, like all the Dominion, would be greatly promoted by preferential tariffs with Australia, New Zealand and other states and commonwealths of the Empire, and I have faith in the constructive statesmanship of the men who will shape the policies of the various self-governing commonwealths, to expect a well-developed scheme for fostering and encouraging trade amongst themselves. With that expectation realized, there is really no limit to the trade possibilities of this Province, which instead of being considered one of the distant outposts of the Empire, will shortly come to be known as an industrial centre from which great trade routes radiate to all the states of the Empire. Quoting again the words of Mr. Griffin, I show you the great advantages of a location on this coast:

"The geographical situation of British Columbia is most favorable for trade with all the countries of the Pacific and Indian Ocean. A British manufacturing establishment with a large trade in the East, by establishing a branch in Vancouver could save over 6,800 miles of carriage in shipping goods to Japan or Siberia, over 5,000 miles in shipping to Shanghai, China, over 4,000 miles in shipping to Hongkong, about 4,900 miles in shipping to New Zealand, over 4,600 miles in shipping to Sydney, Australia, and nearly 1,000 miles in shipping to Singapore."

Chairman 1920-21, Education Committee

The Problem of Technical Education*

How to Reorganize and Strengthen the National Fabric to Meet the Needs of the Future—The Part that Should be Played by Technical Education in this Important Task—What Canada is Doing to Further the Cause

By L. W. GILL, M.Sc.
Director of Technical Education for Canada

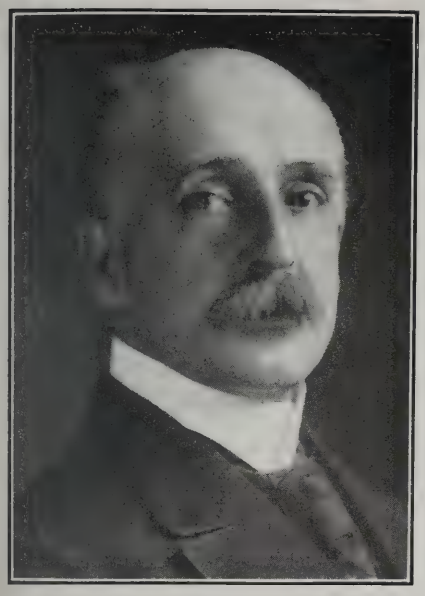
A FEW months ago I gave a short address to the Ontario Division of this Association in Toronto, and I dealt with this subject in a very general way. To-day I am going to present the subject as a problem.

You are familiar with the Technical Education Act which was passed last year by the Dominion Government, and you know that the Federal Government appropriated $10,000,000 to aid in promoting this work, this money to be distributed among the provinces covering a period of ten years, which will be approximately a million dollars a year for distribution. This is distributed subject to the condition that the provinces put up an equal amount of money for this work, and an agreement is to be reached between the Federal and Provincial Governments as to how the work is to be carried on.

Technical education as defined by the Technical Education Act is simply the form of education or training which is necessary or desirable to promote industries in Canada. That is a very broad definition indeed.

Getting Too Much Education

I have talked to a good many employers in this country since becoming interested in this work, and I find that there are more people in this country than I had anticipated who are of the opinion we are getting too much education; that young people are being educated away from employment, that the young boy in the country is being educated away from the farm, and that what we want instead of education is training, the same kind of training, so to speak, as you would give a horse—mechanical training. So that this problem is a mechanical one or it is an educational one. If we are to train our young people, our workers, to be a part of a machine, then it is a mechanical problem; if we are to deal with them as human beings and make citizens of them then it is an educational problem. For my own part I see no reason why, if you take the boy, for instance, on the farm—and the great cry is now that the boys are going away from the farm to the city, they are being educated from the farm, there is too much education—I fail to see why teaching a boy how to judge an animal properly and how to keep a record, for instance, of his dairy herd so that he can weed out the poor animals and take care of the good ones, and how to judge seed—I fail to see why that should take the boy away from the farm; I should think it would awaken an interest in the farm work and keep him on the farm, and the same way with any other industry. As I see the problem, however, as far as the farm is concerned, it is not education that is taking him away from the farm; it is because the boy knows that the people in cities are earning more money and have more time to themselves and more opportunity for recreation and pleasure. It is not education. Secondly, the policy of the Department of Labor in whose hands the administration of Technical Education has been placed, has decided on a policy of education, that this is an educational problem.



Now, in treating it as an educational problem I am going to treat the problem as a whole from the educational point of view, and just briefly touch first on some of the conditions which we have to consider in dealing with this problem.

Reorganize the National Fabric

Since the signing of the armistice in 1918, the great problem confronting every nation involved in the war has been how to reorganize and strengthen its national fabric to meet the needs of the future. Men in all walks of life have been discussing plans for reconstructing everything, including our educational system. Rarely, however, does any of us admit that we ourselves are also in need of reconstruction. Notwithstanding this, one can observe a great change in the mental outlook of most people, and this change is still going on. Our standards have changed radically. Relative values have also changed. As an illustration of this change one has only to point to the recent appointment as head of one of our leading universities of a man who is not a college graduate. Prior to the war such an appointment would never have been considered. And this appointment is by no means an experiment, as a certain newspaper has suggested, but is an indication of a definite change in policy. Similar changes are observable in our industrial development. The demand is for men with character, vision and administrative ability rather than for men possessed of special knowledge. Far reaching changes are also to be noted in the relationship between employers and employed. The policy of establishing Joint Industrial Councils on the principle of the Whitley scheme in England is rapidly growing in favor in Canada This movement was unanimously endorsed by the representatives of both employer and employed at the Industrial Conference last fall. No organized effort is being made to forward this movement, yet there are eleven of these Joint Councils now established in Canada. The most important step in this direction was taken about two weeks ago when the Association of Canadian Building and Construction Industries and the Trades and Labor Congress of Canada agreed to organize a Joint *National* Council. This Council is now being organized. The chairman is to be appointed by the Minister of Labor. Many other changes in our national life may be noted, but I will refer to only one more, viz., the enlargement of our responsibilities as citizens as a consequence of recent steps taken toward a fuller expression of our nationality. Our country has taken its place and proved its worth not only on the field of battle, but also as a recognized member of international councils. The war has done much to create in Canada a national spirit. As this was acquired through stress of circumstances which we did not control, and not through any initial effort on our part, there is danger that it may soon be lost. To avoid this, means must be adopted to develop it and give it more tangible expression But how many of us are giving any thought to these matters How many realize that every citizen must take a keener in

terest in the state if we are to develop our national spirit to an extent which will enable us to carry with becoming dignity those increased responsibilities which we have taken on as a people? And how many ever think of how the reputation which Canada won during the war is to be maintained and enlarged? No doubt a few of our people are giving some thought to these questions, but what about the mass? What about our young people? Are they receiving any instruction or enlightenment on these very vital matters? Practically none; and yet in a few short years they must assume all the responsibilities referred to. It is in this respect that our system of education is particularly weak and in need of reconstruction or extension.

It is gratifying, however, to know some efforts are now being made to remedy this defect.

Youth a Valuable Raw Material

This brings before us the subject of education in a general way. Before speaking on technical education, which is the particular topic for discussion, I would like to say a few words about the subject of education from the broadest viewpoint. First of all, it is to be noted that in the youth of our country we have the most valuable raw material of which the country is possessed. This raw material is very diversified, the variety being limited only by the number of individuals. Some are suited for development to perform tasks which require a maximum of mental effort and a minimum of physical effort, while others are suited for tasks which require more physical effort than mental. It is the function of our educational system to sort and develop this raw material so that it will be of maximum usefulness in building up and enriching our national structure. In other words, the true function of an educational system is to produce citizens of the highest order possible from the raw material available. The degree of success attained in performing this great national work is the measure of the real efficiency of the system.

The problem of sorting the raw material is beset with many difficulties, as it is entangled with the very roots of our social order. For this reason no systematic attempt has been made to do this work. Any scheme for this purpose, to be effective, must be based on a consideration of the natural capacity or native ability of the individual. Hence it is primarily a psycological problem. Under our present social system educational opportunities beyond the elementary school are largely dependent on the size of the parent's bank account. To some extent the youth in the cities have an advantage over those in the rural districts. In the case of those whom fortune favors with more advanced instruction, the selection of a definite career is left largely to fate or chance. In this direction there is a great field awaiting development. It is to be hoped that before long we may find some rational method by which we can do this very important work.

Leaving the question of sorting, let us now consider the process of development. It has already been noted that the ultimate objective of education is citizenship. This means that certain qualifications must be developed in each individual. The ultimate and essential qualification is productive capacity, mental or physical, or both. A healthy man who cannot earn enough by honest effort to support himself and family is certainly not a good citizen. The second essential is a knowledge of, an interest in, and a due regard for our social and economic structure of which he forms an integral part. Included in this is goodwill, desire and ability to cooperate with others. According to Pericles the Athenians regarded a man who took no interest in public affairs not as a harmless, but as a useless, character. Other requirements are: proper standards of conduct and character, good habits, ability to take enjoyment out of work as well as out of recreation, etc. A perfect system of education should develop all these qualities in each individual to an extent which is limited only by inborn capacity.

Education System as it is

Let us now look at our education system as it now exists and see how nearly it approaches this ideal system. First, we have a system of elementary schools which are intended to provide free instruction to every child without exception. A reasonable effort is made by our provincial governments to

provide this instruction, but there are many children, especially in the rural districts, who receive very little or no instruction because they do not attend school. The result is that about 10 per cent. of the children in Canada grow up to maturity with little or no education. In these elementary schools the child is taught to read and write, and the use of figures. Facility in this work was regarded in the past as the framework of education. To-day these are regarded more as tools by means of which an education may be acquired. Incidentally, however, these acquirements involve development of memory and a certain amount of hand and eye training. In recent years manual training and nature study have been introduced into some of the elementary schools. As the child matures the study of history, geography and language is taken up. The whole course of instruction is so planned that the normal child will complete the course before reaching the age of 14 years. The majority of our provinces have a law which provides for compulsory attendance up to 14 years, but it is not always enforced even in the cities, and in many rural districts the school is so far from the home that the children cannot reach it. The result of these conditions is that a large percentage of our children drop out of school between the ages of 11 and 14. Public school reports indicate that only 40 to 45 per cent. of the children attend up to the full age of 14. Some attend beyond that age, but, altogether, less than 30 per cent. complete the eight grades which make up the whole course of instruction. Comments on these figures are not necessary, as they cry aloud to heaven. In the light of these facts the question naturally arises, what does the elementary school do toward developing the children into citizens? Do they develop any of the requirements previously mentioned? My answer is that, beyond providing the tools previously referred to and preparing the mind of the child for real education, they do very little. Much more could be done in developing conduct and character, but time will not permit further reference to this. Such then is the condition of our material as it leaves the elementary school.

Secondary School System

For those who wish to get instruction of a higher grade than that given in the elementary school, we have a system of secondary schools—commonly known as grammar schools, high schools and collegiate institutes. These schools are organized and conducted primarily to provide instruction for those who have sorted themselves and have decided to take up the vocation of teaching or some one of the learned professions. A certain number elect to enter these schools for the purpose of collecting information which they think will be of use to them in after life. Others enter because they or their parents think it will give them a better social standing.

Of the 30 per cent. who complete the work of the elementary school, only about one-third or 10 per cent. of the whole number of children enter the secondary schools. Of this 10 per cent. only one-third or 3 per cent. of the whole ever complete the work of the secondary school. These figures are only approximate for the reason that complete and accurate statistics are not available.

For those who wish to still further develop their mental faculties and those who wish to enter the professions, we have our universities. Of the 3 per cent. who complete the work of the secondary school less than one-third, or less than 1 per cent. of the whole number, enter the university. Taking teachers and those training for professions together they make about 1 per cent. We thus reach the conclusion that our educational system provides vocational training for only 1 per cent. of its youth. In other words, 99 per cent. of our youth have to fit themselves as best they can for useful occupation. 90 per cent. receive no instruction or guidance whatever after they reach 14 years, 70 per cent. get only a part (60 to 90 per cent.) of the instruction given in the elementary schools, and 10 per cent. get practically no instruction. These figures indicate very clearly that our present system falls far short of the perfect system previously outlined. Figures, however, do not always reveal all the facts. The figures indicate that about 90 per cent. of our youth receive no instruction after they reach the age of 14, but they do not reveal the very important fact that for educational purposes the years from 14 to 18 are the most valuable. At about 14 the boy begins to think for himself and reason; begins to think about what his life work will be. On the other hand, he starts to stray away from the home and its influences; social habits begin to take definite form. Yet during these four precious years which are so favorable for the real development of the boy, 90 per cent. of our youth get no guidance whatever. They are allowed to drift out into the world to fight the battle of life as best they can. And we wonder why our working classes listen to agitators, why they do not understand the organization of society. It is to our credit, however, that some steps have been made toward remedying this great weakness in our system of national development.

The Problem of Technical Education

Last year the Federal Government passed the Technical Education Act, the purpose of which is to promote and assist technical education in Canada. As defined by the Act, "technical education" means any form of vocational, technical, or industrial education or instruction which is considered necessary or desirable to aid in promoting industry. The review of our educational system which I have just made gives some idea of the problem which is involved in the purpose of this Act. It has been noted that our present systems provide vocational training for only about 1 per cent. of our young people. In other words, it develops only 1 per cent. to full citizenship. But the 99 per cent. have just as much right to have free, or nearly free, training for full citizenship as the 1 per cent. And it will be of great advantage to the country if they are so trained. Briefly stated, then, the problem of technical education is to provide instruction and vocational training for 99 per cent. of our young people whose degree of development varies from the standard of high school leaving to illiteracy. It is a problem which can never be completely solved, because of the enormous expense involved. But even if we attempt to develop one-half of the 99 per cent. the problem is still a stupendous one. For the purpose of further discussion let us try to visualize what would be necessary to develop, say, 25 per cent. instead of 1 per cent. Our present high schools have class-room accommodation for an average of about 7 per cent., but only a small amount of space for equipment which would be necessary for vocational training. If an adequate equipment for vocational training were provided these schools would not accommodate more than 5 per cent. It follows then that if we are to give vocational training to 25 per cent. of our young people we must provide accommodation equal to five times the present high school accommodation; also the necessary equipment and teachers. Where are we to get the money to provide these? Under the provisions of the Technical Education Act the Dominion Government has agreed to pay to the provinces, for this purpose, an average of $1,000,000 a year for ten years, on condition that the provincial governments spend dollar for dollar on this work. Speaking generally, I may state that

An Estimate of Canada's New Taxation

By SIR JOHN WILLISON
President, Canadian Reconstruction Association

CANADIAN manufacturers will welcome the changes in the Drayton budget. While the new tariff regulations are still open to criticism, at least they are appreciably better now than in their initial form. When the new taxes were announced, the Canadian Reconstruction Association instituted a careful and detailed analysis and a comparison with the revenue measures in the United States. It was found that the Canadian taxes apply to a much larger number of commodities than do similar taxes in the United States, that the non-taxable limits are lower in many cases in Canada than in the United States, that the Canadian rates are higher and that the Canadian legislation also differs from that of the Republic in the fact that the American levy in most cases is not on the entire retail selling price of the taxable commodities, but only on that part of the retail selling price in excess of specified exemptions. As a result, the Canadian taxes in some instances are many times higher than those collected south of the boundary. It was found, moreover, that Canadian taxation, is heavier than that in effect in any similar country in the world.

Just before the changes in the budget were announced, the Canadian Reconstruction Association called attention to these facts and contended that unless the taxes were changed they would add tremendously to the difficulties of domestic readjustment and seriously complicate the industrial situation. In a public statement, the president of the Association said: "While recognizing that heavy taxation is inevitable under present conditions, it is the mature judgment of the Association as the result of such investigation that, unless amended, the new taxes will hasten serious depression in this country and gravely aggravate the problems of economic readjustment after the derangements caused by the war.

"Three weeks' experience with the new Canadian levies as well as considerations of sound economic practice, support the contention that the taxes on such commodities as boots and shoes, clothing, etc., should be revised and made to apply only on the excess over the non-taxable limits. The present taxes place a premium on the manufacture of poor quality goods and, if continued, not only would lower the present standards of Canadian productions in many cases, but, in conjunction with the inevitable curtailment of buying of which there is increasing evidence, they threaten also to force many Canadian manufacturing plants to close their doors. One Canadian boot and shoe factory states that it has received from retail customers throughout the country, since the budget was announced, cancellations for more than 30 per cent of the entire business booked for the fall, and that the company's salesmen have done practically no business whatever since the tax was imposed.

"On national considerations alone, the Association urges upon the Government that the new taxes be made to apply only on that portion of the retail selling prices in excess of the non-taxable limits."

The attitude of the Association towards the revised budget was expressed in a further public statement in which the Minister of Finance was given credit for recasting the budget after its defects had become apparent. "Nevertheless," the statement continued, "it should be recognized that at best the so-called excise taxes are a clumsy, inconvenient and annoying means of raising revenue. Their only justification is that the Government had no alternative which was practicable under present political and other conditions in this country.

"The new levies in the original budget were calculated to raise about $100,000,000 of revenue, including that derived from the increase in the Income Tax. As a result of the amendments, the estimated yield will be even less. The Government has advanced the rates of the Canadian Income Tax until they are higher than those in force in the United States. The Canadian Business Profits War Tax for the current year is higher than that in any country in the world, with the possible exception of Great Britain, where rates recently have been increased. The Minister of Finance had no other practical course except excise taxation on goods used by the Canadian people.

"In comparison with the vexatious internal taxation provided in the new budget, customs duties this year, after removal of the 7½ per cent. war tax, are estimated to yield at least $167,000,000. It has been proposed more or less seriously that other taxation be substituted for the customs

tariff. The Canadian people should frankly recognize that such a course would only be possible by increasing excise taxation on food, clothing, and other commodities required by the people of this country. The customs tariff, in addition to promoting Canadian national development and helping in the building up of new taxpaying national wealth, is collected with a minimum of inconvenience. Moreover, there is abundant reason to believe that the cost of administration of the customs tariff is even less than the cost of enforcing the new excise duties, and that the total burden on the Canadian people as a result of taxation on imports will be less than that resulting from the complicated and difficult system of so-called 'luxury taxes' and taxes on sales.

"By the amendment of the sales tax, Sir Henry Drayton has recognized the legitimate and, in many cases, necessary function of the wholesaler or jobber. At the same time, operation of the tax will tend mildly to discourage speculative operations and a multiplicity of middlemen, inasmuch as a retailer buying direct from the manufacturer or from the first wholesaler will have an advantage over those buying in a more roundabout way."

The Association continues active with its general educational programme. Since the first of the year numerous publications have been issued, including its leaflet, "Ten Commandments for Canadian Trade"; a pamphlet, "Ways to National Prosperity," urging development of natural resources and support of the home market; and a second pamphlet, "The Outlook for Canada," containing my speech before the Canadian Club at Halifax during my recent visit to the Maritime Provinces, where I also spoke on social and industrial conditions at the Acadia University, Wolfville, and spoke again at Truro at the headquarters of the United Farmers of Nova Scotia, under the auspices of the Canadian Club. The president of the United Farmers and other representative farmers attended the meeting. While returning to Toronto, I spoke at length on the work of the Association at the special meeting of our eastern subscribers at Montreal, and I made a similar statement to our Ontario subscribers at a recent luncheon in Toronto.

During recent weeks the Association has revised its weekly Information Service, confining it largely to Canadian affairs and considerably increasing its circulation. It has also reprinted 175,000 copies of its small pictorial Made in Canada cards which are now available to any manufacturers or retailers who may wish to circulate them.

Copies of publications issued this year by the Association may be secured free of charge upon application to the Head Office, Toronto.

Maritime Province Legislation

Resume of Recent Legislation Passed by the N. S. and N. B. Legislatures

The following is a brief summary of the acts affecting the manufacturing industry, which were passed at the recent sessions of the New Brunswick and Nova Scotia Legislatures:

N. B. Workmen's Compensation

The chief amendments made to the Workmen's Compensation Act, are:

(1) In case of permanent partial disability, the maximum total compensation to be paid was raised from $1,500 to $2,500.

(2) In other cases, the limit of $5,500 was removed.

(3) The payments to widows was raised from $20 to $30, and to children from $5 to $7.50.

(4) The allowance towards the expenses of burial was increased from $75.00 to $100.00.

(5) Full medical aid is to be provided.

N. B. Factories Act

An Act was passed amending and consolidating the several acts relating to the protection of persons employed in factories. The new departure under this enactment is, that the factory inspectors are brought under the jurisdiction of the Workmen's Compensation Board. The Board is also given authority to appoint "Safety First" instructors.

Development of Electrical Power in N.B.

An Act entitled, "The New Brunswick Water Power Act" was passed, providing for the appointment of a commission, which by order-in-council may be authorized to expropriate any available sites and construct, maintain and operate machinery and plant for generating electrical energy from water power, coal, peat, gas or oil. It is hoped that this bill will be the means towards the early development of cheaper power in New Brunswick.

Tax on Unlicensed Insurance (N.B.)

"The Corporations Tax Act," passed at the recent session, provided for a tax of 2 per cent. of the "net premiums" paid by any person or company accepting insurance in any company not holding a Dominion license or a provincial permit. "Net Premiums" in the case of a mutual company, shall mean the gross premium deposited, less the unabsorbed portion of the premium actually returned or credited to the policy holder, but shall include interest at a legal rate upon such unabsorbed premium during the time it is deposited.

N.S. Employment Agencies

An Act entitled "Employment Agencies Act" was passed, providing that no person, firm, corporation or association shall collect or receive, directly or indirectly, any fee or compensation for procuring or causing to be sent from or to any place within the province, any person seeking employment, or for giving information regarding employers seeking employees or employees seeking employment. The Governor-in-Council, however, may declare that the provisions shall not apply to any person or class of persons. The intention of this bill is to do away with fraudulent employment agencies.

N.S. Workmen's Compensation Act

An Act amending the Workmen's Compensation Act was passed, the chief feature being an increase in the indemnities payable to the dependants in the case of death. The

widows will receive $30.00 instead of $20.00, and the children $7.50 instead of $5.00.

An Act entitled "Minimum Wage for Women Act," was passed at the recent session of the Nova Scotia Legislature, providing for the appointment of a minimum wage board, which shall have authority to establish standards of minimum wages and hours of employment for women employed in factories and shops, and where not inconsistent with the Factories Act, declare what are proper sanitary conditions for such employees.

Iron and Steel from Native Ores

An Act to encourage the making of iron and steel from native ores (within the Province of Nova Scotia) was passed and provides that the Governor-in-Council may by order, remand the whole or any part of the royalty paid on coal used within the province, in the making of iron or steel, to any company with a daily output of not less than two hundred tons, where such iron or steel is made from ore fifty per cent. of which is mined within the province.

The mining of iron ore within this province has been languishing for a number of years by reason of the importation of ores from other countries, chiefly from Newfoundland, and the intention of this bill is to stimulate the development of resources within the province and the subsequent increase in employment.

Mineral Rights (Nova Scotia)

One of the last measures adopted by the Nova Scotia Legislature before prorogation, was an Act vesting in the Crown all minerals, excepting limestone and building materials. This law applies to all the lands in the province and provides that the owner of the soil shall have the first right to obtain licenses to work the minerals on their lands. It also provides machinery whereby the owners of the soil, or those who have obtained mineral concessions from them, may obtain compensation for any outlay they may have made in developing mineral deposits, in the event of licenses being granted to others.

Vancouver Exhibition

Entries to Close on September 1 for Exhibition to be Held From September 11 to 18

The prize list for the 1920 Vancouver Exhibition, to be held from September 11 to 18, has been issued and contains a striking array of prizes for this year's event. Naturally, chief attention will centre in the exhibits of cattle and agricultural produce, but emphasis is also being laid on manufactures. The Industrial Department will be under the direction of Messrs. J. H. Falconer and James Ramsay and will have its headquarters in the Manufacturers' Building. Articles will be received for exhibition only. In response to inquiries made of manufacturers, it appears to be the desire of a very large majority that prizes shall not be offered in the general line of manufactures. It will, however, be at the option of the judges to recognize, by the awarding of medals or diplomas, any exhibit where the extent or merit of the same would seem to call for special recognition.

Teaching the Flying Boat to Fly

A striking picture, showing the new flying boat "Dorie" of the Spanish River Pulp & Paper Mills, being lowered into the water by a big crane. The boat will be used in the work of protecting the Company's timber limits. *The illustration is reproduced by courtesy of the Spanish River News.*

The C. M. A. Special

Transportation Arrangements for the Trip Worked out With the Utmost Smoothness

On May 29th, at 9.20 p.m., standard time, the C.M.A. special train pulled out of the Union station, Toronto, via C.P.R., the passengers listed numbering approximately 150. These passengers represented the manufacturing concerns from all parts of eastern and western Canada, in practically every line of industry.

The manner in which this large gathering was handled certainly speaks well for the services of the Canadian Pacific and Canadian National Railways. Everything seemed to move like a perfect machine, and at the completion of the through trip all those who had remained with the party had nothing but praise for this service.

The train consisted of seven standard sleeping cars, two lake type and one mountain type compartment, together with the necessary dining and baggage cars to accommodate the various passengers.

The crew numbered 36 and were in attendance to carry out their various duties at all times. The Canadian Pacific Railway instructed their district passenger agent, Toronto—Mr. W. B. Howard—to take charge of the services of the Canadian Pacific Railway; and the Canadian National Railways instructed their district passenger agent at Edmonton, Mr. J. Madill, to take charge of the services on the lines of the Canadian National Railway.

The equipment was carefully inspected and kept in good condition throughout the journey. With the exception of one point the train was on time at every place it was necessary to stop. For the purpose of providing comfortable accommodation at certain places where it was necessary to remain over night, very satisfactory arrangements were made in the way of suppying rooms at hotels and various other accommodations.

The train was conveniently located at all points and a great number of the members used it for sleeping accommodation.

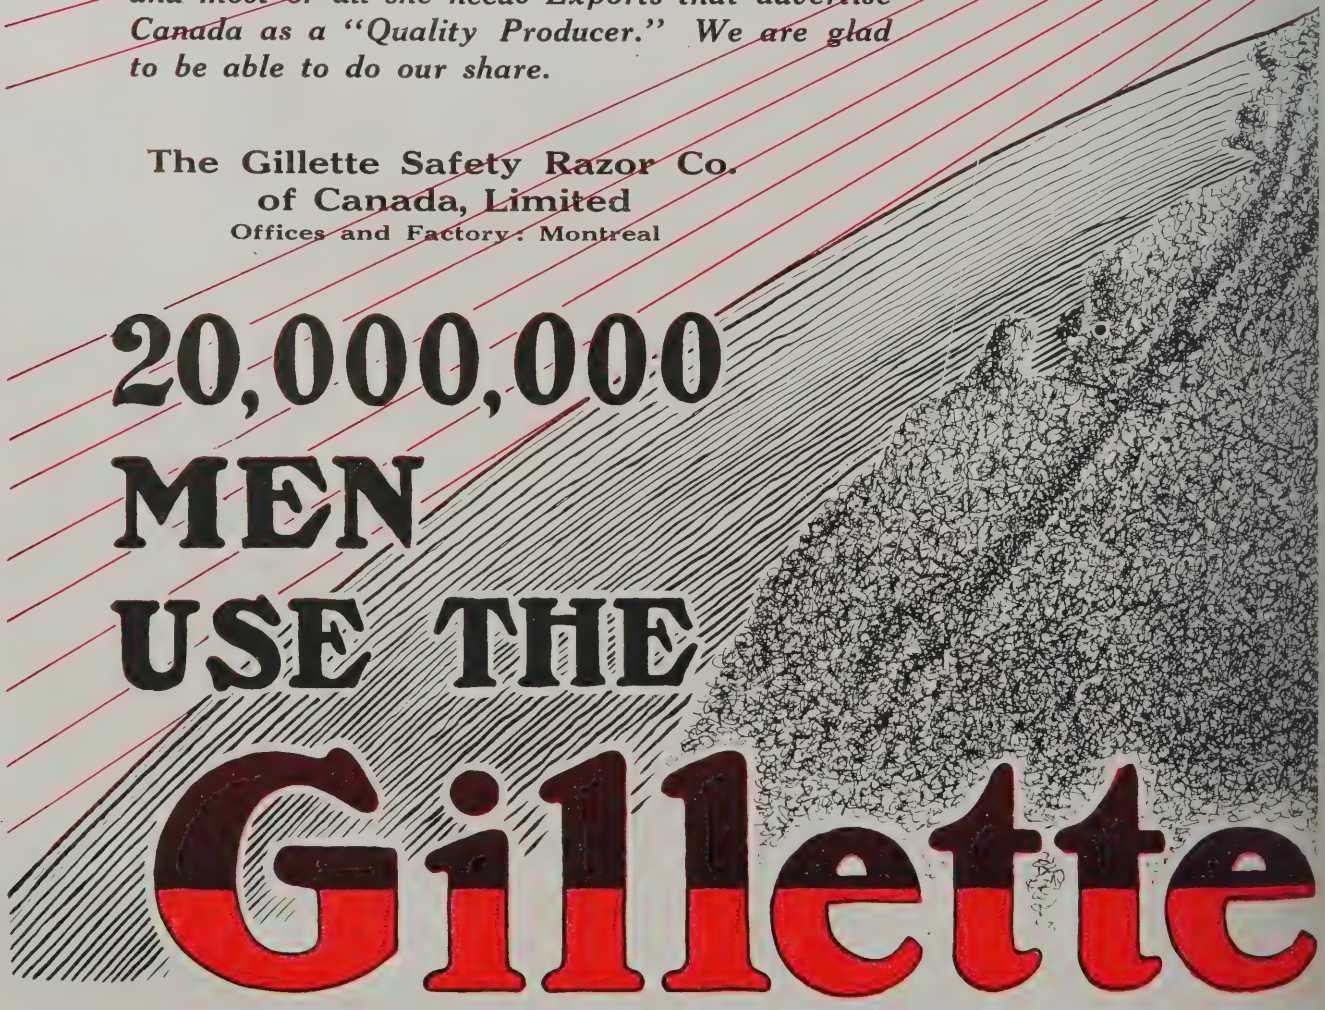
Nearly 6,000 Miles

In their trip from Toronto to the Pacific Coast and return the C.M.A. party covered nearly 6,000 miles, or to be exact 5,852.7 miles. This was made up as follows:

Toronto—Winnipeg	1232.4	Victoria—Vancouver	58.0
Winnipeg — Medicine Hat	656.3	Vancouver—Calgary	641.8
Medicine Hat—Lethbridge	115.5	Calgary—Winnipeg	958.4
Lethbridge—Calgary	140.2	Winnipeg—Fort William	419.3
Calgary—Edmonton	194.1	Fort William — Pt. McNicoll	500.0
Edmonton—Vancouver	770.6	Pt. McNicoll—Toronto	108.1
Vancouver—Victoria	58.0	Total	5852.7

ACHIEVEMENT

MADE IN CANADA



TRADE Gillette MARK

KNOWN THE WORLD OVER

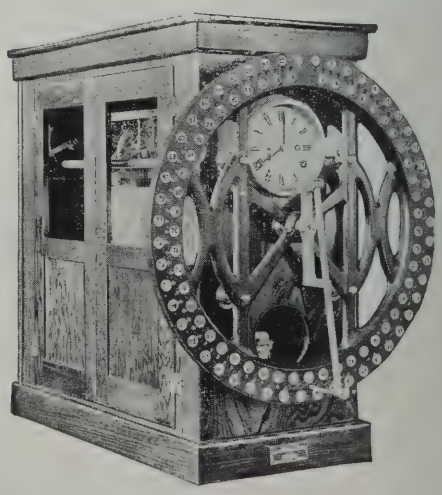
WERE you ever in a city, town, or even a village, where you could not buy Gillette Safety Razors and Blades? It is a matter of pride with us that you can go to any part of the Empire and find the same high quality "Made in Canada" Gillettes in use or for sale as you will find in the biggest centres of population in Canada. "Known the World Over" is no idle boast!

It is export trade that Canada needs right now, and most of all she needs Exports that advertise Canada as a "Quality Producer." We are glad to be able to do our share.

The Gillette Safety Razor Co.
of Canada, Limited
Offices and Factory: Montreal

20,000,000 MEN USE THE Gillette

Safety Razor



Here's a thought on your new Profit Tax

Economy is a real watchword now. Every item of cost must be given closest scrutiny. Take the large and important item of labor time, for instance. Unless you have a real modern recording system how do you know you are getting all you pay for?

INTERNATIONAL TIME RECORDERS

Not only ensure that you get an infallibly accurate record of the Time every employee spends at your plant but—every man is actually his own timekeeper. He makes his own time records. He knows they are printed, unchangeable, impartial and RIGHT. That's a big aid to plant morale.

Time records of late arrivals or early leavers are printed in RED. All green printings are normal time. Ensures a quick, easy make-up of payroll.

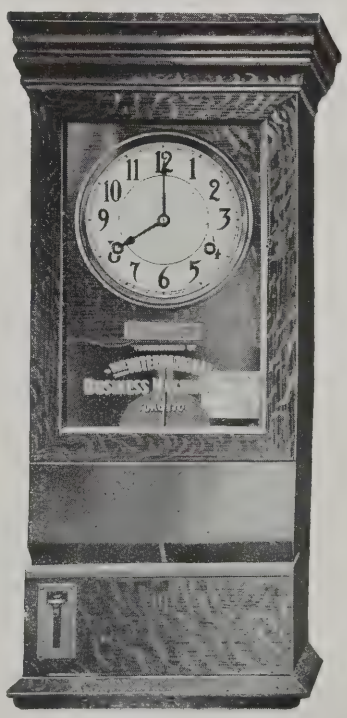
Trying to find the Leak in his Profits



(*We could tell him where it is*)

Yes—we could probably put our finger on it first shot. Years of experience in time recording problems have shown us that there is one big leak-point and few employers grasp it. The difference between the total labor time you pay for and the productive labor time that is actually delivered by the work people. There is the danger spot.

INTERNATIONAL
Job Time Recorders

Enable you to tell exactly what this difference is. Once you know it you have a mighty important part of your overhead burden defined and ready to be taken into proper account when making up your cost.

Let us send you some interesting Literature

The Problem of Technical Education

(*Continued from page 254.*)

the provincial governments have adopted regulations which provide for financial assistance to local school boards to the extent of 50 per cent. of their expenditures. This means that for every $100 spent by a local board, $50 is paid by the province, and of the $50 which is paid by the province $25 is supplied from the Federal grant. It, therefore, follows that the maximum amount of money now in sight for this work is $4,000,000 per year. For a people of 9,000,000, this appears to be quite a respectable sum, but when we consider that we now spend nearly $3,000,000 per year on our secondary schools and universities and fully develop only 1 per cent. of our youth, it is obvious that $4,000,000 is quite inadequate even for partial solution suggested. If the amount appropriated by the Federal Government were $3,000,000 per annum, as recommended by the Royal Commission appointed in 1910 to study and report on this subject, it would still be inadequate. As the problem is clearly one of the greatest national importance, it must be dealt with accordingly, and, on account of the great expense involved, the provinces must assist their school boards more liberally, and the Federal Government should in turn give more help to the provinces.

The Supply of Instructors

Assuming that accommodation and equipment have been provided, the next phase of the problem is the supply of instructors. To obtain an adequate supply of properly qualified teachers is perhaps the most difficult part of the whole problem. A candidate for vocational teaching should have successful experience in his chosen field if he, or she, is to command the respect and hold the interest of the pupils in their work. In addition they must know how to teach—how to systematically impart their own ideas, to awaken the interest and enthusiasm of the pupil, to the end that he will regard his vocation not merely as a channel through which he may make a livelihood, but also as a fountain from which he may draw inspiration and pleasure. It follows then that the supply of teachers must be drawn from those who have been engaged in their several vocations for a time sufficiently long to demonstrate their ability, Minor defects in elementary education will have to be remedied as an incidental part of the training in methods of teaching. It will be necessary to train a large number of teachers because of the great variety of industrial employments. To keep teachers in touch with the ever changing methods of modern industry provision should be made for their periodical re-entry into the productive field. In connection with this particular part of the work, the sympathy and active co-operation of the employer is absolutely essential if systematic vocational training is to be developed to any degree of perfection.

For the Training of Teachers

To provide facilities for the training of teachers a special type of institution is required. As this great extension of our educational system into the field of vocational training will present the greatest possible opportunity for the development of a national spirit which will animate our efforts in establishing national aims and ideals, it is of the utmost importance that each province should have the same system of teacher-training. In this connection I am pleased to be able to state that practically all of our provincial departments of education have expressed a desire and a readiness to co-operate in working out a uniform system. Action toward this end will be taken within a few months, and I am very hopeful that before the end of the year it will be possible to

make the announcement that Canada has adopted a national system of vocational teacher training—the first of its kind in the world.

Before disposing of the question of teachers, attention must be drawn to the question of remuneration. Since none but those who have been successful in productive employment will be of service as teachers, it follows that the salaries fixed for vocational teachers must be greater than the maximum remuneration obtainable in productive work. Salaries of vocational teachers will therefore be considerably higher than salaries of teachers doing non-vocational work.

Securing Attendance at Schools

The next phase of the problem is that of securing attendance at vocational schools. It has already been noted that a large number of children drop out of our elementary schools between the ages of 11 and 14, and that many who attend up to 14 are below the corresponding grade. These conditions are due to several causes; first, the teacher does not possess the ability to awaken and develop the interest of the pupils in school work; second, the pupils' mentality may not be such as can be developed by ordinary school methods; third, some parents keep their children at home to work. These conditions are more marked in the vocational school where attendance is entirely voluntary. From experience already gained in manual and vocational training, we know that the great majority of children can be interested in vocational work. If they are sufficiently interested they will attend school without compulsion. But if the parents put them to work, the only alternative is a compulsory attendance law. The Province of Ontario has already taken a step in this direction. A law has been passed by the Legislature of the Province which provides for attendance of all adolescents between the ages of 14 and 18—full-time attendance if not employed, and approximately half-time if engaged in some employment. This law is not yet in force, but may be made effective at any time by Order-in-Council. Some of the States to the south have a law of this kind partially in force at the present time.

The last phase of the problem is that of system to be followed in the actual work of developing the individual pupil. The first essential is that the vocational system must fit on to the present educational system. Deficiencies in elementary training must be made up. This means that there must be preparatory or supplementary classes for those who are below the normal grade at 14 years. Second, there should be equality of opportunity, which means that each individual should have opportunity for development in accordance with taste and native ability. Third, there should be rigid discipline to develop a sense of duty and responsibility, as well as good habits. Fourth, there must be promotion of good-will, with desire and ability to co-operate with others. This can be done through the medium of various organizations for outdoor games and work, as well as through the objective side of the indoor work. Finally, there must be effective vocational training. The cry of the employer in every corner of the country is for skilled workers. It is generally recognized that the apprenticeship system is no longer effective. Some other system must therefore be devised to take its place. It has been decided that this is to be one of the functions of the technical school. How is this to be done? In dealing with this phase of the problem we have to be guided by the fundamental principle that manipulative and creative skill can be developed only by repeated experiences. It is not feasible, however, to provide facilities in the technical school

to give to the individual the required number of experiences except under such conditions as will give a product having commercial value. This means that either the vocational school must be organized and conducted on an industrial basis with resultant commercial output, or the pupil in training must get the required mass of practical experience through employment in his particular vocation. For various reasons the first alternative can be adopted only under exceptional circumstances. A vocational school with a number of departments organized to turn out commercial products is not feasible for the reason that it would be the target for the wrath of both the manufacturer and the labor unions. Apart from this the organization would always be top heavy and consequently too expensive. If the school is to meet the needs of only one specific industry, this alternative may be adopted with a good prospect of success, but it must be so closely associated with the industry that it may be regarded as a special department. As examples of this we have the private schools which have been established by some of the large manufacturing establishments in the United States. In these cases there is a perfect system of co-operation between the school and the productive departments of the establishment.

Experience Through Employment

While it is not feasible under ordinary conditions to provide facilities in the technical school to give the pupils the amount of experience necessary to develop the required speed and manipulative skill, it is essential that sufficient practical experience should be given to demonstrate and clearly fix in the pupil's mind the principles and methods on which the vocation is based. Under these conditions the mass of experience must be supplied through productive employment. Such a system, which is the alternative of the two systems previously outlined, represents the best and most economical solution of this phase of the problem. Known as the part-time or co-operative system of vocational training, it has been adopted by a number of States to the south and by some European countries. As an organized system it was first adopted on this continent by the University of Cincinnati in the training of its engineering students. Here the student alternates weekly between shop and college. These co-operative courses extend over a period of five years of eleven months each. Corresponding courses in other institutions extend over four years of seven to eight months each. The State of Massachusetts has adopted this scheme for vocational training, and has extended it in some cities even to the elementary schools. The engineering college of Harvard University has recently taken a decided step forward in this direction. The scheme adopted by this institution goes into effect at the beginning of next session. It involves not only an interchange of students between class-room and commercial employment, but also a systematic co-ordination of the work outside and the instruction inside, including outside supervision, and evening lectures while the student is at work. The extension of this system toward the complete control of the student while employed is new. If the attendant difficulties can be overcome it should materially improve the efficiency of the system.

The policy of the Merchants Bank has not been that of amalgamating with other Banks, nor of acquiring business in foreign countries. The gains, therefore, as shown by the above Chart represent the actual growth of the Bank's business in Canada during the period covered.

Stressing Export Trade

Speakers at Annual Meeting Devoted Much Time to Urging Its Development

POSSIBILITIES for the development of trans-Pacific trade were strongly emphasized at the Vancouver meeting. Trade Commissioner Bryan, who came specially from Japan to address the convention, and Captain Robert Dollar, who spoke from the ripe experience of many years, painted glowing pictures of what is in store for those who will but enter the teeming markets of the Orient. British Columbia speakers, like Premier Oliver, Mr. J. B. Thomson, Mr. J. O. Cameron and Mr. McGeer, all linked up their descriptions of the great resources and industrial potentialities of the province, with the bearing which these had on export trade. Throughout the whole convention, the subject bulked largely, and members who attended from the East, returned home with a new vision and a greater enthusiasm for the work of developing the country.

There has been some criticism from time to time of the apathy of Canadian manufacturers towards export trade. It is perhaps time that, confronted with a voracious home market, there has been an inclination to forget about foreign markets. This condition, however, will presently right itself. When once home demands are satisfied, there will be a natural movement towards other markets, and in due course it will be found that Canadian manufacturers will be seeking their full share of world trade. The formation of the British Empire Steel Corporation, the rapid expansion of the pulp and paper industry, the inception of large scale chemical production and other developments of the day, are all planned on the broad basis of export business.

In the meantime it has been good work to tell eastern manufacturers all about trade prospects in the Orient, and it is to be hoped that members of the Association, who did not have the pleasure and privilege of hearing the addresses delivered at Vancouver, will read them as they appear in this issue of INDUSTRIAL CANADA. The one omission is Mr. Bryan's address, which was found too long for inclusion in this number. It will be published in the August issue.

New Steamship Service

Canadian Government Merchant Marine Will Inaugurate Line to India, Etc.

The Canadian Government Merchant Marine announce that they have decided to inaugurate a steamship service from Montreal to India, Java, Singapore and Ceylon. The first vessel will leave Montreal about the end of August. Full particulars as to ocean rates, space, etc., can be obtained from Mr. D. O. Wood, Traffic Manager, Canadian Government Merchant Marine, Limited, 704 Royal Bank Building, Toronto, or agents.

REGINA
Saskatchewan
Canada

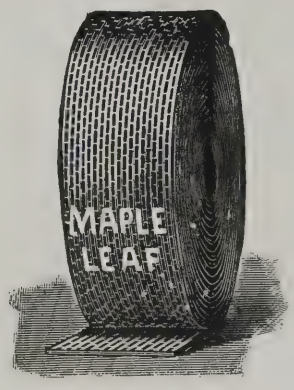
1920

Regina serves 2,255 miles of Railway and 250 towns and villages. Population of District 466,666.

In districts Nos. 1, 2, 4, and 5 are two-thirds of the population of the Province, and over two-thirds of the grain of the Province is raised in these four districts. Of the 1,870,123 head of stock in the Province, three-quarters of the total are raised in the above four districts.

The figures on this map designate the districts.

REGINA



Saskatchewan's capital, is one of the few cities visited by the members of the Canadian Manufacturers' Association on their trip west to Vancouver, where the annual convention of the Association was held. Many of the manufacturers expressed great surprise at the growth and development that has taken place in this city during the last few years and predicted for it a great future, claiming that its geographical situation was of exceptional advantage as a distributing centre. The following is Regina's building programme, as of May 31st, for 1920:

Regina Trading Co.	$200,000	Sellers' departmental store extension	$50,000	Winnipeg Ceiling & Roofing Co.	$40,000
Fairbanks-Morse Co.	200,000	Car barn extension	30,000	Exhibition Grounds extensions	60,000
Provincial War Museum	500,000	Hospital extension	85,000	Disposal Works extensions	30,000
Wood, Vallance & Co.	250,000	Bapco warehouse	40,000	P. Burns & Co.	100,000
Public Schools (2)	250,000	Nay and James Block	20,000	Swift Co.	250,000
Collegiate extension	150,000	14th Avenue Methodist Church	10,000	Allan Wilkinson Stores	25,000
Sask. Co-operative Creamery	150,000	Carmichael Presbyterian Church	25,000	Leader Publishing Co.	20,000
Advance Rumely Co.	150,000	Wascana Boat Club	10,000	Miner Rubber Co.	50,000
Ford Motors, Limited	100,000	Red Cross Lodge	6,000	Masterson's Garage	35,000
Merchants Bank	100,000	Harding Garage	30,000	Bell & Ross Warehouse	35,000
350 residences, an average of $3,000 each	1,050,000	Wheelan's Garage	18,000		

Not a few of the above buildings are well under way of completion.

OFFICE AND FINANCE

The Perpetual Inventory as a Turnover Record

By A. M. IRWIN

IT is generally conceded that an accurate record of labor turnover and its attendant costs is essential to the successful conduct of a manufacturing or other business enterprise, no matter how large or small that business may be; and it stands to reason that if the Employment Manager, the Factory Superintendent and the General Manager can see daily the changes that are taking place in the personnel, rising costs in connection with the labor situation may be nipped in the bud.

The medical man has to know the symptoms before he can effect a cure, and when he has ascertained the symptoms it is easy for him to find the cause and remove it. If the Employment Manager can find the symptoms of the expensive industrial disease known as labor turnover and can have those symptoms charted daily, he also can find the causes and can go to work in an intelligent manner to remove them before their ill-effects gain too great a hold.

The perpetual inventory is so well-known and so widely in use that very little explanation of its adaptation to employment records is necessary. It starts the month with a record of stock on hand and is provided with columns which list receipts and issues, with a daily balance column which tells at a glance what stock is on hand. There is nothing simpler than to adapt this system to the keeping of up-to-the-minute personnel records.

Instead of recording stock on hand and the various fluctuations thereof, a card is designed to suit the conditions of the factory in which it is to be used and is treated in exactly the same manner as a stores record, with the exception that instead of stock, the movements recorded thereon are those of the working force. Record may be kept of the factory or warehouse staff by sexes, wage-rates, jobs or any other classification which may be necessary, and much valuable data may be compiled as a result of a careful study of the effect of surroundings, outside and inside influences, labor disturbances, living costs and seasons, and their relations to staff movements. Monthly and yearly abstracts from the perpetual record will prove themselves very valuable statements and the cards when filed away will be of great worth as a basis for comparison of the turnover in previous periods.

The turnover problem is one of the deadliest foes to efficiency in output. It is well-known that a sudden or even a gradual labor movement above a certain percentage is like the climbing of the mercury in the

clinical thermometer, a symptom of trouble, and the factory manager or personnel officer who can feel the pulse of his force the very day that such movement takes place, who knows that to-day more people have quit than yesterday, than two months ago, than on this date last year, instead of having to wait for a weekly or monthly report, has the best chance of getting at and removing the infection before it can spread. And the method is simple.

Have printed or even mimeographed (the form used in the illustration is only a mimeo.) a card as per figure 1, with whatever divisions or subdivisions are suitable to your business, arrange for its correct up-keep by the statistician or records clerk and have it circulated daily to the officers to whom it will be of value.

The code initials have the following interpretation:

A.—Appointment. TR. TO.—Transferred to Department.

T.—Termination. TR. FROM—Transferred from Department.

And all the equipment necessary in the Employment Department is:

1. A desk blotter or daily record for use of the statistician on the same principle as the teller's blotter used in the banks. (Fig. II.).

2. Set of cards under the necessary classifications.

The routine is as follows: When an engagement, clearing or departmental transfer is made, the fact is noted on the blotter (see Fig. II), and at the end of the day the various entries are posted to cards under their correct classification; with the result that each morning reference to the grand total card will show not only the movements of the day before, but also the strength of the force; and reference to department cards will show each department head his own strength. The same card may be used as a grand total record in which case the codes TR. TO and TR. FROM are not used.

The foregoing shows that by different arrangements of the perpetual record system, statistics may be compiled of various phases of the turnover problems; and daily records, which in a large plant are invaluable, of the different classes of labor may be seen at a glance. By simple alterations in the make-up of the card, the record can be made to give a graphic presentation of labor costs, daily, weekly or monthly.

When used in conjunction with a diary which records such seemingly everyday things as weather, ball games, etc., and the more vitally interesting street car delays, street car strikes and national holidays, a card on the same principle showing absence, loss of time through tardiness, etc., will afford some very valuable data.

For instance, the writer has found in his small experience, that in an office staff of some 600 persons, the percentage of absence was increased by about one-half on the Saturday mornings preceding week-ends in which the Monday was a holiday; lateness was increased by about one-third on rainy days; and the day preceding pay-day and pay-day itself were always signallized by a drop in the absentee record from an average of 3.5 per cent. to an average of 5 per cent.

Barometers are as necessary in the business man's pilot house as they are to the sea captain, and only by their intelligent use and the charting of their records can we expect to accurately prepare for squalls.

shares of no par value, holders of the present stock to receive two shares of the new securities for each one of the old held. As there are 70,000 shares of Brompton common stock now outstanding, the capital re-arrangement will entail the issuing of 140,000 shares of the proposed authorization of 210,000 shares, leaving 70,000 to be held in the treasury to provide for future financing. The new shares will be placed on a $6 per share basis, which is equivalent to 12 per cent. on the present securities.

Riordon Company

Financing of New Company Involved Offering of $8,500,000 Eight Per Cent. Stock

After disposing privately of a large portion of the issue of $8,500,000 eight per cent. cumulative first preferred shares of the Riordon Company, Limited, the Royal Securities Corporation offered the unsold balance, on June 18, at par, with a 20 per cent. bonus of common stock. Terms called for 25 per cent. on application; 25 per cent. on July 15; 25 per cent. on August 16, and 25 per cent. on September 15. Adjustments on common stock will be made at $50 per share.

Willard's Chocolates

Company Make an Issue of $600,000 Eight Per Cent. Cumulative Preferred Stock

An issue of $600,000 eight per cent. sinking fund cumulative preferred stock of Willard's Chocolates, Limited, has been on offer recently by the Dominion Securities Corporation, at par with a bonus of 25 per cent. in common stock. The Company's capital consists of $1,250,000 preferred stock, of which $600,000 will be issued, and $2,000,000 common stock, of which $1,500,000 will be issued. The company have just completed their new ice cream factory on Dupont Street, Toronto.

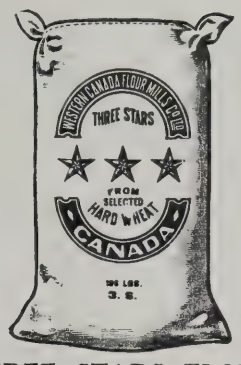
Tooke Bros., Limited

Substantial Gain in Profits Made for the Year Ended May 31 Last

Net profits of Tooke Bros., Limited, for the year ended May 21, after provision was made for war taxes, amounted to $238,230 an increase of $85,920 over 1919 and $102,472 over 1918. After providing $15,000 for depreciation and taking care of all arrears of preferred dividends, there remained a balance of $119,805 applicable to the common stock, or approximately 18.5 per cent. The balance sheet shows an excess of current assets over current liabilities of $727,377, compared with $388,296 at the end of the previous fiscal year.

Dominion Engineering Works

An Offering of Eight Per Cent. Cumulative Redeemable Preference Stock being Made



An offering of $1,400 000 eight per cent. cumulative redeemable preference stock of Dominion Engineering Works, Limited, is being made by Hanson Bros., Aldred & Co., Limited, and McDougall & Cowans. .The sale price is $98 per share, carrying a bonus of 25 per cent. of common stock. This is the company formed by Dominion Bridge Co. interests to undertake the manufacture of hydro power and pulp and paper manufacturing machinery, taking over the plant of the St. Lawrence Bridge Co. for the purpose. The directors include G. H. Duggan, president; A. J. Brown, K.C., vice-president; W. F. Angus, George Chahoon, jr., Sir Herbert S. Holt, Phelps Johnson, Julian C. Smith, J. M. McIntyre, Howard Murray, H. Birchard Taylor and F. L. Wanklyn.

Canada's Industrial Expansion

A Record of Progress

Piano Company Expands

Stanley Piano Company, Toronto, Take Over Building Purchased by Them in Pre-war Days

The Stanley Piano Co., Toronto, are now occupying their new factory premises at 349 Carlaw Avenue. These were purchased in pre-war days, but have been occupied under lease in the meantime by J. M. Loose & Sons, piano action-makers. The building stands on a lot 150x400 feet and is of reinforced concrete construction, containing 20,000 square feet of floor space, with power and kiln. The building will give the company much needed space for expansion, which their business has demanded.

New Chocolate Company

Dominion Chocolate Co., Limited, Formed to Take Over the Hooton Chocolate Co., Limited

The Dominion Chocolate Co., Limited, have been incorporated with a view of taking over the business of the Hooton Chocolate Co., Limited, Toronto, a company established some years ago by the Hooton Cocoa Co., of Newark, N.J., with a plant at 60-76 Duchess Street, Toronto. Some new financing has been undertaken, including the offering for public subscription of $400,000 eight per cent. cumulative preferred shares. This has been necessary in order to get the control of the company into the hands of Canadians. It is stated that an extension of the business in the very near future seems imminent and it is the intention of the management to increase the number of lines manufactured.

Increasing Capacity

Pulp Manufacturing Plant of the Kipawa Company, Limited, to Make 300 Tons Per Day

In connection with the recent visit to the plant of the Kipawa Co., Limited, of a party of American financiers, the *Pulp & Paper Magazine* gives the following information about this industry:

"The Kipawa Company is a subsidiary of the Riordon Pulp and Paper Company and was formed in 1913. It is situated in the Temiskaming District, in the Province of Quebec. Riordon engineers considered it the logical spot to locate sulphite mills. The property now owned by the company was purchased in 1918, in which year the construction of the first unit for an output of 100 tons per day was begun. Production started at the end of 1919. The company owns more than 1,200 square miles of timber limits, and 20,000 H.P. is available the year round. If conservation work is undertaken at the headwaters, this amount could be increased to 35,000 H.P. The company has power leases from the Quebec Government for 75 years. At present the company only develops 7,200 H.P., which is considered sufficient to take care of a production of 300 tons per day.

"The development of the plant and project was planned and carried out under the personal direction of Mr. C. B. Thorne, technical director of the Riordon Pulp & Paper Company. The general design of the mill is the result of years of experience in the manufacture of sulphite pulp and embodies many unique features. The aim of the engineers was to build not only the best mill, but one in which labor costs could be reduced to a minimum. The engineers also kept in mind a mill with a capacity of 500 tons a day. As the plant is now situated, additional units of 100 tons each can be added at any time. A second 100-ton unit is already under construction, and it is expected that, within a few months, the plant will be turning out 300 tons per day. With the completion of the new unit, the cost of the plant will be in the neighborhood of $15,000,000.

"Production was commenced in December, 1919, and a production of 100 tons of bleached sulphite pulp per day was promised, and the party learned with satisfaction that the production for the month of May has been 142 tons per day, and, when the financing to be done in the very near future is completed, and the second unit is completed, a great part of it being already finished, the production estimated for September next will be 175 tons of pulp per day, and early in 1921 the production will reach 300 tons per day."

New Silk Goods Industry

Houlding & Coleman, Limited, are Starting Plant for Manufacture of Neckwear, Etc.

Houlding & Coleman, Limited, is the name of a new incorporation in Toronto, who are establishing an industry for the manufacture of silk knitted dress fabrics, silk knitted scarfs and mufflers and silk knitted neckwear. They do not anticipate erecting a building, but have leased premises at 419 King Street West, where they are locating a small plant. It will comprise the latest machinery for the manufacture of silk knitted gools. Mr. T. R. Houlding is president of the company.

New Canning Factory

Pillsworth & Daly, of Cobourg, are Locating New Canning Industry at Port Hope

Pillsworth & Daly, contractors, Cobourg, are erecting a plant in Port Hope for canning purposes. The factory proper will be a metal-clad building, 30x70 feet, on concrete foundation, and there will be a building of similar size and frost-proof construction for warehouse purposes, with separate boiler and engine house. They propose to organize as a canning company in the near future and will manufacture a complete line of canned goods, making a specialty of tomato products this season. They expect to be in shape for operation about August 1 and will employ about sixty hands. They are installing the latest models of machines in order to put the highest class of goods on the market.

More Coke Ovens

Dominion Iron and Steel Co. Have Placed Order for a Third Battery of By-product Ovens

The Dominion Iron & Steel Co. have recently placed an order with the Koppers Co. of Pittsburg for a third battery of by-product ovens, sixty in number, similar in every respect and to be worked in conjunction with the two batteries built by the same company and put in operation in October, 1919, and March, 1920. Referring to the installation, *Iron and Steel of Canada* says:—

"A look around the coke-oven department of the Dominion Iron & Steel Company affords a microcosm of the history of by-product coke plants. The first ovens built around 1900, were among the first by-products ovens in America. They were of Otto Hilgenstock type, and about contemporaneous with the similar plant designed by Dr. Schneewind for the Everett Gas Co. near Boston. They long since were abandoned, and are now being utilized for the construction of brick-kilns in connection with the silici-brick plant the Steel Company expects to erect immediately.

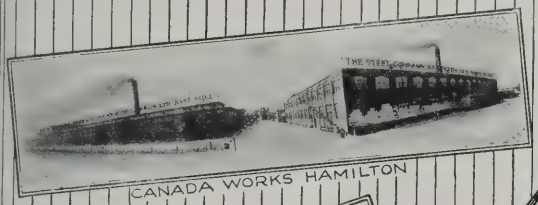
"Further back from the railway track is the No. 2 Battery of by-product ovens, only recently representing the best type of construction, but now idle and awaiting conversion and repair to bring them more up-to-date.

"It is conceivable that even the latest Kopper ovens, which without exaggeration, are believed to be the most efficient installation yet completed and have exceeded the expectations and guarantees given, will in another ten or fifteen years be superseded by something better. For the time being, however, the Dominion Steel Company possesses a coke-oven plant of which its officials are justly proud, nor is it to be expected that even the latest addition will supply the coke requirements for very many years to come."

Woodworking Plant

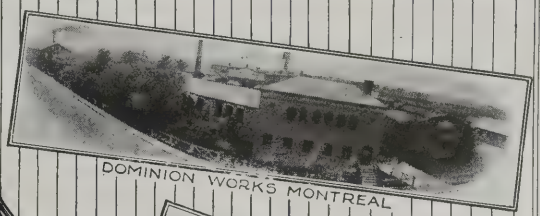
Forest Products Limited, Start Operations on Fairly Large Scale at Parry Sound

The plant of the Parry Sound Lumber Co., at Parry Sound, has recently been taken over by a new company called Forest Products, Limited, in which several local men are interested. It is the purpose of the new company to work gradually into better grade furniture lines, starting with kitchen tables and toys. They have an authorized capital of $100,000, of which $40,000 has been issued. The plant contains 40,000 square feet of floor space. On the ground floor they are installing an edger, a re-saw and a big transit machine, and on the upper floors 15 manufacturing machines, each with its own motor. They will have about 30 hands at work by August 1. The president of the company is Jas. Ludgate, a well-known lumberman; J. P. Weeks, barrister, is secretary-treasurer, and R. Lyons, managing director. The latter has had a long experience in the woodworking industry.



Asphalt Roofings

Beaver Board Companies are Locating a New Industry in Their Ottawa Plant



A new industry for Ottawa will shortly be established in the plant formerly occupied by the laminating department of the Beaver Board Companies. This department was recently moved to Thorold. The new product will be asphalt roofing, and machinery for its manufacture is now being installed. The industry will be known as the Roofing Division of the Beaver Board Companies, and it is expected that manufacturing will be started during September. About forty men will be employed.

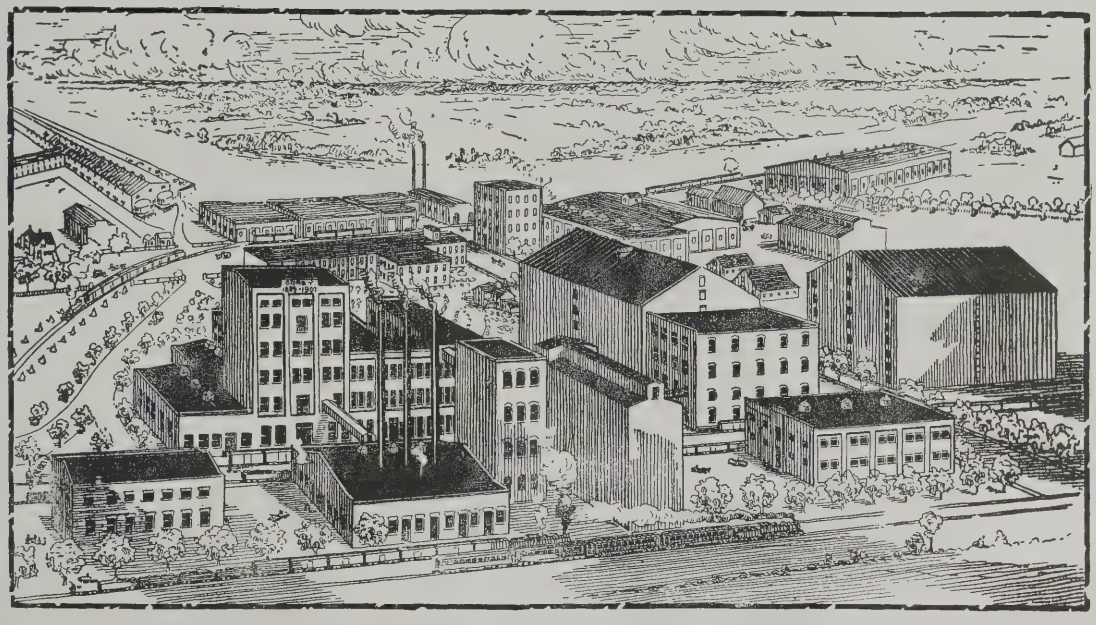
New Stationery Manufacturers

The Sinclair, Allen Co., Limited, Formed in Toronto to Manufacture Fine Lines of Stationery

An interesting new development in the stationery manufacturing industry is the formation of the Sinclair, Allen Co., Limited, Toronto. The new company, who are capitalized at $100,000, have as officers: President and general manager, N. A. Sinclair; vice-president, Thomas Allen; secretary, Thomas Blain Allen. Mr. Sinclair was for many years in charge of the stationery department of Warwick Bros. & Rutter, Limited, Toronto, and has lately had a year and a half's experience in New York. Mr. Allen is head of the publishing house of Thomas Allen. The company have leased an entire flat, containing 17,400 square feet of floor space, in the new manufacturing building on Adelaide Street at Spadina Avenue, and expect to start production about the middle of August. Their goods, which will consist of pads, papeteries and writing paper, will be known as the "Quality Line."

North America Antimony

Plans of Company are Dependent on Reports of Geologists and Mineralogists



Plans of the North America Antimony Smelting Co., Limited, a company formed a few months' ago under the presidency of S. E. Elkin, M.P., of St. John, to consolidate a number of individual workings in New Brunswick, are still indefinite. Heretofore the mines were operated in a small way in the making of metallic antimony. It is proposed by the new company to manufacture golden and crimson sulphurettes of antimony, which are used largely in the rubber industry, and later possibly to undertake the manufacture of paints. Geologists and mineralogists are making extensive surveys of the property and, as soon as these reports are received, more definite plans will be formulated for the prosecution of the work.

According to a prospectus issued earlier in the year, the officers and directors of the company include S. E. Elkin, M.P., St. John, president and general manager; Walter F. Dixon, New York, vice-president; A. F. Saurel, New York, secretary-treasurer, and Messrs. W. H. Irvine, M.D., Fred B. Edgecombe and W. T. Chestnut, Fredericton, directors, with C. A. Crowe, mine manager. The company are stated to own all the area of antimony ore land in New Brunswick by mineral rights from the Government, comprising an area of sixteen square miles, and agreement of purchase, including 448 acres freehold, comprising a total area of eighteen square miles. These are claimed to be the only antimony deposits in Canada or the United States of magnitude or extent to maintain a smelting plant. There is already on the property the first units of a white oxide and smelting plant with a daily capacity of twelve tons of ore.

Make Bar Iron

New Brunswick Rolling Mills Co., Limited, Start Manufacturing Operations at St. John

The New Brunswick Rolling Mills Company, Limited, of which the incorporators are Harry J. Garson, Frank O. Garson and Joseph A. Garson, have acquired the plant and lands of the Portland Rolling Mills Co., Strait Shore, St. John, N.B., and are busily employed in manufacturing bar iron in all sizes, railway spikes, ship spikes, track bolts and mild steel bars. The company, who are capitalized at $99,000, have not yet completed their organization, but Mr. H. J. Garson is provisional president, Joseph A. Garson, secretary and C. H. Lissemore, superintendent.

Guelph Plant Extends

Shinn Mfg. Co. of Canada, Limited, Will Erect Addition to Their Present Building

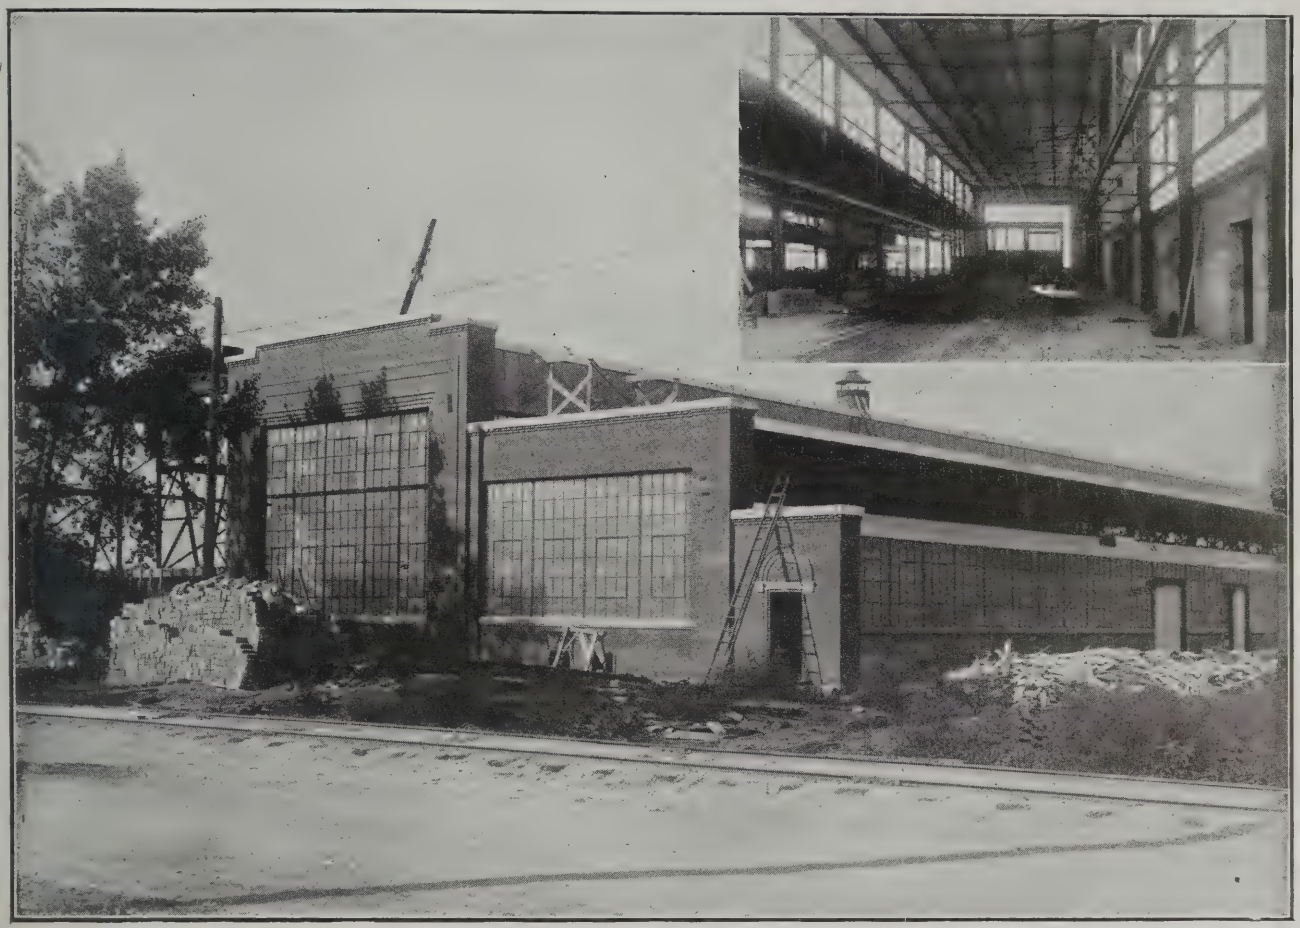
The Shinn Mfg. Co. of Canada, Limited, Guelph, are about to enlarge their plant. They will erect an addition, 30 x 70 feet, three storeys high, at the rear of their present building, using brick and concrete construction. They expect to complete and occupy the addition in the autumn and will be able to double or treble their present output of lightning rods.

Part of the new building will be occupied by the National Standard Co., a company recently incorporated for the manufacture of automobile tire braid.

Beaver Board Development

Company Take Over Plant of the Foley-Reiger Pulp and Paper Co., of Thorold

Important progress towards the expansion of their industry in Canada has been made recently by the Beaver Board Companies, whose administration offices are in Buffalo, N.Y. They have purchased the plant at Thorold of the Foley-Reiger Pulp and Paper Co. and will utilize its output in supplying ground wood for the Beaver Board finishing units at Thorold and Tonawanda, N.Y. The present production of the Foley-Reiger mill is about fifteen tons of ground wood a day. It is equipped with two grinders and five wet machines and is operated by water power. The power facilities are ample to serve additional grinders and it is proposed to instal these and increase the mill's capacity immediately.



The purchase of the Foley-Reiger property is part of the company's definite policy of expansion. Last winter Canadian operations were concentrated at Thorold through the removal of the laminating plant from Ottawa, enlarging and improving its equipment and preparing it to operate with the two finishing units at Thorold. Thus the Thorold plant is now a complete system for manufacturing Canadian and some export requirements. It receives its logs from the Frederickhouse and Abitibi timber grants, grinds them into pulp and finishes and laminates them into the finished beaver board.

The company's development in the way of adding the manufacture of logically related building material lines is emphasized by their purchase of the business of the Patent Vulcanite Roofing Co. of Chicago. This company, the third largest manufacturers of prepared roofings in the United States, is now operated as their Roofing Division. For Canadian requirements, a plant is now under construction at Ottawa which will be completed within a few months and manufacturing for the Canadian market will be begun immediately.

New Knitting Company

The Celtic Knitting Company, Limited, Start Operations in City of Montreal

The Celtic Knitting Company, Limited, who were recently incorporated with an authorized capital of $200,000, have started operations at 14 Turgeon Street, Montreal. It is their intention to produce ladies' silk hosiery, ladies' and children's coats and jerseys made from all-wool jersey cloth, and men's cashmere underwear. It is not their intention to erect a new plant at present but they have rented sufficient space for their requirements. Mr. A. C. Howatson is managing director.

What "KODAK" Means

As a word, a trade-name, "Kodak" is simply an arbitrary combination of letters.

As a trade-mark, "Kodak" indicates certain of the products of the Kodak Companies to which it has been applied, as, for instance, Kodak Cameras, Kodak Tripods and Kodak Film Tanks.

As an institution, "Kodak" stands for leadership in photography. To the world at large it is best known for its simplification of photography for the amateur, for its Kodak and Brownie Cameras, for its films and papers. To the professional photographer, it is known for its progressive leadership in the manufacture of everything that is used in the studio. In the cinema world it is known as the producer of the film that made the motion picture possible. To the scientist, it is known for its X-Ray products, now so vital in the mending of men.

In 1888, when the two "k's," the "o," the "d" and the "a" were euphoniously assembled, they meant nothing. To-day they mean protection for you in the purchase of photographic goods.

If it isn't an Eastman, it isn't a Kodak

New Foundry Building

Record Foundry & Machine Co., Moncton, are Completing a Large New Structure

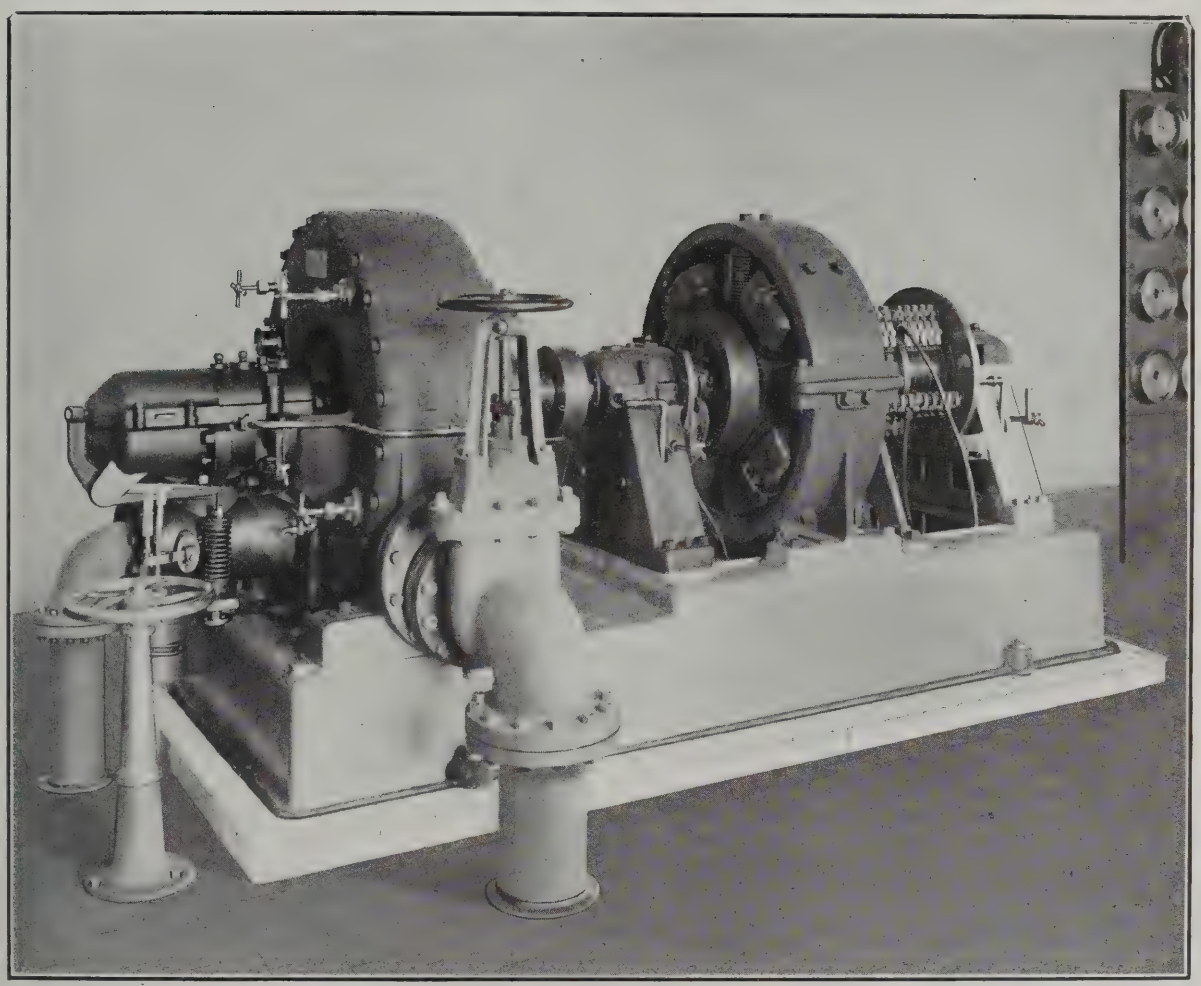
An important addition is being made to the plant of the Record Foundry & Machine Co., manufacturers of stoves, ranges and furnaces, Moncton, N.B. It is a building 370 feet long by 50 feet wide, one storey, reinforced concrete. It will include mill room, mounting room, nickelling room, crating room and sheet metal and tin shop. The cost, when completed, with machinery installed, will be about $75,000. It will all be completed by August 1, but a part will be in operation commencing July 10. The building will be modern in every respect and will enable the company to employ more men and increase output.

New Motor Company

Stansell Motors Limited will Produce a Canadian Light Six Car at Amherstburg

An interesting new development in the Canadian automobile industry is the formation of Stansell Motors, Limited, in which Detroit and Amherstburg capital is interested. The capitalization authorized is $500,000 and the purpose is to make a purely Canadian light six car of distinctive type. At first this will be an assembly proposition, using only the best standard parts, and these have already been contracted for and delivery commenced. Later it is the intention to manufacture all necessary parts. The anticipated production under full running force is from 10 to 16 cars per day, and approximately 50 men will be employed during the first year. It is expected that the first demonstration cars will be in hand by the first of August and an estimated production of 1,100 cars is expected within the ensuing twelve months, this number having already been contracted for.

The company have secured and hold a ten-year lease from the municipality of the town of Amherstburg of a large brick factory, 75 x 150 feet, built by the municipality several years ago for the purpose of manufacturing automobiles. They rent it at $1.00 per year, with the option of buying both factory and site at the end of this term for a nominal sum. The site is a large one with plenty of room for expansion, and the Michigan Central Railway now has a switch running into the yard.



The president of the company is J. B. Whitley, Detroit; vice-president and general manager, W. R. Stansell, Amherstburg; secretary-treasurer, F. P. Davey, Detroit; directors J. C. Veale, Detroit, and F. A. Parke, mayor of Amherstburg

Build New Plant

The O-Rib-O Manufacturing Co., Winnipeg, Have Sold Their Present Premises

The O-Rib-O Manufacturing Company, who manufacture air-tight heaters, stove pipes, coal shutes, steel garages and metal specialties, have sold their present factory at 233 Stradbrook Avenue, Winnipeg, to the Eternal Battery Company of Winnipeg, and have purchased a piece of land on Erin Street north of Portage Avenue with a frontage of 125 feet and a depth of 200 feet with a railway track spur. On this property they will erect a factory 40 feet x 200 feet, two storeys high, of concrete and brick construction. This company are adding special machinery for manufacturing warm air fittings, a line which they purpose going into extensively. They hope to be in their new premises by August.

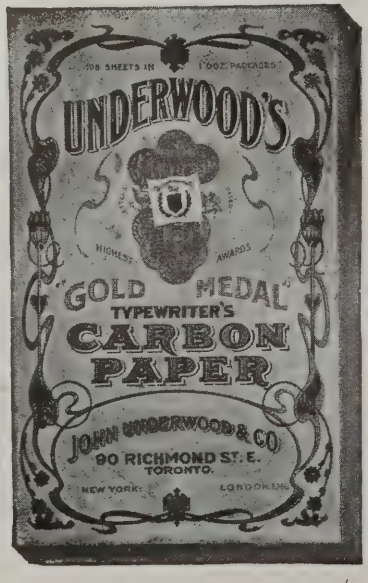
A Huge Amalgamation

Formation of the Riordon Co., Limited, Means Consolidation of Many Important Interests

One of the most important industrial developments of the month has been the formation of the Riordan Company, Limited, which takes over the properties and assets of the Riordon Pulp and Paper Co. and the Kipawa Co., Limited, together with all the issued capital stock of the Gatineau Co., Limited, a company incorporated to acquire the assets and properties of Gilmour & Hughson, Limited, and W. C. Edwards & Co., Limited. The Riordon Co. will also own over 60 per cent. of the outstanding capital of the Ticonderoga Pulp & Paper Co.

In discussing the merger in the daily press, Mr. Carl Riordon, vice-president and managing director of the Riordon Co., Limited, said:

"Hitherto the resources of the Ottawa and Gatineau Rivers have been operated by several companies, chiefly for the production of white pine lumber, without an effort having been made to develop on a large scale the raw materials available for the production of sulphite pulp, paper and hardwood lumber. It is felt that the Riordon Company should naturally undertake the more intensive development of the large properties now brought under its control.



"The merging of the existing resources of the W. C. Edwards Company, the Gilmour & Hughson Company and the Riordon Pulp & Paper Company will permit of economy in production and marketing, and of scientific development of the properties. At a time when American supplies of pulp and other woods are evidently running low, making it eminently expedient for Canada to attain a maximum of production from the minimum of raw materials at the minimum of cost, we aim to extract the greatest value obtainable from every thousand feet of timber and every unit of waterpower which we own, through unified control of vast holdings of wood and water powers and of diversified plant equipment."

The combined timber holdings of the business merger will approximate 10,590 square miles. The pulpwood holdings are estimated to contain 25,000,000 cords of pulpwood, while the stand of white pine is estimated at 1,200,000,000 feet. The company's sulphite pulp output consists of 91,000 tons per annum of bleached and 8,000 tons of easy bleaching. It produces 11,000 tons per annum of soda pulp and 18,000 tons of high-grade book paper. Of lumber, the present output is 125,000,000 feet per annum. With construction at Kipawa completed and reducing lumber production to terms of pulp and paper, the new company will produce the equivalent of 275,000 tons of pulp and paper per annum.

Move to Toronto

Davis-Bournonville Co., Remove Their Plant From Niagara Falls to Toronto

The Davis-Bournonville Company have completed and occupied their new plant at 32-34 Eastern Avenue, Toronto. The company were previously located at Niagara Falls, with sales offices at 168 King Street West, Toronto, but now both plant and office will be under one roof. The new building is 50 x 110 feet, of brick and steel, two stories high, and here they will manufacture all their lines for the Canadian trade, including oxy-acetylene welding and cutting apparatus, barrel-welding machines, and other automatic equipment. They have installed a model generator, which distributes acetylene to the welding and testing stations throughout the plant, and altogether have very considerably increased capacity and improved equipment. If the situation warrants, it is their intention to establish a welding school in connection with their plant, in charge of a competent instructor.

GASOLINE TANKS

COPPER-STEEL WELDED TESTED HIGH-CLASS TANKS

For Underground Storage of Gasoline

Any Fittings to Suit Supplied

A high quality tank steel welded throughout, making it practically a one-piece tank. Treated with an odorless, anti-rust oil, and then painted on the outside with anti-rust acid-proof black paint. They are practically rust and corrosion proof. We are tank builders. We make a specialty of tanks. Anything we turn out in this line you can depend on. They are made by expert workmen. We put our best efforts into tank building; it is our specialty. Our tanks are built to conform to the requirements of the National Board of Fire Underwriters. They are all tested before leaving our works under air pressure by a competent superintendent and then crated and shipped so they will reach you in good condition. We believe our prices will appeal to you as being very reasonable. Nothing but the best will do for handling gasoline. If not as represented when it reaches your station, fire it back at our expense. Can we do fairer? Any size made to your order.

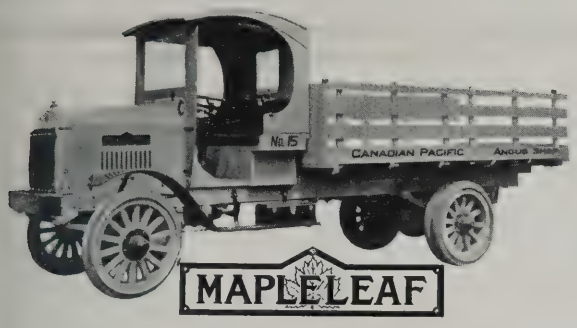
Paper Mill Machinery

Description of the Plant at Lachine of the Domini Engineering Works, Limited

The June issue of *Iron and Steel of Canada* contai description of the plant of the Dominion Engineering W Limited, the company recently formed by Dominion B Co. interests to undertake the manufacture of paper machinery. From the description the following inform about the undertaking is culled:

The company have taken over the erecting and ma shops of the St. Lawrence Bridge Co. at Lachine, which erected in 1912 for the fabrication of the Quebec Bridge. are of substantial fireproof construction, well laid out with railway sidings. The main building is 660 x 220 with two erecting bays 85 feet and 75 feet x 220 feet re tively and side bays, 60 x 440 feet, containing boiler h power house, tool room, etc. The crane equipment is ticularly complete.



The foundry as at present used is a building 145 x feet, but will shortly be enlarged to 145 x 330 feet. cupolas comprise one of 84-inch diameter, not yet inst but which will replace a 37-inch cupola now in place, one of 54 inches. There are two casting pits, but the fou extension will be equipped with a casting pit, 120 feet by 30 feet wide and 8 feet deep, intended for pouring large castings to be used for the water turbines. The tern shop is a separate brick and steel building, 176 x 60

At the present time the works are building two 166 high-speed newsprint machines for the Laurentide Co., a 148-inch Harper tissue paper machine for the Inte Tissue Mills. There has already been completed one 48 fourdrinier writing-paper machine for the Howard S Paper Mills. The company are also building two 20,000 water wheel units for the Laurentide Co.

Belleville Industries

New Industrial Commissioner Reports Location of Seve Industries During the Year

In his first report to the mayor and city council of Belle ville, C. I. White, Industrial Commissioner, reports th location of seven new industries since June 14, 1919. Th Elliott Machinery Co. took over the premises of the Burre Rock Drill Co., local parties invested some capital and th plant in now running and employing sixty men. The Judg Jones Milling Co. were located in the new building of Gra hams, Limited. The H. A. Woods Mfg. Co. were locate through the efforts of Mr. R. J. Graham and will manufa ture valves, automobile steering wheels and door locks. Thi company have also purchased the patent rights of the Tiltin Detachable Steering Wheel. The Natural Tread Shoe Co will start operations as soon as their machinery is installed The Toronto Hat Mfg. Co. have commenced operations, an the A. S. Richardson Co., Limited, will commence operation in the near future in the east wing of the H. A. Woods Mfg Co. building. The Weed Harvesting Machine Co. will com mence operations just as soon as machinery can be installed When these new industries have developed to the point ex pected, they will employ upwards of 500 hands.

Chemical Products, Limited

Eight Per Cent. Cumulative Participating Preference Shares Being Floated

One of the most interesting industrial offerings of the da is that of the 8 per cent. cumulative participating preferenc shares of Chemical Products, Limited. This was preceded by a campaign of press publicity in which the importance o the chemical industry in general was emphasized. The com pany's capitalization consists of $2,000,000 preference share of which $1,700,000 are being issued, and 100,000 shares o common stock of no par value, of which 75,000 shares ar being issued. The offering is being made by Graham, Sanson & Co., Toronto.

Chemical Products, Limited, were incorporated February 28, 1920, succeeding Chemical Products of Canada, Limited organized in 1916. The latter company successfully operated a plant in Toronto, but the new company have taken over the property of British Chemicals, Limited, Trenton, and will develop it. The plant includes 120-ton sulphuric acid plant and concentrator; 70-ton nitric acid plant; storage tanks, distilling plants; 100-ton ice plant; a boiler plant with total capacity of 2,000 h.p.; an ample fire protection system with about five miles of underground water lines.

As laid out by Chemical Products, Limited, their plant will consist of five units—No. 1, acid phosphate plant, with minimum annual capacity of 75,000 tons; No. 2, sulphuric acid plant, with capacity of 120 tons a day; No. 3, refined nitrate of soda, epsom salts and general chemicals; No. 4 salicylates of allied derivatives, viz.: aspirin, salicylic acid sodium salicylate, oil of wintergreen, cresotinic acid; No. 5 ammonia and coke oven by-products.

Directors of the company include R. J. Copeland, Toronto president and general manager. J. C. Graves, Saginaw, Mich. vice-president; W. H. Van Winckel, New York, vice-president; Col. H. Cockshutt, Brantford; D. M. Sanson, Guelph; T. E. O'Reilly, Toronto; T. P. Birchall, Montreal; R. J. Cluff, Toronto. The actual direction of the plant, operating and works management will be in the hands of Mr. A. H. C. Heitman, an experienced and successful chemical plant operator.

New Chemical Plant

Soda Deposits Limited, of Calgary, Locating New Industry at Fusilier, Sask.

John O. Williams, managing director of Soda Deposits, Ltd., Calgary, furnishes the following information about the plans of this company for development at Fusilier, Sask. Writing early in June, Mr. Williams says that the company expect to commence building operations at once, and should be producing by the end of July. They propose to manufacture sodium sulphate or salt cake, glauber's salts, and glass-makers' salt cake. The first unit of their plant will turn out twenty tons of dry sulphate per day, and gill give employment to twelve persons. So far the organization of the company, which is capitalized at $100,000, was incomplete.

New Galt Factory

The Yale Shoe Mfg. Co. to Establish Fifth Shoe Industry in Galt This Summer

Galt's fifth shoe industry will be started about the first of August by the Yale Shoe Mfg. Co. in the stone building formerly occupied by the Riverside Silk Mills. This is a four-storey structure, 40 x 90 feet. The company will make boys' and men's McKay shoes and will start with about forty employees. They are chartered and capitalized at $40,000, with the following officers: President, R. K. Serviss; vice-president, R. F. Scott; secretary-treasurer, G. Malcolm; superintendent, F. Englert; sales manager, F. R. Delafield.

Take Over St. John Plant

Murray Co. of Canada, Limited, Secure Plant of Wilson Chemical Company

The Murray Co. of Canada, Limited, are a new incorporation, associated with the Murray Co. of Boston, who have taken over the plant of the Wilson Chemical Co., St. John, N.B., and have commenced the manufacture of fruit syrups and similar products, largely for use in connection with soda water fountains. Owing to the high price of sugar and to causes incidental to a new business, the company are not manufacturing very extensively at present, but are making preparation for a larger output in the near future. The incorporators are H. W. Wilson, Leon A. Keith and Milton E. Murray. The capital stock is $99,000. Mr. Keith, a St. John broker, is president; Mr. Murray, vice-president, and Mr. Wilson, manager.

Will Double Capacity

Wells Bros. of Canada, Limited, Change Name and Increase Their Capital

Wells Bros. Co. of Canada, Limited, manufacturers of taps, dies and screw plates, Galt, Ont., are changing their name to the Greenfield Tap and Die Corporation of Canada, Limited, this being more in harmony with the name of the parent concern at Greenfield, Mass. They are at the same time arranging for an increase in their capital stock from $40,000 to $250,000. It is their intention to increase their capacity by erecting new buildings, which will give them more than double their present floor space.

A by-law fixing the assessment of the Montrose Division mill of the Provincial Paper Mills, Limited, at $125,000, was carried on June 10 by the ratepayers of Thorold. The original fixed assessment was $20,000, and this was renewed in later years. The mill is one of Thorold's largest industries.

Human Element in Production Engineering

An Appeal for Greater Harmony in Industrial Relations—The Obligations Resting on Both Parties—Higher Wages not the Solution of the Problem, but Greater Production and More Economy

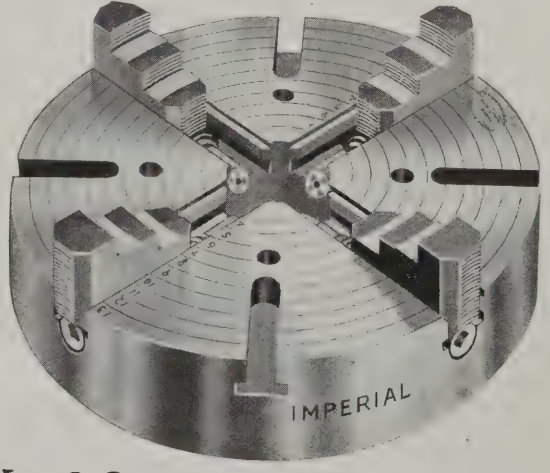
By G. S. HUTCHINSON
Vice-President, Sherman Service, Limited

AN employer may build the most modern plant possible to construct, and equip it with the best machinery procurable, but his efforts will be in vain without the human element to operate it.

Further than that, he cannot expect a whole-hearted response from this human element unless he gives it at least as much thought, care, and attention as he does his equipment.

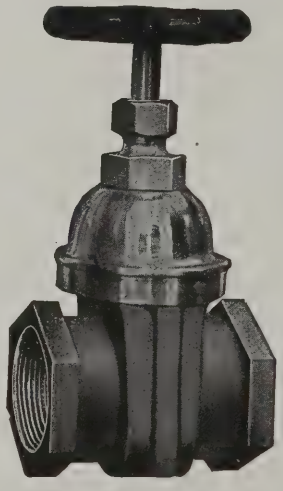
The employer naturally desires a "full value" return from his investment in equipment, and therefore does not hesitate to supply whatever means may be necessary to bring his machinery to a full capacity operation. Is he doing as much for the human element in his plant?—that element without which his machinery is useless?

One of the favorite methods of many concerns is the employing of the "Stop Watch" method. This is done openly, and the workers feel their rights are being invaded. They feel the boss is suspicious and that he is taking this means of showing them that he is wise, or, in other words, the boss did not believe that the workers were doing their duty or this "Stop Watch" man would not have appeared.



This being the case, they at once get busy trying to devise some way to beat the man with the "Stop Watch." After some time study the workers are ordered to do their work in just such a manner as the person installing a system may see fit, and no suggestions or co-operation from the workers is desired, which causes the workers to feel that they are being used simply as machines and not as human beings. There is nothing in the system that takes into account the limitations of the human body, and what a man can produce in a day, when everything is favorable, workers are driven to produce every day, without any regard to the circumstances, climatic or physical conditions.

There must be more of the human relationship between the employer and the worker; Labor can no longer be considered as a commodity to be haggled for in the open market. Loyal service should command something more than the minimum which it will bring in competition.



On the other hand, and of quite equal importance, employees must be loyal to their employers. Agreements once fairly made must be sacred, and so must be observed. Labor's word must be as good as its bond. And if, as I said before, loyal service should merit more than the frigid observance of hard and fast agreements, loyalty of service should mean more than the grudged exchange of a minimum of work for a maximum of compensation.

Capital cannot expand without Labor. Labor cannot live without Capital. Deny the country the support of either,

and it must die. The ranks of both elements are made up of human beings, each depending upon the other for maintenance, and the country depending upon both for existence; and there is no earthly reason why the two cannot get together, co-operate and work in harmony for the betterment of all.

It is not a question of what you *want* to do, or a matter of catering to your own particular desires. But rather is it a question of good business judgment. Employers who read "the writing on the wall" granted this inevitable recognition and drew their workers into a closer personal contact and business association, purely as a matter of policy, are to-day enjoying the fruits of their foresight.

To-day Labor realizes more consciously than ever before the dawn of a new era, in which its decisive function has become finally apparent. Now, more than ever before, is needed that whole-hearted and sincere co-operation between Capital and Labor that will quickly and permanently place Canada upon a solid industrial foundation.

And to-day the world is turning to Labor to build anew upon the ruins created by four years' of madness. The man in overalls steps into a new "firing line," where the order is not to "destroy" but "create."

Canadian labor has never betrayed its trust, and it will not do so now, in the face of the great crisis of reconstruction, when the future depends so largely on its courage and loyalty.

What may come in the way of popular control, as education advances, none can say. That the worker will undoubtedly gain a voice in the management of industry—and a large voice at that—is a fairly safe prediction, but joint control of industry is a problem that offers many difficulties, and it is well that the worker should go into it with a knowledge of all it implies. The appointment of Labor representatives on controlling bodies in industry is undoubtedly a step in the right direction, but the worker must be prepared to accept their limitations, to consider the industry first and foremost, and to abide by the results of the joint action of his own representatives and those of the employment class.

Compromise the Difference

Can we not compromise for the time the difference between Capital and Labor, between the various interests that are risking our future for the sake of their own particular grievances and co-operate in another ideal equally great?—the restoration of peace and the return of prosperity on a better foundation. With this accomplished, the separate ideals of the industrial divisions of our society can be discussed with far more chance of fair adjustment than is possible in these difficult times. We shall, I hope, settle our problems with reasonable fairness and common-sense, and so improve the relations between Labor and Capital, that the country can do its very best in production, and thus enable our country to bear cheerfully the cost of the war, and, better still, make every returned soldier think that such a country was worth fighting for.

Trade union leaders are becoming interested in the idea of industrial democracy. It is not an exotic plan from Soviet Russia. Adult educational classes, university extension courses, the definite linking up of organized labor with the universities, night schools, and study groups, conducted with increasing success in the last few years, have helped to educate the manual workers to their present advanced position. The barriers of caste between manual workers and technical and professional labor are disappearing. Doubtless the common experience of men in the trenches has helped to hasten this change. An understanding be-

tween Labor and Capital, not necessarily a coalition, but a recognition that each is moving in the same direction as the other on policies such as democracy in industry, should have a profound influence on the economic readjustment in Canada.

I do not propose to discuss the why and wherefore of high prices or the extent to which they are due to the inflation of credit and currency. It is enough that they are here and that everybody suffers from them. Surely, however, the time has come to look at the position from a somewhat different angle, and the workers particularly may be asked to consider whether demands for still higher wages are likely to solve the problem, and whether they are materially better off for some of the recent concessions they have obtained. They have secured several substantial increases, and at the same time a considerable reduction in working hours. It should now be their aim, and that of other leaders, to get the fullest effective value out of what they have won. That cannot be done by clamoring for further increases, or the whole weary circle will have to be trod again, but it can be done by increasing production and by practicing economy until supply overtakes demand. Only thus can the value of our dollar be restored to something much nearer one hundred cents than it is at present, and no effort must be spared to accomplish this.

The foreman in modern industry is the link between the Management and the rank and file of Labor. The policies of the Executive regarding production and other matters are transmitted to the employees through the agency of the foreman. It has been said that a great part of Labor disturbances is directly due to unskilful handling of men by foremen. Whether or not this is so, all parties are due to benefit from greater efficiency on the part of the supervisors. The foreman is the key to production. He stands between Labor and Management, and is, therefore, in a strategic position in industry. All the policies of the management, all its ideals and its production orders, must pass through the foreman, who is, therefore, in a position to make or mar its successful operation.

In the days when national problems are occupying the attention of everybody, it is difficult to get men to think soberly of questions of personal duty. Yet the future of our nation depends upon what we do as individuals. The two words that should be in our minds are "Produce" and "Save." Nothing is needed to-day so much as production. If the world is short of food, clothing, and material for building, there is only one thing to do, and that is to hurry up with production. This is no time for wrangling and fighting over hours and labor. The only sensible thing to do is to get busy and supply the world's need. Until it is supplied, we cannot have anything but unrest. The man who loafs or wastes the day is an enemy of his country and to mankind.

At the present time industrial conditions are acute, owing to a general feeling of unrest, and the necessity of a means to bring about better understanding is more than ever apparent.

A very small amount of corrective influence, properly applied, will effect a cure when the relations have not reached a serious condition of estrangement. Wise industrial heads realize this, and for their protection and as an investment maintain certain corrective and educational influences in their plants continuously. The value of this is indisputable and the results obtained fully justify them in making the relatively small investment necessary.

Woollen Manufacturers

Canadian Woollen Manufacturers' Association Held its Annual Meeting in Toronto in June

The general annual meeting of the Canadian Woollen Manufacturers Association was held in Toronto on June 17th, when the establishment by the province in co-operation with manufacturers, of a textile college for the training of Canadians in the more scientific phases of the textile industry received considerable attention. Upwards of fifty members of the Association were present from various parts of Canada and a keen interest in the proposition was evidenced. The proposal has been in the hands of a competent committee for some time and the manufacturers at the meeting expressed themselves as heartily in favor of the idea, the need for fully trained operatives being recognized.

Reports for the past year showed that business had been satisfactory and that a considerable amount of export business had been carried on. In this connection it was stated that Secretary Fred H. Yapp was now in Europe in connection with negotiations for a large amount of overseas business and several extensive orders are pending at the present time. The meeting was preceded by a luncheon, presided over by Mr. Richard Thompson, president, at which Mr. J. S. McKinnon, president of the Canadian Manufacturers Association, and Dr. F. Torrance delivered addresses.

The following officers were elected: President, Mr. Richard Thompson, Carleton Place (re-elected); Vice-President, Mr. Harold G. Smith, Hamilton; Executive: Messrs. D. N. Panabaker, Hespeler; H. Barrett, Paris, Ont.; A. H. Saul, Mitchell; T. A. Burns, Dunnville; C. W. Bates, Carleton Place; W. W. Thompson, Toronto; James Moodie, Hamilton; George A. Dobbie, Galt; C. Gordon Cockshutt, Brantford; Thos. Hepburn, Preston, and K. W. Harvey, Woodstock.

"CEETEE"

THE PURE WOOL UNDERCLOTHING THAT WILL NOT SHRINK

Every "Ceetee" Garment is knitted on special machines—the only machine of their kind in Canada making underwear. Each garment is shaped in the process of knitting (not cut) to fit the human form. The wearing parts are reinforced — the selvage joins are then knitted together — not sewn as ordinary underwear; thus there are no thick or rough seams.

Nothing but the finest, cleanest and purest Australian Merino Wool is used. Finally every garment goes through our special process, that enables us to guarantee ***it not to shrink.***

You cannot buy a low-grade garment bearing the famous "Ceetee" Sheep trademark. "Turnbull's" Underwear is sold by the leading dealers for men, women and children in all sizes.

The Fuel Problem

How a Saving May be Effected Through Increased Use of Mechanical Stokers

An aggressive campaign, having in view the reduction of Canada's coal bill, is being launched by the Under-Feed Stoker Co. of Canada, Limited, formerly the Jones Underfeed Stoker Co., Limited. It is pointed out by this company that the annual consumption of bituminous coal in Canada in leading industries and in public utility plants approximates 7,000,000 tons. Of this 1,000,000 tons, or one-seventh, it is contended, could be saved by the application of scientific combustion methods. The adoption of such methods would not only save coal but would release 20,000 coal cars for other service.

Just how coal can be saved by the installation of stokers is illustrated by some figures applied to a boiler plant consisting of six 250 h.p. boilers. Assuming that five boilers are operated for 24 hours a day, 300 days a year, with two shifts of 12 hours, labor costing 50 cents an hour and coal $6.00 a ton, the annual cost of hand-firing works out at $139,500; that of stoker firing at $120,250. This is a cash saving of $19,250, but there is also an increased plant capacity of from 50 to 100 per cent., while cheaper grades of coal may be utilized.

A reorganization of the business of the Jones Underfeed Stoker Company, Limited, has recently been effected, which will serve to emphasize more completely the Canadian character of this industry. Hereafter the Canadian end of the business will be known as the Underfeed Stoker Co. of Canada, Limited. Mr. Lloyd Harris, who is also president of the Underfeed Stoker Co. of America, becomes president; Mr. S. A. Armstrong is vice-president and managing-director of both companies, and Mr. James L. Ross, vice-president and secretary of both companies. The directors include T. A. Russell, A. W. Holmested, H. J. Fuller and David Fasken. The Jones Underfeed Stoker Co., Limited, have carried on business in Canada for the past twenty years and the new development is in line with the rapid expansion of the business. Some exceedingly effective publicity on the part of the new company is being commenced in the current issue of this publication, to which the attention of readers is specially directed.

Paper Box Makers

Annual Convention of Canadian Paper Box Manufacturers' Association Held in Quebec

The annual convention of the Canadian Paper Box Manufacturers' Association was held at the Chateau Frontenac, P.Q., on June 21 and 22, with about sixty delegates present. A number of valuable addresses were delivered including the following: "How Montreal is solving the Cost Problem," by C. N. Moisan, Standard Paper Box Co., Limited, Montreal; "The Problems of the Metropolitan Paper Box Manufacturers' Association," by H. E. Roden, New York; "Popularizing the Cardboard Carton," by Charles P. Wellman, National Packing Machinery Co., Boston; "Demonstration of Cost of a Men's Shoe Box," by F. W. Fisher, F. W. Fisher & Co., Limited; "The Utilization of the Association to increase Factory Efficiency," by D. H. McDermid, Somerville Paper Box Co.; "L'Entente Cordiale," by L. J. Amyot, Quebec Paper Box Co.; "Costs of a Folding Box," by J. B. Lawrason, Lawrason-Doughty Co., Toronto.

The following officers were elected: President, C. T. Reid, Chas. Reid & Co., Hamilton; vice-president, C. N. Moisan,

Workmen's Compensation

Industrial Accidents More Numerous in Ontario During the First Half of Year

There were 25,940 accidents reported to the Workmen's Compensation Board of Ontario during the first half of 1920, as compared with 19,811 in the first half of 1919; the fatal cases were fewer, being 211 as against 215.

The compensation and medical aid awarded during the first half of 1920 totalled $2,451,912.82; during the first half of 1919 the total was $1,846,509.11.

The first half of 1919 was the lean period of industrial activity, the last half showing much larger figures, but not so large as the figures for the half-year just closed. Over 500 cheques per day are now being issued by the Board for compensation and medical aid.

June was the high month for accidents reported, averaging 183 per day, 36 being fatal.

The increased scale of compensation provided for at the last session of the Ontario Legislature is now in effect. For accidents happening since 1st July, workmen are to receive two-thirds of their average earnings instead of 55 per cent., and the minimum is to be $12.50 a week or the total average earnings if these are less than $12.50.

Dating from 1st July widows are to receive $40 a month for themselves and $10 for each child under 16, and orphan children are to receive $15 a month, provided the total in any case does not exceed two-thirds of the workmen's aver- any case does not exceed two-thirds of the workmen's average earnings. The cheques now going out are partly on the old scale and partly on the new, adjustment having to be made where the pension period covers part of both months. In accidents happening since 1st July the widow is also to receive a lump sum of $100, and workmen requiring them are also to receive artificial members or other apparatus necessary as a result of the accident, and to have these kept in repair for one year.

Unique Advertising

The Canadian Car & Foundry Co., Limited, Montreal, send out a set of twelve blotters, which have the merit of attracting attention and developing interest in the product of the company. Starting with scenes in which prehistoric man is shown solving the engineering problems of his day, the transportation idea is carried along through imaginative pictures down to the present day and, in fact, beyond. Some of the products of the company are illustrated and the series closes with the gyroscopic railway travelling the air.

The Canadian Steel Foundries, Limited, Montreal and Welland, have a somewhat similar series of blotters, illustrating processes of manufacture as carried through by a troop of Teddy bears. It is a clever way of directing attention to the work done in their plants. H. W. Hartnell is the artist responsible for both series.

The Elder Dempster Co., Ltd., announce that their next sailing from Montreal for South African ports will be the steamship *New Mexico* about July 15th, and *New Brooklyn* about July 30th. These steamers will call at Cape Town, Algoa Bay, East London, Durban and Delagoa Bay in the order named.

Labor Supervisors

Spanish River Pulp & Paper Mills Undertake an Important Development

In the carrying out of their industrial relations plan, the Spanish River Pulp & Paper Mills have recently appointed three labor supervisors, one for each of their mills. The duties and functions of these labor supervisors are set forth as follows:

"The Labor Supervisor will be assistant to the General Superintendent in all labor matters which have to do with our employees, their work and the general conditions which surround them in their work. The Labor Supervisor will work in close co-operation with the Secretary of Industrial Relations, and, together with the General Superintendent, the manager and committees, they will develop the various plans which we have in mind for the improvement of conditions in our mills.

Deals With Many Subjects

"The subjects with which the Labor Supervisor will have to deal are varied. All which are mentioned here will not at first go into effect, but when the logical time comes and there is a natural demand for the introduction of the plans, they will be duly set in motion.

"A policy of group insurance was taken out February 21st, 1920, by the Spanish River Pulp & Paper Mills, Ltd., with the Metropolitan Life Insurance Company, covering all employees in mills and offices and on the permanent payroll of the woods department who have worked for the company three months or over. The details in connection with group insurance in the mills will be in the hands of the Labor Supervisor. It will be his duty to see to it that all insurance records are kept up to date in every respect. The best method of keeping insurance records for Spanish River will be worked out between the Labor Supervisor and the Secretary, Department of Industrial Relations.

"The Labor Supervisor will keep an accurate index of all employees, showing length of service. From this index he will make up a monthly list of employees entitled to vacation with pay, showing length of vacation to be granted. Any adjustments having to do with vacations will be made by the Labor Supervisor with the foremen of the various departments. Men desiring vacations will notify foremen as to preference of date, etc. The foreman will arrange for the granting of the vacation, on prescribed forms. The details of this plan will be in the hands of the Labor Supervisor.

Keeps Service Button Records

"The Labor Supervisor will keep service button records and will make bi-monthly reports to the Department of Industrial Relations. The Labor Supervisor will make all arrangements for giving out service buttons and for long service gatherings in co-operation with the Department of Industrial Relations.

"The Labor Supervisor will be in charge of all safety and first aid work in the mill. He will have a committee to work with him composed of employees chosen from each department. The Labor Supervisor will make weekly reports to the Department of Industrial Relations on safety work, first aid and accidents, and will in every way promote safety in the plant.

"All new men employed by the company will pass through the Labor Supervisor's office. All men applying for work will apply at the office of the Labor Supervisor. He will be familiar with all departments of the mill, and foremen desiring help will notify him of vacancies, and his duties will be to fill vacancies in so far as he is able."

Industrial Oxygen

Methods of Manufacture May Differ but Resultant Product, When Properly Made, Should be Equally Satisfactory

A good deal of space has recently been devoted by certain Canadian technical publications to a discussion of the relative merits of industrial oxygen prepared by the electrolytic and liquid air methods. It may help consumers who are puzzled by the controversy to read the following extract from an article on oxygen appearing in the Bulletin of the Department of Chemistry of the Pennsylvania State College (1917), by Professor Geo. Gilbert Pond:

"Industrial oxygen, compressed in cylinders, is commonly guaranteed to be ninety-eight per cent. pure. The manufacturer usually claims, and probably rightly, that the purity of commercial oxygen is greater than the guarantee would indicate.

"The character of the impurity is perhaps of greater consequence than its exact amount, and the character very naturally varies with the method of preparation. Electrolytic oxygen contains as impurity chiefly hydrogen, with small quantities of nitrogen and carbon dioxide. Liquid air oxygen very naturally has for its impurity principally nitrogen. These impurities, if not kept down to very small dimensions, may cause more or less trouble according to the purposes for which the oxygen is employed. It is the purpose of this paper to consider oxygen only in relation to oxy-acetylene welding and cutting. Nitrogen, being an inert gas, can do no harm to the welding process except that it displaces so much oxygen, being in that sense a dilutent. Hydrogen requires, to be sure, one-half its own volume of oxygen for combustion under ordinary circumstances, but, when led into the oxy-acetylene flame, at some six thousand degrees Fahrenheit, it cannot burn, because this temperature is higher than the dissociation point of water vapor. Hydrogen is as inert as nitrogen under these circumstances and can add nothing whatever to the flame temperature.

"Commercial practice has now brought oxygen to a high degree of purity; the guarantees of reliable manufacturers being on a ninety-eight per cent. basis. Experience has shown that with oxygen of this purity, the best work can be accomplished. The fine distinctions which are drawn in commercial arguments after guaranteed purity is reached may have some theoretical basis, but in practice do not appear of any measurable importance. As there is no possibility of the user analyzing every cylinder and as by whatever process oxygen is made wide variations may occur, the best advice that can be given is to buy of those companies whose technical staff and established reputation make sure the uniform high purity of their guaranteed product."

Other questions dealing with the advantages of gas obtained from one method of manufacture over that of another have also been dealt with. Two of the most common being—

(*a*) That electrolytic oxygen invariably contains, notwithstanding the utmost precaution in its purification, certain traces of soda, and even potash, which are injurious to the piping and internal parts of the apparatus by which they are consumed (as in oxy-acetylene welding);

(*b*) That oxygen extracted from the air by liquefaction contained a certain percentage of argon, another inert gas.

While it is almost impossible to remove completely all traces of soda from electrolytic oxygen, it is also a fact that the manufacturers of oxygen regard argon as too valuable a product to be wasted. It is carefully extracted from the oxygen and sold to electric lamp manufacturers; therefore the oxygen manufactured by the liquefaction of air, would be as commercially pure as electrolytic oxygen.

GROUP INSURANCE
LIFE, SICKNESS AND ACCIDENT

Group Sickness and Accident Insurance is an outgrowth of Group Life Insurance, and is written on a separate contract.

The benefits being direct to employees, and during their life time, may make the protection more attractive to them than a Group Life Policy.

The contract covers employees against sickness of all kinds, and all non-occupational accidents, thus, in conjunction with the Workmen's Compensation Act, furnishing adequate protection, particularly if combined with a Group Life Insurance Policy.

The particular contract we recommend is one paying a weekly indemnity of 50% of individual employee's weekly wage, after a seven-day waiting period and for a maximum of 26 weeks.

The premium is based on the annual pay roll, and the low rate we can quote will surprise you.

Paper Imports Prohibited

French Government Decree Prohibits Importation of Newsprint and Paper Pulp

A cablegram to the Department of Commerce, Washington, from U.S. Commercial Attache Huntington, Paris, June 21, 1920, states that a French decree of June 16, 1920, published June 19, prohibits from the date of publication the importation into France and Algeria of all newsprint paper and wood pulp for the manufacture of newsprint paper, except under special license from the Minister of Finance. Goods en route to France or Algeria or declared at warehouses before the publication of the decree are not subject to prohibition.

A New Appointment

Mr. George E. Bunting Goes to Australia for Canadian Government Merchant Marine

Mr. George E. Bunting has been appointed Australasian manager of the Canadian Government Merchant Marine, Limited. Mr. Bunting began in the transportation business with the Grand Trunk when nineteen years of age. Later he was with the Lehigh Valley at Buffalo, and afterwards with the Canada Atlantic Railway at Ottawa. He became travelling freight agent for the Allan Steamship Company when the Canada Atlantic Railway was absorbed into the Grand Trunk System, and in 1913 was promoted to the General Agency of the Allan Steamship Co. in Chicago, where he remained until 1917.

When the "National" Merchant Marine was organized, Mr. Bunting was made General Agent for Ontario. Last December he was sent to Australia and New Zealand to organize agencies for the Canadian Government Merchant Marine, his appointment as Australasian Manager following his work in that connection.

Book Reviews

The Causes of High Prices

A comprehensive study of the causes of high prices. By Halbert P. Gillette. Chicago: Engineering and Contracting Publishing Co. 5 cents per copy. $5.00 per 100 copies.

This is an extremely interesting and thought-provoking booklet by the editor of *Engineering and Contracting*. It aims to answer twenty questions, which are troubling not a few business men at the present time, such as "When will prices begin to drop? How rapidly will they drop? How far will they drop? Is it wise to lay in a large stock of goods or supplies now? Is it wise to construct buildings now?"

Mr. Gillette has worked out a clever formula, which he substantiates by many pages of proof. His formula, in brief, is this: The wholesale index price for any given year varies directly with the total amount of currency in circulation and with the average number of times it is turned over annually, but it varies inversely with the total population and the per capita efficiency of production.

The conclusions arrived at are instructive and, based on the argument advanced, are evidently pretty sound. The index price for 1919 was 212. Mr. Gillette predicts that the limit of decline for several years will not exceed 20 per cent. 1921, he says, will have a price level of fully 175. Any commodities that can be bought at not much more than 75 per cent. above the pre-war level will be bought at a reasonably low price and this will hold true for many years to come. As for construction costs, Mr. Gillette deduces that it will be futile to postpone construction of any kind in the hope of lower costs.

The booklet is well worth a study by those who are interested in the probable trend of prices. Whether the formula given is infallible or not remains to be seen; it is at least plausible.

Labor Organization in Canada

Labor Organization in Canada. Ninth Annual Report. Ottawa: The Department of Labor.

The ninth annual report on labor organization in Canada, containing statistics, etc., for the calendar year 1919, has been issued by the Department of Labor. The report deals with the advent of the One Big Union, and also gives a review of the progress of the National Catholic Unions in the Province of Quebec. Notwithstanding these two forces, the international organizations have made a very substantial gain in their following, while the non-international bodies and independent units show losses. The figures given in the report show that trade union membership in the Dominion has reached the highest point recorded since the department commenced the publication of these annual reports in 1911, the total reported membership for all classes of labor bodies in Canada at the close of the year 1919 being 378,047. There are in all 2,847 local branch unions in the Dominion, of which 2,309 are affiliates of international organizations, comprising 260,247 members, an increase over 1918 of 412 branches and 58,815 members; 325 local branches, with 33,372 members, are connected with what are termed non-international bodies, these figures showing a loss of seven branches and of 4,556 members; 29 are independent units, a decrease of 16, and the reported membership was 1,249 less than that reported in 1918; the National Catholic Unions number 83, comprising a membership of 35,000; the One Big Union reported 101 units with a membership of 41,150. These figures show a gain of 573 in local branches of all classes of labor bodies

All our tanks and towers are built to pass inspection of any Board of Fire Underwriters.

Send for special tank and tower catalogue.

GALVANIZING HOT AND ELECTRIC

We do all kinds of hot and electro galvanizing for the trade. Our plant is one of the largest in Canada and our charges reasonable.

Write us for quotations on your galvanizing work.

Ontario Wind Engine & Pump Co., Limited
TORONTO MONTREAL WINNIPEG CALGARY

operating in Canada, and the remarkable increase in membership of 129,160. The membership of all classes of organized labor in Canala, as reported to the department for the past nine years, has been as follows:

1911	133,132	1916	160,407
1912	160,120	1917	204,630
1913	175,799	1918	248,887
1914	166,163	1919	378,047
1915	143,343		

The report follows closely along the lines of earlier reports on labor organization in Canada, the various phases of the plan of organization which has been developed being given due considertion.

Chapters dealing with the advent of the One Big Union and the National Catholic Union movement in the Province of Quebec are discussed, as are also the activities of the Industrial Workers of the World, and other important incidents in labor matters which have occurred during the year 1919.

The report serves as a directory of trade unions for the Dominion for 1920, containing, as it does, particulars not only of every known local trade union in Canada (including branches of international, non-international, independent, National Catholic and One Big Union bodies), but also a list of all central organizing unions, together with the names and addresses of the chief executive officers.

More Fine Color Printing

In keeping with their intention to emphasize the possibilities of fine color printing, Rous & Mann, Limited, Toronto, sent out another folder, containing two striking examples adapted from the work of two Canadian artists. These are illustrative of the four-color process, which gives an astonishingly exact reproduction of the originals. One plate depicts "A Nova Scotian Fishing Village," by A. Y. Jackson, R.C.A., and the other a sketch by J. W. Beatty, R.C.A. Both lost of the atmosphere that each artist has created. As illustrations of what the printing art can accomplish, they are are fine pictures, and, in the reproduction, nothing has been most illuminating.

Dyehouse Ventilation

The Buffalo Forge Company and their Canadian subsidiary, the Canadian Blower & Forge Co., Limited, Kitchener, have issued Catalogue No. 721, which describes, with several illustrations, their dye house apparatus. These companies have made a special study of the problems presented by the incessant dripping of moisture from the roofs of dye houses, and in the booklet they give the result of their experiments. The photographs give telling evidence of their success. The booklet is worth the attention of all manufacturers who operate dye houses.

Engineering Standards

The Secretary of the Canadian Engineering Standards Association, Mr. R. J. Durley, announces that a stock of a number of the most important publications of the British Engineering Standards Association has now been received and is available for distribution. These are priced principally at 25 cents each and are procurable from Mr. Durley at Room 112, West Block, Ottawa. A list of the publications in stock will doubtless be supplied on request.

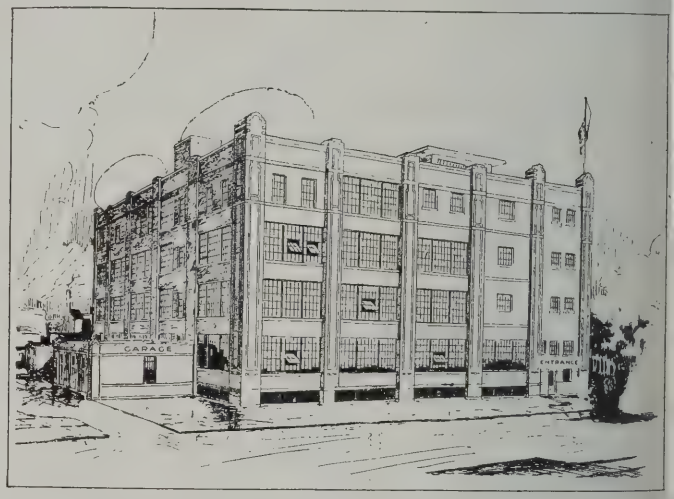
New Excise Taxes

Tariff Department has Issued Revised Circular Bringing the Subject to Date



The Tariff Department of the Association has prepared a revised circular dealing with the new Excise Taxes. This circular, which cancels previous circulars issued by the Association, contains the complete text of the Bill, rulings received to date, and general information respecting regulations issued by the Department of Customs and Inland Revenue. This circular is dated July 10th, and a copy has been mailed to each member of the Association.

Any subsequent changes in the operation or application of these taxes will be reported from time to time in INDUSTRIAL CANADA.

New Biscuit Plant

North-West Biscuit Company, Limited, are Erecting a Four-oven Plant at Edmonton

A large new biscuit manufacturing factory is at present under erection by the North-West Biscuit Co., Limited, Edmonton. It is a building of reinforced steel and concrete construction, four storeys above the ground, 105 x 112 feet in size. The estimated cost of plant and equipment complete is $400,000, and the building will be ready for occupancy late this

The North-West Biscuit Co.'s building under erection at Edmonton

fall, or possibly the beginning of next year. It will be used exclusively for the manufacture of biscuit and will double the company's present output, the new plant having four ovens as against two in the old plant. It is believed to be the second largest exclusive biscuit factory in Canada. For the past three or four years the company have been unable to take care of their business in the territory west of Winnipeg, which accounts for putting in an entirely new plant at this time.

Service to Martinique

Canadian Government Merchant Marine Inaugurate Line to the Windward Islands

The Canadian Government Merchant Marine have been solicited to establish a service to Martinique and now announce their intention of initiating a tentative service from Montreal to this point: the S.S. *Canadian Banner*, or a substitute vessel sailing about the end of this month.

The possibility of this service ultimately being of a permanent nature, and regular sailings established, is dependent upon the tonnage offering.

For a "Great" Vacation

Try the Great Lakes Trip by Canadian Pacific Steamer. For when the mercury is playing around in the upper eighties, and you wish Henry Ford would invent a self-refrigerating collar---do you ever stop to remember that the temperature of Lake Superior ***never rises above 40 degrees?***

What if you don't spare the time for a long holiday? The Canadian Pacific Railway's Clyde-built steamships make a five-day trip from Port McNicoll to Fort William and back, during which you can be as cool as an Eskimo and as comfortable as a clubman.

Roomy cabins, the best of chefs---oh, those broiled Lake Superior whitefish!---tea on deck under the lazy awnings---seagulls against the long, northern sunset---and a breeze from a thousand miles of clean pine woods, on duty twenty-four hours in the day.

Then---if you find you've got more time than you counted on---how about a week on the Nipigon River, forty miles from Fort William, with guides, canoes and camp-fires and white water under the moon---and more speckled trout than you know what to do with?

How do you get there? That's easy. Phone---write---or see any Canadian Pacific Ticket Agent, or

Recent Trade Enquiries

A List of Enquiries Received from Various Sources including the Canadian Trade Mission, London; the Canadian Trade Commission, Ottawa; the Department of Trade and Commerce, Ottawa; and the Commercial Intelligence Department, C.M.A., Toronto.

DOMESTIC.

453. Cooking Utensils.—A reliable sales' organization would like to get into communication with manufacturers of kitchen hardware and utensils, with a view to marketing their products in Canada. This firm has branches in the larger provinces, and is in a position to give good service.

454. Sales Agency.—A firm of importers and exporters in Montreal have a well-established sales force which is employed in marketing their imports, and desire to get in touch with manufacturers in the vicinity of Toronto and London, who have under consideration the marketing of their output in the district of Montreal. They are prepared in some instances to purchase the goods outright.

FOREIGN.

455. Mexico.—A gentleman born in Mexico, having a good knowledge of the Spanish language as well as good connections in that country, would be interested in visiting manufacturers with a view to representing them in Mexico. He is making a trip through Mexico and South America during the last part of this year, and wishes to undertake commissions from firms. His references are good.

456. India.—An import and export firm has recently been established in Toronto to import raw materials from India. They are in a position to supply Canadian manufacturers direct on account of their connections with native producers in India, and can quote advantageous prices. They are open to receive details of requirements for raw or manufactured products from India, and are also in a position to place the following Canadian products: leather goods, phonographs, iron screws, electrical goods, bleaching powder, magnesia chlorides and agricultural implements.

457. British West Indies and British Guiana.—A gentleman with fourteen years' experience travelling in the British West Indies and British Guiana wishes to get in touch with Canadian manufacturers desiring to trade with those countries.

458. Egypt.—An old-established British Commission House in Egypt is interested in obtaining agencies from Canadian firms for the sale of their goods or for the purchase of products in Egypt.

459. West Indies and Guianas.—An important West Indian firm of importers and exporters who furnish reliable references wish to get in touch with Canadian manufacturers of straw, typewriting and foolscap papers, textiles, suspenders, hosiery, neckwear, boots and shoes.

460. New Zealand.—A firm of manufacturers' representatives in New Zealand desire to make connections with, or secure agencies for New Zealand in the following lines: leather bags, boots and shoes, calcium carbide, serge, tweed and overcoating cloths, fencing wire and galvanized wire, linoleums, all classes of wooden handles, silk, woollen and cotton hosiery, electric pumps, cotton shirts and underwear, hockey sticks and picture mouldings.

461. Lima, Peru.—A firm in Lima, Peru, would like to represent Canadian manufacturers who intend selling their products in that country.

462. Australia.—An Australian firm of importers and exporters having special salesmen for various lines of merchandise and also excellent connections throughout Australia would like to secure catalogues of Canadian firms who are interested in trade with Australia. This firm has excellent references.

463. Montevideo, Uruguay.—A firm in Uruguay, that is in close touch with the market in that country, and in a position to sell goods throughout the Republic, would like to get in touch at once with any Canadian exporters who could furnish quotations on the following commodities: blotting paper, chemicals, metals, textiles, machinery, boots and shoes.

464. Hardware, Building Materials, etc.—A London firm of importers and exporters possessing showrooms and warehouse, are desirous of securing the representation of Canadian manufacturers of hardware of all sorts, building materials, and specialty lines generally.

465 Paints, Varnishes and Domestic Hardware.—A firm about to open an office in London and place travellers throughout the United Kingdom, is desirous of securing agencies, upon a commission basis, of Canadian manufacturers of paints, varnishes and domestic hardware.

466. Chemical Products.—Glasgow and Aberdeen merchant desires to import several chemical products, including particularly: genuine dry carbonate of lead, oxide of cobalt, mica-flake and powder, galena and sulphate of lead, asbestos powder.

467. Tools and Hardware.—A London firm wish to secure the agency of Canadian manufacturers of tools and hardware seeking a United Kingdom connection, notably: twist drills, milling cutters, etc.; spanners, hand; brace and bench drills, hand and bench grinders, hacksaw blades, carpenters' tools.

468. Hams and Bacon.—An old-established Scotch firm wish to be placed in touch with Canadian packers of hams and bacon.
469. Rubber Wear.—A well-known London firm are open to place orders for autumn delivery for waterproof collars and cuffs; also indiarubber footwear, including boots, rubbers, snowboots, etc., and would like to receive offers and quotations from Canadian manufacturers able to accept orders.
470. Ferro-Silicon.—A North of England company ask to be furnished with the addresses of Canadian manufacturers of ferro-silicon who can fill substantial orders.
471. Silver Novelty Articles, Rolled Gold Novelties.—Wholesale jeweller is willing to represent Canadian manufacturers of novelty articles as designated. Has facilities for covering entire United Kingdom if desired. Has done big business with United States firms; wants to establish genuine, permanent Canadian connections.
472. Molybdenum and Ferro-Molybdenum.—A Lancashire firm, claiming a large connection among users, are desirous of securing the representation of Canadian producers of metallic molybdenum (impurities not to exceed 5 per cent., chiefly iron, phosphorus low), and also ferro-molybdenum (about 50 per cent. Mo., phosphorus low); and they are also interested in molybdenum ores.

Laurentide Insurance Plan

Big Paper Manufacturing Company Puts Into Effect a Comprehensive Scheme

On June 2 the Laurentide Company of Grand Mère, P.Q., announced through their company organ, *The Digester*, a proposed programme of insurance for the benefit of employees. The main features were as follows:

(1) Life insurance in various amounts according to the earnings of the individual.
(2) Sickness and accident insurance with certain amounts payable weekly; the amount being dependent upon your earnings.
(3) The Life Extension Institute's physical examination.
(4) The combined health services of the Metropolitan Life Insurance Company and the Life Extension Institute.

The administration or management of the plan was to be under the direction of a Mutual Benefit Association, to be largely in the hands of employees. For life insurance purposes, the employees would be divided into three groups. Those earning less than $1,500 a year might take a $1,000 policy; those earning from $1,500 to $2,000 a year might take $2,000, and those earning over $2,000 might take a $3,000 policy. For every three years of continued service $100 additional insurance would be added without additional expense.

The accident benefits would not conflict with the Workmen's Compensation Act; that is, they would not cover accidents incurred on the job, but would apply to all accidents occurring outside of work. Sick benefits would be paid as all sick benefits are, regardless of how or where the sickness is incurred, and payments would begin and become payable at the seventh day of illness and be continued as long as the sickness lasts up to 26 weeks.

Cost would be borne half by employees and half by the company. The first group would pay 25 cents per week and draw $10 per week sick and accident benefits; the second group, 50 cents and $20 benefits, and the third group 75 cents and $30 benefits.

By the end of the week in which the announcement was made 1,740 employees had filled out the application blanks. The organization of the Mutual Benefit Association was proceeded with and an executive board and sub-committees were appointed.

Will Visit Canada

Mr. H. C. Hole, the managing director of an old-established firm of manufacturers' agents with a first-class connection in the British Isles, will be in Canada during August. He will be glad if any manufacturers of hardware, woodenware, tools, etc., desiring business in the old country, will communicate with him at the King Edward Hotel, Toronto.

TWO beautiful driveways built with Tarvia Filled Macadam in 1918. Prospect Cemetery, Toronto, Ont. (left) and St. John's Cemetery, Toronto, Ont., shown below.

Tarvia Reduces Road Costs—

THE severe Canadian winters and spring thaws demand that roads be waterproof and frost proof.

At the same time construction and maintenance costs must not be excessive.

Canadian cemetery authorities, like scores of progressive townships throughout the Dominion, have found Tarvia to be the most satisfactory and economical solution of their road problems.

They have found that water cannot work its way beneath the tough, resilient wearing surface—that frost cannot start a "break-up" or raveling—that Tarvia keeps the road as fit in the spring as it was in the fall.

If there are, in your community, plain macadam roads that are beginning to require repairs, an inexpensive treatment with Tarvia will restore the surface, making it smooth, dustless and durable.

Thus instead of a ruined road which would often require expensive rebuilding, Tarvia will keep your roads in remarkable condition for little money.

Taxpayers prefer Tarvia roads because of their economy, as they pay for themselves over and over again through their maintenance cost.

Illustrated booklets describing the various Tarvia treatments free on request.

Tarvia

Preserves Roads
Prevents Dust—

Special Service Department

This company has a corps of trained engineers and chemists who have given years of study to modern road problems. The advice of these men may be had for the asking by any one interested.

If you will write to the nearest office regarding road problems and conditions in your vicinity, the matter will be given prompt attention.

Editorial Comment

Canada's Trade With Greece

IT is gratifying to observe the manner in which Canada's trade with Greece has been expanding. In 1914, the year before the war, the value of our exports to Greece was the paltry sum of $11,934. For the fiscal year ended March 31st last, the value of Canadian exports was $29,588,984. While Greco-Canadian trade has undoubtedly been assisted and stimulated by the extension of Canadian credits, it is significant that of the $29,588,984 of exports only $2,747,031 was paid for out of the credit from Canada to Greece.

Of our trade with Greece during the past fiscal year, the bulk of the business was done in foodstuffs. Over five and a half million bushels of wheat valued at slightly over fourteen million dollars were exported, together with 130,262 cwt. of fresh beef valued at $2,473,798 and 751,289 bbls. of flour worth $7,820,390. Among other large exports were 7,212,800 lbs. of sugar valued at $606,144; 642,054 lbs. of cheese, worth $191,695; 397,928 lbs. of sole leather valued at $259,645; boots and shoes worth $521,291; knitted woollen clothing worth $140,000 and other woollens worth $2,060,273. In short, there was a pretty wide variety of goods shipped, indicating that it seems reasonable to expect that a permanent export trade can be built up with Greece.

It may not be generally appreciated that the area of Greece has been largely extended by the terms of the Treaty of Peace with Turkey. Practically all of Turkey-in-Europe, with the exception of Constantinople and its environs, has been given to Greece and in addition she has been ceded the islands of Imbros, Lemnos, Tenedos, Samonthrace, Mitylene, Samos and Chinos, all islands whose people are largely Greek. She is also in control of an important area on the mainland of Asia Minor, including Smyrna, the chief port along the Asia Minor coast. All these territorial extensions increase the power and prestige of Greece and should make her a valuable customer for Canada.

Canadian credits to Greece have so far amounted to $25,000,000, made up of $20,000,000 for the purchase of manufactured products and materials required by the Government of Greece and $5,000,000 for the purchase through the Greek Government, on behalf of citizens and residents of Greece, of goods produced in Canada. Against the former, only $7,537,737 has been applied, this consisting of purchases of military equipment and manufactured goods; against the latter, no purchases have yet been made. If the extension in our trade with Greece already indicated is a result of the credit established, there appears to be considerable ground for this supposition, then it would appear as if ample justification had been furnished for the credit advanced in the case of this particular country.

A Treatise on Japanese Trade.

WE commence the publication in this issue of the very exhaustive address on Canadian-Japanese trade which was delivered by the Canadian Trade Commissioner to Japan, Mr. A. E. Bryan, at the annual general meeting of the Association at Vancouver. Mr. Bryan made the long journey from Japan to Canada for the express purpose of bringing before the manufacturers of the Dominion the desirability of doing all in their power to develop trade between the two countries. He went into the subject very fully, speaking from that store of information which he had collected after a thorough study of the situation, and it is only fitting that the results of his investigations should be given to the members of the Association in full in these columns.

Mr. Bryan dealt with his theme in a systematic and business-like way, first laying the foundation for a more detailed survey of the field by outlining the general situation of Japanese trade, with references to the extent of that trade, the financial position of the country and its resources. He then proceeded to give details of the trade of the country in various commodities, showing just where Canadian manufacturers could take advantage of

the Japanese market's demand for manufactured products. His address was rounded out with a lot of excellent advice as to how business should be transacted in order to secure the best results.

As was pointed out in our convention issue, the subject of export trade was very much to the fore at this year's annual meeting, and quite deservedly so. The manufacturers and business men of British Columbia are keenly alive to the desirability of getting a share for Canada of the immense trade that is bound to develop in the next few years in the Orient, and they saw to it that their views in this regard were impressed on eastern delegates. This larger outlook is to be commended and it is to be hoped that the efforts of Mr. Bryan and others to arouse interest in export trade will meet with a worth-while response.

Canadian or New York Funds?

IT is apparently a moot subject whether Canadian exporters should or should not make quotations on the basis of "payment in Canadian funds." For various reasons it would appear desirable that the policy of quoting in Canadian funds should be followed, but there are arguments advanced against this course. For example, it is contended that in stipulating payment in New York funds, Canadian manufacturers are able to quote on the lowest possible level, thereby attracting business. Further, it is claimed that there is greater stability in the New York quotation.

Mr. D. H. Ross, Canadian Trade Commissioner to Australia, in discussing the question brings forward some interesting considerations. He says, for instance, that in Australia, a quotation in New York funds undoubtedly conveys the impression that the industry so quoting is dominated or controlled by United States capital or else that the industry is enjoying some advantage not apparent to the buyers. "In seeking for a more extensive market in Australia it is eminently desirable that any suspicion of the idea of taking (what may be construed as) an unfair trading advantage should be removed. The sentiment of 'trading within the Empire' was never stronger in Australia than at the present time, and Canadian exporters should not discount this pronounced desire by raising such obstacles (and impressions) as quoting for payment for their goods in other than Canadian funds."

On the question of the impression given by the lower rate on New York funds, Mr. Ross says that this carries no weight, for the Australian importer is daily *au fait* with the disparity between Montreal and New York conversion rates and can readily compute his f.o.b. or landed costs accordingly. "Before placing an order it is only natural that Australian buyers will compute how much merchandise their pound sterling will secure for them from Canada, the United States, or whatever country they may receive their quotations from. The rate of exchange or conversion,—the same as marine freight, insurance, etc.,—is one of their items of cost, and they will place their order in the country where they can secure the largest quantity of goods, of the quality they desire, for the least amount of their own money."

Impartiality of Judicial Bodies.

A REASONABLE attitude has been taken by the Association in its representations to the Ontario Government with regard to filling the present vacancy on the provincial Workmen's Compensation Board. It is contended that in order to ensure the successful working of the Compensation Act, it is essential that the Board should enjoy, in the highest degree, the full confidence of all parties and particularly of both the employer and the employee. The Board is not a commission of arbitration; its work, in at least one of its most important phases, is purely judicial and it may very well be regarded as a judicial body. This being the case, members of the Board should be neutral and unbiassed and not subject in any way to class interest. The Association appeals to the Government to maintain its policy of keeping patronage out of public appointments and to secure for the Workmen's Compensation Board the services of an impartial commissioner.

Since the coming into force of the Workmen's Compensation Act, in 1914, the manufacturers of the province have co-operated loyally in endeavoring to make it work successfully but, from the outset, they never contemplated the possibility of the Board being anything but in the strictest sense a judicial body. To change the character of the Board, by appointing the nominee or the representative of a class directly interested in the operation of the Act, particularly at a time when the burden on employers has been substantially increased, is a course which might endanger the continued successful operation of the Act.

A Determining Factor in Wage Increases.

THAT the cost of living shall no longer be the determining factor in decisions regarding wage increases is the view now being taken by the British Industrial Court. Hitherto the awards of the Committee on Production in Great Britain, and, following them, the awards of the Interim Court of Arbitration, have provided for wage increases intended to be commensurate with cost of living increases. Also there was a common provision for a rehearing every four months in order that if the cost of living were further increased there might be consideration of an equivalent increase in wages.

A recent decision of the British Industrial Court, however, has been on a different basis. The court takes the position that no increase in the scale of wages is

ecessarily due on account of increase in the cost of living, ut that in place of it the value of the work done must e the determining factor. To quote the specific words f the court in this decision, "The remuneration of the arious classes of workpeople should, in ordinary cir- umstances, depend on the value of the work done, and the alue of the work done depends upon the state of the iarket and the demand for the products of the work- iop." The court held this opinion in the case of a de- iand for an increase in wages on the part of the engineer- ig and foundry trades, and also in a case dealing with ie ship-building and ship-repairing trades.

Referring to a bulletin on this subject issued by the Ianufacturers' Association of Connecticut, the New York *ournal of Commerce* says: "This is an illustration of governmental institution acting in the same manner as ie Merchants' Association of New York during the har- or tie-up in the attempt to bring the relations of labor, ipital and the public back to a position of sound economic :ability and fair dealing as between all the interests ivolved. Courage like this is the one thing needed above ll others, of course, always provided the course decided pon be based upon truth and justice to all. Also, the ritish Ministry of Labor has commented upon this de- sion with open and frank approval, saying that 'it has ng been seen that the effect of an increase in wages to eet the increased cost of living is still further to increase ie cost of living, and it will be appreciated that if the ad of the Industrial Court is followed, the "vicious rcle" may be broken' The American people are face to ce with the climax of such a policy of what may better called a vicious spiral. The policy cannot continue for- er, and the only thing that can stop it is increased pro- iction. To increase production there must be increased ficiency upon the part of labor. Of course, lessening of nsumption will bring prices down, but by a process of dustrial stagnation and decay that will spell the ruin iown as 'hard times,' unemployment and financial nic."

---

skatchewan's Industrial Future.

T is gratifying to observe that the government of the great grain-growing province of Saskatchewan is iking steps to secure the development of the natural sources of the province. In a recent address before the skatoon Board of Trade, Hon. C. A. Dunning, one of le foremost members of the Martin administration, gave a interesting outline of the programme that has been pped out by the new Bureau of Industries and Labor i the interests of industrial development. There is to l a survey made of the resources of the province, with a w to ascertaining both their extent and the possibility their use in manufacturing. This applies to clay posits, timber, coal, oil and gas in particular, while ention will also be given to water powers and the beet gar industry.

In taking this step, the example of Alberta is being followed to a certain extent; but there is no doubt that Saskatchewan will enter upon the undertaking with that zeal and originality which has characterized its policy in many other directions. While up to the present time, grain-growing has been the paramount industry of the province, provincial pride will sooner or later see to it that the other resources of the great prairie country will be made use of, to the advantage of the people. When this day dawns, it is not too much to expect that a greater degree of sympathy with the problems of manufacturing industry in other parts of Canada will develop among the grain growers of the West, while there will be more appre- ciation of the desire of many Canadians to see the fullest possible development of the natural resources of the country.

A Return to the Open Shop.

IN a recent editorial the Toronto *Mail and Empire* asks the question whether the reaction from the ex- cessive demands of labor unionism is to be the open shop again. After referring to the situation in Great Britain, where for decades industrial interests have regularly nego- tiated with the unions, and where to-day, owing to unconscionable demands, employers are beginning to won- der whether the open shop may not be a way out of their difficulties, the editorial proceeds:

"In the United States the triumph of the United States Steel Corporation, and later the railroads, has had marked effect. The strikes on these have been failures. On the railways new men have been gradually broken in to take the place of switchmen and other "out- law" strikers. There is a general disposition now to fight strikes and not to yield to further threats. The labor situation has taken an easier turn. But the growth of Los Angeles is perhaps the most notable triumph of an anti-union policy. Los Angeles, which used to be far down in the list of cities, has passed San Francisco, But- falo, Milwaukee, New Orleans and Cincinnati. Perhaps the movies are partly responsible, but the main fact is that Los Angeles has been the open-shop city of the United States. Labor is not less well paid, and not less prosperous. But unions are not recognized. No walking delegates have jobs there. While building in San Fran- cisco is at a stop, it is flourishing in Los Angeles. Bank deposits are more numerous, are larger, and progress is everywhere more marked—because there is no union stifling.

"While manufacturers and other dealers could pass on increasing costs to the general public, they were more or less indifferent toward keeping down costs. The de- mand was so abnormal that to get output fancy prices were paid for common labor. All over the world the reac- tion in consuming capacity is noticed, and trade is more or less cautious in most lines. The period of a 'buyer's market' is fast approaching. This makes for economy and a fight for efficiency, and where in the past few years Labor Unionism has gone to excess business is likely to be compelled to get to a more normal basis of operation."

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Executive Committee Meets

The first meeting of the newly-elected Executive Committee for 1920-21 was held at the head office on Wednesday, July 14. The president, Mr. J. S. McKinnon, and the second vice-president, Mr. J. R. Shaw, were both present. A good deal of important business was transacted, including the authorization of the formation of a hat manufacturers' section. The following applications for membership were accepted:

ALBERTA.

Calgary	Simmons, Limited, E. C. Bromley	Additional Representative.
Medicine Hat	Canadian Western Steel Corp., Ltd., D. J. Kennedy	Bars, Angles, etc.
Medicine Hat	Saskatchewan Bridge & Iron Co., Ltd., E. G. S. Bennett	Pole Line Hardware.

ONTARIO.

Brantford	H. K. Ferguson Co., John F. Lutkenhouse	Factory Builders.
Delhi	Robert Quance Co., Ltd., Robert Quance	Lumber, Lath.
Fort William	Canadian Feed Manufacturing Co., Ltd. H. J. Sterling	Stock Food.
Guelph	Fred Grills Hat Co., Ltd., F. R. Ramsey	Hats
Hamilton	W. D. Shambrook & Co., W. D. Shambrook	Aluminum Ware.
Hamilton	Steel Co. of Canada, John C. Callaghan	Additional Representative.
Leamington	H. J. Heinz Company, D. T. Zahniser	Additional Representative.
London	O-Pee-Chee Gum Company, J. K. McDermid	Chewing Gum.
Oshawa	McLaughlin Motor Car Co., Alex. W. Bell	Additional Representative.
Toronto	Algoma Steel Company, R. E. Nicholson	Additional Representative.
Toronto	Dalton Mfg. Co., Ltd., F. Dalton	Dresses, etc.
Toronto	Gutta Percha & Rubber, Ltd., Jas. S. McMurray	Additional Representative.
Toronto	The International Nickel Co. of Canada, Ltd., C. E. Macdonald	Additional Representative.
Toronto	The Louis McLain Co., Ltd., Louis McLain	Aluminum Ware.
Toronto	Purdy Phonograph Co., R. J. Purdy	Phonographs.
Toronto	Sanderson, Pearcy & Co., Ltd., J. D. Craig	Paint.
Woodstock	The Kennedy Car Liner & Bag Co., Ltd., B. C. Nelson	Car Liners.

MANITOBA.

Winnipeg	The L'Air Liquide Society, G. A. Brown	Additional Representative.

QUEBEC.

Montreal	Canadian Tube & Iron Co., Ltd., W. L. Davies	Additional Representative.
Montreal	Simmons, Limited, A. W. Johnson	Additional Representative.
Montreal	Simmons, Limited, R. Bradshaw	Additional Representative.
Montreal	Simmons, Limited, J. W. Abbott	Additional Representative.

BRITISH COLUMBIA.

New Westminster	Heaps Engineering Co., Ltd., John Heaps	Machinery, etc.
Vancouver	Henry Birks & Sons, Ltd., W. M. Carson	Jewellery, etc.
Vancouver	Wm. Braid & Company, George L. Beveridge	Teas and Coffees.
Vancouver	Canadian Foundries & Forgings, Ltd., George Mather	Additional Representative.
Vancouver	Canadian General Electric Co., Ltd., Henry Pim	Additional Representative.
Vancouver	Canadian Ingersoll-Rand Co., Charles Sangster	Additional Representative.
Vancouver	Cluett, Peabody & Co., Lorne Nash	Shirts, etc.
Vancouver	J. W. Gehrke Co., Ltd., J. W. Gehrke	Stationery.
Vancouver	John K. Miller Co., Ltd., W. R. Nelson	Sheet Metal Work.
Vancouver	Morrison Steel & Wire Co., Ltd., H. H. McDougall	Wire Products.
Vancouver	Simonds Canada Saw Co., Ltd., Geo. C. Luders	Additional Representative.
Vancouver	Steel Co. of Canada, Ltd., D. B. McCoy	Steel Products.
Vancouver	J. S. Tait, J. S. Tait	Cast Iron Pip
Victoria	Baker Brick & Tile Co., C. T. De Long	Brick, Tile.
Victoria	Canadian Lignaite Co., Ltd., John Howshall	Fertilizers.
Victoria	Gabriola Shale Products, Ltd., D. W. Campbell	Brick, Tile.
Victoria	Sidney Island Brick & Tile Co., Ltd., J. L. Skene	Brick, Tile.
Victoria	Silver Foam Soap Mfg. Co. Ltd., J. O. Mann	Soap, etc.
Victoria	Victoria Brick Co., Ltd., W. A. Luney	Brick, Tile.

Total, 44 applications.

Quebec Division and Montreal Branch

By R. W. GOULD
Secretary, Quebec Division, C.M.A.

The past month has been one of comparative quiet in the Quebec Division of the Association, a sort of reaction after the strenuous days of June.

The Montreal Branch Executive met on July 7th, the first meeting of the new executive with the recently appointed chairman, Mr. F. W. Stewart, presiding. There was a splendid attendance.

The question of the appointment of an Industrial Development Committee for the Montreal Branch was discussed, the functions of this committee to be the compilation of information calculated to assist manufacturers from other countries who desire to locate subsidiary plants in the Province of Quebec. A provincial committee with similar duties has already been appointed. The Montreal executive decided to name Messrs. F. W. Stewart, B. W. Coghlin and Lt.-Col. W. J. Sadler as a provisional committee for the purpose of enquiring into this subject and fixing upon ways and means of conducting the work of such a committee so that it would be most effective. This provisional committee has arranged to meet on August 10th next when the first work in this connection will be carried out.

At the last executive meeting it was decided to adjourn the monthly sessions for the months of July and August, but owing to the fact that several urgent matters have come up for consideration during the past fortnight Chairman Stewart has called a special meeting of the executive committee to be held on August 11th next, when matters demanding attention will be handled.

Standing committees for the ensuing year were elected at the last meeting of the Montreal executive as follows:

Reception and Membership—
B. W. Coghlin (Chairman).
A. H. Brittain.
W. H. Miner.
Paul E. Joubert.
F. R. Whittall.
(F. W. Stewart).

Municipal Affairs—
Art. Harries (Chairman).
E. C. Budge.
Jos. Daoust.
(F. W. Stewart).

Legislation—
Julien C. Smith (Chairman).
Wm. Rutherford.
F. G. Daniels.
(F. W. Stewart).

Finance—
F. W. Stewart (Chairman).
W. H. Miner.
I. Greenberg.

Industrial Relations—
John Lowe (Chairman).
Paul E. Joubert.
Geo. A. Slater.
Jas. L. Waldie.
J. A. Richard.
(F. W. Stewart).

Commercial Intelligence—
A. H. Brittain (Chairman).
Jos. Daoust.
A. S. A. Falle.
(F. W. Stewart).

Ex-Officio—
Sir Chas. B. Gordon.
T. P. Howard.
Col. W. J. Sadler.

The executive in reply to a letter sent out by the principal of the Montreal Technical School decided to do whatever lay in their power to assist graduates of that institution to secure positions in the manufacturing plants of this city.

In connection with the new budget taxes it was decided that Chairman F. W. Stewart, F. H. Hopkins and W. R. Granger be named a committee with power to add to its numbers to make a study of the new taxation regulations during the summer with a view of submitting a memorandum to the Dominion Executive Council of the Association this fall, embodying suggestions, that, if the latter body deemed fit, might be passed on to the Federal authorities, suggesting ways and means by which the present taxation system might be improved. The question of the establishment of a branch of the Association at Lachine was discussed, but was laid over for a future meeting. Lt.-Col. W. J. Sadler, chairman of the special committee handling the Emergency Fund for the Association in this Province, submitted a report upon the progress which had already been made in this work.

The applications of the following new members were passed upon: Colgate & Company, L. B. Holliday & Company, Limited, and the Sanatogen Company of Canada, Limited, all of Montreal.

W. A. Desbarats, former chairman of the Graphic Arts Section here, has returned to Montreal after an extensive trip to the United Kingdom and on the Continent.

The Graphic Arts Section is preparing for a survey of the printing trades of the city to be made about the first of October. The printing trade in this section is experiencing the usual "dog days" slump in business, but reports indicate that so far 1920 business is very much in excess of that of last year during the corresponding period.

On July 10th the members of the executive of the Montreal Branch had the pleasure of entertaining the executive members of the National Association of Manufacturers of the United States. Arrangements were made with the Montreal Harbor Commission so that in the morning the distinguished guests were taken for a trip around the harbor front. They expressed themselves as being deeply impressed with the activities which they saw and stated that the busy hum of industry at both Toronto and Montreal had amazed them. A luncheon was held in the Oak Room of the Windsor Hotel, after which the guests were taken on an auto tour of the city. The luncheon was presided over by Chairman F. W. Stewart, who expressed the pleasure with which the members of the local executive greeted their kinsmen in business from across the border. Stephen C. Mason, president of the United States Association, replied, expressing the appreciation of the welcome that had been extended to them by the Canadian Manufacturers Association since their arrival in Canada. Joseph Beaubien spoke on behalf of the French manufacturing interests of Canada. The visitors left for their respective homes that night.

Ontario Division

Meaford Council and Board of Trade Meet

A large and representative meeting of manufacturers, merchants and farmers under the joint auspices of the Meaford Town Council and Board of Trade was held in the Armouries, Meaford, on Friday, July 23rd. The chair was occupied by Mr. T. W. Moore, President of the Board of Trade, and amongst those present were: the Honorable F. C. Biggs, Minister of Highways; the Honorable D. Carmichael; Mayor S. A. Gray, Meaford, and H. Macdonald, Secretary, Ontario Division, C. M. A. The directors of the different factories in town were also among the invited guests. The banquet was largely attended by business men and citizens of the town generally. Mr. Biggs, who was on an inspection trip of the roads in this section of the Province, speaking on the Hydro Power situation, said he was in favor of Hydro

Mr. Macdonald, after intimating an apology from Mr. J. S. McKinnon, President, C. M. A., referred to the progress of Canadian industry. In 1917, 6,500 manufacturers were listed in the "Canadian Trade Index," who were making 6,251 different commodities. In the 1920 issue of the Index, the number of manufacturers had increased to 8,500, and the number of commodities to 8,445, showing that about 2,200 new articles were introduced into the list of Canadian manufactures in the past three years.

In 1900, we had 14,650 manufacturing establishments, which had increased in 1917 to 34,392. The capital invested in these industries in 1900 was nearly $447,000,000, which had increased in 1917 to $2,787,000,000, while the value of products, which in 1900 was given at $481,000,000, had increased to $3,016,000,000 in 1917.

From the agricultural standpoint, it was interesting to note that of the estimated area fit for cultivation in Canada of 440,000,000 acres, only 43,000,000 acres are being so far cultivated. There were 730,000 farms under cultivation in Canada. Mr. Macdonald referred to the recent convention of the Canadian Manufacturers' Association held in Winnipeg and stated that there was every promise of a record crop; and that industrial relations were exceedingly satisfactory.

The total trade of Canada in 1918 amounted to nearly $2,549,000,000 and last year totalled $2,352,000,000, so that generally our trade figures for the past year could be viewed with considerable satisfaction.

Referring to the growth of the C. M. A. as representative of Canadian industry, he stated that in 1900, the membership totalled only 300, no memberships being held west of the Great Lakes. At the present time, the Association had in its membership 4,100; had five Divisions and active Committees, which were fully equipped to co-operate to serve the interests of Canadian industry and to aid in the development of our home market and the extension of foreign trade. Other speakers were: Mr. Frank Kent, of Seaman, Kent Co., Limited, and Mr. O. A. Keffer, of the Meaford Manufacturing Co., Limited.

Toronto Branch

Scholarships Scheme for 1920

The Educational Committee of Toronto Branch has directed that application be made to members of the Branch for fifty-five scholarships of the value of $25 each, to be awarded in connection with the regular day courses in the Central Technical School for the present year. The success of the scholarships scheme has been very marked. The support and good will evidenced by the interest and generosity of Toronto manufacturers has brought much encouragement to those who are responsible for the conduct of technical education in Toronto.

A Fraternal Gathering of Manufacturers

Visiting members of the Board of Directors of the National Association of Manufacturers and their Toronto hosts photographed on the steps of the Harbor Commissioners' Building in Toronto on July 9

In his report of last year's results, Dr. McKay states that from both regular and special day classes in the Central Technical School, there is a constant stream of young people entering industrial life with an ever-increasing equipment of mental culture and practical efficiency. The scholarships given by the manufacturers are a strong factor in helping the School to hold students until they have secured an adequate preparation for life. As far as possible, the special classes are industrial, that is, are designed to give definite instruction in the closely related industries.

After the experience of four years, the Educational Committee of Toronto Branch cordially recommends the scheme to the manufacturers. It is obvious that the efficiency acquired by three years' industrial course at the Technical School makes students thus equipped desirable candidates for vacancies in our industrial corporations. The names of this year's donors of scholarships will be published in INDUSTRIAL CANADA as formerly.

United States Manufacturers Visit Canada

A pleasant international event took place last month, when, on the invitation of the Executive Committee of the Canadian Manufacturers Association, the directors of the National Association of Manufacturers of the United States, who had been holding their annual meeting in Buffalo on July 7 crossed into Canada and visited Hamilton, Toronto and Montreal on July 8, 9 and 10. Preliminary arrangements for the visit were completed at a meeting in Niagara Falls, Ontario, on June 23, attended by Mr. Boudinot, secretary of the National Association and Messrs. Walsh and Stirrett of the C. M. A.

The party of visitors included the president of the National Association, Stephen C. Mason, the McConway & Torley Co., Pittsburg, Pa.; the treasurer, Henry Abbott, Calculagraph Co., New York, N.Y., and the following members: Joseph Bancroft, Joseph Bancroft & Sons Co., Wilmington, Del.; J. H. Franz, American Rolling Mill Co., Columbus, Ohio; John Kirby, Jr., The Dayton Mfg. Co., Dayton, Ohio; E. B. Leigh, Chicago Railway Equipment Co., Chicago, Ill.; W. K. Leonard, Piqua Hosiery Co., Piqua, Ohio; A. J. Lindemann, A. J. Lindemann & Hoverson Co., Milwaukee, Wis.; Geo. L. Markland, Jr., Philadelphia Gear Works, Philadelphia, Pa.; Constant Meese, Meese & Gottfried Co., San Francisco, Cal.; Enos Paulin, Ferracute Machine Co., Bridgeton, N.J.; Charles L. Taylor, The Taylor & Fenn Co., Hartford, Conn.; Wm. P. White, Lowell Paper Tube Corporation, Lowell, Mass. The party also included the general manager and assistant treasurer, J. P. Bird, General Offices, New York, N.Y.; the secretary, George S. Boudinot, General Offices, New York, N.Y., and the general counsel, James A. Emery, Union Trust Bldg., Washington, D.C.

On the evening of July 7, the National Association entertained a number of members of the C. M. A. at dinner at the Clifton House, Niagara Falls, Ont. July 8 was spent in Hamilton, where the visitors were entertained by the Executive Committee of the Hamilton Branch; in the forenoon several industries were visited and after that a luncheon was tendered. July 9 was spent in Toronto. The Harbor Commissioners provided a yacht for a tour about the harbor and entertained the visitors and local members at a luncheon at the Sunnyside Pavilion. Later the Toronto Branch Executive entertained the visitors at dinner at the Scarboro Golf Club. The president of the C. M. A., Mr. J. S. McKinnon, presided and welcomed the guests. Speeches in reply were delivered by President Mason and the general counsel, James A. Emery.

On his return to New York, George S. Boudinot, secretary of the National Association, sent the following letter of appreciation to the C. M. A.: "We are back on the job; tired, but with most pleasant recollections of the splendid trip last week. No use for us to try to express our appreciation in mere words. In the vernacular of the States, "you did yourselves proud." Our only regret is that we did not have an opportunity to see more of your wonderful country and meet more of your good people. However, maybe the future has something of that sort in store for us."

Canadian-Japanese Trade Conditions*

General Resume of the Present Trade of Japan—Why Japan is a Country With Which we Should Trade—Present Extent of Canadian Exports to Japan—How to Increase Our Exports

By A. E. BRYAN

Canadian Trade Commissioner to Japan

THE total trade of Japan during the year 1919 amounted to 4,272,332,497 yen. Imports came to 2,173,459,880 yen; while exports from Japan were 2,098,892,617 yen. There was therefore an unfavorable balance of trade to the extent of 74,587,263 yen. This was in contrast to the previous year 1918, when there was an excess of exports over imports of 293,956,835 yen, and also to the year 1917, when exports were more than 567,193,941 yen over imports into Japan.

There were also favorable balances in 1916 and 1915, so that, taking the total returns from 1915 to 1918, we find that Japan shipped goods out of the country in value 1,408,058,043 yen more than she imported. This is the cause for all the prosperity which our Eastern Ally has enjoyed since the outbreak of war. For five years prior to 1915, Japan had always had an unfavorable trade balance. In fact, if we go back to the year 1868, ten years after Japan was first opened to foreign trade, we find that in *thirty-one years out of forty-seven* Japan suffered an unfavorable balance of trade. What was the result of this sudden prosperity? The country became flooded with surplus money—the people had more of it than ever before. In fact, Japan experienced the same economic changes that took place here in Canada, only to a more marked degree. Huge sums of money were put into industrial pursuits. New factories sprung up like mushrooms overnight. Plants were built to turn our articles which never before had been made in the country. Orders for goods came flowing in from all over the world. The banks of Japan, as well as officialdom, stood right behind this enterprise and encouraged industry right up to the hilt. At the same time Japanese steamship companies enlarged to take care of the growing business. The tonnage of Japan increased from 1,577,025 tons at the end of 1914 to 2,533,361 tons (end of March, 1920).

A. E. Bryan

Canadian Government Trade Commissioner, Yokohama, Japan

I only mention these facts to show why the imports into Japan increased from 596,735,725 yen in 1914 to 2,173,459,880 yen last year, an increase of some 264%. With this prosperity they required more materials of all kinds. They needed iron and steel, machinery, lumber, and structural materials. At the same time the individual Japanese with his accrued profits wished to buy things he had never been able to purchase before. He wanted his private car, his modern besso (or country house), his expensive clothes, in fact everything possible to make himself comfortable. When a Japanese has money he certainly is not afraid to spend it. He is no cheap sport. He will always buy the very best of everything, and in this he feels that he must have imported goods. For instance, I know for a fact that a Canadian piano selling at around 1600 yen in Japan has been purchased by wealthy Japanese gentlemen who really had no use for it as a musical instrument as no one in the family could play. But the piano is considered an elaborate piece of furniture which looks very nice in the well-to-do Japanese house. It makes a favorable impression on his friends when they come to visit him. So, when making such a purchase, he will generally buy the most expensive. If there were two pianos, one Japanese and the other Canadian, and both equal in quality, although the foreign one cost twice as much he would have the imported. In other words there is a market for certain high-class goods in Japan.

Effect of Armistice

The war finished a great deal sooner than the business interests of Japan had calculated, with the result that it found them with large quantities of material on order in the United States and elsewhere. These goods had been contracted for at very high prices and many of them were held up by Government embargoes. When the armistice was signed and embargoes lifted, this material began to flow into Japan on every boat. At first there was a depression just after the armistice and particularly so when firms in America, Africa, India, and even Canada, I was told, began to cancel orders already placed for goods in Japan. However, this dullness proved to be only temporary, the incoming materials were gradually consumed, prices of silk, cotton, rice and other foodstuffs, continued in their upward trend, and in short, business became as brisk as before. Buyers continued to place orders for all kinds of equipment and supplies, so that the import business last year was more by over 505,316,047 yen than it was in 1918. Although exports also increased by 136,771,949 yen, yet the increased imports were so great that they overcame any lead in exports and resulted in the first unfavorable balance of trade experienced in the past six years.

* An address delivered at the annual meeting of the Canadian Manufacturers' Association, Vancouver, June 9, 1920.

Why Japan is a Country with which we should Trade

Standing off in the East, in the same geographical position to Asia as England bears with Europe, we find our little ally, our next-door neighbor, Japan.

The country is 4,283 miles from the city of Vancouver and only takes nine days sailing on our fine C. P. R. boats, vessels which set such a pace for all-around service to the travelling public that no other steamship lines can be compared to them. Indeed it is a thing to be proud of, when one sees these Canadian vessels sail into Yokohama. Everybody knows them, everybody likes them, and every person wants to travel on them. If it is correct that "Trade follows the flag," surely the C. P. R. is our greatest trade missionary and exploiter, and no doubt through the great advertisement that Canada receives through these vessels, is due much of the business that we are receiving from Japan and the Orient to-day.

We are closer to Yokohama by 253 miles than is San Francisco. We are a few hours sailing nearer to Japan than is any other American seaport, while if a line is ever established between Prince Rupert and Japan (and in my opinion there should be), we will find ourselves only 3,815 miles from Yokohama, from which port vessels like the big Empresses could make the trip in less than eight days.

Japan is a country, the total area of which is 176,000 square miles. This includes Korea, Formosa, Karafuto and Hokkaido (Japan proper is 148,700 square miles), which is not quite half the size of this province of British Columbia. But if we take the whole of Canada, we could put eighteen Japans within our borders, and we would still have plenty of room for the British Isles, France, and yes, Germany.

The population of Japan proper is 57,070,936, but, with Korea, Formosa and Karafuto added, amounts to 78,861,856. Thus we see that although Canada is twenty-one times as large as Japan in area, our population is only about one-tenth the size of our neighbor's.

Let us remember then that there are over seventy-eight million people in Japan who must be supplied with goods. Surely such a number must have a large consumption value which we should endeavor to make the most of.

Value of Japan's Business

In order to ascertain the purchasing power of, say, these 60,000,000 people in Japan proper, let us refer to her total imports in 1914 and 1918.

Imports in 1914 ..... 729,431,644 Yen.
Imports in 1918 ..... 1,668,143,833 Yen.

Thus we see that the buying power of Japan for imported goods has increased over 128% since 1914, and last year amounted approximately to $834,071,916 gold.

Is it not worth our while to try and get some of this business from our next-door neighbor. We supply other neighbors, both to the south and across the Atlantic, and why should we not sell to Japan? We ship across and around other countries in order to sell to people who are not our neighbors, who are much farther away from us than Japan, but how about this ally of ours—Japan—just straight across the sea here? We will see later on what our endeavors in this direction amount to.

Financial Position of Japan

Japan never was in a stronger position financially than she is to-day. Let us examine her:

1. *Bank Deposits.*—At the end of 1918 bank deposits of associated banks in Tokyo and five other leading cities aggregated 3,930,000,000 yen, as compared with 880,000,000 yen in 1913. That is, during the war the deposits increased five-fold.

2. *Post Office Deposits.*—At the end of 1913 post office savings accounts totalled 195,000,000 yen. At the end of 1918 they amounted to 562,000,000 yen, nearly three times the amount.

3. *Clearing House Returns.*—In 1913 the total amount cleared through the bank clearing houses was 10,400,000,000 yen. In 1918 they were five times as much, amounting to 53,410,000,000 yen.

4. *Foreign Investments.*—During the war, Japan loaned to her allies 735,000,000 yen.

5. *National Debt.*—While all the other allies greatly increased their national debt, Japan has only increased hers by 8.2 per cent. compared with 1914.

Such is the proud record of Japan financially, and I am sure you will agree with me that, compared with the rest of the world, her position is "A1 at Lloyds."

Has Been Paying Cash

During the last three years Japanese buyers have been supplying irrevocable letters of credit for all goods purchased. She had the money, and was not afraid to spend it; and although she asked for no long credits, very few Canadian firms were on the job with their goods.

On the other hand, you Canadian manufacturers were falling all over yourselves trying to sell to European countries on long credits, on Government advances—because they had no money, they could not pay cash. Of course I appreciate the fact that you were all trying to rehabilitate Europe, but, nevertheless, this is the picture as it actually was. You were trying to sell to European countries which had no money, but did not bother about our wealthy next-door neighbor here—Japan.

Japan's Position as Regards Supplies

Another reason why we should introduce our wares into Japan, is that Japan is in need of many of these same natural products and manufactured goods which you are shipping or are endeavoring to consign to other parts of the world.

Such goods as iron and steel, and manufactures of steel, lumber, asbestos, nickel, lead and zinc, woodworking, and all kinds of iron working machinery, some kinds of paper, sulphite pulp, and food products, many of the absolute necessities which are indispensable to Japan—such things are natural to Canada, are manufactured here in large quantities—why not send a certain percentage of your output to Japan? She is eager to buy from you, but how many of you have been yourselves, or have sent an A-1 salesman to Japan to show them your goods? Do you expect that Japan is going to send buyers over to Canada to see what we make here, when other countries have their salesmen and showrooms located there in Japan, who are studying the market, and who are doing everything possible to supply these peeople with what they want? No! If Canada is to get business, she must go after it. You send your travellers around periodically to see your customers here in Canada, and to seek out new clients—are you doing the same thing in foreign countries? This brings me to my next point.

Let us dissect the imports and ascertain just how much and what Canada supplied to Japan. Of course we must remember that most of the enquiries for supplies sent to this country from Japan never resulted in business. Canadian firms either could not make delivery or preferred to sell to other countries rather than to Japan. In considering these imports, it may be well first to say that I have had recourse to both Japanese and in a few cases Canadian official returns, because there are some items which are of interest to

Canada in Japan

Exterior of the Canadian Trade Commissioner's office in Yokohama

Canada in Japan

Library and reference room in the Trade Commissioner's office

us, but which the Japanese statistics do not record yet separately. Another thing which I might point out and which works great havoc to some of our returns, is the fact that Japanese import figures are not in every case credited to the country of origin, but to the country from where ocean shipment is made. Thus the United States is credited with supplying much to Japan which really should have been credited to Canada. This fact accounts for the great variance between Canadian and Japanese figures showing Canada's exports to Japan.

Canada's total contribution to the 2,173,459,880 yen imported into Japan last year amounted to 6,125,416 yen (or 8%) or a little over ¼ of 1% of the whole amount. In contrast to our measly share of this trade, it may be said that our neighbor to the south of us shipped goods to the value of 766,381,438 yen or 35% of the total imports of the country. During the same year Australia's share was 2.6%, Africa's portion 2.5%, Great Britain's share was 5.8%, Asia supplied 49% of the whole, South America a little under 1%, Europe about 1½%, so that we see that Canada sold to her next-door neighbor on the east much less than any of the countries just mentioned. This should not be the case. We are not getting our proper share of Japan's business, the reason for which I will explain later on. Our imports in 1918 were larger, totalling 7,775,180 yen, which was nearly ½ of 1% of the total figures. Although these figures seem small and disappointing in one sense, they are rather pleasing to me in another. During the war our office was not in regular business owing to the fact that our Trade Commissioner at that time went off to the front almost as soon as the first shot was fired. Although our interests were well taken care of by my good friend Mr. Crowe, the British Commercial Attache, yet he could not be expected to actively engage in the promotion of Canadian trade.

How Sales Have Increased

I arrived in Japan in April, 1918, and whether as a result of any efforts on my part or not, the fact remains that our sales in 1918 increased by more than 204% over those in 1917, when our exports to Japan only amounted to 2,557,108 yen. In 1916, they totalled 1,666,230 yen; in 1915, 1,063,000 yen and in 1914, 1,073,000 yen. Thus the year 1918 is so far a record for Canadian imports into Japan and therefore it will be in order to consider the returns for this year so as to see what we supplied to Japan, particularly as the full returns for 1919 have not as yet been issued.

In 1918, I said our exports to Japan totalled 7,775,180 yen or about ½ of 1% of the total. The Canadian official returns tell us that we exported approximately 10,546,082 yen. The difference between these two amounts, 2,770,902 yen, must give us about the sum total of Canadian goods which were shipped from American ports or through American export houses and for which we did not get the proper credit.

Now, let us run through these imports. In each case we will compare our figures to those of the United States. This will give you some idea of the market potentialities for the various products and will show you what a nonentity Canada really is, when considering business efforts with our Japanese neighbors. I will take them in the order which they are shown in the Japanese official returns:—

Animals and Plants (Imports in 1918)

	Yen.
Total	166,308
Canada	23,004
U.S.	18,131

This is one of the few items where we top our southern neighbor. The best we ever did before was in 1917, when we shipped animals and plants to the value of 3,651 yen.

I was up in Morioka last summer in Northern Japan, and was visiting the Koiwai experimental farm owned by Baron Iwasaki. Here I saw a very fine assortment of thoroughbred cattle and horses. The cattle, some two hundred in number, were for the most part black and whites or Holstein. With great pride the Manager, Mr. Toda, took me to a special stable to see the best they had or, as he called it "Ichi ban ii desu"—the very best they had. This proved to be a Holstein bull, bought from Evandale Farm, Brockville, which as you probably know is owned by Mr. Hardy. This was said to be the best bull in Japan. There is a certain market for thoroughbred stock of all kinds, as the Japanese Government is doing everything possible to improve the stock of all animals. Some Canadian sheep have recently been imported for this purpose.

Malt (Imports in 1918)

	Yen.
Total	1,422,000
*Canada	Nil
U.S.	529,514
Australia	829,488

Here the Japanese returns do not credit us with anything, but we evidently shipped via U.S. ports about 6,000 bushels valued at over 20,000 yen according to Ottawa returns.

* Canada over 6,000 bushels at 21,238 yen, according to Canadian Returns.

Most of the malt comes from California. In talking about Canadian malt to some of the brewers in Japan, it was said that a bushel of Canadian (42 lbs.) malt weighs more than American (37 lbs.), and does not yield any more extract, while the duty and freight of course are also computed on the weight which brings the price up to a higher figure, and that the freight rate from Canadian points is also higher. If Canadian malters can remedy these defects, there should be a market in Japan for this product.

Australian exports of malt to Japan, in 1918, were over ten times as much as they were in 1917, so that Canada's competitors here are U.S. and Australia.

Flour and Wheat (Imports in 1918)

Flour—

	Yen.
Total	1,286,639
Canada	
U.S.	510
Australia	253,769

As pointed out in a report I wrote on this subject which appeared in Weekly Bulletin No. 842, the present requirements of Japan amount to about 800,000 bags a month. I think most of our mills are quite familiar with the requirements of this market. The flour sold to Japan is not a first grade flour, although considerable quantities of such can be disposed of to the middle and wealthy class trade. But by far the greatest demand is for a second grade flour to sell to the masses. On account of the high price of rice, many of the Japanese farmers who used to grow wheat are now putting in only rice, therefore, the domestic supply is diminishing and must be made up by imports. The question of whether Canada can again get into this market depends purely upon price. I think as soon as the prices get down to something like normal there will again be an opening in the east for Canadian second grade flour and perhaps for first grade also.

The import duty on flour has recently been reduced from 1.85 yen to 75 sen per 133 lbs., which should help us to land our flour at a somewhat competitive cost with the domestic product.

Wheat—

	Yen.
Total	9,940,529
Canada	
U.S.	
Australia	4,620,578
China	the rest of it.

In 1919 (last year), imports of wheat increased to 38,530,035 yen. The causes for this great increase were as follows:—

1. The Government took off the import duty.
2. Great shortage of rice in Japan.
3. Japanese firms were able to buy up at cheap prices all the wheat that had piled up on the wharves in Australia during the war.
4. Speculation on the part of large Japanese buyers.

I went through one of the largest Japanese flour mills in Japan last month and was delighted to find there a Canadian superintendent. He told me that they had used Canadian wheat in the past and would use it now if the price were not so high, but they had been able to get supplies from Australia, Manchuria and China, which was not such a good yielding wheat, and not so satisfactory as regards gluten content, but was cheaper. By mixing the various wheats they had been able to turn out a flour comparing well with anything milled in Canada or elsewhere. They were then running 1,600 barrels a day.

With your Government elevator in Vancouver, there seems to be no reason why Canada should not be able to get back into this field, providing of course that we have just as cheap freight rates as from American points. There are no grain elevators in Japan, so that wheat must be put up in bags which can be stored in warehouses. Australia uses 160 lb. bag, while China uses 185 lb. bag, but the size does not matter much. For further particulars on Wheat Imports I would refer you to Weekly Bulletin No. 842.

Confectionery, Cakes, Jam (Imports in 1918)

	Yen.
Total	117,480
Canada	1,337
U.S.	90,870
Australia	9,471

Under this heading is included confectionery of all kinds, preserved fruits, and jams. Although we supplied about twice this amount in 1916, we have never been very energetic in our efforts to sell confectionery, etc., to Japan.

During the past year I know that a small business has been worked up between wholesale grocers in Vancouver and certain firms in Japan. But the demand as you can see is a very small one, only about $60,000,000 a year. However, the Canadian confectionery that can now be bought in Japanese stores I may say has created a favorable impression, and more of it can be sold, particularly of our high class chocolates, whose only competition is from a San Francisco firm. As the duty is based on weight, and not on price, it is just as high on cheap goods as on high grade chocolates. Consequently the demand is for A-1 goods.

Packing is the most important point here—all chocolates should be put up in tins (as English chocolates are) to withstand the humid climate of Japan. Wax covered boxes are no good—except for winter trade.

Groceries (Imports in 1918)

Under this heading I should not fail to mention groceries, which Japanese returns do not classify separately. But during the last year and a half, we have been successful in introducing Canadian groceries to Japan in value of some 26,000,000 yen and they have given the best of satisfaction. In fact one of the houses in Japan gave me a power of attorney just before leaving to go to a certain wholesaler here and order anything which I think would be saleable in Japan. Prices compare very favorably with U.S. prices, and Canadian honey, jams, potted meats, maple syrup, cereals, etc., are quite well-known now—while Canadian cheese has long been in the market. The demand although not very large is well worth while for B.C. wholesalers to consider. I do not think it would pay for say a manufacturer of only one line to make any particular efforts in Japan. The demand is not great enough now, but is growing.

Whiskey (Imports in 1918)

	Yen.
Total	336,551
Canada	7,830
U.S.	73,418
Great Britain	247,404

Canada's exports of whiskey to Japan last year were more than ever before.

Certain brands of Canadian whiskey have quite a reputation now in Japan and are sold in all the Japanese liquor stores. In fact the agents for one liquor asked my aid a short time ago in helping them locate the Japanese culprits who were putting up Japanese whiskey in old "Canadian Club" bottles and selling it as such.

In speaking of the possibilities of this liquor business in Japan I may say that people there think it will be a long time before there is legislation against the use of liquor in

Japan. The liquor interests are too strong; the profits too large; in fact one of the most remunerative sources of revenue the Government has is from the manufacture of Japanese sake. In 1919-20, estimated revenue from this source will amount to over 109,000,000 yen.

Yes! Japan is a place of refuge for the liquor manufacturers, also a Garden of Eden for the anti-prohibitionist, anti-W.C.T.U. or whatever you like to call them. Unfortunately a great many occidentals now coming to Japan abuse the privilege thrust before them, (probably trying to make up for lost time.) But one sees a few funny cases around the foreign hotels in Japan these days.

Condensed Milk (Imports in 1918)

	Yen.
Total	1,436,372
Canada	13
U.S.	1,355,847
Australia	70,567

England before the war supplied most of the requirements of this article, but now the United States has taken the lead. Both the Borden and Carnation brands of the United States are well-known—as well as the English "Milkmaid" and Swiss "Nestles." In 1914 and 1915, Canada shipped 185,000 yen and 184,560 yen respectively of condensed milk to Japan, but exports fell off entirely during the war. Canadian returns show that we shipped 375,750 yen in 1914 and 297,500 yen in 1915, so that about half our shipments must have gone from U.S. points. Last year I was able to interest a large British firm with branches all over the East, in a new brand of Canadian milk. This was tested by Government analysts and said to be one of the finest milks ever imported into Japan.

Japan has made considerable progress in the manufacture of condensed milk and in 1919 manufactured 1,200,000 cases (4 doz. tins to a case) valued at 6,000,000 yen. This industry has been built up purely by Government assistance.

1. There is an import duty of 5.50 yen per 133 lbs. on foreign manufactured milk.

2. The manufacturers of condensed milk are exempted from paying income tax for the first three years they are established.

3. They are given a bonus equal to the amount of sugar consumption tax paid.

The industry has now so far developed that Japanese concerns can export abroad to such places as China, South Sea Islands, etc. However, the foreign firms named have built up a good business and there will always be a market for about one million yens worth of foreign milk, as its quality is better than the domestic article.

Fish (Imports in 1918)

Salted Herring and Salmon—

	Yen.
Total	99,399
Canada	25,008
U.S.	74,373

I presume that it is not necessary to go into this very fully, as B.C. exporters know well the requirements of this fish trade, most of the shipments being made from this coast. It can be said, however, that this business fell off almost entirely during the war when prices rose so high that it no longer could be sold in Japan. In 1913, we exported to Japan salted fish to the value of 219,902 yen compared to the U.S. figures of 292,534 yen. In 1914, our exports fell to 158,130 yen and the U.S. figures to 166,857 yen. So that we divided this business pretty evenly with our American neighbors. This fishstuff is considered quite a delicacy by Japanese palates. Salted salmon is particularly so at New Year's time, and can often be seen at this time of year done up in a big white envelope with coloured strings or "Noshi" to be given usually as a New Year's present to some close friend.

There is always a market for fishstuff in Japan providing the prices are right.

Canned Fish

The market for canned fish in Japan is very small. In the first place the Japanese have now many canneries of their own, both in Hokkaido, Manchuria, and in Kamchatka. The American Can Co. have a factory in Hakodate to supply the tins for this industry. During 1919, the output of tinned salmon in Kamchatka amounted to 740,000 cases which was much larger than usual. This salmon is exported all over the world, but by far the greatest portion goes to London, where in August, 1918, it was selling at 105 shillings a case delivered.

However, the quality of the Japanese salmon is not to be compared with B.C. red salmon, so that there is a small demand for our salmon in the high class trade, which also buys other Canadian tinned fish of all kinds.

This is chiefly supplied by the wholesale grocery houses. Some business has also been done with Canadian fishstuff in Siberia and China, the fish being bought through Japanese commission houses for re-exportation.

Leather Hides and Skins

Total—	
Hides and skins of bull, ox and cow	6,757,972
Hides and skins of deer	221,425
Waste hide and skin	503,656
Other hides and skins	4,407,170
Leather—	
Bull, ox and cow	977,115
Sole leather	593,413
Sheep and goat leather	689,194
Waste and goat leather	275,302
Other leather	222,057

We supplied none of the hides or skins mentioned above. But this need not interest us at all, as our aim must be to

After Japanese Trade

Representative of a Canadian Manufacturing Company getting pointers from Trade Commissioner Bryan

sell Japan manufactured goods—so let us refer to leather—we find Canada sold in 1918:—

Leather—

	Canada. Yen.	U. S. Yen.
Bull, ox or cow	1,867	270,000
Sole leather	372	576,207
Waste leather	2,098	76,326
Other leathers	....	267,661

I have tried several times to interest Japanese importers in Canadian sole leather and Canadian sample shipments were made, but it was claimed that an American brand of oak-tanned leather was preferred, that it was harder and smoother than the Canadian article. I still contend however, that the Canadian leather is just as good, but it is very hard to break down these prejudices of the Japanese. They are very conservative and hate to buy something different to what they have been accustomed to purchasing. However, I feel sure that one or two of our big tanners will soon get established in this market.

High prices have been a deterrent feature in the case of side leathers, but I think that normally there should be a market in Japan for this class of leather also.

As for manufacturers of leather, there is a small market for leather belting (71,546 yen in 1918) and leather hat bands (585,397 yen in 1918).

Animal Bones (Imports in 1918)

	Yen.
Total	3,369,007
Canada	
U.S.	444,833
Australia	370,514
Argentine	816,728

These bones are used for all kinds of things in Japan. They make tooth brush handles, glue, gelatine, carvings, fertilizers, etc. Canada supplied about 7,000 yens worth in 1916 and small quantities in previous years. It would seem that our meat packing houses should find a good outlet here for this by-product. I know that this business has been done successfully by western packing houses in the past, and hope they will again be in the supply market in the near future.

Caustic Soda (Imports in 1918)

	Yen.
Total	3,256,537
Canada	121,061
U.S.	3,031,597
England	101,824

Before the war, Great Britain supplied about 90 per cent. of the total requirements, but since 1914, she has not been able to make deliveries, and the U.S. got in very strong. There is a very big demand for caustic soda in Japan, and Canada can sell all she can supply. I have had many enquiries for it, and, when one of our Canadian manufacturers was able to supply, same resulted in substantial and successful business for all concerned.

Soda Ash (Imports in 1918)

	Yen.
Total	11,405,021
Canada	
U.S.	8,342,232
England	3,043,326

Here again there has been a tremendous demand which could hardly be met during the last five years. Great Britain had this market to herself before the war, although the U.S. filled in since 1914, but everything points to the conclusion that British manufacturers will again predominate in both the caustic soda and soda ash fields of Japan. On account of her sterling reputation for reliability and honest dealing, Great Britain will not only regain this market but many of the others she unavoidably lost during the war. However, there is a big field here for Canadian competition, and if Canadian firms can come up to scratch I would advise them to study the market requirements of Japan.

Dynamite (Imports in 1918)

	Yen.
Total	2,473,361
Canada	757,181
U.S.	1,690,680

Canada built up quite a reputation for itself during the war on account of the fine quality of dynamite exported to Japan. Prior to 1917, no supplies were received from Canada. It all came from Germany and England. When war broke out embargoes were immediately put on in Europe so Japan had to look elsewhere for her requirements. She imported then from the United States and Canada, but just when the good quality of the Canadian product was proven, the Canadian embargo was made air-tight—so that no more could be had from this source either.

At this time in my capacity of Canadian Trade Commissioner, I received a petition from the largest importer of dynamite into Japan. It may prove of interest to you, if I read a few extracts from this petition. This firm wanted dynamite in the worst way for mining operations in Korea. They had tried American dynamite and Canadian and you shall now hear what they have to say about both:—

"Extract of Petition to His Excellency the Governor-General of Korea and to the Canadian Trade Commissioner made by Seoul branch of a very large Japanese firm in 1918."

"The opening of mining resources, road-making and railway construction in Korea necessitated a yearly increasing supply of explosives. But Korea, having no explosive manufacturing plant within its boundaries, had to rely wholly upon imports from other countries.

For many years past, Glasgow and Hamburg were the two largest suppliers who sent their manufactures to meet the increasing demand. But unfortunately the outbreak of the European war totally stopped the imports from the Hamburg Works. Then followed the British export prohibition of explosives which shut up the other remaining source from Glasgow.

This entire stoppage of import immediately brought about the pronounced scarcity of explosives in Korea as well as in Japan proper, and fabulous prices reaching to about five and six times those just before the war were paid by the consumers, but even at these enormous prices they could not get enough supply.

To alleviate this difficult situation, importation of American explosives was projected by many importers. But upon arrival of American goods, considerable parts of such imports could not pass the Japanese Government's inspection on account of defects and thousands of rejected cases were officially burnt in Yokohama. The American manufacturers were far from satisfying the consumers, owing to their very inferior and dangerous quality and no further shipment was received ever since.

The first shipments from Canada were imported in August 1917, into Japan proper, and Korea. Trials were quite satisfactory and in Korea, especially, the 62% NG Gelignite was at once used by the local government in the Seoul-Fusan Railway construction and several mines controlled by the Mining Department used it as a substitute for the Cherry Brand Dynamite of the Japanese Military Arsenal with very good results.

The imports from other countries were mainly from Canada, in fact we ourselves imported as much as 17,000 cases, or about 75% of total imported during 1917. From these you will note how seriously the Canadian export prohibition has been felt by the Korean miners, who are the consumers of the greatest part of explosives in that market. We shall therefore deem it a great favor if you will kindly extend to us any official help in getting export license for more supplies from Canada."

I sometimes meet pessimists who ask, "How can we compete with the United States?" If there is anything which

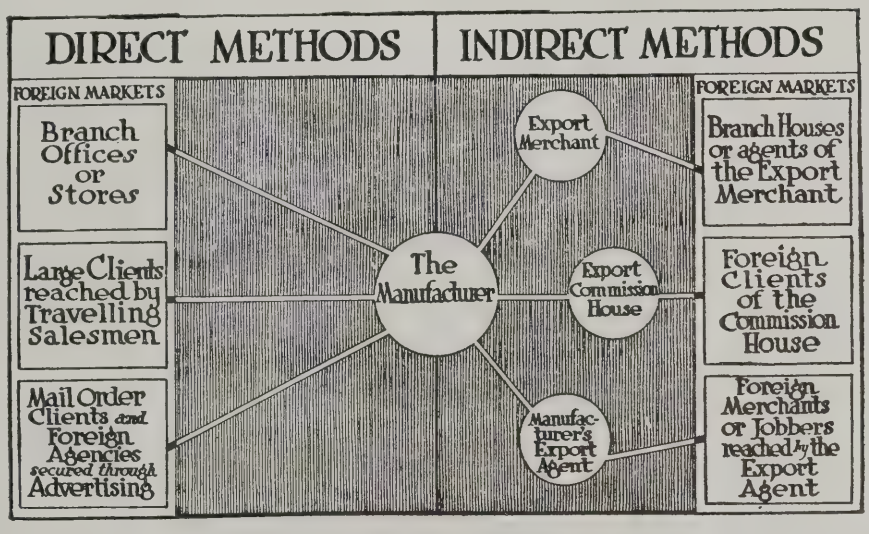
Export Trade from the Viewpoint of the Canadian Manufacturer*

In Two Parts

Part I. METHODS OF HANDLING THE BUSINESS

By S. A. BEADLE
Beadle, Putland & Co., Victoria, B.C.



THE manufacturer who expects to enter foreign trade may choose from a number of different methods. These may be divided into two classes—first, the methods of direct exporting; second, those of indirect exporting. In indirect exporting, the manufacturer organizes an export department and himself exports the goods and pushes the sale in foreign countries. In indirect exporting, the manufacturer utilizes the services of some intermediary outside of his own organization, and has no direct interest in the goods after they have left Canada.

The manufacturer who wishes to export direct must, first of all, organize an export department and place in charge of that department a competent executive. Having established the export department and having decided to do business direct, the manufacturer and the manager of the export department have still to choose from several different methods.

Many manufacturers have established branch offices in foreign countries and conduct their affairs from these local nuclei. When the size of the business and the volume of sales warrant its adoption, this is undoubtedly one of the best and most efficient methods of carrying on foreign trade. As in the case in domestic trade, branch offices enable the manufacturer to divide up his sales force and to get more individual supervision of his selling units and more intimate contact with the market. In connection with the branch offices there may be, as the case requires, warehouses, showrooms, sample-rooms or even retail stores.

Most manufacturers, however (at least in beginning their foreign trade), find it necessary to rely upon the services of individual travellers. A salesman well equipped with information concerning his product, with samples and other information, speaking the language of the market to which he is sent, and possessing the other qualifications which an export salesman must have, should be able to do a large business in most markets provided he does not attempt to combine too many lines. It is impossible to conceive how a salesman representing from six to thirty lines will be able to devote real selling ability to each of these lines. Inevitably the majority of the manufacturers entering into such a plan would be dissatisfied with the result. Applying to export salesmanship the same rule that has been applied to export trade in general—namely, that it must be measured by the same measuring rod as domestic trade—the manufacturer can easily differentiate between good and bad selling schemes.

In almost every market there will be found a certain type of concern that should interest the Canadian manufacturer who wishes to sell abroad. It might be called the local importing house. In many cases it conducts large distributing agencies. The Canadian manufacturer may do business directly with these concerns, but this does not mean that he comes in direct contact with the ultimate consumer.

How the Overseas Markets are Reached

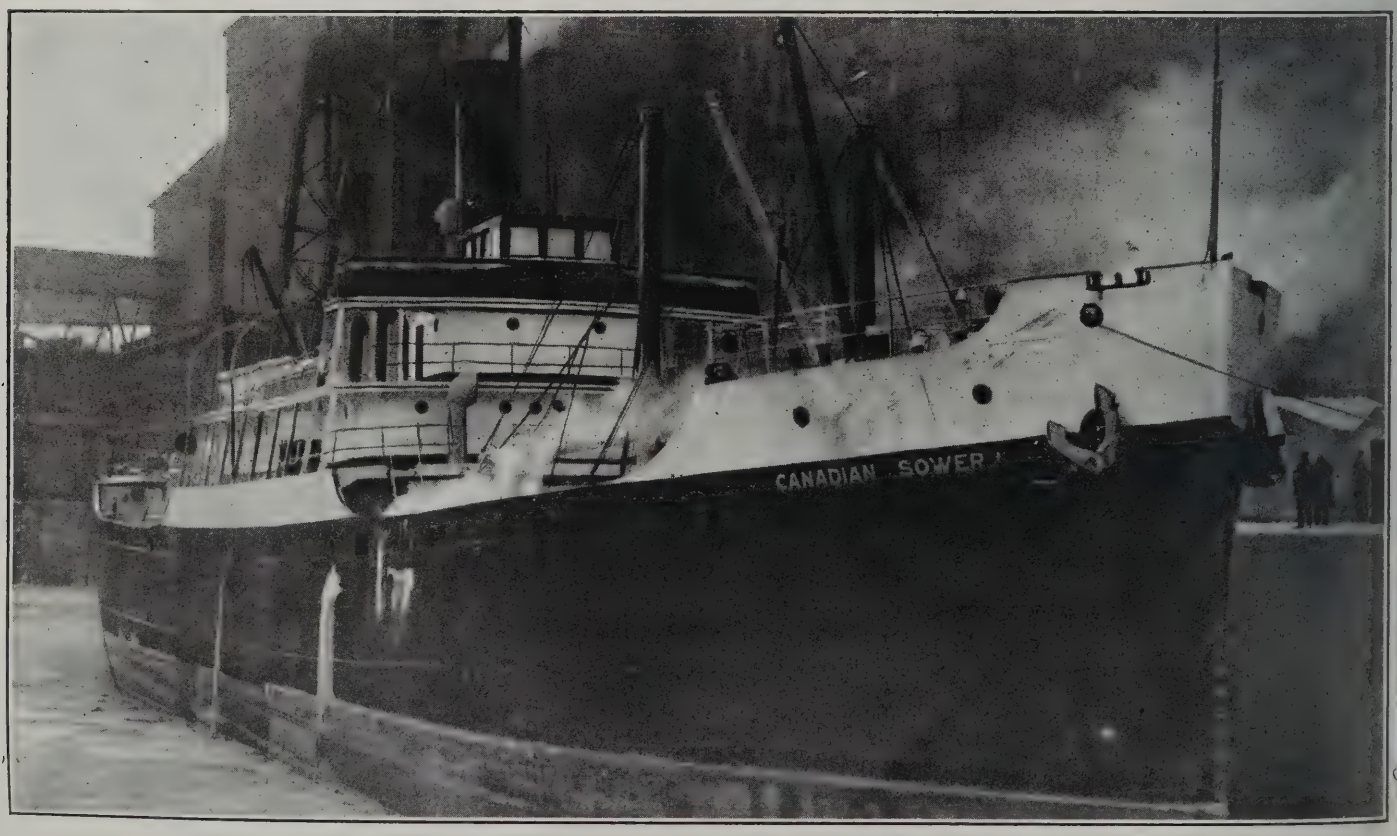
It is necessary for the manufacturer to assure himself as to the credit responsibility of the agent; also he must make all arrangements for manifesting, invoicing and shipping his goods. In many overseas markets these general importers make excellent representatives for Canadian concerns, especially concerns that do not see fit to establish their own branch offices. In the more highly developed markets these agencies specialize in certain lines of business, such for example as machinery, general merchandise and dry-goods. In other markets, less developed, similar concerns will be found handling every known type of merchandise.

The manufacturer in selecting one of these importers to extend his business, will find that he can obtain a large amount of credit information with reference to them. He has at his disposal not only the services of the usual credit agencies but also the records of Canadian concerns that have done business through these houses. Ordinarily the agency will accept representation only for a single manufacturer in any one line.

This method of direct exporting enables the manufacturer to come in closer contact with his markets that he could through any of the indirect methods to which reference will

*Copyright, Canadian, 1920.

presently be made, and at the same time it enables him to utilize the services of concerns that not only have been established for years but are also well-acquainted with their respective local clienteles.



In case the manufacturer desires to use the more exclusive services of an individual representative, he may find responsible persons who are willing and able to push his products in certain foreign markets. Such agents, as is the case in domestic trade, are likely to be less reliable than old established, well-organized importing concerns. But the manufacturer who has used due care in the selection of his agents may find this a successful method of exploiting foreign markets.

If the manufacturer decides to accept either of these last two methods mentioned, it would be well for him to recognize that he can get the best results from such methods only by keeping closely in contact with his representatives. The manufacturer is indeed foolish who appoints his agents and who never comes personally in contact with them or who never sees how they are doing business. It is likely, and has happened time and time again, that some importing concerns in a fruitful foreign market have accepted two or three or even more competing lines, not with the idea of pushing that line but for the purpose of keeping it out of the market. The manufacturer must guard carefully against this type of concern, and the only really effective precaution is not only to draw his contract in such a manner to protect all his interests, but to keep so closely in touch with his agent, either personally or through his trusted representatives, that no improper or unfair practice can overtake his business.

Many manufacturers are, we believe, unduly prejudiced against the middleman in foreign trade. They do not realize the expert services and the real function of the intermediaries in connection with the development of a foreign business. Too many manufacturers are inclined to say to themselves, "This middleman simply takes a profit out of me in the shape of a commission for a service that I could just as well perform myself." Now this is not the case, and we shall endeavor to explain in some detail later the various advantages of the middleman method of doing business in foreign markets. The manufacturer would do well to approach the subject with an open mind and try to discover how he can utilize the services of an intermediary to his own advantage.

In the following paragraphs we shall attempt to define the functions of the professional export houses. The methods which are in use by the various types of professional exporters are not exclusive or distinctive. The various theoretical functions which distinguish one type of exporter from another are not to be clearly illustrated in practice by any one concern. There is a confusion and duplication of functions. One export house may carry on most of its business as an export commission house and another part of its business as an export merchant. It is difficult, therefore, to find clear-cut illustrations of these functions. It must not be supposed that any one exporting house does business exactly as defined. In practice one concern may do business by one, two or three of the methods.

Perhaps the most important of the various methods of indirect exporting is the export commission house. There are many commission houses at all of our seaports. Similar types of exporting houses are to be found in all the large exporting centres of Europe, especially Liverpool, London, Hamburg, Bremen, Copenhagen, Rotterdam and ports of similar importance. Much confusion has arisen in the minds of Canadian manufacturers because they have not clearly understood the functions of the export commission house. The export commission house (or the indent merchant, as he is called in Europe) executes orders in Canada for purchasers located in foreign countries. The professional export com-

(Courtesy of Canadian Illustrated Monthly.)

The S.S. "Canadian Sower" Loading Grain in Montreal for her Pioneer Voyage

mission house, therefore, is not in any sense a seller of Canadian merchandise in foreign markets. It is rather a purchaser of Canadian commodities for the foreign buyer. It charges a commission, not to the Canadian manufacturer of whom it purchases the goods, but to the foreign buyer for whom the purchases are made.

This is the general theory underlying the existence of the export commission house. But, as in the case of so many of our commercial institutions, the practice has developed far away from the theory. This has caused much misunderstanding with reference to the commission merchant's true function in export trade. Manufacturers ask: "Why is it that the export commission house charges a commission both to the manufacturer in this country and to the buyer located in a foreign country?" The reason is that the commission fixed by custom and on which the commission house must do business is too small, and therefore a commission must be charged at both ends.

The second method of indirect exporting is that represented by the export merchant. In practice the functions of the export commission house and the export merchant are almost hopelessly intermingled, and this again causes confusion in the mind of the manufacturer as to the true function of the middleman in export trade. The export merchant in theory does not buy or sell on commission. He purchases the goods outright and sells them outright for whatever profit he can make or for whatever losses he may sustain. The export merchant has attained the greatest importance in markets that are least developed. He is an exporter who in many cases maintains a string of warehouses in a certain foreign market. Frequently he operates retail stores in connection with these warehouses.

The manufacturer who does business with the export merchant does it with that particular merchant because he offers the most satisfactory terms. There is absolutely no essential difference between doing business with the export

(*Courtesy of Canadian Illustrated Monthly.*)

Unloading West Indian Sugar at the Port of Montreal

A commission house cannot properly accept the representation of any manufacturer's line in a foreign market, since in the overseas transaction it primarily represents the foreign buyer. The idea is that the buyer in the foreign market pays it a commission, not for *selling* him merchandise, but for *buying* that merchandise for him at the very best terms obtainable. The manufacturer, therefore, cannot expect the commission house to exploit his goods. He must realize that it will buy his goods only on the very best terms, and only when it has actual orders in hand or can see an opportunity to dispose of them immediately. The manufacturer must not complain if the commission house with which he has decided to do business makes no sales for him. The commission house may have received no orders and therefore cannot be expected to execute them. On the other hand, the manufacturer is entirely released from all responsibility as to the collection of the final payment for the goods. Ordinarily he is paid by the commission house on his usual domestic trade terms. He ships his goods to the commission merchant and generally does not know the name of the purchaser—in many cases not even the destination of the goods.

merchant at Vancouver, Toronto or Montreal and doing business with any jobber or wholesaler in the same city. As in the case of the export commission house, the manufacturer must expect no special selling service when selling his goods to the export merchant. If it is to the interest of the latter to exploit any special line of goods, he will do so. He will buy his goods in the cheapest market and sell them to the best advantage.

The third method of indirect exporting is that which will probably appeal to most Canadian concerns desirous of having their goods exploited and vigorously pushed in foreign markets, but are unwilling to bother with the details involved in actually taking care of all shipments, looking up all the credit ratings and investigating the markets. This method makes use of the manufacturer's export agent.

There are concerns in the Dominion that are doing an increasingly large business by accepting agencies for a limited number of Canadian manufacturers and exploiting their goods in foreign markets. These houses usually specialize in some particular commodity, such as textiles, machinery, boots and shoes, hardware, etc. They charge the manufacturer a com-

mission, usually a larger one than is charged by the export commission house or the ordinary domestic manufacturer's agent. They put real selling service into the distribution of the goods. They are the manufacturer's representatives. At the same time they save the manufacturer all the trouble and annoyance of technical export detail. The type of manufacturer's agent referred to in this paragraph is not the small concern or the individual manufacturer's export agent representing only one or two concerns, and having only desk room on some back street in Montreal, Halifax or Vancouver, but the larger concern representing many manufacturers and doing business on a wholesale scale.

Increase of Export Agents.

In our opinion, the manufacturer's export agent represents the coming method of doing export business through an intermediary. We are inclined to believe that, with the further developments of foreign markets and their increasing advancement and perplexity, the commission house and the export merchant will gradually give way to the more specialized services of the manufacturer's export agent.

There are certain general advantages and certain general disadvantages with reference to both direct and indirect exporting. These advantages and disadvantages are much the same as obtain in domestic trade and which differentiates business done directly through representatives, salesmen, agents, branch houses, branch stores, etc., from indirect business through middlemen, such as wholesalers, jobbers, commission houses and retailers. It is difficult to lay down explicit general rules as to which is best or which is least desirable under all circumstances. In certain cases one method may be preferred and in others a wholly different mode of procedure may yield the most satisfactory results. There are, however, certain general conclusions with reference to direct exporting and the middleman in foreign trade that are worthy of consideration. It may be worth while, first of all, to call attention to the fact that the export commission house or jobber is in a position not unlike that of the commission house or jobber in our domestic trade. Like the latter, the export commission house is a feature of an undeveloped commercial system. With the higher development and increasing complexity of our commerce, the export commission house will surely pass out of existence. This has already happened in Canada and Europe. That day, however, is so far distant that we need not consider it. It is worth while, however, to recognize the fact that the commission house is doing in export trade exactly what the commission house did in domestic trade a few years ago.

The export commission houses and export merchants find their best field in those parts of the world where the population is sparse and trade and commerce is not fully developed. This is true especially in markets where local dealers handle everything from needles to pianos. In those limited markets a profitable business can be carried on only by the concern that is able to furnish commodities for practically all the wants of the community.

The Export House.

The export house is particularly well qualified to represent to the small manufacturer whose volume of sales does not warrant the establishment of foreign representatives. The manufacturer may be disqualified in this respect on account of either the small margin of profit or the limited volume of sales. There are numerous manufacturers in Canada to-day attempting to do a direct exporting business who might be dealing more economically through the export house.

The export houses of the two types mentioned are better qualified to handle foreign business where financing is necessary. Many manufacturers in Canada are unable, or unwilling to give the usual terms that are expected in foreign trade. The export commission houses and the export merchants, who are also bankers, have a large field before them in helping to finance the manufacturer's export business.

The experienced manufacturer's export agent is prepared to handle the foreign business of a firm unfamiliar with overseas trade or a firm that desires to have its products go abroad but does not care to build up an export department or concern itself with export details. The manufacturer's export agent has acquired by long experience an expert knowledge of these details of consular regulations and methods and all of the minutiæ of legal requirements. It has, moreover, an expert knowledge of the freight situation, and by reason of its large shipments it is able to secure the lowest possible rates.

The export house has gathered expert knowledge on credits. In fact, until very recently it had almost a monopoly on this line of information. No other agency has had such facilities for obtaining and keeping up-to-date credit information—although many of the export houses have not made adequate use of their advantage in this regard.

One of the great difficulties that the manufacturer who is dealing direct with customers in foreign countries has to meet with is the problem of settling his legal difficulties. Lawsuits brought in most foreign countries are an almost insuperable obstacle to the independent manufacturer or the manufacturer who does not have personal representatives in each country. It is here again that the export house has a considerable advantage. In short, a more exact and up-to-date knowledge of the export field cannot be obtained by any one except the very largest manufacturer—one who is willing to put a tremendous amount of time, energy and capital into the development of a particular (and perhaps highly specialized) line of business.

Tendency of Germany.

In Germany the tendency among the export houses has been toward the manufacturer's agent type. Most of the successful professional export houses in Germany have accepted the principle of representation; instead of doing business on a commission plan representing the foreign purchaser in Germany, the export house has, rather, represented the manufacturer in foreign markets. In other words, the German middleman in export trade has shown a tendency to act in behalf of the manufacturer and actively push the sale of his goods abroad. This movement has gone so far that in many cases associations of German manufacturers have been formed for the purpose of promoting their interests in foreign markets, and these associations have become, to all intents and purposes, professional export houses, specializing in one line of goods. The same principle has been followed in Canada, which has several well organized

The First Canadian Industries Exhibition

Held in the Royal Agricultural Hall, Islington, London, from June 7th to June 17th, 1920—Lessons to be Learned from it—Differing Opinions on its Success—Difficulties which were Overcome—List of Exhibitors

By J. M. McINTOSH

Manager, Trade Sections Department, C.M.A.

THE first Canadian Industries Exhibition was conceived in a period when the post-war demand for manufactured goods was so keen that the absence of Canadian samples and salesmanship in England appeared to place Canadian export business at a disadvantage, but by the time the Exhibition was opened this demand had been to some extent satisfied. As a result, those enterprising manufacturers who participated in this Exhibition are not likely to speak of it with much enthusiasm. In some respects, however, it will be of value. Canadian products are marketable in the United Kingdom. Indeed, they are an important factor in that and other foreign markets, and as business develops business so will our exports grow.

Trade exhibitions in the United Kingdom are of considerable importance as business developers. From private enterprises they have grown in some instances into large Governmental undertakings and serve as introductions to seasonal selling campaigns. Good salesmanship must adapt itself to the peculiarities of the market in which sales are to be made, and it follows that trade exhibitions, depended upon as they are by British buyers, must necessarily be considered by those who desire to merchandise their products in that country.

The Royal Agricultural Hall
General View of the Canadian Industries Exhibition at Islington, London

From the Canadian Industries Exhibition we may therefore draw some very valuable instruction, obtained possibly at some cost, but after all at a very reasonable cost. We have received reports from a number of different sources, some of which say that it has been particularly useful and others that it was decidedly disappointing. To the one who went there in the expectation of making the venture as an enterprise pay for itself, dissatisfaction would be obvious, but by the one whose vision looks further into the future profitable experience would be gained.

A comprehensive demonstration thoroughly representative of our industrial production sufficient in volume to have filled the Royal Agricultural Hall, would have startled the British buying public out of the belief that all Canadians follow the plow. Such a demonstration was in the minds of those who gathered the proposal and gave it support. The Exhibition fell far short of being comprehensive or representative, and to the extent that it did so may be considered as the measure of its effect upon the public mind, but nevertheless our manufacturing possibilities are now much better known than they were before.

The Exhibition was visited by thirty thousand people; fifty-five thousand buyers were personally invited to attend; one hundred and ninety-four press notices were paid for in twenty trade papers and sixty-nine London and Provincial papers, and in addition, and most valuable of all, were the numerous press comments. It served also to show that Canada is manufacturing in such variety and volume that it is prepared to invade the biggest and most highly developed markets of the world, that we consider ourselves able to "carry coals a long way to Newcastle."

If we then look upon this Exhibition as a sort of preliminary canter, a tuning-up preparatory to greater and possibly more efficiently organized expansion in the future, we must consider whether we are sufficiently tuned up to require anything further in the way of a preliminary canter. The writer submits for the consideration of those whose vision extends beyond the home market the following general observations:

Is it not desirable that the wisdom gained from ventures into foreign markets be centralized, and that all exporters be so organized that the advantages and disabilities common to all may be discussed, and well-defined policies evolved? If Canadian products are satisfactory they will be in demand. As distribution increases, the interest in and knowledge of these products increases, the cumulative effect is a demand for Canadian products which reflects itself in the sales of all who are in the market. Hence, the exporter who enjoys a fair trade is resting on his oars if he does not interest himself in the promotion of trade in other lines.

Inasmuch as trade exhibitions are a part of the British structure in bringing buyers and sellers together, is it advisable to promote our sales in one general exhibition of our own, or would it not be better to take advantage of the invitations extended to us and participate in the British Industries,

Fairs, and other Exhibitions held at appropriate periods? British trade Exhibitions are confined to certain specified lines, and are held at periods when wholesale buyers are about to go into the markets. Hence, an Exhibition of a general character is at a very marked disadvantage. If held early, the buyer will postpone until he sees what the British Industries show. If held late, his requirements may already be satisfied, but if shown side by side with British products the Canadian product has an even chance.

Differing Opinions

In respect to the Fair itself, there was dissatisfaction. In the first place, it got off to a bad start. Most of the exhibits were in England in ample time for the opening of the Fair, originally scheduled for June 3rd, but owing to the inadequacy of some of the shipping documents a number of them were held up by the Customs authorities until bonds were effected for their release. This caused a delay, and the opening was postponed until June 7th. During the first week very few attended, and exhibitors became dissatisfied. What has been described as an "indignation meeting" was held, and some exhibitors threatened to withdraw, but wiser counsels prevailed.

During the second week, as the result of further advertising, the attendance was much better. We have received a good deal of direct evidence expressing satisfaction with the enterprise. One exhibitor says: "I am happy to say that we have done quite a good business, and as this is the first, or, as very aptly put by one of the speakers at the opening luncheon, a milestone, in the history of what we hope to be an annual affair, we are quite satisfied."

Another says: "I may say I had enquiries from business houses operating in Australia, New Zealand and South Africa, and as this is our first Exhibition in England I consider it highly successful."

Praise for the Promoter

Still another letter written to Mr. Montgomery, English promoter of the Exhibition, by the representative of a firm whose products are known the world over, says: "May I take the opportunity to express the appreciation of the majority of the stall holders at the first Canadian Industries Exhibition, of your hard work and initiative in giving Canadian manufacturers this opportunity of showing their goods to the mother country. When we consider that this, the first Canadian Exhibition in this country, was organized, managed and financed by you, an Englishman, without any support whatsoever from the Dominion and Provincial Governments of Canada, and that all great undertakings must have a small beginning, we consider that the Exhibition has proved an unqualified success. The great majority of the firms represented had no cause to be other than highly satisfied with the results obtained. The firm I have the honor to represent, selling an article which is already popular in this country, of course look upon an Exhibition of this nature in the light of an advertisement, and as such it has surpassed our expectations.

"Further, on behalf of the stall holders, I wish to tender our regrets for the unfortunate incidents which occurred in the earlier part of the Exhibition, and to assure you that the behavior of these individuals does not represent the attitude of the manufacturers of Canada."

Sir George McLaren Brown, representing the largest exhibitor, the Canadian Pacific Railway, at an Exhibitors' Luncheon just prior to the close of the Exhibition, is reported to have said that although they had not perhaps obtained immediate selling results, the benefit which the exhibitors would derive from this splendid piece of advertising wou be very great.

Having regard to the organizing work in Canada, th Association was encouraged by many of its members exper enced in foreign trade to introduce the proposal and e courage its members to participate. The Canadian repr sentative of the promoters, Mr. O. C. Pease, displayed co siderable energy and ability during the six months which h had at his disposal, to work it up. He met discouragemer frequently. A few of the early contractors for large block of space afterwards withdrew. Others who might have pa ticipated to their own advantage procrastinated, either lea ing the matter till too late or deciding to come in at th last moment. Others who thought favorably of the proposa at first declined to participate when the value of sterling fe to a point where British buyers found it necessary to canc orders.

On the whole, however, it may be considered in the ligh of an inexpensive experiment. Individuals who participate will determine their future course of action in the light o knowledge born of experience. The Association, as repre senting the collective opinion of the participants, will b better able to advise and serve its members in respect t proposals for the development of foreign trade.

Those who exhibited, as taken from a report by Mr Harrison Watson, Chief Canadian Government Trade Com missioner in Great Britain, as published in the *Weekly Bulletin*, are as follows:

Reducing Labor Turnover by Advertising

Some Instances of the Effective Use of Advertising in Securing Help That Will Stick to the Job — Creating a Favorable Attitude of Mind Among the Workers Towards the Industry

By WILLIAM G. COLGATE

ONE of the most important problems facing the employer to-day is that of labor turnover. The United States Department of Labor estimates industry's loss from this cause as at least one billion two hundred and fifty million dollars a year. This means an average of four million dollars for every working day. Careful analyses has shown also that the cost of breaking in an employee ranges from $25 for trying out an office boy to $300 for training a superior bank clerk. The study of metal plants in the Middle West showed a turnover of more than 150 per cent.; while it was found that the turnover in a large number of Detroit plants averaged more than 250 per cent. A manufacturer who finds that to maintain, say, a staff of one thousand on an average, in operating his factory, he has to hire during a year three thousand men, realizes that the coming and going of two thousand men means constant dislocation, added bookkeeping records, the wear and tear on machinery in training a new worker, lost production due to time lost, not to mention the inevitable wasteful expense incurred by constant breakage and spoilage. It is the combined influence of these factors which forces home the conclusion that one of the best times to cut down labor turnover is before the new employee is hired. For this reason, industrial concerns who have hitherto confined themselves to the bald, conventional "help wanted" advertisement, are now, under pressure of increased production and inadequate help, picturing in large display advertisements the attractions which their particular work has to offer from the viewpoint of the employee.

Well paid positions for girls of intelligence

The exquisitely fine and dainty materials used in the making of high-grade corsets like Gossards demand operators of intelligence, taste and skill. Hence there are always openings here for bright, ambitious girls. Beginners are paid good living salaries. At the end of the year they also receive a cheque for their share of the year's profits. The workrooms are light, cheerful and airy, the surroundings congenial and promotion rapid. If you are intelligent and anxious to succeed you'll be interested in what the Gossard plan has to offer you.

The Canadian **H. W. Gossard Co.** *Limited*
284-286 King St. W., Toronto

Designed to Stimulate Increased Output

It has been found that such advertising—direct, personal and persuasive in its selling appeal—is much more likely to interest the steady, reliable, ambitious worker than the bare, lifeless, meagre classified advertisement. Thus by attracting the right kind of employees at the start, labor turnover has been greatly decreased and a consequent material saving effected. Somehow, the very appearance of liberal display advertising explaining to the prospective employee the advantages of a place to work gives the impression of sincerity, broadmindedness and opportunity, which is almost invariably lacking in the ordinary classified advertisement.

A notable example of the new help wanted style of advertising is that which is now appearing in the newspapers over the signature of the Bell Telephone Company. This corporation is engaged in selling, so to speak, a place to work, which is more than a mere "job," to ambitious young women. Beginning with a series of small newspaper advertisements the Bell Company have gradually extended their efforts until now they have reached a point where large space appeals, coupled with so-called human interest illustrations and well-written booklets, carry the attractive story of telephone operating as an occupation into thousands upon thousands of homes throughout the United States and Canada. Specific arguments that deal with the character of the work, the conditions under which it is performed, its ever changing interest, as well as the provisions made for the health and happiness of the operators are all set forth in plausible and persuasive terms.

"Her's [the operator's] is an enjoyable public service, with every moment crowded with interest and ever-moving, ever-changing life. It is humanity she serves and she sees human nature in every form and every degree."

The above quotation is from a Bell booklet on "An Ideal Occupation for Young Women,"—a fair example of the manner in which the Bell management attacks the problem of help scarcity. In all their advertising the Bell Company lays stress on the important fact that salaries are paid to all who start the regular department training course.

Certain of the pictorial illustrations used are also worthy of note. A view of a practice switchboard in the operators' training department accompanies the heading, "An Enjoyable Public Service." Another advertisement depicts a group of intelligent and pleasant-faced girls having a cup of refreshing tea during one of the rest periods. Every appeal is aimed straight at the respectable, home-loving, dependable girl between the ages of sixteen and twenty-three. The kind of girl who changes her position at the promise of a few cents more an hour is not wanted and the copy tries to make this point clear. In fact, the Company's policy in employing help is summed up in an advertisement headed, "We are looking for Intelligent Girls." The Company's officers appreciate, as any close student of human nature must, the truth of the axiom that, if one wishes to make a thing desirable to the public mind, one must surround it with an air of quasi-exclusiveness. It is to the credit of the Bell advertising that it does this without unduly narrowing the breadth of its appeal.

But the Bell is not the only corporation to employ advertising to fill its depleted forces. Other prominent firms are doing the same thing.

Not long since a company manufacturing men's wear in a town less than one hundred miles from Toronto, issued a booklet explaining the peculiar advantages of its geographical situation in general and the working conditions in the factory in particular. This piece of literature, attractively got up, was profusely illustrated with photographic views depicting actual working conditions in the factory. It, moreover, gave an interesting description of the character of the work performed; the kind of people engaged in it; the hours of labor, wages, and the like. Distributed chiefly in towns and outlying districts round about, it reinforced the advertising in the classified columns of the newspapers. Of course, it has been impossible to trace results directly; but it seems

I Like Telephone Operating

BEGINNERS find the work of telephone operating even more interesting than they expected.

¶ We have some vacancies for girls who wish to enter a desirable and profitable profession.

¶ Working hours are reasonable; protection is afforded in case of sickness; good pay, with numerous opportunities for advancement; cosy rest-rooms for off-duty periods; association with congenial companions; lunch-rooms where food may be obtained at small cost.

¶ Salary commences as soon as training begins and, when once learned, telephone operating equips a girl to earn a good living wherever she may be.

¶ If you would care to learn this desirable occupation, call at

College Exchange Building
Bellevue and Oxford Sts.

The Bell Telephone Co. of Canada

What Classified Advertisement could compare with this in human interest and direct appeal?

fair to assume that the booklet did its share toward bringing in recruits to the ranks of the company's operatives. Here again, as in other instances, much was made of the inducement, "pay while learning," and emphasis was placed on arrangements made for the care and comfort of employees. Quite a contrast, one would say, as compared with the pernicious sweatshop system which filled the mouth of the moral reformer some years ago.

Still another concern, The Canadian H. W. Gossard Corset Co., Limited, through display advertisements in the daily newspapers held out the inducement of a profit-sharing plan to prospective employees with such good results that the advertising had soon to be withdrawn. Advertisements measuring two columns wide by five inches deep were run in a list of Ontario dailies. Although the copy was designed to present a fairly complete picture of working conditions in the Gossard factory, especial stress was placed on the fact that each girl hired participated in the yearly profits of the company up to 10 per cent. of her salary. Other inducements offered were interesting needlework, congenial company, healthful surroundings and the payment of good wages. Each advertisement heading was pithy and provocative in a way to arouse quickly the curiosity, interest, and enthusiasm of girls, normally intelligent and capable, who were looking for something more than a "stop-gap" or mere living. So successful was the series in Canada that it was later used by the head office in Chicago as a means of recruiting girls for the American factories.

Obtaining Extra Help

Again, a rather original device to obtain extra help during a rush season was adopted by a department store in a large American city in the South. The manager of the store, wishing to get the names of saleswomen who might be available for the women's shoe department during the holiday trade, overhauled its payroll books for two years. Sixty names of former employees who might have married were secured and letters sent to them asking them to help out, for part time at least, whether or no they needed the money that would be paid them. The T. Eaton Company, Limited, it may be noted, is now trying out a similar plan, and in the classified columns of the daily press are offering positions to women, married and unmarried, who because of household duties or other ties can only spend part of the day at an outside occupation.

But such expedients, valuable as they may be for emergencies, are, after all, only temporary. For the indispensable condition of permanent help we must look further. Unquestionably, the motive which operates chiefly in keeping an employee in a place is contentment—satisfaction with the work and the circumstances under which that work is performed. Thus we find upon analysis that the thought, energy and skill of the more intelligent and discerning employers of of labor are directed toward the establishment of conditions which, taken altogether, will tend to prevent the disintegration of their forces and minimize the economic losses caused by the departure of trained workers and the consequent "breaking in" of new help.

Humanizing Industry

Such a move indeed may well be considered one of the indispensable preliminaries to the solution of labor turnover. Although in reality the ultimate success of any scheme of this kind postulates a humanizing of industry. So long as the workers feel that their interests are hostile to those of the manufacturers, no form of reward will go far in attaining the co-operation sought. Once, however, a manufacturer has succeeded in bringing about a good spirit of co-operation between himself and his employees, he should not hesitate to tell his fellow employers about it. And the obvious, the most direct, means for the dissemination of such information is through the medium of the press.

Manufacturers who have adjusted their relations with their employees on the basis of post-bellum conditions are in a first-rate position to bid for the services of competent help and by this means grant to outside firms the privilege of learning by what means labor may best be induced to remain constant and contented. Take, for instance, the case of the A. B. Kirschbaum Company, of Philadelphia, manufacturers of men's clothing. This firm recently made the experiment of applying large space to the solution of a strike called in their plant in last December by the Amalgamated Clothing Workers. As everyone familiar with the clothing business knows, December marks what is probably the busiest period in the whole year, as the trade is then working full blast on

Notes on Transportation Matters

Shipments from U.S. to Canada — C.P.R. Cartage Arrangements — Wage Award on U.S. Railroads — Increase in Express and Freight Rates

By S. B. BROWN

Assistant Manager, Transportation Department, C.M.A.

Prepayment of Freight Charges on Shipments from United States to Canada

This question which has been under active consideration ince the latter part of April, is still unsettled. Meetings ave been held between representatives of the Association nd the Railways; also with the Board of Railway Commis-ioners. In addition to this, conferences have been held in ie United States between shippers and railways, as well as ie Interstate Commerce Commission, and just recently a nference was held in Washington and again in New York etween the Canadian Railway Commission and the Inter-ate Commerce Commission, but as yet no decision has been eached. It is expected that the Interstate Commerce Com-ission will give a definite and final decision on this question . the very near future, as a result of the conferences re-ntly held in Washington. It is to be hoped that this de-sion will be of such a nature as to remove onerous condi-ons which have been brought about by the prepayment der in effect since May 1st.

From what has been stated by the Canadian railway com-nies it would appear that the American railroads, while ecuring American money for the through rate to Canadian estinations are paying the Canadian railroads in Canadian nds; thus benefiting to the extent of the exchange on the nadian portion of the rate. In other words, they are eiving more than their legal tolls. There is no question, wever, but that the working out of a system for charging te American portion of the rate on the basis of American ney and the Canadian portion of the rate on the basis of nadian money, is a very difficult problem, and one which uld require the co-operation of Canadian and American ilways. A great number of members have been required to p a considerable sum of money since this order was placed effect, outside of the fact that they have also found it very ficult properly to handle the various accounts. There is no ubt that the decision on this question will be welcomed by l concerned.

anadian Pacific Railway Proposes to Cancel its Cartage Arrangements

The Canadian Pacific Railway by a supplement to its tariff No. 2945 proposes, effective August 15th, to cancel all cartage arrangements in Eastern Canada. For a great num-be of years all railways in Eastern Canada have main-tained cartage agents at a number of the larger centres, for th purpose of picking up and delivering merchandise traffic. Tese cartage companies have acted as the agents of the cariers, in so far as regular cartage traffic is concerned. Th proposal of the Canadian Pacific Railway is rather un-usal, when it is understood that both the Grand Trunk Railway and the Canadian National Railway propose to con-tine their arrangement with their cartage agents.

The effect of the cancellation of this arrangement will necessitate consignees or shippers making special arrange-mets with some cartage agent, or maintaining a cartage serice of their own. If this cancellation is allowed to take effct, it is assumed that the Canadian Pacific Railway, at its different freight stations will treat all cartage services alike; whereas, to-day, on account of their arrangement with the Dominion Transport Co., acting as agents for them, pref-erence is given to that company. One of the results of this cancellation will probably be a congestion of freight sheds.

The Toronto and Montreal Boards of Trade, it is under-stood, have requested the Board of Railway Commissioners to postpone the effective date of the cancellation of the above mentioned agreement. No word has been received from the Board up to the time of writing as to what action will be taken. It is expected that Boards of Trade in various other cities where arrangements will be cancelled, will join with the Toronto and Montreal Boards of Trade in protest.

New Wage Award on the United States Railroads

On July 20th, at Chicago, the United States Railroad Labor Board issued decision No. 2 (Dockets 1, 2 and 3), al-lowing an increase in the wages of railroad employees, other than division or general officers, averaging approximately 21 per cent. Section No. 6 adds 8c per mile for pay to engineers and firemen in the passenger service, and $1.04 per mile in the freight service; while conductors and brake-men are given an increase of 67c per mile in the passenger service, and $1.04 in the freight service. Where the basis of payment is per day, or per month, the additions for passen-ger conductors or brakemen is $1.00 per day, or $30.00 per month; and freight conductors or brakemen $1.04 per day. A day is considered as eight hours, and a month as 25½ days.

From reports in the press it would appear that the Can-adian railway officials intend to adopt this award in Canada. In fact, Hon. Dr. Reid, Minister of Railways and Canals, is quoted as having stated in Vancouver that the Canadian National Railway would adopt the award. It is stated that the award in the United States will add in round figures $600,000,000 to the payrolls of the railroads, which, in turn, the railways of the United States propose to collect from the public, by a further increase in freight or passenger tolls; this increase to be in addition to the proposed increase of approximately 30 per cent. in Eastern and Southern terri-tories and 24 per cent. in Western territory.

Forty Per Cent. Increase in Express Rates

Following closely upon the application of the railway companies for an increase in their freight rates, the Express Traffic Association of Canada, on behalf of a number of the express companies, filed an application for an increase in their rates of 40 per cent. In support of the application statements of the Canadian and Dominion Express Companies are submitted, showing the total expenses and total revenues for the years ending June 30th, 1913 to 1919, and the period ending March 31st, 1920, in the case of the Canadian Express, and May 31st, in the case of the Dominion Express. The Canadian Express Company's net loss for all these years amounts to $96,439—and the Dominion Express Company's net loss to $2,817,209.99. The large disparity between the

Canadian and Dominion Express Companies' amounts, may be due to various causes:

(a) The larger earnings of the Dominion Express.

(b) The larger expenses.

(c) The contract which they have with the C. P. R., which requires that they pay one and one-half times the standard first class rate, as compensation to that Railway Company.

Up to the time of writing no date has been set for the hearing of the express companies' application.

Thirty Per Cent. Increase in Freight Rates

On July 9th, 1920, the Railway Association of Canada, on behalf of various railways in Canada, filed with the Board of Railway Commissioners an application for authority to increase their freight rates by 30 per cent. There is no attempt in the application to supply any detailed information, or authoritative figures in support thereof. From this it is assumed that the railways are preparing detailed statements, showing their actual position, for submission to the Board of Railway Commissioners. The Transportation Committee of the C. M. A. held a meeting on July 15th, when this question was given very careful consideration. It was the opinion of the meeting that counsel should be retained for the purpose of assuring the proper consideration of this question, to the end that any increase which may be allowed must be based on statements submitted by each railway, showing their actual position, bearing in mind particularly the position of the Canadian Pacific Railway.

From press reports, and information at hand, it would appear that it is the general opinion of the public, shippers and consumers, that some increase in freight rates is necessary, but that without any information of a definite nature before the public it is unable to say that the amount requested is proper. A great many of the shippers are opposed to the principle of horizontal increases in freight rates. To anyone familiar with these conditions, the effect is quite obvious. In fact, as a result of the 15 per cent. and 25 per cent. increases, many of the rate fabrics have been thrown out of line, which condition will certainly have to be remedied. The members will have received circular No. 276, advising in regard to this question. It has been stated that only one hearing will be held in regard to this question, on August 10th, at Ottawa.

New Rolling Mill

Dillon Crucible Alloys, Limited, of Welland, Ontario, Have Installed a 10-in. Mill

The Dillon Crucible Alloys, Limited, of Welland, Ontario, have installed a 10-inch rolling mill, which is at present in operation. The new mill has a capacity from ¼-inch to 2⅜-inch rods and squares. Nine men are employed at present, but from three to five more will be needed when the mill is running to capacity.

Home Products Fair

Larger than Ever, Will be Held in Victoria, B.C., from September 20th to 25th, inclusive

The Home Products Fair will be held in Victoria, B.C., from September 20th to 25th next, inclusive. We are informed that the Fair this year gives promise of being much larger and more representative than any previously held, and as those that have gone before have been highly successful we look for still bigger things this fall. As the name implies, it is a "Home Products" Fair, and those who are interested in British Columbia products, either as manufacturers or users, would be well advised to patronize it.

Recent Fires

Serious Fire Losses at Medicine Hat, Alta., St. John, N. and St. Thomas, Ont.

The building and plant of the Saskatchewan Bridge & I Company at Medicine Hat, Alberta, were entirely destro in a recent fire. The value of the equipment is estima at $250,000.

On the morning of July 20th, the Provincial Chem Fertilizer Company's plant at East St. John, N.B., destroyed by fire, causing a loss of about $100,000, pa covered by insurance. As the plant was some distance fr the city, the fire apparatus arrived too late to save building. The plant is owned by R. D. Patterson and built by him in 1891.

A serious loss, estimated at over $100,000, was sustai when a fire occurred in the plant of the Canada Iron Fo dries, Limited, at St. Thomas on July 29th. The patt storage room, pattern room, store room and the roof of casting foundry were burned as well as the material sh and shipping room of the Dominion Brake Shoe Compa Limited. Nearly all the patterns of the Michigan Cen Railway Company, valued at $30,000, were stored with Canada Iron Foundries.

Europe's Recovery

Reconstruction Activities are Gradually Bringing Engl and France Back to a Normal Basis

It is gratifying to note the progress being made Europe, more particularly in England and France, in task of reconstruction. The question on every business ma lips no longer is, will the Allied nations be able to pull th selves out of the appalling situation in which nearly years of gruelling war has left them, but rather how s will these countries again be on a normal basis.

A year ago Government expenditures in England w exceeding Government receipts at a rate which see to make bankruptcy in national finances a dangerously p able eventuality. To-day, thanks to the courage which E land has displayed in facing its financial burdens and levy the necessary taxation, this condition has been so far rever as to place Government receipts ahead of Government penditures and instead of bankruptcy a substantial reduc in the British national debt is a prospect of the not distant future. British export trade continues to improve although British labor is still giving some cause for con this situation is vastly better than it was twelve months

In France the peasants have settled down to hard w realizing that in this alone rests their own and their c try's salvation. It is said that in many sections of Fr the farmers are working seven days a week in an effort t their utmost and the eminently satisfactory crop rep coming from most parts of France would seem to testif the effectiveness of their efforts. The resumption of wor French factories located in the territory held at one tim another during the war by the Germans is proceeding slowly, but compared to this time in 1919 the recover noteworthy, ranging anywhere from 45 to 75 per cent.—*The World's Markets, published by R. G. Dun & Co.*

On page 278 of the July number an item referring to Murray Company of Canada, Limited, states that they taken over the plant of the Wilson Chemical Company, ited, at St. John, N.B. This statement is incorrect. Murray Company have not taken over the Wilson plant have rented space and are carrying on their business t

Parliamentary Legislation During Past Year

Circular No. 268 of the Legal Department—Digest of Federal and Provincial Bills Affecting Manufacturing —Action taken by the Association—Disposal of the Bills

THE following is a digest of the legislation affecting manufacturing introduced during the past year in the Dominion Parliament and Provincial Legislatures. The first column gives the official number of each bill; the second column gives the gist of the bill; the third column indicates the action taken by the Legislation Committees of the Association through its Legal Department; and the fourth column shows the final disposition of the bill.

Every bill brought forward was carefully considered, and where manufacturers were concerned, proper steps were taken,—in the case of Dominion Legislation through our Ottawa office, and in the case of Provincial Legislation through the Divisional Secretaries under the direction of the Legal Department,—to safeguard their interests. In such cases, briefs were prepared pointing out the probable effects of objectionable measures, and where it was thought advisable, deputations waited on the legislatures to express their views.

1. FEDERAL BILLS

SENATE

Bill	Object	Action Taken	Disposal
D	To extend meaning of "employer" to include any number of persons, companies, etc., having interest in common.	Conferences held.	Passed.
M-5	To allow any 30 persons to form a board of trade.	Action not considered necessary.	Passed.
O-3	To continue Director of Coal operations in force till end of next session.	Conferences held; whole fuel situation investigated; views put before Government.	Passed.
Y-2	To give Minister power to call for information from any person or firm *re* conditions of employment.	No action necessary, as information is simply for administrative purposes.	Passed.

HOUSE OF COMMONS

Bill	Object	Action Taken	Disposal
3	To place steamboats on inland waters under Railway Commission.	Opposition of previous years continued by correspondence and interviews.	Dropped.
19	To consolidate Patents Laws.	Comprehensive brief submitted; chief recommendations accepted.	Dropped in Committee.
20	To regulate import, sale, etc., of drugs.	Drug section circularized; brief submitted; chief recommendations accepted.	Passed.
27	To regulate the branding of foods and drugs.	Several delegations visited Ottawa; extensive correspondence with members of Government and Parliament.	Passed.
28	To prohibit the mixture of maple syrup and maple sugar with other substances.	Interviews with Minister; briefs submitted and such changes secured as were asked for by manufacturers before third reading in Commons; other changes now considered necessary.	Passed.
29	To regulate manufacture and sale of honey.	No action considered necessary.	Passed.
37	To regulate copyright.	Comprehensive brief submitted; deputation waited on Minister; numerous conferences; extensive correspondence; views accepted.	Dropped in Committee.
47	To regulate minimum rate of interest payable by Banks (4%).	No action considered necessary.	Dropped in Committee.
49	To regulate steamboat inspection.	No action considered necessary.	Passed.
50	To regulate quality and weight of fish and containers.	Fish packers consulted; views presented.	Passed.
103	To extend time of Oleomargarine Act until 1st March, 1922.	Representations made that legislation should be enacted making legal for an indefinite period the manufacture, sale, and importation of Oleomargarine; compromise reached, and one year extension.	Passed.
104	To regulate packing of fruit.	No action found necessary.	Passed.

BILL	OBJECT	ACTION TAKEN	DISPOSAL
126	To amend Bankruptcy Act *re* inspectors' fees, administration, etc.	No action found necessary; amendment being simply to facilitate administration of Bankruptcy Act passed in 1919, which became effective 1st July, 1920.	Passed.
157	To amend Business Profits War Tax Act.	Repeated representations made against renewal; numerous conferences with Government; extensive correspondence with members.	Passed, but tax reduced
158	To amend Income War Tax Act.	No action considered necessary.	Passed.
165	To regulate sale and inspection of commercial feeding stuffs.	No action considered necessary.	Passed.
167	To increase charge for registered letters to ten cents.	No action considered necessary.	Passed.
178	To allow private interests to engage in the manufacture of industrial alcohol.	This legislation was introduced after delegations had interviewed the Government and pressed for the enactment of legislation likely to result in an adequate supply of industrial alcohol.	Passed.
182	To license exports.	Strongly opposed; interviews with Government; objections presented.	Dropped in Committee
183	To amend Special War Revenue Act.	Numerous suggestions of amendments made to Minister, which in main were adopted.	Passed.
199	To make loans to shipbuilders.	Strongly supported; deputations to Cabinet.	Passed.
217	To give Railway Board control of coal and other fuels.	Closest possible touch kept with whole coal situation.	Passed.
	To amend Insurance Act, 1917, by imposing tax on unlicensed fire insurance companies doing business in Canada.	Numerous delegations visited Ottawa, protesting against proposed change.	Dropped.

2. PROVINCIAL BILLS

1. Ontario Division—1920 Session

BILL	OBJECT	ACTION TAKEN	DISPOSAL
60 Partnership Act.	To consolidate Law of Partnership.	No action thought necessary, as bill simply clarifies and declares the existing partnership law.	Passed.
65 Sale of Goods Act.	To codify law *re* sale of goods.	Amendments based on British Act submitted and adopted.	Passed.
82 Cream and Milk Purchase Act.	To regulate inspection of cream and milk.	No action considered necessary.	Passed.
100 Load of Vehicles Act.	To limit load of vehicles during March and April.	No action considered necessary.	Passed.
115 Factory, Shop and Office Building Act.	To forbid use of endless belt elevators.	No action considered necessary.	Passed.
117 Factory, etc., Amendment Act.	To repeal provision giving municipality power to regulate hours of work.	No action considered necessary.	Passed.
120 Privy Council Appeals Act.	To abolish appeals to Privy Council.	No action considered necessary.	Dropped in Committee
150 Assessment Amendment Act.	To make dividends from shares in manufacturing business taxable.	Strongly opposed; deputation to Minister; special counsel employed, amendment vigorously contested in Bills Committee of Legislature.	Passed.
166 Factory, etc., Act Amendment.	To prohibit all Sunday and night work in bake-shops.	Co-operated with Bakers' Section in opposing.	Dropped.
226 Minimum Wage Act.	To establish board with power to fix minimum wages for women.	Investigated; consulted ex-Chairman Manitoba Wage Act; not considered objectionable.	Passed.
252 Stationary Engineers' Act.	To establish boards to examine candidates.	Approved, subject to examinations being conducted under Government auspices. Numerous conferences with Deputy-Minister of Labor, Chief Factory Inspector, etc.	Passed.
211 Workmen's Compensation Act.	To increase scale of compensation from 55 per cent. to 75 per cent. and increase pensions.	Comprehensive briefs prepared; two deputations to Cabinet; reduction from 75% to 66⅔% secured.	Passed.

2. Maritime Division

(a) NOVA SCOTIA

	Bill	Object	Action Taken	Disposal
1	Employment Agencies Act.	To do away with fraudulent agencies.	Approved, and support given in Legislature.	Passed.
2	Workmen's Compensation Amendment Act.	Increases in rates of compensation.	Brief submitted; successfully opposed increase in scale of compensation from 55 to 66⅔%.	Passed.
3	Minimum Wage Act.	To regulate hours and wages for women.	In line with National Industrial Conference resolution in regard to wages.	
4	Native Ores Act.	To encourage working of native ores by granting refund of royalties on coal.	No action considered necessary.	Passed.
5	Mineral Rights Act.	To vest in Crown all minerals except limestone and building.	No action considered necessary.	Passed.
6	Factories Act Amendment.	To establish a basic eight hour day.	Strongly opposed; numerous conferences held.	Dropped.

(b) NEW BRUNSWICK

1	Workmen's Compensation Amendment Act.	To increase compensation to widows, etc., and to permanently disabled.	No action considered necessary.	Passed.
2	Factories Act.	To consolidate laws for protection of factory workers; inspection put under Workmen's Compensation Board.	Carefully considered; not regarded as objectionable.	Passed.
3	Corporations Tax Act.	To impose 2 per cent. tax on net premiums paid to unlicensed insurance companies.	Briefs, with amendments submitted; chief recommendations accepted.	Passed.
4	Water Powers Development Act.	To appoint Commission with power to expropriate sites and develop electrical energy.	No action considered necessary.	Passed with alterations.

3. Prairie Division

(a) MANITOBA

	Bill	Object	Action Taken	Disposal
1	Workmen's Compensation Amendment.	To increase scale from 55 per cent. to 66⅔ per cent. and increase benefits to widows.	Representations made and compromise effected after conferences and negotiations.	Passed.
2	Electricians' License Act.	To abolish right of factory engineers to repair plant machinery.	Amendment successfully opposed.	Dropped.
3	Temperance Act Amendment.	To require manufacturers to buy alcohol through Government vendors in ten gallon quantities.	Carefully investigated, and representations successfully made.	Dropped.
4	Industrial Conditions Amendment Act.	To recognize the right of employers and employees to organize for any lawful purpose.	Co-operated with general body of employers in opposing Anti-Injunction Bill, the result being that bill was dropped and present amendment substituted.	Passed.

(b) SASKATCHEWAN

1	Bureau of Labor Act.	To set up a bureau to gather information *re* labor troubles, hours, conditions of employment, etc., and to administer the Factories' Act, the Employment Agents' Act, etc.	No action thought necessary, the information being for administration purposes.	Passed.
2	Factories' Act Amendment.	To limit hours for women, young girls and youths to 48 per week; also to regulate construction and operation of elevators.	Statistics and information presented.	Passed.

(c) ALBERTA

1	Workmen's Compensation Act.	To increase benefits to workmen to 55%; to widows $30.00 per month, and to children $7.50 per month.	Numerous conferences and extensive correspondence.	Passed.

4. British Columbia Division

1	Workmen's Compensation Act.	To increase benefits to dependents of workers.	After full consideration, increases not opposed, as it appeared no material addition to burden on industry would result.	Passed.
2	Mothers' Pensions Act.	To provide pension of $42.50 per month for mother and one child under 16.	No action considered necessary.	Passed.
3	Eight Hour Day in Lumber Industry Bill.	To introduce eight hour day in lumber industry.	Co-operated with the other organizations opposed to Bill in presenting to the Government the views of manufacturers; the object in view being attained.	Dropped.

Doubts having arisen as to the status and powers of the Board of Commerce, the Board submitted a stated case to the Supreme Court of Canada to determine whether, in fact, Parliament had power to create the Board of Commerce. A copy of the stated case being served on the Association and other representative bodies, the Legal Department instructed Mr. W. N. Tilley, K.C., as Special Counsel, to represent the Association on the argument. Meantime, the officers of the Board of Commerce having resigned, and the Supreme Court of Canada being equally divided in its judgment as to its constitutionality, the Government carried an appeal to the Privy Council, which is now pending.

Yours faithfully,

H. MACDONALD, *Secretary.*

J. E. WALSH, *General Manager.*

H. W. MACDONNELL, *Assistant Secretary, Legal Department.*

Niagara District Industrial Association Congress

AS the culmination of several months co-operative organization on the part of the industrial centres located in the Niagara Peninsula, a unique publicity programme was successfully carried out in the Niagara district on Monday, Tuesday and Wednesday, August 2nd, 3rd and 4th, with the result that manufacturers throughout Canada, United States and even Great Britain have had their attention concentrated on this favored district as a suitable place to establish branch industries.

The Niagara District Industrial Association Congress, as it was called, grew out of an organization of the local Boards of Trade in Niagara Falls, Bridgeburg, Port Colborne, Welland, Port Robinson, St. Catharines, Merritton, Thorold, Port Dalhousie, the Township of Thorold and other towns and villages, comprising sixteen in all. This was under the Chairmanship of Mr. W. M. German with Mr. Louis Blake Duff as the capable General Secretary.

The object of the Congress was to bring together as many as possible American and other manufacturers for a three days "close-up" view of the electrical and transportation developments taking place in the Niagara district.

Finance, Advertising, Names, Reception and other committees were formed, adequate funds were secured by a pro-rata levy on the municipalities concerned and the Names Committee made an exhaustive compilation of firms likely to be interested in locating in the district. Each municipality set to work compiling advertising matter featuring present manufacturing firms, and setting forth in vigorous fashion the general advantages of the Niagara Peninsula and of their own towns in particular.

Invitations were sent out lavishly accompanied by the advertising matter mentioned above and every preparation made to ensure the visitors every opportunity of getting in personal contact with the district and of inspecting the splendid industries that have in recent years been established there.

The Conference opened at Niagara Falls on Monday, Aug. 2nd, at 12.30, with a luncheon at the Refectory in Queen Victoria Niagara Falls Park, where they were the guests of the Park Commissioners and welcomed by Commissioner Dr. H. Y. Grant and by Mr. W. M. German, Chairman of the Congress.

Immediately after luncheon the party to the number of about two hundred were taken through the Ontario Power Company's plant, where they viewed the immense turbines and generators producing electrical power, and later were driven in autos to the power canal to view the gigantic operations there being carried on. Earth and rock excavations, steam shovel work and rock crushing plants were inspected and the afternoon terminated with a view of the fore-bay at the Queenston end of the new power canal where the openings for the flumes are now being blasted through the cliff at Queenston Heights, giving a power head of 305 feet and capable of ultimate development of over 500,000 horse power electrical energy.

Returning to Niagara Falls, the guests were entertained at a banquet in the Clifton House, where the wonders of Niagara power were fitly presented by such speakers as Senator Robertson, Mayor Stevens, Mr. W. M. German and Mr. H. G. Acres of the Ontario Hydro Electrical Power Commission. Tuesday was transportation day and the programme included an auto trip along the Niagara Boulevard to Bridgeburg, Fort Erie and Crystal Beach, where luncheon was served in the Casino, the railroad officials present supplying the oratory. The party were here picked up by Port Colborne motorists and motored to that thriving town, where they were conducted through the International Nickel plant by Manager John More, inspected the harbor, the Maple Leaf Milling plant, the Canadian Furnace plant, and at Humberstone were met by the Welland automobilists, who carried the party down the new cement highway along the canal to Welland, where a reception was held at the Club, an address of welcome being presented by the Mayor. The party were then driven around on a tour of inspection of Welland's many industrial plants, and at 6.30 were entertained to a most delightful dinner held in the skating rink, the ladies of Welland kindly assisting in extending the town's hospitality. Mr. M. Vaughan, Chairman of the Board of Trade, presided, and the principal speakers were Senator Robertson, who outlined the transportation situation in Canada and Mayor Alex. C. Lewis, who spoke on the Deep Waterways Ship Canal and predicted that in the near future sea-going vessels from all over the world would be plying the waters of the Great Lakes and the new Welland Canal. Mr. Warren D. Howe, of Chicago, expressed the appreciation of the American guests of the Congress at the opportunity given to visit the Niagara district, and promised

Saskatchewan's New Bureau of Industries*

Functions of the New Bureau are Outlined—Its Objective will be the Development of Saskatchewan Resources for Saskatchewan—What Some of These Resources are and Their Known Extent

By HON. C. A. DUNNING

THE main aim of the Government for the new bureau will be industrial development of known resources rather than exploration in search of resources at present unknown. If we attained the ownership of the resources a survey would be necessary to base a policy for future administration of them, but until we attain or control our resources the Government is determined to stick to the encouragement of industrial development of our known resources—an industrial survey rather than a survey of natural resources.

The practicability of every industry which might appear possible of development in Saskatchewan because of the presence of raw material or other favorable conditions, will be investigated by the bureau. So far as possible the facts thus discovered will be made available to any who may be interested in developments of this character.

As industries develop, particularly industries which are based on marketing possibilities in the province, the bureau is prepared to undertake advertising on behalf of the industries without cost to the industry. That is to say: if an industry is built up in Saskatchewan which may contain a number of plants (the bureau is not particularly concerned with boosting one plant) if it depends for its existence on the support of the Saskatchewan people, the bureau will do all it can in an educational way to bring to the people of Saskatchewan the necessity of supporting their own home industry. We think this desirable and necessary especially in connection with the first survey which is to be made.

The Clay Industry

The first industry we propose making a survey of is the clay industry in Saskatchewan. I see some men here who will agree with me that it is certainly in a condition that needs a survey or an operation or something. The constantly increasing cost of lumber is rapidly reducing the margin of difference between permanent and temporary construction. I am told that at the present time the margin of difference in cost between lumber and brick construction is eaten up in the upkeep of the lumber building in five years and as the price of lumber increases the desirability of brick construction will become more apparent. The fire record of this province is not an enviable one and it is brought about by the combination of our large number of lumber buildings with the winds that sweep across our glorious prairie. We must have a development along the line of more permanent construction and hence the importance of our clay industry.

In the three cities of Prince Albert, Regina and Saskatoon, the building permits indicate that half the amount spent on buildings is spent on lumber and half on brick. In 1919 Saskatoon permits amounted to $1,404,590. $448,965 was for lumber construction. Saskatoon gives evidence of a tendency towards greater permanency of building. The whole trend in our cities is to insist on permanent construction for the protection of the city itself. As our cities grow we must expect a greater demand for clay products.

Dominion geological survey reports indicate that we have in Saskatchewan some of the most valuable clay deposits in the world. We have them right here. We have the raw material conditions here for the manufacture of clay products. The industry has not been successful except in the case of one or two heavily capitalized and well organized companies. I am not going into the reasons why the plants have not been successful. I do not know. That is why a survey of the industry is necessary. Has a plant failed because the clay is not the right kind? Did the men operating the business not know enough about it? Were they too far from a reasonably large market? What are the basic facts connected with the industry? In 1912, the last normal building year in the province, exclusive of the brick which was imported from Alberta and Manitoba in large quantities, we imported from the United States $108,000 worth of brick. In addition to that there was a very large quantity brought in from the neighboring provinces. Do you not agree with me that something should be done, if possible, to develop an industry of this kind for which there is a market for a considerably larger quantity of the product? We have eleven plants in the province and eight or nine are now in the hands of the receiver or banks. We do not intend to be satisfied with the suggestion that it is because of the war. We intend to get the facts. Two are in full operation and cannot begin to supply the demand. In the southern part of the province, near Moose Jaw, the Clay Products Company is making face and fire brick and they cannot produce nearly enough of the quantity they could sell.

It is an indication that if the industry is to be properly organized it may be necessary for the bureau to secure the services of expert clay burners for instruction purposes to keep this industry on its feet. We are prepared to go that far.

If all brick plants were in operation, according to the information in the possession of the bureau, their maximum production is less than 400,000 brick per day. Everyone knows that the consumption of brick in Saskatchewan is beyond that figure and in addition there are markets outside the province for a good article. The plant in the south is selling its brick to Winnipeg, St. Paul and other cities in the States. In my office at the present time I have some beautiful samples of pottery and ornamental tile made from Saskatchewan clay, the equal of any article of its kind I have ever seen. If we have a resource of that kind we should look into it, see what the commercial practicability of it is, get the facts and bring them to the notice of those most likely to be interested. We think the present situation in the province regarding building demands attention being given to this industry.

Lumbering

The lumber industry is not in the best kind of shape in the province. In 1919 there were thirteen mills operating. The returns to the bureau indicate the output was seventy-five million feet, board measure, to the value of $2,122,000. The biggest lumber company in this province, the Prince Al-

* Portion of an address delivered before the Saskatoon Board of Trade on the work of the new Bureau of Labor and Industries.

bert Lumber Company, has moved to Le Pas, Manitoba. The Larder Lake Lumber Company is working this season for the last time. The reason adduced is that the timber suitable for lumbering in that area is reduced to such an extent that a big mill cannot profitably operate. Our timber resources are under the control of the Dominion Government and we cannot do very much except get the facts. Large areas of valuable timber have been burned through lack of proper protection. What effect has that on the stifling of this industry? More important still; what effect has the holding of speculative licenses on the industry? Have we timber in this province held by speculators under lease on account of which the actual manufacturer of lumber cannot get it? Is that the condition? I do not know. But, in the interests of the province, we should find out.

There is the question of pulp. We all know the trouble the newspapers are having and they have the advantage over the rest of us, because when they squeal their squeal is heard. We are told there are simply immense possibilities of pulp manufacture in Manitoba and Saskatchewan. I do not know why nothing has been done to develop it. It will be the business of the bureau to find out. On the face of it I imagine there is not a sufficiently large market for paper within easy transportation of any possible pulp mill in the timber area. The bureau will get the facts and make them available to those who may be interested in the business.

Coal Mining

Then there is the question of coal. That needs a survey. You may be surprised to learn that we have fifty-one coal mines in Saskatchewan. We obtain 300,000 tons of coal a year. That kind of development is facilitated by two conditions: (1) the conditions under which mining leases are obtained; (2) our coal is of a kind which is accessible near the surface. There are two comparisons which may be made with regard to coal. In the Lethbridge field there are three mines and at Drumheller between fifty and sixty mines. The three Galt mines put out as much coal as the Drumheller for two reasons: (1) the nature of the regulations; (2) the difference in the natural condition. Drumheller mining is easier than the mining at Lethbridge. At Lethbridge it is necessary to have a big organization with lots of capital to get down to where the coal is and get it economically. At Drumheller you can dig a hole in the hillside and become a mine owner. Which is the soundest development from the standpoint of the people of the province, three or four mines with three or four overhead costs, doing business in the most up-to-date manner, or fifty-six mines peddling away in the side of a hill?

Our mining industry requires looking into. Most of you are familiar with what is being done by the Government in co-operation with the Governments of the Dominion and Manitoba to briquette Saskatchewan lignite. A plant is in course of erection near Estevan, and we have reasonable hopes that the product will be on the market this year. That is an important step forward, but it is not the only one.

Lignite Burning

Another matter about which I have recently received information in this connection. Professor Bone, of the Imperial College of Science of London, has invented a furnace for burning lignite, and the Canadian agents are prepared to erect boilers and plant for any municipality or responsible firm and to guarantee the efficiency and defer payment until the municipality or firm is satisfied that the guarantees of efficiency of the plant are complied with. The claims made are the same as those made in connection with lignite furnaces generally. The offer made by these people is of a character which gives indication that they have faith they will be able to put through their end of the deal. They require no pay unless they are able to live up to the guarantee.

Another interesting thing is the finding at the eastern edge of the lignite coal field in the south of a bituminous coal at a depth of 260 feet. It has been tested by borings which revealed a thick seam. The one weakness of the test has been that the Government experts did not take the samples. Assuming that the men who made the borings and sent the samples are honest and gave fair samples, it is certain that in the Lampman district there are valuable deposits of bituminous coal. I asked the manager of one of the lignite mines if he was aware that there was a rich seam of bituminous coal below his present workings. He said, "yes." I asked why he had not worked it and he said his principals were men that were getting a good rate of interest on their investment and this deeper development would require expensive machinery to get down to it, and they were pretty well satisfied and so let it alone.

In the north part of Saskatchewan, since the earliest times reports have been made by policemen, fur traders, Hudson Bay men and others, of coal at Lac La Ronge, about 15 miles north of Prince Albert. The geological survey mentions this, but all that is devoted to it is about one line. While I said a few moments ago that we were not prepared to undertake exploration for precious minerals, the economic value of a coal possibility in the north is so immense to the north and the central part of the province, that I am prepared to find out as much as possible, if there is coal there, what kind it is, and what there is of it. What would it mean to northern Saskatchewan to have coal within the boundaries of the province and within approximately (when a railway was built) 200 miles of Saskatoon? It would be an important economic fact to our people and might involve great development in the northern area. All these reports from different sources are surely sufficient to justify, if necessary, even a wasting of money to find out. I believe these reports are sufficient to justify the bureau in conducting a full investigation. Think of the possibilities in the north. Precious minerals, copper particularly, are being mined on the eastern boundary of the province and taken to Trail, B.C. for smelting. What would it mean to this province if this coal was found suitable for coking? We do not say it is, but we propose to find out.

Natural Deposits

There is another class of work I want to refer to. In addition to the industrial survey work, we intend also to endeavor to co-operate with our people as far as possible in locating natural deposits in the settled parts of the province. Last summer a deposit of six million tons of sodium sulphate was found in the southern part of the province. The discovery was made in an accidental manner. In order to assist in work of this kind the bureau will arrange to analyze free of any charge any specimen from a natural deposit sent in by any citizen of the province.

We know that we will have a lot of valueless pebbles and so forth sent in and that there will be a lot of work for nothing, but if one valuable deposit is discovered as a result of spending a lot of money in examining useless samples the work will be justified. A purely technical analysis of a sample is not of much value in determining the industrial possibilities of a deposit of any kind and so we propose to make commercial surveys of the deposit wherever the technical analysis is promising. We will get particulars from the person who sends in the sample as to his knowledge of the extent of the deposit, location of it, and so on, and if it looks

sufficiently promising we are prepared to make a thorough commercial survey of it in order to be able to go to the people who are interested in that industry and say we have a deposit of so and so, its location is so and so, its extent is so and so, and give all the available details in connection with it.

Water Powers

I know the difficulties are great. There would not have been any Saskatchewan to-day if men had been balked by difficulties. The west would never have been if men had balked at difficulties. It has been urged upon me—it has become a sort of litany—that you cannot have industries in Saskatchewan because you have not cheap power. I am not prepared to admit that that difficulty is impossible to overcome. We have power of a kind. Reports show that the minimum development of water power possible in the province is 568,000 h.p., and the maximum possible of 1,312,000 h.p. But this power is practically all in the north. When we get power as far north as the Churchill River the difficulties of transmission become apparent. There are very many promising developments being made in connection with the matter of more economical transmission of electrical power over long distances and it is not without the bounds of possibility that within the next 20 years it may be easily possible to transmit power from the Churchill River to Saskatoon. Whether or not water power is easily available, we certainly have vast possibilities of power development in our coal deposits to which I have already referred.

Oil and Gas

And then, I almost hesitate to say it, we have, at least prospects of oil and gas. None of the prospects have been surveyed by a competent engineer. We will have available for this service of the bureau a first-class man employed by the Dominion Geological Survey branch in the near future. Some of the more recently reported prospects are oil near Dewar Lake and gas at several points in the south, specially at Alameda. A gas flow there which has been carefully examined, is a well 400 feet deep with a flame 8 feet high and 4 feet wide which burned three days. The flame was extinguished by water. After this the pressure threw water and sand high in the air for several days until stopped presumably by choking with earth.

Sugar Beets

A man said to me this morning, this job you are tackling is a hopeless one. Maybe, but we have always been good triers in Saskatchewan. We have splendid agricultural progress and development. What we need is some industrial balance for our agricultural industry. Even there we can afford to look the industrial question over. The price of sugar, as we all know, has increased enormously. In Minnesota there are 12,000 beet farmers and a beet sugar industry. Why not in Saskatchewan? The bureau will find out.

I cite the beet sugar industry as a possibility in connection with agriculture. There was a beet sugar industry started a few years ago at Raymond, Alta., and our information is that the machinery was moved to the States because the farmers would not grow enough beets.

Yes, the difficulties are great. It has been said that there are four parties to industry—capital, labor, the community and management. I have always held the opinion that of these four, management stands very high, if not the first. I care not how much capital or labor you have or how much community interest; if you have not the executive ability at the head managing the institution, the others will fall apart.

The boards of trade of Saskatchewan have shown themselves willing at all times to take hold of something which looks promising and put it over; put into it that element of management so necessary in bringing together capital, labor and community.

The International Market for Iron and Steel*

By HERBERT P. HOWELL

Vice-President, National Bank of Commerce in New York

THE world is short of iron and steel. For four years a large share of the total output was put to non-productive uses. Demand for iron and steel is cumulative to a much higher degree than is the demand for many other classes of commodities. Iron and steel are not usually destroyed by immediate consumption, so that to-day the producer faces not only a demand augmented by population growth, but a demand for supplies to offset the years when there was not enough of iron and steel for the ordinary purposes of industry and of commerce.

The United States is by far the greatest single market for these commodities. Development of this country as a manufacturing nation is not complete, and iron and steel must be had for machinery and for all forms of plant equipment in increasing amounts for domestic uses. Increasing quantities are being used in the manufacture of machinery for the export trade. Railroads consume large tonnages of these metals, and the railroad mileage of the United States is over a third of the total mileage of the world. The use of steel as a structural material, especially with concrete, has been carried further here than in any other country.

At the end of the war there was in the United States an accumulated demand which can only be approximated. Even before the entry of the United States into the war, a very large proportion of the iron and steel output of the country was exported for military uses. The American iron and steel industry, next to the mills of France itself, was the greatest single factor in providing ordnance and munitions for the French army. While American production of rails throughout the war years fell short of the output from 1909 to 1913, rail exports for 1916 and 1917 rose to higher figures than ever before. Even these enlarged exports were exceeded by exports for 1919, which were 42 per cent. greater than in 1913. As a result, American railroads now need large tonnages of rails sufficient for accumulated replacements and expansion. The situation is the same in the case of structural steel for bridges and buildings, of steel for locomotives and cars and for machinery. It is estimated that the building industry in the United States is at least a year behind the effective demand. The shortage is especially acute in individual and corporate housing. Added to the requirements for these many uses is the demand which has arisen as a result of the rapid development of the automobile and shipbuilding industries.

* Portion of an article in the July issue of the "Commerce Monthly" of the National Bank of Commerce in New York.

The shortage in the other chief producing countries is even greater. Germany, which was a large exporter of iron and steel, is now short of these materials for domestic needs. The situation of the United Kingdom is similar. At times during the war one-third of the total ingot production was diverted to military uses. Demand for iron and steel for reconstruction has further aggravated the situation in Belgium and France.

The international demand, as distinguished from the domestic demand for iron and steel, falls into three main classes. Those countries where industrial development is in progress, but where the domestic production of iron and steel products is not commensurate with growing needs, are heavy importers. Australia, Canada and Japan are typical of this class. A second group of importing countries consists of those with relatively little industrial development. Iron and steel and their products, including machinery, are frequently among the leading imports into countries of this group, which require steel for railways, for construction and for the innumerable needs of an awakening economic life. Representative territories of this type are the Philippine Islands, the Dutch East Indies, and to a large degree, the Argentine Republic.

Effect of War

A third group is made up of countries which are themselves large producers. In the years preceding the war, Great Britain found better sale for her iron and steel in the United States than in many non-steel-producing countries. Germany usually bought more iron and steel products from her competitor, Great Britain, than did British South Africa. The United States, while normally selling both crude and manufactured steel to the United Kingdom, buys British specialties also.

The international trade in iron and steel was completely disorganized by the war, and countries dependent on an imported supply found their industrial development severely handicapped. Thus Argentina had depended chiefly for imports of iron and steel on the United Kingdom, Germany, the United States and Belgium. British exports of iron and steel to Argentina for the five years from 1909 to 1913 totalled 1,817,223 gross tons. In the five years 1914 to 1918 they totalled 534,150 gross tons. In the five fiscal years 1910 to 1914 the United States sent to Argentina 213,867 tons of steel rails; from 1915 to 1919 but 10,974 tons. The blockade of Germany and the occupation of Belgium completely cut off Argentine supplies from these two sources. Chile, which in the five fiscal years 1910 to 1914 received 56,778 gross tons of steel sheets and plates from the United States, received 23,781 tons from 1915 to 1919. The situation of all countries which are normally importers was similar to that of these two countries. The United Kingdom made a determined effort to maintain the supplies usually sent to British dominions, but nevertheless the exports to British possessions fell from 9,759,661 tons of iron and steel in the five years from 1909 to 1913 to 4,561,397 tons from 1914 to 1918.

Comparisons

Because of considerable increases in the prices of iron, steel and their products during recent years, it is necessary to make all comparisons on a tonnage basis. This results in the exclusion from statistical discussion of certain manufactures of iron and steel, such as machinery and tools, automobiles, locomotives and similar products, since they represent so advanced a stage of manufacture that available data as to the export trade in them are on a value basis only.

The following table shows the decline of exports of iro and steel from the United Kingdom during the war and th greatly increased share which was sent to France:*

Calendar year.	Total exports. (in gross tons).	Exports to France. Amount.	Per cent of total.
1909	4,210,799	154,701	4
1910	4,588,009	151,459	4
1911	4,515,905	194,196	4
1912	4,807,528	185,444	4
1913	3,933,704	202,939	4
1914	3,884,153	156,802	4
1915	3,196,983	782,724	24
1916	3,294,624	1,667,499	51
1917	2,328,030	1,505,072	65
1918	1,608,103	936,549	58
1919	2,224,984	**	**

American iron and steel exports expanded greatly durin the war and to a limited extent met the shortage in the e port market created by the blockade of Germany, the occup tion of Belgium and the diversion of the British output. striking example of this readjustment is the great increas in American exports to Japan, while British shipments t Japan in 1918 fell to less than one-thirteenth of the usu pre-war figure. The table below shows total exports of th more important classes of products from the United Stat from 1909 to 1918.†

Calendar year.	Gross tons.
1909	1,239,710
1910	1,537,943
1911	2,183,994
1912	2,924,543
1913	2,704,810
1914	1,518,570
1915	3,463,959
1916	6,020,894
1917	6,319,853
1918	5,264,169
1919	4,291,456

The present situation in the international steel mark becomes much more evident upon consideration of America exports of specific products. The average exports of ste rails in the five years from 1915 to 1919 exceeded the ave age for the preceding five years by 75,000 tons, but the destination was different. Before the war rail exports fro the United States were widely distributed, Canada being th heaviest buyer, with Argentina, Australia, Mexico, Braz Cuba and Japan following in the order named. In the fi years from 1915 to 1919, however, France and Russia, i cluding both European and Asiatic Russia, which had boug no American rails during the preceding five-year period, to 45 per cent. of the average yearly exports.

Increase of Exports

Exports of steel billets, ingots and blooms for the fi years 1915 to 1919 were eight times the exports of this cla for the preceding five-year period, increasing from an annu average of 150,000 tons to 1,200,000 tons. The export dist bution of billets, ingots and blooms has always been narro The noteworthy feature of the war period is the fact th France, which received no products of this class from t United States from 1910 to 1914, took 41 per cent. of t total from 1915 to 1919. While the expansion of exports France, the United Kingdom, Italy and Canada did directly constitute a diversion, the steel sent in this form

* Included are pig iron; ferro-alloys; iron bars, castings and f ings; steel ingots, blooms, billets, slabs, bars, rods, castings and f ings; plates and sheets; shapes and structural material; rails; rail materials; wheels, axles and tires; tubes, pipes and fittings; hoops strips; bolts, nuts, nails, rivets and screws; anchors, grapnels cables; chains; wire and wire manufactures; bedsteads; and mi laneous manufactures of iron and steel.

** Not yet available.

† Included are exports of pig iron; scrap; bar iron; steel bar rods; steel billets, ingots and blooms; nails and spikes; pipes and t tings; radiators and house-heating boilers; steel rails; sheets and pla structural iron and steel; tin plates, terneplates and taggers' tin; wire.

these countries probably meant a corresponding shortage in exports to other countries of finished steel products and of machinery.

The distribution of exports of steel bars and rods, exclusive of wire rods, and of steel sheets and plates, exclusive of galvanized steel and of plates that have been punched and shaped, shows a different tendency. In the case of these two products, the American producer did much to supply the markets which could no longer secure iron and steel from their usual sources. American exports of steel bars and rods increased from an average of 148,000 tons a year for the five years 1910 to 1914 to 550,000 tons annually for the period from 1915 to 1919. Exports of steel sheets and plates from the United States for the same periods averaged 264,000 tons a year and 544,000 tons a year respectively. Before the war Canada took more than half of the total exports of steel bars and rods from the United States. The four next heaviest buyers were the United Kingdom, Cuba, the Philippine Islands and Japan. While the leading pre-war purchasers continued to buy heavily during the war period, the American steel industry was able to export greatly increased quantities of bars and rods to Argentina, Brazil, China, Hongkong and many other countries.

Steel Sheets and Plates

The export distribution of steel sheets and plates from 1910 to date has developed along lines similar to the exports of bars and rods. From 1910 to 1914 Canada took 74 per cent. of the quantity exported. While the tonnage received by that country from the United States from 1914 to 1919 was somewhat greater than the tonnage received during the preceding period, it was only 37 per cent. of the total. On the other hand, American exports of steel sheets and plates to Japan from 1915 to 1919 were over fourteen times the exports from 1910 to 1914, and exports of this class to the European Allies, Cuba, Argentina, Brazil, China, Japanese leased territory in China, Hongkong, British India, the Dutch East Indies and Australia, all showed considerable gains.

Tin-plate is another product in which American exports helped to supply the deficiency during the war. In the five years from 1910 to 1914 the leading market for American tin-plate was Canada, which received over three-fifths of the exports. China, British India, Argentina, Hongkong and Cuba were the next most important customers. Shipments to the United Kingdom were negligible. The average yearly exports of tin-plate from 1915 to 1919 were more than four times as great as in the preceding five years. This provided for larger shipments to every country. Exports to Canada, although larger in volume, amounted to only one-fourth of the total. Argentina received about fifteen times as much as in the earlier period, and Japan about seventeen times as much as before the war. Relatively large shipments were sent to continental European countries and to the United Kingdom.

Concentration of Production

The United States, Great Britain and Germany produce 80 per cent. or more of the total iron and steel output of the world, while Belgium is a considerable factor in the international market. The war had varying effects on the industries of these three European countries.

The case of Germany is clear. As a producer of iron and steel for the international market, that country need not be reckoned with at present. The war cost Germany a portion of her iron ore resources, variously estimated at from two-thirds to three-fourths of the total, and a large part of her blast furnace capacity. If coal production were satisfactory, it would perhaps be possible for Germany to secure minette ore by exchanging for it the coal which France must have. But German coal production is in a most unsatisfactory state. The loss of the mines in the Saar district means a loss of about 6 per cent. of the total annual production, but more important still has been the weakening of the working people in body and spirit by the war. The results on coal production are shown below:

Year.	Coal.	Lignite.
	(in millions of gross tons).	
1913	188	86
1914	159	83
1915	144	87
1916	156	93
1917	165	93
1918	158	99
1919	107	93

Recent German estimates of coal requirements for the country for 1920 are 117,500,000 tons, and according to the treaty terms, Germany is bound to deliver up to 43,000,000 tons per year to the Allies for the next five years. For the current year this requirement has been reduced to 20,000,000 tons. Reasonable allowance for consumption of coal for railways and ships, for household use, for public service and for other industrial uses indicates that the German iron and steel industry is bound to be short of coal. An added handicap is the difficulty of purchasing needed foreign ores of special grades because of the depreciation of the mark. These factors, together with the general industrial paralysis, seem to leave no doubt that Germany will take no considerable part in export trade for a long time to come. German official production figures to date amply confirm this gloomy outlook, production of pig iron in Germany, exclusive of Alsace-Lorraine and Luxemburg, having declined from 12,700,000 tons in 1913 to 6,200,000 tons in 1919; while steel output declined from 15,000,000 tons in 1913 to 8,400,000 tons in 1919.

French Production

As to French production, on the basis of the ore and blast furnaces acquired by the treaty, potential pig iron output has been estimated at 10,000,000 tons annually, which would leave a considerable exportable balance. However, French production is dependent on German coal, and lack of fuel and industrial disorganization have thus far kept it much below the pre-war level. Output of pig iron during the first half of 1919 was at a rate of less than 2,000,000 tons a year. Later accurate data for French production are not available. Operations in Lorraine have thus far been very disappointing. In 1913, Lorraine produced 3,870,000 tons of pig iron. Production is now proceeding at only about one-third of the pre-war rate. Lorraine mills which had accepted orders for billets from British and Belgian rolling mills, have been unable to make deliveries. France is still an importer of iron and steel, and is not likely to become a factor in the export field until such time as it takes for western Europe to recover from the industrial chaos which the war and the treaty left.

Before the war, Belgium was fourth in importance as an exporter of iron and steel. Of the total output in the years from 1909 to 1913, about 60 per cent. or over 1,000,000 tons annually went into international trade. The Belgian industry shows encouraging features and exports are increasing, but domestic demand is heavy and the amount Belgium can export will not greatly affect the international market in the immediate future.

United Kingdom Our Only Competitor

The only active competitors of the American iron and steel producers at the present time are the iron-makers of the United Kingdom. British output was well maintained until after the armistice. Since that date, however, war weariness and labor troubles have seriously curtailed British production. These adverse factors have been felt both directly, in the iron and steel industry itself, and indirectly, through coal shortage and transportation troubles. The following table summarizes the production of pig iron and of steel in that country from 1909 to 1919:

Year.	Pig Iron Production. (in thousands of gross tons).	Steel Ingot Production. (in thousands of gross tons).
1909	9,532	5,882
1910	10,012	6,374
1911	9,526	6,462
1912	8,751	6,796
1913	10,260	7,664
1914	8,924	7,835
1915	8,794	*8,550
1916	9,018	*9,196
1917	9,420	*9,804
1918	9,072	*9,591
1919	7,398	*7,894

Coal production in the United Kingdom is in a most unsatisfactory state. The annual coal output of the United Kingdom from 1909 to date is summarized below:

Year.	Coal Production. (in thousands of gross tons).
1909	263,774
1910	264,433
1911	271,892
1912	260,416
1913	287,430
1914	265,664
1915	253,206
1916	256,375
1917	248,499
1918	227,715
1919	233,000

The British iron and steel industry is not hopeful. A prominent British trade journal in this field recently stated with regard to pig iron production as follows: "With the exception, perhaps, of Northamptonshire brands, there is still no sign of that expansion of output which is so necessary to appease the world hunger for iron, . . . At the same time, the iron-masters cannot be charged with slackness in making preparations for an increased output, for there are already several furnaces only awaiting materials, but while fuel is actually insufficient for the present blowing capacity, it is idle to talk of increased production, particularly in view of the ore shortage, scarcity of wagons, and the chronic state of chaos on the railways."

United Kingdom Output

It must be recognized, nevertheless, that steel output in the United Kingdom during the first five months of 1920, although at a lower rate than in 1917, was above the rate for any other year. Exports of iron and steel must still increase before they reach the rate maintained in 1913. However, remarkable increases over exports for 1919 are shown by the British figures for the first four months of 1920. Gains were made in all the items except six, the gain for the different classes of products ranging from 8 per cent. to over 400 per cent. The British position is improving and must not be underrated.

As a result of the higher cost of mining coal, due to shorter hours, high freight rates, increasing prices of imported ore, higher wages and lower productivity of labor, British iron and steel prices have risen rapidly, until they are much higher than prices for corresponding grades in the United States.

* Including steel castings.

The arrears caused by four years' destruction of steel and by reduced output after the armistice cannot be made up in the near future by any country except the United States. Yet in the first calendar year after the war American pig iron output dropped to 31,015,000 tons, which was 8,000,000 tons below that of 1918 and practically the level of 1913. The fact that this reduction occurred without financial or industrial disturbance is a matter for congratulation, but in view of the five years' accumulated need of steel throughout the world it is a calamity.

American blast furnace capacity at the end of 1918 was reported at 49,269,000 tons, while the output of pig iron for the year 1919 totalled only 31,015,000 tons. Output was thus at the rate of 65 per cent. of rated capacity at the beginning of the year, compared with 81 per cent. of the rated capacity in 1918. Additions to blast furnace capacity during 1919 were small. The first three months of 1920 showed an expanding rate of production, but the railroad strike brought about a serious reduction, so that the April output of pig iron dropped to 2,740,000 tons. Production for May was 2,989,000 and the total for the first five months of 1920 was 15,000,000 tons. In spite of fluctuations, production in the United States is being maintained at a rate more than double the present output of Germany and the United Kingdom combined.

American Exports

The American iron and steel industry has heretofore exported a smaller share of its iron and steel output than have Germany and Great Britain. The exact ratio between exports and total production is difficult to determine. It is estimated, however, that prior to the war American exports averaged about 8 per cent. of the total pig iron production, and practically the same per cent. of total steel output. During the war the proportion of exports to total pig iron and steel output rose somewhat. In 1919, exports are estimated as about 14 per cent. of all pig iron produced. Exact figures as to the steel output for the country for 1919 are not yet available, but on the basis of an output slightly in excess of 34,000,000 tons, exports during 1919 were over 12 per cent. of total steel production. It remains to be seen whether so high a proportion can be maintained in 1920.

Yet despite unfavorable exchange, Canada must buy American sheets and plates to keep the wheels turning in her own industries. The United Kingdom received much larger quantities of steel ingots and billets from the United States in March, 1920, than during the corresponding month of 1919. Steel for shipbuilding was exported to France in April of this year in spite of exchange difficulties, and shipments of steel plates to Italy in March exceeded those made in March, 1919. It is to be expected that foreign customers will restrict their purchasing at times in response to disadvantageous exchange conditions, but in such periods the shortage grows and must eventually be met.

Even assuming a production of pig iron in 1920 equal to that of the best war year and a rate of export somewhat higher than that of the pre-war years, the exportable surplus is not likely to equal Germany's annual exports in the years immediately preceding 1914. The United Kingdom is unable at present to recover her former volume of exports except at a sacrifice of domestic needs. There can be no question, therefore, as to sufficient foreign outlets for all the United States can spare and more. The American iron and steel industry has the resources, the capacity and the industrial organization to produce largely beyond domestic needs. A responsibility rests upon this country to maintain production at a point where the industry can do its share toward satisfying the world-wide need of steel.

Made-in-Canada Movement in B. C.

Wholesalers, Retailers and Manufacturers in our Great Port on the Pacific Coast Unite to Promote the Sale of Made-in-Canada Goods and Beat the Exchange Rate — Press Co-operate

VANCOUVER is the latest centre to organize a vigorous Made-in-Canada campaign. Early this summer, under the chairmanship of Mr. Dunsmuir, a joint committee representing the wholesale, retail and manufacturing sections of the Vancouver Board of Trade was formed to see what could be done to promote the display and sale of Made-in-Canada goods. Several enthusiastic organization meetings were held, the younger business men of the city got behind the movement, funds were raised, plans formed for securing the co-operation of the retail trade, and the latter were supplied with suitable placards for use in their windows and counters. Some of these are reproduced in connection with this article.

The movement enlisted the interest of the local press, the *Vancouver Daily World*, in a recent issue, commenting as follows:

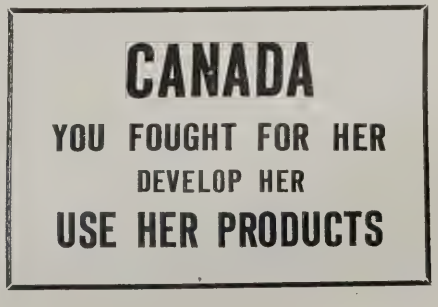
British Columbia retailers, wholesalers and manufacturers are co-operating in a campaign seeking to bring about greater consumption of home-manufactured products, and are going into the campaign with a vigor that augurs well for its success. This is not the first time that such an effort has been put forward in this province, but it is the first time that British Columbia as a whole, supported by other provinces in the Dominion, has gone into the attempt with such seeming wholeheartedness. The fact that the co-operation of not only this province, but also of other sections of Canada are behind the movement, was proven by the attitude displayed by the Canadian Manufacturers here recently.

The campaign was launched here at a meeting of the wholesalers of the Board of Trade some time ago, and it is doubtless due to the broad viewpoint taken by them, that it has started out under such promising auspices. These men, while more directly concerned about the sale of British Columbia products, went on record as favoring the promoting B. C. goods, Canadian goods or British Empire-made goods. By placing British Columbia-made goods first, they showed that they realized the duty they owed to their home industries, and after that to Canada and the Empire at large.

Pronounced demand for the products of any province or country means a guarantee of sales sufficient to encourage factory expansion. By such expansion new wealth would be created through increased production and steady and profitable employment would be provided for new industrial populations. Any substantial increase in industrial workers means bigger and better markets for other products of the country, and in this the farmer, as much as anybody else in the country will benefit.

Another benefit arising from supporting home industry is that each successful undertaking makes possible the creation of others. Subsidiary industries spring up from the larger industries, as has been well evidenced by the inception and growth of the shipbuilding and allied industries in this province. Similar conditions surround other lines of manufacture. Each successful industry helps to render possible some other.

It is unnecessary to point out the great lesson taught Canada in regard to the existing exchange situation, or to point to the huge sums of money this Dominion is paying the United States in exchange alone, except to allude to the fact that at the rate of exchange which existed for the past year—from 10 to 17 per cent. against us—it has been estimated by one authority that it is costing Canadian consumers between $75,000,000 and $100,000,000 a year, or prac-



tically the equivalent to five and a half per cent. on Canada's national debt.

Another phase of the "Made-in-Canada" idea is the movement to bring about the manufacture of more of the raw products of this country, instead of shipping them out of the country for manufacture and re-export in the finished state. "Produce at Home," "Buy at Home," and "Export Finished Products" are three of the slogans that have been adopted in connection with this campaign, and if these are lived up to there need be little worry about the future of this country or of the people living in it.

Steamship Sailings

Proposed Sailings from Montreal, Quebec, and Vancouver subject to Change without Notice

FROM MONTREAL.

To Liverpool.

Silica and Talc

The British Columbia Silica and Talc Company Have Quarries at North Bend, B.C.

An industry recently established in British Columbia is the British Columbia Silica & Talc Company, who have been in operation for the past six months and are employing ten to fifteen hands in their plant. The quarries of this company are located at North Bend, B.C., approximately 125 miles east of Vancouver on the C.P.R. main line. About five million tons of silica and talc are in sight, both practically pure in their natural state. At the present time the company are exporting 200 tons of silica a week to the United States.

WANTED

GOOD JUDGMENT!

Why not follow it to a logical conclusion?

Your firm now uses International Time Recorders for your original payroll entries. So far, so good.

Let the same good judgment go one important step further. Even more vital to your business, we believe, is the International Job Time Recorder. It gives you an absolutely accurate, printed, unchangeable record of the time used at any stage of the making of your product.

It does more. It shows you exactly the difference between the labor time you buy and pay for, and the labor time that is actually used and pays you.

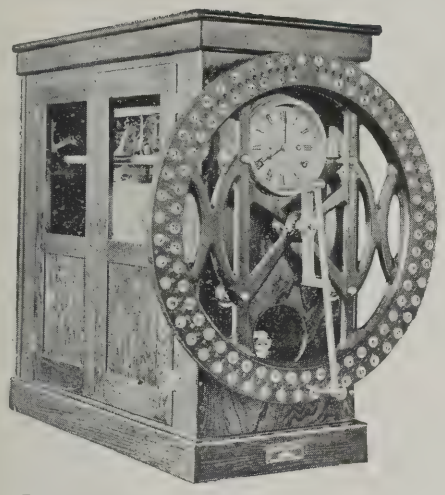
If your labor or process costs depend on pencil and paper, or pencil and job ticket, you will admit they may be changed, they may be wrong, they may be guessed at sometimes. If they are wrong—your total costs are wrong. If your costs are not right, your profits are guess work too. Guessed-at-profits often lead to failure.

THIS STATEMENT IS WORTH READING TWICE

We will gladly send you more detailed information on request

International Business Machines Co., Limited

FRANK E. MUTTON, Vice-President and General Manager



Head Office and Factory, 300 to 350 Campbell Avenue, Toronto

OFFICES AT

Niagara District Industrial Association Congress

(*Continued from page* 80)

to carry back with him the most favorable impressions and become a booster for the Niagara district.

Wednesday was devoted to the industrial and fruit district along the canal belt. The rendezvous for the party was the Welland House, St. Catharines, and around 9.30 the motorists left carrying the visitors first around the industrial districts of the City of St. Catharines and out to Port Weller to view the gigantic first lock and the tremendous new harbor with its mighty breakwaters built up from the debris taken from the canal excavation. While work is not at full headway on the canal, there was enough activity to give one an idea of the tremendous work involved.

From Port Weller the party were taken through the orchards and vinelands to Port Colborne, then back through St. Catharines to Thorold, where a luncheon was served in the new hall. Mayor Foley presided and short and snappy addresses were given by representatives of the neighboring municipalities. After luncheon all were driven out to lock 24 to view one of the large rock cuts on the Welland Ship Canal and later inspected the Ontario Paper Company, the Beaverboard and Riordan Paper plants, then back to St. Catharines, taking in the town of Merritton on the way.

The Congress was concluded with a banquet at the Welland Hotel on Wednesday night, Mayor Lovelace acting as toastmaster. Senator E. D. Smith was the principal speaker of the evening, dealing with fruit growing and transportation. Among the other speakers were H. M. Bell, Secretary Chamber of Commerce, St. Catharines, Ex-Mayor W. J. Burgoyne and E. C. Graves, President of the St. Catharines Chamber of Commerce. Representatives of the Guelph Board of Trade were also present as guests.

At one of the concluding sessions a suggestion was made and enthusiastically received to make the organization permanent, and this is likely to be carried out.

Sudbury Mill Moved

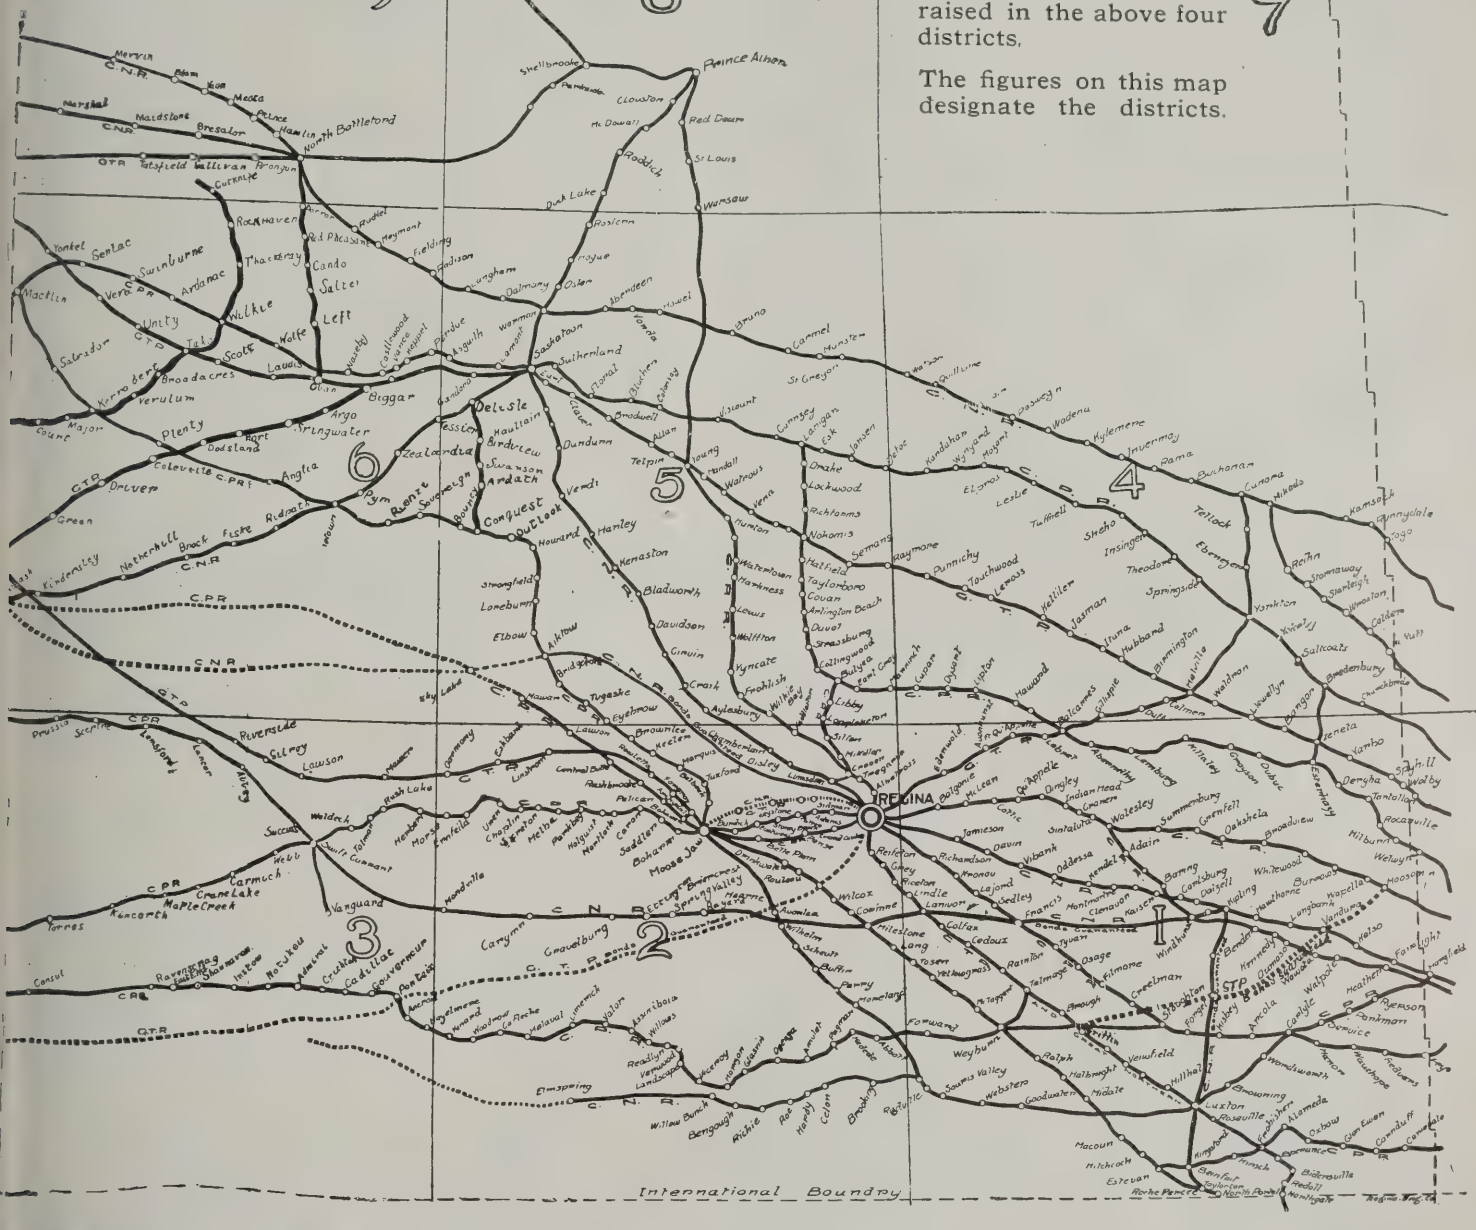
G. Copeland & Sons are Moving a Mill from Sudbury to Midland, Ontario

G. Copeland & Sons, millers, grain and seed merchants, with head office at Midland, Ont., have purchased the plant of the Sudbury Flour Mills at Sudbury, Ont. The intention of the purchasers is to wreck this mill, move it to Midland, and re-erect alongside the Grand Trunk elevators there. The work of wrecking and moving is now in progression. In addition to the better elevator facilities secured by the new location, the present output of the Midland mills should be increased by some 1,150 barrels a day, that being the capacity of the Sudbury plant.

The General Motors Corporation at Oshawa, Ont., has donated the 65-acre Henry farm on the lake shore to the town to be converted into a public park. The sum of $9,000 was also donated by the corporation, $3,000 to be used in initial improvements to the above land and $6,000 to be used in procuring and equipping a public playground in the South-east Ward.

Sir Lomer Gouin, who recently retired from the Premiership of the Province of Quebec, has been elected a director of the Laurentide Company.

When writing advertisers, please mention INDUSTRIAL CANADA.



REGINA
Saskatchewan
Canada

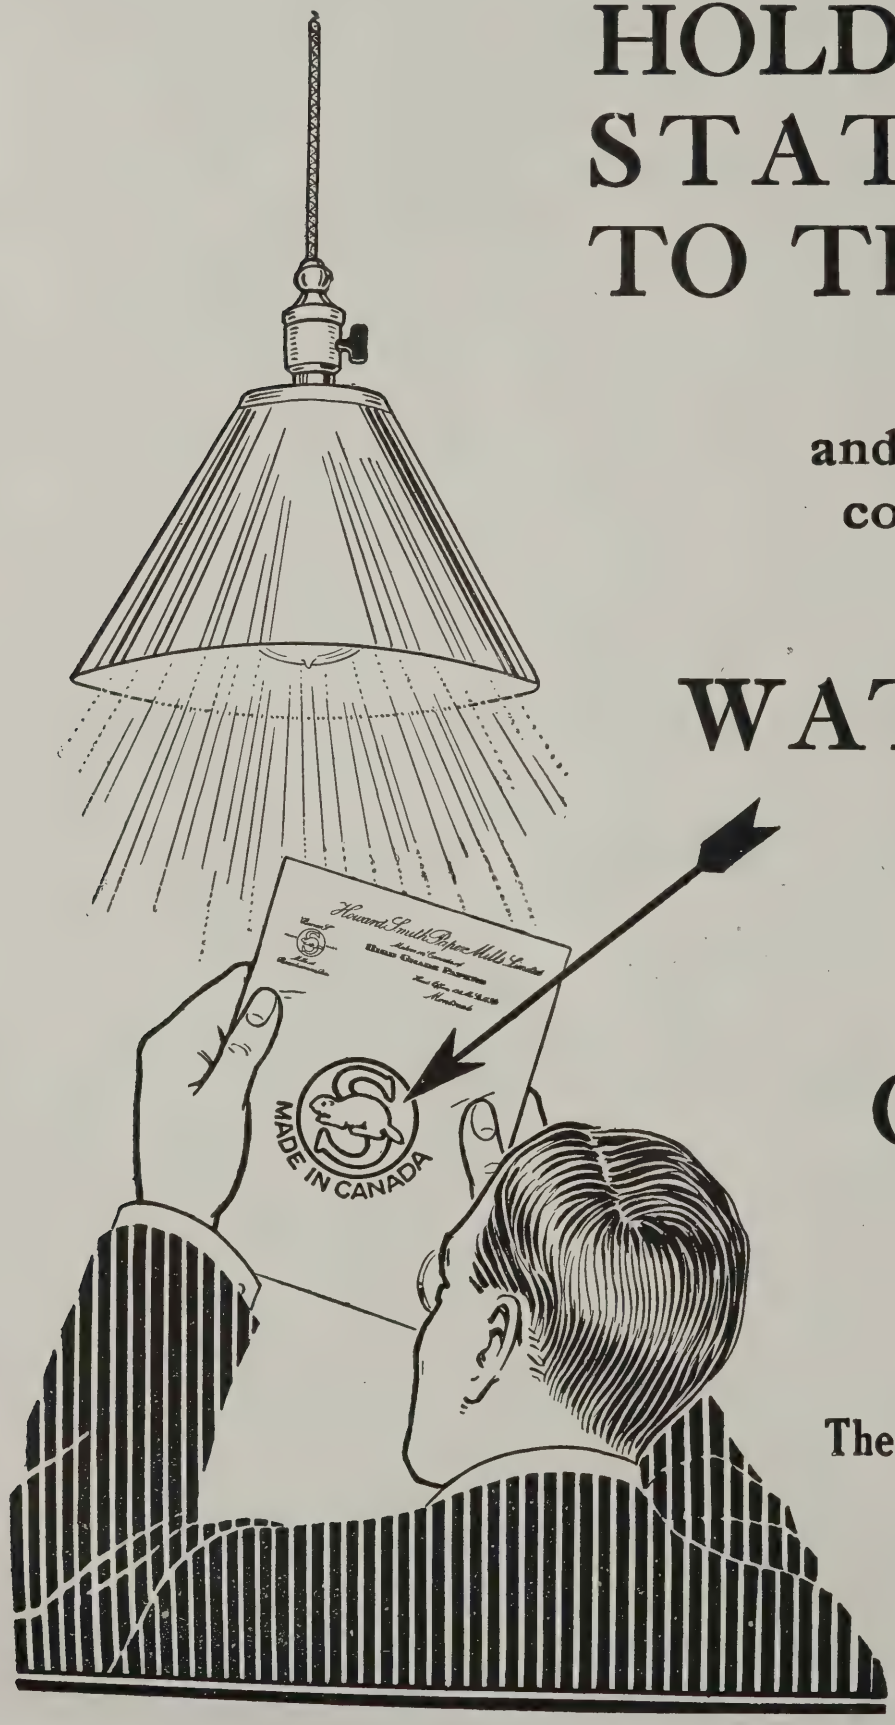
1920

Regina serves 2,255 miles of Railway and 250 towns and villages. Population of District 466,666.

In districts Nos. 1, 2, 4, and 5 are two-thirds of the population of the Province, and over two-thirds of the grain of the Province is raised in these four districts. Of the 1,870,123 head of stock in the Province, three-quarters of the total are raised in the above four districts.

The figures on this map designate the districts.

REGINA



Saskatchewan's capital, is one of the few cities visited by the members of the Canadian Manufacturers' Association on their trip west to Vancouver, where the annual convention of the Association was held. Many of the manufacturers expressed great surprise at the growth and development that has taken place in this city during the last few years and predicted for it a great future, claiming that its geographical situation was of exceptional advantage as a distributing centre. The following is Regina's building programme, as of May 31st, for 1920:

Regina Trading Co.	$200,000	Sellers' departmental store extension	$50,000	Winnipeg Ceiling & Roofing Co...	$40,000
Fairbanks-Morse Co.	200,000	Car barn extension	30,000	Exhibition Grounds extensions...	60,000
Provincial War Museum	500,000	Hospital extension	85,000	Disposal Works extensions	30,000
Wood, Vallance & Co.	250,000	Bapco warehouse	40,000	P. Burns & Co.	100,000
Public Schools (2)	250,000	Nay and James Block	20,000	Swift Co.	250,000
Collegiate extension	150,000	14th Avenue Methodist Church..	10,000	Allan Wilkinson Stores	25,000
Sask. Co-operative Creamery	150,000	Carmichael Presbyterian Church.	25,000	Leader Publishing Co.	20,000
Advance Rumely Co.	150,000	Wascana Boat Club	10,000	Miner Rubber Co.	50,000
Ford Motors, Limited	100,000	Red Cross Lodge	6,000	Masterson's Garage	35,000
Merchants Bank	100,000	Harding Garage	30,000	Bell & Ross Warehouse	35,000
350 residences, an average of $3,000 each	1,050,000	Wheelan's Garage	18,000		

Not a few of the above buildings are well under way of completion.

For further information apply to L. T. McDONALD, Board of Trade, Regina or Commissioner L. A. THORNTON, City Hall, Regina

Filing Systems and Modern Business

Filing as a Product of Industrial Organization
Necessity and Advantages of Efficient Systems

By DALTON J. LITTLE

IN the days of barter and trade, before the medium of exchange was established, and the merchant traded his wares for corn, or the fisherman offered his catch for a homespun garment, there was little occasion for keeping careful account of commercial activities for future reference. Not so many years ago, when the artisan was master of his craft, and managing director of his enterprise, there was no semblance of industrial organization as we know it to-day. Consequently, even in the more enlightened days of comparatively recent times the business man was able to keep all his records in marked bundles, or preserve some by copying them into a book. Later came the "flat" file, which was a series of trays, one above the other. The "box" file was next in vogue. Eventually, the "vertical" file made its debut, and is to-day universally employed. The advantage of the last-named method of filing over the previous ones is in the fact that the correspondence, being placed in filing folders which stand upright in the drawers, or cases, becomes much more accessible than it is when lying in a "flat" or "box" file.

Modern Improvements

The improvements to machinery, embracing the adoption of mechanical labor and time-saving devices in the plant, during the past decade have been phenomenal. As a sequence to the great advance in the machine shop has come the close margin of profit in manufacturing. While the progressive manufacturer has been quick to perceive the advantage of any short cut in turning out his product, he has not begun, until very recently, to appreciate the value of carefully prepared records of his plant operation, selling organization, credit department, etc. Not functioning his office to its proper activity in proportion to the exercise of the hands and feet of the manufactory he has discovered a lack of "top storey" work, or mentality exercised and preserved for the welfare of his business. Gradually the sales, credit, accounting, purchasing and other departments of the office have been scientifically developed for the purpose of creating business mentality, and of recent years the improvement of a quick and reliable memory for the office has evolved in what is termed the "Records Department," or "Central Filing Department."

A Central Filing Department provides—

1. One place only for all business records.
2. Responsibility on a filing executive.
3. Trained clerks for filing rather than spare time mediocre help.
4. A check on all files in circulation throughout the office.

The experience of filing experts has proven that just as men engaged in different trades require tools, each to suit his work, so various kinds of business call for filing systems that can be made most adaptable to their respective needs.

It is obvious that the lawyer, with his principal correspondence relating to the "cases" he has on hand, would not require the same kind of filing equipment as the large industrial and commercial house with its thousands of regular customers. In the former instance, the correspondence is mainly of a temporary nature, and when the legal dispute has been settled the "case" is closed, and the correspondence relating thereto becomes a "dead" file, seldom, if ever, to be referred to again. However, in providing a filing installation for the latter example of an office, it must be borne in mind that a large proportion of the correspondents are old customers, and that the files relating to business transacted with them may often be wanted in their entirety for certain periods. It follows as a result of these divergent requirements that the lawyer's correspondence and documents are usually filed by a numeric system and are kept by "cases," while the business house preserves its records by an alphabetic system of filing.

Variety of Systems

There are as great a variety of filing systems as there are kinds of business, and methods of doing business. For instance, a mail order house, handling only one of two specialties and not retaining many customers for more than one order, frequently uses a straight numeric system in its filing department, and numeric arrangement of files is also employed by many departments of the Government having a large quantity of miscellaneous correspondence with the general public, but few special or regular files. On the other hand the mail order department of a company dealing in staple articles will have a large number of regular customers, and accordingly find an alphabetic filing of its correspondents under their respective names to be most adaptable.

It is folly to lay down hard and fast rules with respect to the desirability of any filing system for any particular business, without making a careful survey of the requirements of such company's office in the preservation of its records. If any one of the many excellent filing systems patented is secured it is again the height of nonsense to attempt a direct application of the detail worked out in the filing department of another business house using the same system. The equipment is bound to be elastic enough to meet the requirements of the office in which it is placed. Otherwise it is not a suitable installation for the business concerned.

Essential Considerations

Simplicity and quick reference with due regard for preservation are the main considerations in selecting a filing system.

Once installed, the equipment is manned by an intelligent clerk or clerks. As in every other field of labor, so it is in that of filing, the worker is "worthy of his hire." Since the safe and ever ready custody of business papers has now attained a pre-eminent place in the organization of the going concern, it devolves upon the management to offer sufficient incentive to clerks engaged in filing, that they will be the more likely to become experts in their work.

A Pay Check Device

(G. W. B. Ladd, Treasurer, Amalgamated Metals Company, in July "System")

EVERY one knows the arguments that can be cited for paying workmen by check, or in cash. And while the pay check method has probably the largest number of arguments in its favor, more concerns pay in cash because it is more convenient to the men.

We have got away from this, we feel, by devising a pay check method that is different—it was worked out by A. M. Campbell, one of our executives. That it is even more satisfactory to the men than cash payment is testified by the men themselves—from time to time we get a good many favorable comments, and hear practically none that are unfavorable.

The plan is simple, too. It consists of splitting each man's weekly earnings into a number of checks. The checks come in two standard printed denominations—$5 and $10. We give him his pay in these checks, with the third kind of check filled out to complete the odd dollars and cents of his earnings. These small checks are easy for the workman to cash; and almost anyone prefers to carry surplus funds in non-negotiable checks instead of currency.

The one drawback of this plan is that it involves more paper work than others—each of the checks has to be signed, and handled at the bank. But the advantages, particularly in these days of payroll robberies, outweigh this slight objection.

Incidentally, here is an interesting development that we were not looking for when we put the plan into effect: our bank balance averages about $1,000 more than under the old plan, simply because of the delay which some of the checks encounter before they are presented at the bank for payment.

Many of the pay checks come back with five or six endorsements; they have passed through that many hands. They seem to be used almost like government currency in the neighborhood of our plant.

We take advantage of this tendency by printing on the back, below the space for endorsements, our line of business, our address and the fact that we employ in our plant molders, core makers, furnace tenders, grinders and laborers.

While it is of course practically impossible for us to estimate accurately how many employees this brings us, we feel that the number is considerable. The checks afford us a "help wanted" advertising medium which circulates among the very people we most want to reach, with practically no advertising cost to us.

Our men are in favor of the plan, as I have said.

So are we. I seem to be about the only one who has a serious objection to it; that is because I have to sign the checks!

Profit-Sharing Plan

International Harvester Company Set Aside Sixty Millions in Stock for Their Employees

Stockholders of the International Harvester Co. voted at a special meeting in Jersey City, July 29th, to set aside $60,000,000 in stock to be divided among employees under an extra compensation and stock ownership plan, open to all workers in Canada and the United States. The program devised by the directors provides for special disbursements each year, beginning January 1, 1921, consisting of stock and cash. It is planned to divide annually an amount equal to 60 per cent. of the company's net profits in excess of 7 per cent. upon the corporation's invested capital.

The full amount of the company's investments is not specifically set forth in the latest statements, as sums in-

vested in foreign organizations are not made public. At the end of 1919, however, total assets amounted to $188,869,500, which may be considered an approximate value of working capital, plant investment, inventories, etc.

In that year net profits amounted to $21,011,761. Seven per cent. of the aggregate assets would be $13,220,865. Deducting this from the profits, and taking 60 per cent. of the proceeds, there would be approximately $4,675,000 to be divided among employees on the basis of 1919 income.

Wabasso Cotton

Company to Double the Number of Outstanding Shares of Common Stock

A circular signed by C. R. Whitehead has been issued to the shareholders of the Wabasso Cotton Company, notifying them that the annual meeting has been called for August 26, and that a special meeting of shareholders will be held immediately afterwards to authorize the adoption of a resolution to apply for letters patent changing the common stock of the Company from 17,500 shares of $100 each to 35,000 shares of no par value, and the allotment of two new shares of new stock for each one of old now held.

New Merchant Service

Canadian Government Merchant Marine to Connect Atlantic Ports with Far East.

The Canadian Government Merchant Marine propose to commence a service from Montreal beginning about August 25th with the sailing of the "Canadian Pioneer" to India and Far East ports. The vessel will call at the following ports: Karachi, Singapore, Bombay, Batavie, Colombo, and Surabaya. Interested members who are in a position to use this service should get in touch with the representative of the Canadian Government Merchant Marine for the purpose of securing space and rates.

Building Postponed

Falk American Potato Flour Corporation Have Decided to Defer Building Additional Plants

Owing to the general industrial, financial and crop conditions, the Falk American Potato Flour Corporation have decided to defer indefinitely the construction of additional mills either in Canada or in the United States. For the present they will content themselves with keeping in touch with conditions in New Brunswick, Prince Edward Island and some other Canadian points previously under consideration, hoping that conditions will adjust themselves in such a way as to render justifiable the building of new plants.

Changes in Directorate

The Association of Canadian Advertisers (Incorporated), report the following changes in their board of directors. Mr. J. George Clark of the McClary Manufacturing Co., London, Ontario, succeeds Mr. W. C. Betts as president; Mr. W. G. Seward of the Goodyear Tire & Rubber Co. of Canada, Limited, is vice-president; and Mr. H. E. Mibell of the Imperial Varnish & Color Co., Toronto, takes Mr. E. G. Hogarth's place as director. The Hoover Suction Sweeper Co. of Canada, Limited, are reported as a new member of the Association, with Mr. Thomas F. Kelly as their representative.

VALUABLE DOCUMENTS

Bonds, insurance policies and other valuable documents should not be kept at home where they are likely to be lost or mislaid.

The Safety Deposit Boxes of this Bank provide at a moderate cost an excellent means of keeping valuable papers.

Switzerland in Canada

Swiss-Canadian Relations. Carl P. Huebscher, LL.D. Swiss Club, Toronto, 1920.

This is a reprint of an address delivered in April, 1920, at the general meeting of the Swiss Club. The author deals with his subject under the four general heads of commercial interests, intellectual intercourse, protection of individual Swiss citizens and of their property, and the Swiss colony in Canada. Under the first division an outline sketch of the present economic situation in Switzerland is given. In spite of the high rate of exchange for the Swiss franc, the cost of living in that country has greatly increased, since the exchange rate is low in those countries from which foodstuffs must be purchased. To correct this the government is doing its best to further and develop export trade, and this assistance is being supplied by an efficiently organized consular service.

Dr. Huebscher, as Consul-General of Switzerland in Canada, is in touch with all the details affecting the commercial relations of the two countries, and the figures he gives are instructive. "They will show us," he says, "that in the past years Switzerland was a very heavy buyer in Canada, and at the same time they serve to remind us how grateful we should be to the Government and people of the Dominion for having helped us to feed our people during the war. We shall not forget!"

In conclusion, the writer expresses a sentiment which promises well for the friendly intercourse between Canada and the old Republic: "Our actual or former allegiance to Switzerland can best be expressed by our being law-abiding inhabitants of Canada, and by our fitting in as useful members, helping to build up a great nation, and finally, by standing together wherever we speak and think of our dear Switzerland."

Extension of Technical Education

The Board of Education having intimated the appointment of a special committee of the Board to interview the Board of Control in reference to obtaining $200,000 required for the erection of a technical school in the east end of Toronto, the Educational Committee unanimously agreed to support the action of the Board of Education, and appointed a sub-committee, consisting of Messrs. H. H. Mason, W. C. Coulter and W. H. Shapley, to represent the manufacturers in a joint appeal to the city authorities.

Manufacturers to Visit Central Technical School

At a meeting of the Educational Committee held on July 21st, Mr. Geo. Brigden, Chairman, reported that he had made arrangements with Dr. McKay, Principal of the Central Technical School, for evening visits by members of the Toronto Branch in groups, to enable them to observe the character of the work the school is performing. It is intended that the visits shall be arranged for the months of October and November.

The Three Rivers Shipyards Company, a subsidiary of the National Shipbuilding Corporation of Wilmington, Delaware, have gone into liquidation. This company secured their first contract for wooden vessels from the French Government. A liquidator will be appointed to wind up the affairs of the Company.

Service for Canadian Importers and Exporters

Throughout the course of our long experience we have become familiar with the problems and requirements of Canadian merchants, manufacturers and producers, and have developed an organization for facilitating domestic and international banking transactions.

Canadian-Japanese Trade Conditions

(*Continued from page* 66)

makes my blood boil it is an asinine question like that. Here is a case where one of our competitors could not compete with us in quality at any rate, which is the most important feature, and this is not an isolated case. I know that you Canadian manufacturers can turn out products equal to anything in the world. I know, also, that if you are satisfied with a nominal profit, if your transportation companies will give you equal facilities to Japan as can be had from America, that you can lay down your goods in Japan to compete any day. There may, of course, be a few exceptions to which this assertion does not apply, but this would be the case with very few things which are manufactured in Canada to-day.

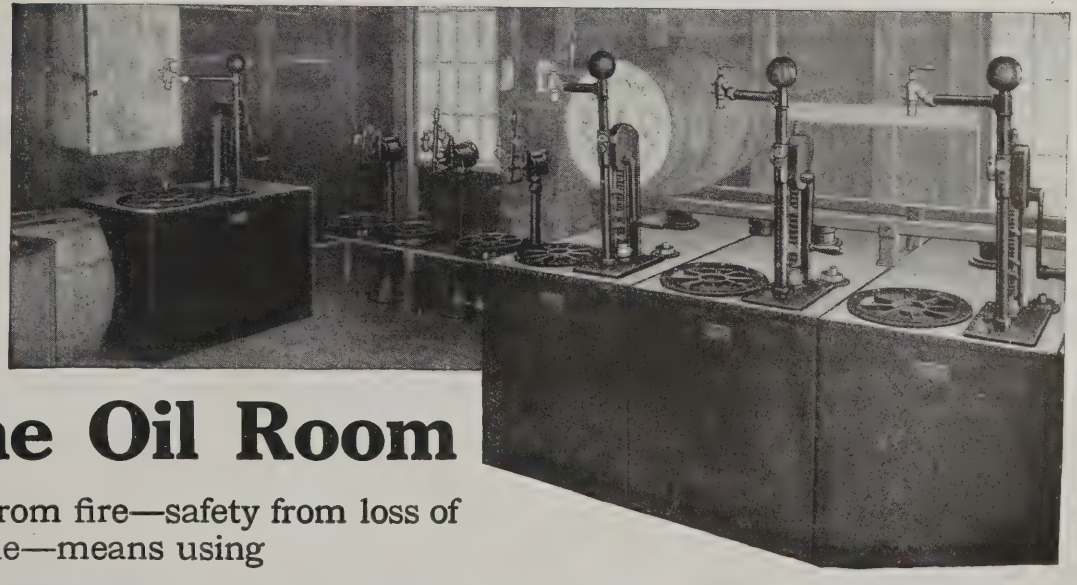
Canada also sold a few thousand yen worth of detonators in 1916, but the returns do not show that any have since been imported.

Varnishes and Paints (Imports in 1918)

	Yen.
Total	392,957
Canada	
U.S.	257,225
England	130,750

England at one time did practically all the paint business in Japan, while the United States did a very small share of it prior to 1915. But since then England, of course, could not make deliveries, and a large portion of the business fell to American concerns, although the English product is much preferred, on account of long acquaintance. But, even from 1913, this business began to decrease because of the growing domestic production, and during the war Japanese manufacturers enlarged their plants to such an extent that export business was commenced, and in 1918 exports of Japanese paints amounted to about 4½ million yen.

However, paint is still being imported from Thomas Hubbard & Son, of England, and the California Paint Co., as well as other American makers, and I think that, if proper representation is had, Canadian paint, too, could sell in Japan. But, of course, there is no denying that the competition is very keen, and the best of representatives are the only ones who could do anything at all. Canada has made small shipments in the past, and there is no reason why these should not be increased if properly pushed.



(In next month's issue of INDUSTRIAL CANADA *a further instalment of Mr. Bryan's article will be published.)*

Electrical Household Appliances

Electrical Washing Machines Being Manufactured in Brantford, Ont., by the Bluebird Corporation

The Bluebird Corporation, Limited, are a new and entirely Canadian industry, not being amalgamated with any other manufacturing establishment. The company in the middle of July were employing approximately eighty men in the manufacture of electric washing machines, but, as full production is reached, two hundred and fifty men will be needed and a full line of electrical household appliances, such as washing machines, vacuum cleaners, electric refrigerators, etc., will be turned out. J. B. Detwiler, W. J. Verity and T. Hendry are respectively president, vice-president and secretary-treasurer of the corporation. The directors are: W. T. Henderson, R. E. Secord, W. C. Boddy and J. M. Young.

Export Trade from Viewpoint of the Canadian Manufacturer

(*Continued from page 70*)

selling companies built on the lines of a manufacturer's export agency.

In England, however, the export trade has clung more closely to the old indent merchant or strictly commission house business than in either Germany or the United States. The indent merchant does a much larger part of the business in the London or Liverpool markets than in either New York or Hamburg. To a certain extent the export merchant has developed there, but the export merchant and the manufacturer's agent are less important factors in the export trade of the United Kingdom than they are in that of the new world.

There is another tendency in the development of export business that the manufacturer should consider. This is the tendency to make the intermediary the financial representative in the transaction. In Great Britain many of the export houses, which once upon a time actually handled the goods, shipped them and sold them to the customers in a foreign country, have become merely the financial intermediary between the purchaser residing in a foreign market and the seller at home. A similar development is likely to take place in Canada. The Canadian manufacturer will probably desire to push his goods in his own particular way, but he will be less willing to finance those sales. He will call upon the export commission house or the export merchant to finance the transactions. Therefore, the export house may be expected to develop in the direction of a financial institution and to do very much the same kind of business that is now being done by the London acceptance houses.

(*In next month's issue of* INDUSTRIAL CANADA *the concluding instalment of Mr. Beadle's article will be published.*)

Canadian National Exhibition

New Records are Expected to be Made in Every Department of the 1920 Exhibition

"Work and Prosper" is the motto adopted for the 1920 Canadian National Exhibition, and the entire machinery of the organization has been turned to the task of making the forty-second annual event a striking exemplification of the appropriateness of the slogan. Unwilling to rest on the standard of previous expositions the Directors and management have utilized every resource of this mighty Canadian institution in the effort to make the position of the enterprise more noteworthy. Early indications point to new records in every department, perhaps also in the matter of attendance which reached the magnificent total of 1,201,000 last year, a figure never attained even by the monster World's Fairs at Paris, London, Chicago, San Francisco, etc., in the same number of consecutive days. To be one of the crowd that establishes an even greater record this year will in itself be a thing to boast about, but even more important still will be the fact that all who come will see a field of marvels which will make the Big Fair undoubtedly the most remarkable and interesting array of activity and achievement ever presented.

A Record of Progress

New Metal Company

Officials of Bearing Metals, Limited, of Montreal, Have Been Announced

Bearing Metals, Limited, are a company recently incorporated for the manufacture of babbitts, anti-friction metals, solders, type metals, alloys, etc. They have acquired the works formerly occupied by the Lion Metal Company at Cotè St. Paul, Montreal. Among the officials of the new company are included the following:—President, Norman M. Campbell, the former sales manager of the Canadian Ingersoll-Rand Company, Limited; vice-president and general manager, E. L. W. Sanderson, who, for the last twenty-five years, has been identified with the mill supply business; production manager, T. T. Fulton, late chief chemist and metallurgist for the Londonderry Iron & Mining Co., mining engineer for the Canada Iron Corporation, and chemist for the Dominion Iron & Steel Company of Sydney, N.S.

With a directorate composed of prominent railroad men and manufacturers and the Milton Hersey Co., Limited, as consulting metallurgists, to pass upon and test all purchases and finished products, this enterprise should meet with success.

New Canadian Factory

S. C. Johnson & Son, of Racine, Wisconsin, Establishing a Plant at Brantford, Ont.

The new Canadian plant of S. C. Johnson & Son, the manufacturers of Johnson's prepared wax, is approaching completion at Brantford, Ont. The contractors are expected to turn the building over to the company early in August, and the commencement of manufacturing and shipping is planned for September 1st.

Consolidation of Plants

Drop-Forging Plants of J. H. Williams & Co., and the Whitman & Barnes Manufacturing Co. Amalgamated

The stockholders of J. H. Williams & Co., manufacturers of drop-forgings and drop-forged tools, at Brooklyn and Buffalo, N.Y., and those of The Whitman & Barnes Manufacturing Company, makers of twist drills, reamers, wrenches and drop-forgings, at Akron, Chicago, and St, Catharines, Ontario, have ratified the agreement providing for the consolidation of the wrench and drop-forging plants and business of the latter firm at Chicago and St. Catharines with J. H. Williams & Co. The Whitman & Barnes Manufacturing Company retain their twist drill and reamer business and will continue as an entirely separate organization and on an extended scale the manufacture of these goods in Akron, Ohio.

J. H. Williams & Co., founded in 1882, are one of the oldest and largest firms in their particular field. The Whitman & Barnes Manufacturing Company was founded in 1846 and acquired their St. Catharines plant in 1882. They occupy some two and a half acres here, and own about six acres in addition that can be utilized for extensions as required.

The St, Catharines plant will operate under the name of J. H. Williams & Co., Limited, as soon as the necessary formalities can be arranged. The officials are all men who have been continuously identified with one or other of the four plants, the Canadian manager being W. J. Elliott.

Will Make Dishwashers

The Hurley Machine Company, Limited, to Take Over the Canadian Manufacture of the Walker Dishwasher

The Hurley Machine Company, Limited, 413 Yonge Street, Toronto, have affiliated with the Walker Brothers Company, of Syracuse, N.Y., for the Canadian manufacture of the Walker Dishwasher. For this purpose they have leased a part of the Canadian Rumely Company's building on Abell Street, where they expect to assemble an initial output of from fifty to one hundred dishwashers per month.

The Walker Dishwasher is made in several styles, suitable for homes, hotels, restaurants—in fact, wherever the disagreeable job of dishwashing is carried on. The manufacturers claim, however, that their machines will eliminate the disagreeable features. For the time being the machines will be assembled in Canada from American made parts, but the electric motors used will be of Canadian manufacture.

Secure Plant in Petrolea

The Adams Wagon Company, Limited, of Brantford, Ont., Acquire Plant of the Petrolea Wagon Works.

The Adams Wagon Company, Limited, of Brantford, a subsidiary of the Cockshutt Plow Company, Limited, have secured the plant of the Petrolea Wagon Works, Petrolea, Ontario, and are fitting it up especially for the manufacture of sleighs and trucks. The plant is now in operation and will be working to capacity in a month's time. The present plant of the Adams Wagon Company at Brantford was not equal to the demand for its products and this new arrangement will enable the Brantford plant to devote its capacity to the production of farm wagons, dump wagons, drays, etc., lines in which business has recently been very brisk for the company.

A contract has also been let for an important addition to the plant of the Cockshutt Plow Company, Limited, Brantford, Ontario. An extension 200 x 70 feet is to be built to their forge department immediately, filling a long-felt necessity for additional space.

New Fibre and Paper Mills

The Nipigon Fibre and Paper Mills, Limited, are to Build a Ground Wood Mill at Nipigon

A new company, the Nipigon Fibre & Paper Mills, Limited, are to build at Nipigon a ground wood mill. The daily capacity at the outset will be forty tons, but machinery has been ordered and electric power contracted for to increase this output to one hundred tons a day by January 1, 1922. The principals connected with the new enterprise are: W. S.

Murphy, general manager, Riverside Fibre & Paper Co.; E. E. McAlpine, vice-president, Bradner-Smith Co.; W. H. Russell, president Russell Timber Co.; and J. A. Little, president New Ontario Contracting Co.

A Model Shingle Plant

New Mill of the Dominion Shingle and Cedar Company, Limited, at Eburne, B.C.

The Canada Lumberman and Woodworker publishes the following information about the new mill of the Dominion Shingle & Cedar Co., Limited, at Eburne, B.C.:

"Regarded as one of the most modern shingle plants in British Columbia, the new mill of the Dominion Shingle & Cedar Co., Limited, replacing the one burned in September of last year, is now in full operation at Eburne, B.C. Undaunted by the high cost of machinery and equipment of all kinds, the company decided to leave no stone unturned to make the new mill a most modern one in every detail, a sprinkling system and dust collecting system being installed, the former as a warning from past experience, and the latter with a view of protecting the health of the employees.

"Situated on a site of seven acres and having an excellent water-front of 610 feet, the buildings, which are substantially constructed, have been allocated to positions to conform with the demands of the underwriters, who have given one of the lowest rates of insurance on any mill in the lower mainland.

"The boiler house, 45 x 75 feet, stands on piles, and is 45 feet from the power house, which adjoins the mill proper. It contains three boilers of over 400 h.p. capacity, and fitted with Dutch oven feed, the fuel coming in through an overhead conveyor with openings above each feed hole. The power houses contain Whelan twin engines and also a generator of 300 electric light capacity. Farther out on the water-front is the pump house with a capacity of 1,000 gallons per minute, connected with the sprinkler system and also a 30,000 gallon supply tank. The mill contains 13 Letson and Burpee machines, one hand machine for spaults, an 86-inch Disston cut-off saw, Heaps Engineering Co. steam splitter operating 60-inch saw and two knee-bolters.

"The plant has a new air cooled burner recently completed by the Walsh Construction Co., of Vancouver, 85 feet in height and 55 feet in diameter. To accommodate the working gang of 100 men, the company has just completed a modern bunkhouse about 100 yards from the mill which is fitted with dining rooms, kitchen, chef's room, and 40 rooms with two bunks in each. Shower baths have also been installed."

Port Arthur Pulp Mill

New Plant of the Kaministiquia Pulp and Paper Company, Limited, at Current River, Port Arthur

The new plant of the Kaminitiquia Pulp and Paper Company, Limited, will be located in Port Arthur, Ontario, at Current River, on a site which was formerly part of Current River Park. The Company have acquired sixteen acres of land favorably situated on the lakeshore and construction operations are now progressing under C. D. Howe & Company, consulting engineers.

While extensions are planned to give an ultimate capacity of 250 tons of newsprint a day, the first unit of the plant will be a four-grinder mill with a daily capacity of about 30 tons. Ground wood pulp will be manufactured and operations will probably commence about November first. The officers of the Company are as follows: President and managing director, U. M. Waite; vice-president, A. E. Osler; directors, John Ball, C. D. Howe, F. R. Graham and F. W. McGarry.

And You Cut Fuse Maintenance Cost 80%

compared with the maintenance cost of any "one time" fuse equipment.

Only the "Drop-Out" Renewal Link is destroyed when the fuse blows.

Both ferrule and knife-blade types are easily and quickly restored without expensive delay in service.

Economy was the first line using inexpensive bare renewal links for restoring blown fuses to their original efficiency to be APPROVED IN ALL CAPACITIES by the Underwriters' Laboratories.

Sold by all leading electrical jobbers and dealers

ECONOMY FUSE & MANUFACTURING CO.
OF CANADA, LTD.
UNITY BUILDING MONTREAL, CANADA

A Slipper Factory

Oscar Rumpel Locates a Branch of His Kitchener Business in New Hamburg

New Hamburg, Ont., is to have a slipper factory, a branch of Oscar Rumpel's business at Kitchener and Baden, Ont. The new plant is a two-storey building, 40 x 135 feet. About fifty hands will be employed for the present, but an increase in this number is expected.

Maritime Spice Factory

Federation of Wholesale Grocers at St. John, N.B., to Manufacture Spices and Specialties

As several wholesale grocery firms have found difficulty in procuring satisfactory delivery and quality in certain specialties used by them, they have formed a company at St. John, N.B., under the name of the Canada Spice & Specialty Mills, Limited, and will carry on the manufacture themselves. The firms interested are: Reed & Company, Moncton; A. F. Randolph & Sons, Fredericton; Baird & Peters, Jones & Schofield, Puddington Wetmore, Morrison, Limited, and Dearborn & Co., Limited, of St. John. The officers of the company are: President, F. B. Schofield; vice-president, R. F. Randolph; managing director, A. H. Wetmore; directors, A. P. Patterson and J. F. Edgett.

In addition to spices, the mills are manufacturing baking powder, flavors, vinegar, peanut butter, etc. The capacity of the plant has not yet been determined, but a floor space of approximately 15,000 square feet is being occupied to begin with, and from 25 to 35 hands are to be employed. Two buildings on Water Street, St. John, are in use besides the Dearborn Building at 93 Prince William Street. The latter was almost totally destroyed by fire in April, but will be rebuilt and ready for occupancy early in August.

New Planing Mill

The Sheppard & Gill Lumber Co., Toronto, Construct and Equip Mill in the Danforth District

The Sheppard & Gill Lumber Company of Toronto have recently purchased the lumber yard of O. and W. R. Smith, where they have constructed an up-to-date planing mill, with equipment of the latest design. The new mill is a two-story frame building, 48 x 54 feet, with heavy machinery on the lower floor, which is of concrete. The upper floor is chiefly used for the storage of sash and doors. According to *The Canada Lumberman*, electric power is used, with an individual drive for each machine. Two shavings exhaust systems are employed, one to collect the sawdust and the other to carry away the shavings from the stickers. Separate storage vaults are provided for each material. The layout of the machinery is such that a large volume of work may be handled. The machines are placed crosswise of the building so that stock may be fed in one side and carried away through doors on the other side. The latest style profile heads with milled cutters are used, and everything provided for the efficient handling of all the work that offers.

L'Air Liquide Society

New Supply Depots for Oxygen at Sydney, N.S., and Windsor, Ont.

extensions include the establishment of supply depots at Sydney, N.S., and at Windsor, Ont. The former depot will be supplied by the Halifax factory and provision has been made to keep available enough cylinders to fill large orders immediately upon receipt.

The Windsor depot, like the Sydney one, has been established in order to make immediate attention to orders possible, and to avoid freight delays. It will be kept stocked by the London factory, which is producing to capacity.

New Knitting Mill

Knit-to-Fit Manufacturing Company, Limited, Construct New Plant

The Knit-to-Fit Manufacturing Co., Limited, of Montreal, manufacturers of sweaters and underwear, have a new plant under construction at Parthenais and Larivieve Streets, Montreal.

The new plant has been designed by the W. J. Westaway Co., Limited, of Hamilton, Ont., and is being built by the Anglin Horcross Co. of Montreal. It includes a main building, executed in modern "mill construction," and a bleach-house and boiler house in concrete. The initial floor-space is 80,000 square feet, but the grounds of the mill are large enough to admit of doubling or trebling this area should increase of business warrant it. Manufacture of the "Knit-to-Fit" and "Health-Brand" wear should commence in the new plant this coming November.

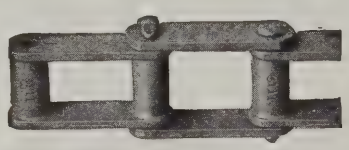
Will Rebuild

The Maritime Bridge Co., Ltd., arrange for Temporary Operation, and Plan a New Plant

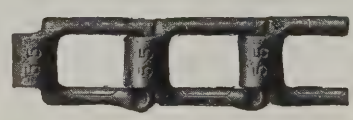
Although the main building of the Maritime Bridge Company, Limited, was entirely destroyed and a considerable amount of machinery seriously damaged in the disastrous fire of July 7 at New Glasgow, N.S., arrangements are under way for temporary operation and the completion of contracts already on hand. At the same time, plans are being prepared for the erection of a larger and more modern buliding in the near future.

Will Make Silk Gloves

St. Catharines Silk Mills, Ltd., Will Employ Fifty Hands in New Branch Plant at Port Colborne, Ont.



The St. Catharines Silk Mills, Limited, manufacturers of the "Queen Quality" silk products, are establishing a branch plant on rented premises in the new Mahaffy Block, Port Colborne. Increase of business has made the new factory necessary, while the scarcity of help in St. Catharines has determined the advisability of locating it in Port Colborne. The organization and personnel will, however, be the same as that of the main plant. Fifty hands will be employed in the new branch and silk gloves will be the product. The company expect to commence operations about the first of August.



North Ontario Company

The Sudbury Woollen Mills, Limited, will Manufacture Sweaters, Mitts and Hosiery

A recent organization is the Sudbury Woollen Mills, Limited, where the manufacture of woollen goods from the raw material to the finished article is to be carried on. At present about fifteen hands are employed in the production of sweaters, mitts and hosiery, but this number will shortly be increased to twenty-five. The enterprise will be organized as a joint stock company with J. A. Lemieux as president and A. Weder as vice-president. The capital is $40,000.

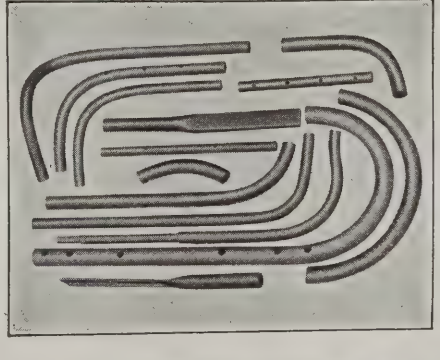
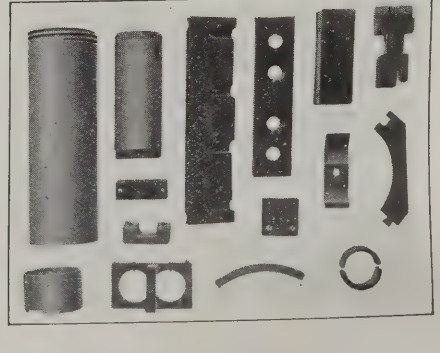
DIAMOND-FIBRE is the most adaptable material known. Its utility in the electrical, mechanical and industrial fields is practically unlimited. Its properties make it especially suitable as a raw material for products and special parts of every description.



It is a superior material because of its great strength — compression, shearing, tensile and dielectric; its toughness and light weight; the ease with which it can be machined and formed; its attractive appearance; and its low cost.



Diamond-Fibre combines in an unusual degree utility, machining and working facility and economy. Manufacturers everywhere find it a better and cheaper material. It replaces other materials with better results and less cost.

Diamond-Fibre improves the product and cuts production costs. It will pay you to investigate this material. Tell us your problem and let us co-operate. Send for booklet—"Diamond-Fibre and Its Uses."

Diamond State Fibre Company of Canada
Limited
TORONTO - CANADA

Diamond-Fibre is tougher than horn, almost as hard as iron, yet lighter than aluminum. Its compression strength is 30,000 to 40,000 lbs. per sq. in.; tensile strength 12,000 to 15,000 lbs. per sq. in.; shearing strength, 9,000 to 10,000 lbs. per sq. in.; and its dielectric strength, 200 to 400 volts per mill of thickness. It is impervious to oil, grease and ordinary organic solvents. It does not corrode, dent, break, split, splinter, or crystallize under severe vibration. It readily takes any machining process and can be formed into various shapes. Furnished in sheets, rods, tubes, and machined parts of every description.

Diamond-F

Expansion at Oshawa

Samson Tractor Co. of Canada, Ltd., will Operate as a Division of General Motors of Canada, Ltd.

The Samson Tractor Company of Canada, Limited, has been formed, with head office at Oshawa, Ontario. As a division of General Motors of Canada, Limited, and under the presidency of R. S. McLaughlin, the new company will immediately begin the manufacture of Samson trucks, which are specially designed for farm use.

For the present the Samson tractors and farm implements will be imported from the parent factory at Janesville, Wisconsin, and their Canadian distribution will be handled from Oshawa. The early establishment of a plant for their Canadian manufacture is, however, now under consideration. From one hundred and fifty to two hundred hands are to be employed at once and a rapid increase in the staff is expected.

Additions to Plant

A New Paper Machine with Building Under Erection at the Plant of The Ontario Paper Co., Ltd.

The Ontario Paper Company, Limited, of Thorold, Ontario, are adding one new paper machine to their equipment and are erecting a building for it about 60 x 300 feet. The present daily output of the plant is 230 tons of newspaper. The new machine should increase this capacity to approximately 300 tons.

Building Programme Completed

Extensions to the Plant of the Hull Iron & Steel Foundries, Limited

The building programme of the Hull Iron & Steel Foundries, Limited, is nearing completion. The recent extensions to the works are three, namely, a two-storey pattern shop and storage building, 160 x 160 feet; an 80-foot square addition to the main building; and a machine shop, 100 x 80 feet, to be occupied partly by the machinists handling plan and equipment repairs, and partly by air compressors.

A central transformation station, with electricians' repair shop in connection, has also been erected, and arrangements have been made for removing all overhead wires and poles. Through these improvements it is hoped that production will be increased by at least 50 per cent.

Baskets and Boxes

Extensions in the Plant of the Oakville Basket & Veneer Co., Limited

The Oakville Basket & Veneer Co., Limited, have erected two new buildings. One of these is two storeys high and 75 x 80 feet. It will be used for the manufacture of 4—one wirebound boxes. The second is a three-storey building, measuring 32 x 200 feet. The ground floor of this building will be entirely devoted to the manufacture of baskets.

Owing to delay in obtaining machinery, the date on which manufacturing will commence in these new buildings cannot be definitely stated.

A Motor Castings Company

Dominion Motor Castings, Limited, Capital $250,000, Apply for Charter at Windsor, Ontario

A company formed for the manufacture of all sorts of castings used on motor vehicles will shortly commence operations at Windsor, Ont. A charter has been applied for under the name of Dominion Motor Castings, Limited, for a $250,000

The Canadian Appraisal Company
Limited

The Pioneer Appraisal Organization of Canada
ESTABLISHED 1905

OWING to the rapid growth of our business, we have moved into more commodious offices, and our staff, already considerable in numbers, is being largely augmented.

We are therefore able to assure prospective clients of our prompt attention to any work that may be entrusted to us.

Our unique appraisal experience in Canada, covering as it does, a period of fifteen years, and investigations of properties representing every line of industry that is carried on throughout the Dominion, qualifies us in a very special manner to undertake appraisal service of every description.

capital, the incorporators being A. Morrill, P. McKee, C. A. Ripley, L. Smitherman and R. St. Clair.

The factory, which is now under construction on a lot 400 x 144 feet at the southeast corner of Windsor Avenue and Hanna Street, will have 23,000 square feet of floor space. About one hundred and fifty men will be employed and a daily output of forty tons of castings is expected.

Nearing Completion

Premier Tire & Rubber Company, Limited, Expect to Operate New Plant Beginning of Next Year

The plant of the Premier Tire & Rubber Company, Limited, at Beamsville, Ontario, is now nearing completion, and the Company expect to be running about the beginning of next year. The building is a one-story brick and concrete structure measuring 150 x 50 feet. The output of tubes is estimated as from four hundred to one thousand a day.

Tobacco Manufacturers Expand

Changes in the Plant and Equipment of Benson & Hedges (Canada), Limited

Benson & Hedges (Canada), Limited, manufacturers of cigars and cigarettes, have been making extensive additions to their plant and equipment. Their former plant at 210 Lemoine Street, Montreal, having proved too small for an increasing export and domestic trade, they have moved to 45, 47 and 49 Coté Street. The floor space in the new building is 46,000 square feet as compared with 12,000 square feet in the old factory. With this increased accommodation and the new and up-to-date machinery which is being installed, they expect to double their annual output for Canada, and increase their export business by about 75 per cent.

Another Branch Plant

The Carr Fastener Company Establishes a Canadian Factory at Hamilton, Ontario

The Carr Fastener Company, of Cambridge, Mass., have under construction at Hamilton, Ontario, a two-story reinforced concrete building approximately 72 x 172 feet. Here, under the name of the Carr Fastener Company of Canada, Limited, they expect to employ about 75 hands making the "Dot" line of fasteners. This line, according to their advertisement, includes "a fastener for every fastener need," and their list of articles to which this slogan applies is a long one. Manufacturing operations are expected to begin in the Hamilton plant about September 1st.

A Franco-Canadian Industry

Perrin Freres & Cie., of Grenoble, France, Locate Factory in Montreal under name of V. Perrin & Cie.

V. Perrin & Cie., the firm doing business in France under the name of Perrin Frères & Cie., have recently established a factory at 323 Bleury Street, Montreal. Here they will carry on the manufacture of kid, cape and mocha gloves of the best grades, taking all necessary measures to obtain workmanship of the highest standard. This Montreal factory brings the number owned by this firm up to seven. In addition to the parent factory at Grenoble, there are three others in France, one in England, and one in the United States.

For various reasons the Brunswick Canadian Products Company have decided to postpone the erection of their proposed plant at Woodstock, Ontario. It is probable that the project will be resumed at a later date.

Large Addition Opened

Jenkins Bros., Ltd., Hold a Dance in Their New Machine Shop

With its spacious interior transformed for the time being into a veritable fairyland of flags, streamers and bunting, the new machine shop for the iron valve division at the Jenkins Bros., Limited, plant, 103 St. Remi Street, Montreal, was recently the scene of a very enjoyable social entertainment. Gotten up by way of fittingly inaugurating the opening of this latest addition to the valve manufacturing establishment, its success was noticeable both as regards the numbers in attendance and the excellent arrangements which characterized it throughout. Certain it is that the four hundred or more couples participating, including the management, employees and invited guests, enjoyed every instant of the time from the moment of their arrival until their departure in the "wee sma' hours."

Dance held by Jenkins Brothers, Limited, when New Machine Shop was Opened

Mr. W. F. Trimble, the managing director, after tendering the gathering a very cordial welcome, outlined the provisions made by the Company for the future welfare of the employees under the group insurance system, as well as a pension scheme. The hearty applause which greeted the conclusion of the speaker's remarks was evidence of the keen interest and wholehearted approval displayed by those directly concerned.

A flashlight photograph was then secured of the entire assemblage, after which the festivities began in real earnest. The fascination of the euchre tables attracted a goodly number of those present and throughout the evening vied with the dancing floor in the matter of popularity. The latter, specially laid for the occasion was all that the heart or feet of the most particular devotee of the "light fantastic" could desire, its attractiveness being still further enhanced by the stirring music of the Grenadier Guards' Band.

Much interest was displayed by those present in a group of photographs showing the steady growth of the institution from the period of its establishment, in 1864 in the United States, and 1906 in Canada, up to the present day. With the increased manufacturing facilities which the new machine shop will afford the iron valve division, the Company will

be in a splendid position to handle their steadily increasing business.

At the refreshment counter everything that the inner man (or woman) desired was served in a most generous way. Full justice having been done there, dancing was again resumed, and the hour of departure—2.30 a. m.—heralded by the strains of the National Anthem, brought the delightful evening to a close.

Collingwood Shipbuilding Co.

Shareholders Agree to Sell to a Subsidiary of the British Empire Steel Corporation, Limited

At a meeting of the shareholders of the Collingwood Shipbuilding Co., Limited, held in Collingwood July 27th, it was unanimously agreed to sell all their assets to the Collingwood Shipbuilding Corporation, Limited, who are a part of the British Empire Steel Corporation. By the terms of the agreement the Collingwood Corporation undertakes to pay all accounts, and to assume all agreements of the Collingwood Shipbuilding Company.

The consideration as unanimously accepted by the shareholders is that set out in the official notice as follows:

(a) First mortgage ten-year 6 per cent. serial bonds upon the property of the Corporation, of the par value of $1,950,000 unconditionally guaranteed as to principal and interest by the British Empire Steel Corporation, Limited (Nova Scotia Corporation).

(b) Seven per cent. cumulative preference stock of British Empire Steel Corporation, Limited, of the par value of $1,040,000.

(c) Seven per cent cumulative second preference stock of British Empire Steel Corporation, Limited, of the par value of $1,040,000.

(d) Common stock of British Empire Steel Corporation, Limited, of the par value of $1,040,000.

Western Match Co., Limited

Will Manufacture Matches by the "New Square Match System" at Neepawa, Manitoba

A new industry under process of organization is the Western Match Company, Limited. The company, capitalized at $200,000, have secured buildings at Neepawa, Manitoba, where they will carry on the manufacture and distribution of matches for Western Canada. J. D. Mantion, formerly of the E. B. Eddy Company and of the Diamond Match Company in the United States, is superintendent. Numerous machines perfected by him will be used in the new factory, and an output of one hundred cases per day is expected.

The manufacturing process to be used is known as the "New Square Match System," patent rights of which are in possession of the Western Match Company. By this system, it is claimed, three matches can be cut from a given dimension of lumber as against one match cut by other machines now in use. The new machine also cuts three times as many matches in a given period of time as are cut by other machines. The amount of composition used is also reduced by the new system, and the match splints can be cut from green lumber, thus eliminating a large investment in lumber set aside for seasoning.

The Manitoba Finance Corporation, Limited, who are selling stock in the industry, estimate the earnings of the new company as at least $50,000 per annum. This will be derived not only from the sale of matches, but also from leasing or selling machines to foreign corporations for manufacturing matches outside of Canada.

Reinforced concrete extension to the plant of Horn Bros. Woollen Co., Lindsay, Ont., erected under the extreme weather conditions of December, January and February last. A distinctive feature is the unusually high ceiling (25'-0") of the lower storey which forms the dye house.

Makers of Shoe Supplies Extend Their Plant at Chambly Canton, P.Q.

In order to take care of their counter factory and to gain extended space for the operation of their board mill, Bennett, Limited, makers of shoe supplies, at Chambly Canton, P.Q., are building an addition to their present plant. This addition when completed will be 110 x 66 feet, and should be in use by September 1st. This being only one of several additions which the Company hope to be able to make from time to time, it will be used for the counter factory machinery only.

Making Pulp Machinery

Waterous Engine Works Co., Ltd., Making Machinery Formerly Owned by J. M. Voith Co.

The Waterous Engine Works Co., Limited, of Brantford, Ontario, have recently obtained exclusive rights for the manufacture of the entire line of pulp-mill machinery formerly owned by the J. M. Voith Co., New York. This line includes pulper, refiner, paper machine screen, sliver screen, magazine grinders, etc. Of particular interest is the magazine grinder, of which a cut is reproduced on this page. *The Pulp and Paper Magazine* describes these grinders as follows:

"The capacity of these grinders is from 16 to 25 tons of dry pulp in 24 hours, depending on the wood to be ground, and the pulp required. The wood is cut into 48-inch lengths, instead of 24-inch, which represents a considerable saving in a year's sawing. Also, the cost of labor per ton of pulp produced by these grinders is about 50 per cent. less than on the old styles, and the operators are working in a clean, steamless room, handling or cutting no wood whatever, so that their whole time is devoted to seeing that the grinder is producing properly. Three men only are required to operate each four grinders, producing 80 tons of pulp, one man on main floor to look after the operation of the machines, and two on the charging floor to load the magazines.

"As to the power consumed by these grinders, actual figures obtained from the averages of weekly returns show that one ton of news pulp is produced with 56.6 h.p., as against 67.8 h.p. required by other types. This low power consumption is due to the peculiar design of this machine; its operation is entirely automatic and pockets are refilled from the magazines by gravity in a minimum time. Extremely sensitive governors are used which increase the pressure on the working pockets, to compensate for the reduction of load while other pockets are being recharged. Each machine has only two pockets, placed horizontally and directly across the stone from one another. This construction eliminates to a large extent friction in the shaft bearings."

Orders for these grinders have been numerous. The Laurentide Company, Limited, have ordered six, the Belgo-Canadian Pulp and Paper Company, four, the Brampton Pulp and Paper Company, three, the Port Arthur Pulp and Paper Company, six, and the St. Maurice Lumber Company, twelve.

Rebuilding Plant

Expansion of the Booth Fisheries Company at Wiarton and Owen Sound, Ontario

The Booth Fisheries Company are in the process of rebuilding their plant at Wiarton, Ont. The present structure will be replaced by a new building which comprises a freezer, ice house, fish house and office. In addition to the Wiarton alterations the company propose to start construction work on a plant in Owen Sound during the spring of 1921.

By B. M. A.

From the Commerce Monthly of the National Bank of Commerce, New York

As our understanding of crises has increased we have come to substitute for the notion of crisis the notion of "business cycle" and to recognize that the crisis is merely a phase of the general rythmic movement in business—crisis followed by depression, depression by prosperity, prosperity by crisis again, and so on. There is good reason for believing, too, that with better understanding of the business cycle we are gaining better control of it, that the period of prosperity can be lengthened, that the crisis can be made less severe, and that the period of depression can be shortened. If we can minimize the extravagance and mistakes of the prosperity period we can make the reaction from it less severe. This relates to the normal crisis. Great disasters, such as a world war, will bring derangement under any system imaginable. Natural disasters —earthquakes, fires, tidal waves, crop failures and the like— striking at great and rich centres of population, may bring unexpected business and financial shocks. But the normal crisis which brings every prosperity period to a close can ultimately be reduced to a relatively painless process of readjustment.

Crises must be distinguished from panics. The crisis is an affair of industry generally, the panic is an affair of the money market. Crises come when active business men find that their creditors, whether banks or investors or other business men, begin to insist upon a contraction of credit and a liquidation of debts. A crisis means the end of a boom period, the inauguration of a period of slow business and depression, accompanied by a settling up of debts and a readjustment of prices. Usually this involves a good many bankruptcies, but it may be a relatively painless process of liquidation. Panics, on the other hand, involve runs on banks, great tension in the money market, a situation in which solvent borrowers are unable to get adequate, if any, accommodation from banks, because the banks themselves are subject to extreme pressure from those who hold their demand liabilities.

Crises, liquidation periods, are apparently inevitable in the course of industry as at present organized. Panics, however, are largely avoidable. They grow out of an unsound organization of money and banking. Our Federal reserve system has been devised to make panics impossible in the future, and there is abundant ground for confidence that we shall not see again in the United States such demoralization and chaos in the money market as the years 1893 or 1907 witnessed. England has gone through a number of crises without real panics. The outbreak of the war in 1914 brought a financial panic to England, but the English system was proof against any ordinary shock. The year 1907, which brought both a severe crisis and a severe panic to the United States, was marked in England by a rather mild crisis, without any panic phenomena.

Periods of reaction and liquidation, unless too violent and prolonged, are wholesome rather than harmful. They relieve maladjustment and strain. They prevent unsound policies from being carried too far. They "hold court over values and prices, and bring aspirations face to face with realities." They give time for the maturing of new plans, and for the careful introduction of new processes. They

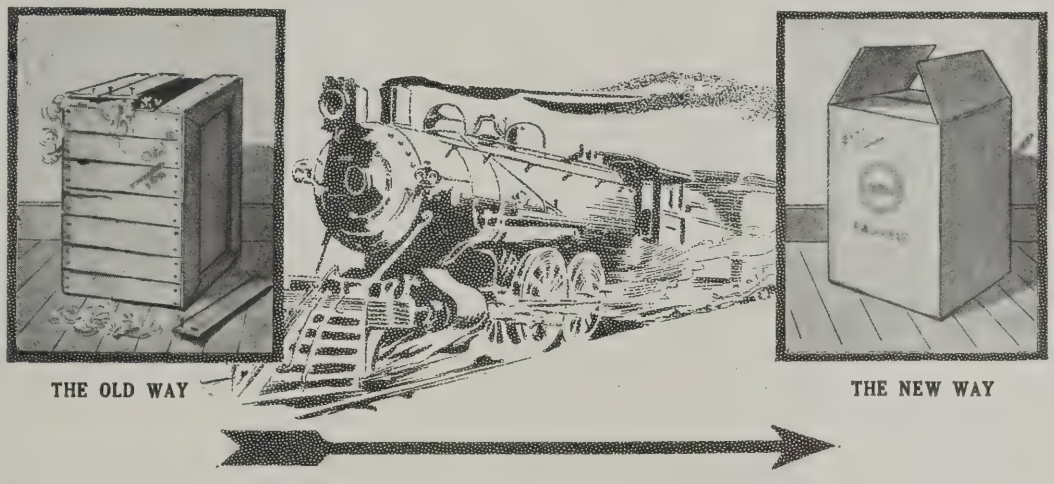
check wastes and restore efficiency. They allay financial fevers. They need mitigation and control—but progressively we are learning to mitigate and to control them.

The Cycle



The normal business cycle, as it occurs in the absence of special disturbing factors like a great war, has been carefully worked out by a number of recent writers.* The description may start at any place in the business cycle, and the analysis will work around again through the cycle to the starting point. It is convenient to start with the close of the period of depression.

At the end of a period of depression we find the following situation: (1) prices are low; (2) there have been drastic reductions in costs; (3) the margins of profits are narrow; (4) bank reserves are high; (5) conservative policies obtain as to borrowing, capitalization and loans; (6) stocks of goods on hand are moderate; (7) buying is cautious. In such a situation an expansion in the physical volume of production and sales takes place, often with prices still falling. During the period of depression which is coming to a close, people have used up their stocks of clothing and shoes, have reduced the volume of household furnishings, linen, china and the like, factories have allowed equipment and stocks of raw materials to get as low as seems wise, and new buying is forced upon everyone who is in a position to undertake it. Moreover, a growing volume of conservative business men and investors who had "sold out" on the crest of the preceding wave of prosperity, have reached the conclusion that things have about reached bottom and are disposed to invest or to start business again. There come then a slow and cautious revival and expansion in the physical volume of trade. Slow at first, this process is cumulative, and it gradually turns slow business into active business. The revival may start in a narrow field, but necessarily it spreads to other fields, because the active concerns will have more spending power, which leads them to increase their buying from other enterprises. The active concerns, moreover, employ more labor, which increases the spending power of laborers, and increases the demand for many things. Increased retail demand leads to increased demand on jobbers and wholesalers, who pass it on to manufacturers, who take on more laborers, who increase their retail buying. The quickening of industries reacts on the starting point, which is quickened and gives renewed impetus to other fields.

There comes, moreover, a psychological change. The "temper of business" is not a thing which is made by men as separate individuals. Rather, it is a social product. The man who finds business in his own line expanding becomes an optimist with regard to business at large. He talks with other men. They, even though they have not felt increased orders for their own goods, begin to be influenced by his optimism. The process is partly rational and partly non-rational. The mere fact that men find their neighbors more cheerful influences them unconsciously even in the face of facts. On the other hand, the man who has been delaying an increase in his own business activity may well find a valid ground for taking positive action if he finds increasing confidence among those about him. The temper of business, an intangible and psychological thing, is, none the less, one of the most fundamental realities with which business men must reckon. No business man can run counter to a general feeling of despondency, even though he be sure that it is ill-grounded, without incurring risk of loss. On the other hand, a business man may well find it worth while to "swim with

*By far the best book on the subject is that of Wesley C. Mitchell, whose *Business Cycles*, published by the University of California Press, in 1913, contains a wealth of statistical materials by which the theory of the matter is carefully checked.

Steel for Permanence

The All Steel Elevated Water Tank is the most economical installation for Automatic Sprinkler systems for fire protection, general mill supply, or Municipal Water Works systems.

Its first cost is not excessive, the maintenance expense is very low, and there is no danger of leakage, falling ice, or possibility of the tank bursting or catching fire.

Hundreds of our All Steel Elevated Water Tanks now in service throughout Canada bear witness to these facts.

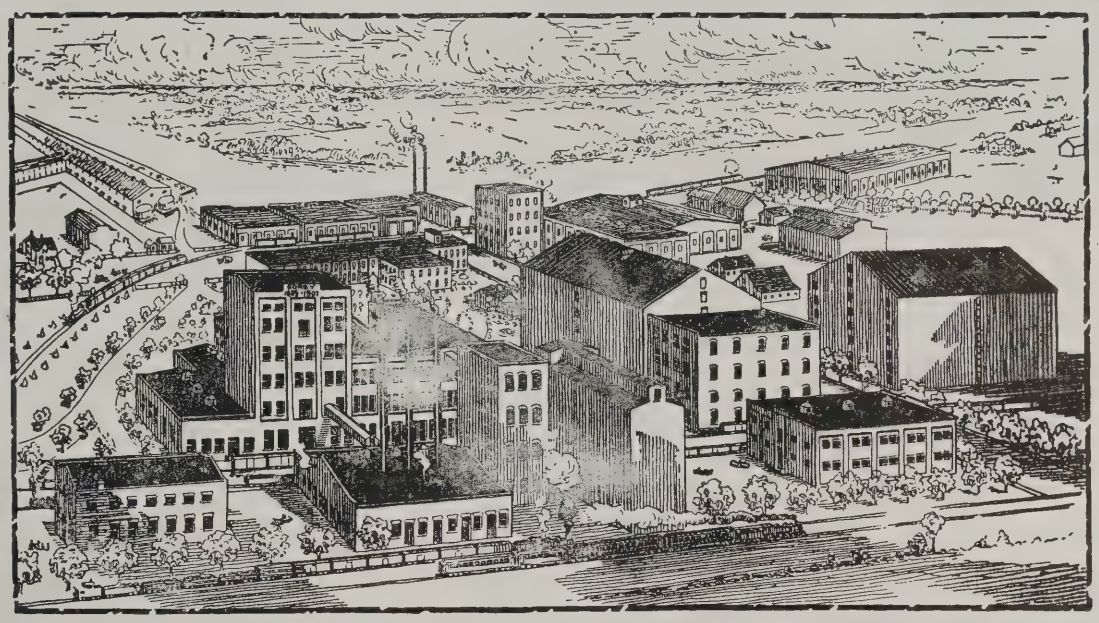
the tide" of business optimism for a short time at least, even though he be sure that it is ill-grounded. There are, in the business world, a few strong figures who can stand out against the prevalent optimism or pessimism, little influenced by it, and profit by running counter to it, but to do so requires a long purse, a clear head and unusual courage.

The price level is often slowly falling when the revival begins, but the expansion of trade stops this. For when business men have plenty of orders they stand out for higher prices. Moreover, when prices start to rise, the expectation of higher prices makes buyers increasingly eager. The rise of prices, like the volume of trade, spreads rapidly through all fields. The advance in prices in one establishment puts pressure on someone else to recoup himself.

The rise of prices is uneven. Retail prices lag behind wholesale prices. Consumers' goods lag behind producers' goods. Finished products lag behind raw materials. Retail prices are influenced a good deal by custom. Moreover, the retailer's total costs do not increase as fast as the wholesale prices he has to pay. His overhead charges do not increase as fast as wholesale prices do, and even if he adds all the increases of the wholesale prices to the retail prices, the percentage increase in retail prices is not so great as the percentage increase in wholesale prices.

Unspecialized raw materials, like pig iron, tend to rise faster than finished products, like knives, because they respond more quickly to demand from many quarters, increasing demand not only for knives but also for steel rails, for wire fencing, for tin plate and for many other things.

Wages often rise more promptly than wholesale prices, but in general the increase is much less. Wages are much more influenced by custom than are wholesale prices. Discount rates rise sometimes faster and sometimes more slowly than wholesale prices. Interest rates on long time loans move slowly in the early stage of the revival. The prices of stocks, especially common stocks, advance before the rise in wholesale prices, and go much higher than wholesale prices.



The unequal rise in prices in the great majority of cases means a great increase in profits in the revival period, since most of the elements of cost rise more slowly than wholesale prices. Raw materials, and sometimes bank rates rise faster than finished goods, but wages lag behind, while supplementary costs or overhead charges are commonly fixed by old agreements covering rentals on leases, salaries and interest on bonds.

The increase of profits and the prevalence of optimism leads to a great increase in investment. This means more orders and higher prices for structural steel, other building materials, machinery, etc.

These factors are cumulative. The rise in prices at one point, increasing the incomes of those engaged in a given industry, increases their ability to buy, which stimulates others, and so on.

Why should not this process continue indefinitely? What is there to bring prosperity to a close? The answer is to be found in several factors.

For one thing, business mistakes are made. Heavy investments are made in enterprises which either fail to return profits or else fail to return them on the scale expected. The crisis of 1873, for example, grew largely out of an overbuilding of transcontinental railroads, which ran so far in advance of the development of population that they were unable even to earn interest on their bonds. In some measure, overextensions in particular lines, with the result that profits fail to materialize, and even fixed charges fail to be earned, occur in every period of prosperity. Business op-

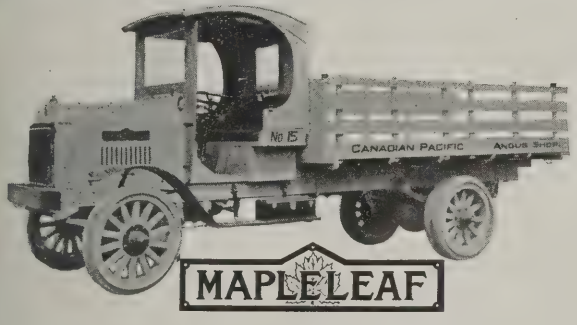
timism tends to run beyond reasonable limits. Speculative imaginings take the place of careful calculation.

In the second place, even though business plans be soundly laid at the beginning of a period of prosperity, taking into account the prices and costs that prevail at that time, the very prosperity itself may so alter the data on which the plans were made as to construction and other costs, as to upset the plans, and make it necessary for the enterprise to call a halt, take stock and readjust. Finally, throughout the business field, as the period of prosperity goes on, there is a tendency for costs generally to rise at a very rapid rate.

During the early part of the prosperity period, supplementary costs, or overhead charges, tend to decline per unit of output until existing plants are fully employed. When, however, production necessitates an increase more rapidly than the output. Leases and other contracts expire, moreover, and have to be renewed at much higher rentals. Bond issues at low rates of interest mature and, especially toward the end of the prosperity period, renewals can be made only at much higher rates. So strikingly true is this that it regularly happens that strong corporations, toward the end of a boom, will defer the refunding of maturities and issue short-term notes, expecting after a year or two to be able to refund them into long-time issues at lower rates. The pressure on the capital market grows more and more intense as prosperity increases. Prosperity breeds extravagant consumption, and extravagant consumers save less for investment. Even those who regularly save for investment find it increasingly difficult to do so as the cost of living rises. The end of a period of prosperity is almost always characterized by high interest rates on investments and by a great scarcity of new money for long-time investment.

Short-term money rates and the rates on commercial paper rise, making it more expensive for the wholesaler to carry his inventories or for the manufacturer to carry his materials and work in process.

Other costs increase rapidly. Old plants and ill-located plants are brought into use as the better plants, which alone were worked in the period of depression, are fully utilized. The output of these old and ill-located plants is turned out at a higher cost. Labor cost rises perhaps most of all. This is not due only to the increase of wages. It is due partly to overtime work for which higher rates are paid. It is due partly to the weariness of the laborer, which overtime work involves. Laborers cannot engage in overtime work week after week and month after month without reducing their efficiency. Employers, seeking to enlarge their labor force, moreover, are obliged to take on undesirable individuals who would not be employed in a depression period. Perhaps most important of all, shop discipline is lessened in a prosperity period. Laborers who are sure that they can get a job for the asking across the street cannot be held to their tasks in a period of prosperity as they can in a period of depression. On this point both laborers and manufacturers seem agreed. Laborers complain of "speeding up" in a time of depression, and manufacturers complain of "loafing on the job" in a period of prosperity.



Managerial efficiency is lessened as the pressure of prosperity increases. Managers cannot watch the business so closely. Small wastes multiply, rush orders make for confusion. The pressure, moreover, which working on small margins involves, is removed.

The very prosperity of most businesses impose serious burdens on those businesses which are least able to raise their prices or to increase their markets. Where prices are fixed by law or by public commissions, as in the case of municipal utilities or railways, a prolonged period of pros-

perity is apt to increase costs seriously at the expense of profits. Businesses tied up with long-time contracts are similarly placed. Moreover, there are always lines in which recent construction has grown faster than the market. Maladjustments increase. High rates of interest not only check current demand for goods of various kinds but also make it difficult for speculators to hold them off the market.

Consequently, at the height of a period of prosperity, an important minority faces declining and vanishing profits. The decline of profits means the doubtful solvency of many outstanding credits. In such a situation it is only a question of time until a readjustment and liquidation is forced. Creditors begin to get nervous. The very rise in interest rates tends to reduce the values of investment securities which have been used as the basis of collateral loans—a phenomenon well known in the bond market. The basis of all credit is, in last analysis, earning power, and with the actual or prospective decline in the profits of a business, its creditors, whether banks or other businesses, tend to demand additional security or to insist on contraction of credit. When profits get shaky, creditors get nervous and force liquidation. A crisis comes. The liquidation extends over the whole field. If a debtor is pressed he is obliged to press his own debtors. The pressure may take the form of offering extra inducements for prompt settlement, as where a seller offers a buyer more than the customary 2 per cent. discount for cash. It may take many forms. If one man succeeds in meeting the pressure upon himself he does so at the expense of others who are embarrassed by it. A sudden change takes place in the temper of business. For many business men the question of profit-making gives place to the question of maintaining solvency. Business men quit pushing sales vigorously, especially when doubtful of the credit of buyers. There comes a rapid falling off of the volume of business. Even when few failures occur the temper of business changes. Pessimism replaces optimism—sometimes almost overnight.

If banks fail to pay their depositors on demand and if they contract loans (or fail to expand loans) a panic comes. This has happened in America a number of times, notably in 1893 and 1907. It did not happen in England, Germany and France in those years because of the better organization of the banking systems. There is little chance of panic when depositors can get their money on demand and when solvent business men can borrow the amounts necessary to meet their pressing obligations.

If a panic comes a great many plants are temporarily shut down. With the passing of the panic these are reopened and there comes a short-lived revival immediately after the panic. This short-lived revival is chiefly for the purpose of finishing orders not wholly completed, for delivery to solvent firms who do not desire to buy the goods but who are obliged, under their contracts, to take them. New orders do not follow, however, and a period of real depression follows. In this period, consumers' demand falls off as labor is discharged and as profits fail to appear. Investors' demand for construction falls off most of all. These tendencies are cumulative just as the reverse tendencies in the period of prosperity were cumulative. The falling off of orders in one business reacts on the other businesses which sell to it. Prices fall. Wholesale prices fall faster than retail prices. Raw materials fall faster than finished products. Wages do not fall so fast, but they fall. Common stocks fall faster and farther than anything else. High-grade bonds, on the other hand, tend to rise as investors turn to the safest forms of investment, and as the pressure on the capital market is relaxed.

The depression lasts until liquidation is completed. Inefficient firms are weeded out. Costs go down. A reorganization of leases and of bond issues brings rentals and other fixed charges down. Interest falls. Bank rates get low. Bank reserves increase. Labor costs go down. This is partly because wages go down, partly because overtime work ceases, partly because shop discipline improves, partly because the least efficient laborers are unemployed.

We are thus brought back to the point at which we started, the point at which a revival is due. As the depression period continues, clothing, materials, structures, machinery, etc., wear out. Population continues to grow; bargain sales of the equipment of defunct enterprises cease, and new things finally have to be bought. The men who have been waiting for "bottom" to be reached, decide that the time for action has come. At low prices business begins to increase, and the cycle of prosperity, crisis and depression starts again.

Banking Policy in a Crisis

When the banking and currency system is sound and elastic it is almost always possible to prevent a crisis from degenerating into a panic. It is no part of the duty of the banks in a crisis period to force, by artificial methods, a continuance of waning prosperity. It is not their duty to provide funds for expansion of new enterprises at the high costs which the end of a prosperity period involves. It is not their duty to encourage customers to borrow for the expansion of established businesses. Banks will rather seek to persuade their strongest customers to curtail borrowings in the interests of the general situation and may even seek to persuade their strongest customers to make loans to help relieve the situation. But banks will lend freely to enable solvent firms to meet their quick liabilities. It is their busi-

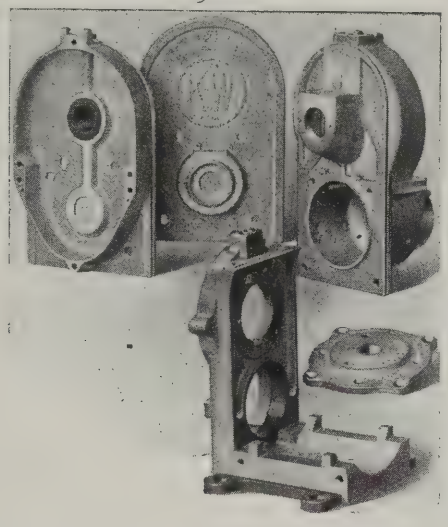
ness to protect solvent firms, but not to protect insolvent firms. It is their business to assist solvent firms to mobolize slow assets, but it is not their business to validate bad assets of insolvent firms. They may sometimes find it necessary to protect a firm which is largely but not wholly good for its liabilities, in order to prevent the throwing of its assets on a demoralized market, which would occasion severe losses to its solvent creditors. The banking community will especially be disposed to come to the rescue of temporarily embarrassed banks if such should appear.

But the significance of a crisis is that the business community pauses to take stock. The crisis is a time when weak spots are tested, when unsound policies are reversed. If a crisis and depression are to be followed by a period of soundly based prosperity, it is necessary that the cleansing be thorough and that really insolvent businesses be reorganized. The difference between a crisis and a panic is that in a panic solvent businesses may be pulled down and new weaknesses created. The banking community has done its full duty to the business community if it prevents a crisis from degenerating into a panic.



With the best will in the world our banking system has failed in this in virtually every important crisis in the past except that of 1914. Since the Civil War the reason was to be found chiefly in our almost wholly inelastic currency. Our currency has consisted partly of greenbacks, fixed in amount by law; partly of national bank notes, the volume of which depended more on the price of Government bonds than on anything else, and which have shown very slight elasticity over short periods of time; silver and silver certificates, whose volume had no relation to the demands of trade; and gold. The volume of gold had considerable elasticity since we could draw gold in from the outside world, or could release gold to the outside world. During the panic of 1893 when there was uncertainty regarding the maintenance of the gold standard in the United States, gold tended to leave the country rather than come to the country, and this intensified the evils of the situation. The panic of 1907, however, was relieved by the importation of about $100,000,000 in gold in the last two months of 1907.

The provision of emergency currency under the Aldrich-Vreeland Act made it possible in 1914 for the currency to expand rapidly to meet the unusual needs of a crisis period. Country banks were not under pressure to draw on their New York balances in 1914 to the extent that they did in earlier crises. New York banks consequently did not find their reserves inadequate at this time when they needed them most. It was possible for the banks of New York and throughout the country to make such new loans as were necessary for the protection of solvent businesses.

The Federal reserve system, under which Federal reserve notes can be freely issued against the rediscount of commercial paper, and under which the legal reserve ratio can be suspended in emergencies by the Federal Reserve Board, would seem to eliminate all danger that an actual shortage of hand-to-hand currency would embarrass our banks in crises in the future. Bank reserves, under the new system, consist of deposits with the Federal reserve banks which can be replenished by rediscount of commercial paper, or paper secured by obligations of the United States Government, at need; and hand-to-hand cash which banks may pay out to depositors can be increased at need by obtaining Federal reserve notes through the same process. No currency and banking system can avoid the recurrence of crises in the sense of liquidation periods, or periods of readjustment, but we have strong grounds for confidence that under wise financial leadership our currency and banking system has made us panic-proof.

The Control of the Business Cycle

There is a proposal for "stabilizing the dollar," in such a way as to keep the average of wholesale prices unchanged. The originator of the plan thinks that it would eliminate the business cycle in large measure. The plan is to withdraw all gold coins from circulation, and to substitute for them gold certificates redeemable in a varying amount of gold. As the general average of prices, or the "general price level," rises, the Government would increase the amount of gold paid in redeeming gold certificates by such a percentage as would pull prices down to the original level, while as prices fall the Government would reduce the amount of gold paid in redeeming gold certificates by such a percentage as was necessary to raise prices back to the original level.

This plan has many defects. It would, for example, have led to foreign drains on our gold in the crises of 1893 and 1907. Foreign gold came to our aid in the latter crisis to the extent of $100,000,000 in two months. Had foreigners foreseen, however, that the amount in gold to be paid in redemption of the dollar would diminish as prices fell, they would have sold dollars short, would have withdrawn their balances from New York banks and intensified our difficulties. For present purposes, however, it is enough to point out that the business cycle grows, not out of variations in the general average of commodity prices, but rather, as we have seen, out of business mistakes and the unequal movement of particular prices with changes in the relation between prices and costs which affect profits and consequently credits. The ups and downs of the average of wholesale prices through the business cycle, moreover, are wholesome rather than harmful if not too violent. Falling prices tend to bring depression to a close by encouraging revival of demand. Rising prices tend to bring a boom to a close before it goes too far, by lessening consumption and checking demand. The movement of prices through the business cycle may be likened to the governor on an engine, constituting certain natural limits, and tending to steady the course of business. Business cycles need mitigation. The mitigation should come, however, not through tampering with the currency in the effort to control price movements, but rather through indirect measures, designed to take up slack in time of depression and to relieve the strain on industrial capacity in time of boom, together with measures designed to secure greater foresight in business plans and greater steadiness in the temper of business.

The most important proposal that has yet been made for the mitigation of the extremes of the business cycle is that the various grades of government, Federal, State and municipal, together with large corporations like the railroads, should adopt a buying policy designed to throw as many of their purchases as possible into the period of depression and to withdraw from the market in considerable measure at the height of a period of prosperity. A railroad, for example, which can so adjust its affairs as to increase its purchases of rails, freight cars and the like in relatively dull times, and to reduce its purchases of rails and freight cars when the strain on productive capacity is greatest, would profit by the process itself, and would lessen the extremes of prosperity and depression for general business. This policy is sometimes difficult, since the credit of the railroads is apt to be better in prosperous than in dull times, but it is perfectly feasible for the various grades of government, and especially for the Federal Government, to work out far-reaching plans covering a very substantial part of their buying.

GASOLINE TANKS

COPPER-STEEL
WELDED
TESTED
HIGH-CLASS
TANKS

For Underground Storage of Gasoline
Any Fittings to Suit Supplied

A high quality tank steel welded throughout, making it practically a one-piece tank. Treated with an odorless, anti-rust oil, and then painted on the outside with anti-rust acid-proof black paint. They are practically rust and corrosion proof. We are tank builders. We make a specialty of tanks. Anything we turn out in this line you can depend on. They are made by expert workmen. We put our best efforts into tank building; it is our specialty. Our tanks are built to conform to the requirements of the National Board of Fire Underwriters. They are all tested before leaving our works under air pressure by a competent superintendent and then crated and shipped so they will reach you in good condition. We believe our prices will appeal to you as being very reasonable. Nothing but the best will do for handling gasoline. If not as represented when it reaches your station, fire it back at our expense. Can we do fairer? Any size made to your order.

As yet this policy has been very slightly applied by the governments. Some railroads have been able to do it. Government activity, however, has taken the form chiefly of emergency works in periods of depression, notably municipal woodyards and the like. These devices may relieve an acute situation regarding unemployment, but do little to start again a revival of business activity. It is better that the governments should make orderly plans stretching over a series of years, and that they should make their expenditures through the ordinary channels of trade rather than through emergency organizations of their own.

We have already seen how sound bank policy can, and does prevent crises from degenerating into panics. Banks can, and do, moreover, by careful scrutiny of credits, prevent the expansion of credit both by themselves and by their customers on the basis of unsound assets, and limit the development of dangerous weak spots at all stages of the business cycle. The influence of the banks, which are in touch with all kinds of businesses, and which consequently have information concerning general business conditions available to few merchants or manufacturers, makes it possible for them to give advice and information of a valuable sort to customers. The steadying influence of contact with many diverse kinds of business makes the banker less optimistic than many of his customers in times of boom, and more optimistic than many of his customers in times of strain, crisis or depression. He exercises, therefore, a steadying influence on the temper of business, which tends to mitigate the extremes, both of enthusiasm and of gloom. It rarely happens that business is wholly bad or that it is wholly good. In the worst crisis and depression there is a large volume of ordinary business going on. Thus, taking railroad gross receipts as an index of general physical production, there was a drop of only about 12 per cent. when the year of depression, 1894, is compared with the prosperous year, 1892. At the time when business generally is most prosperous there are always unsatisfactory elements in the situation. Business never goes wholly "to the dogs," and it is never free from some uncertainties and dangers.

There has come, too, a general knowledge on the part of business men that there are variations in prosperity, and that periods of reaction, crisis and liquidation sooner or later may be anticipated. The older business men, who have lived through the troubled times of 1893 and 1907, are apt to recognize this more than the younger business men to whom periods of trouble are matters of tradition. But there are few managers of important industries who are not on the lookout for various signs which indicate whether business is to wax or to wane, and who do not in good times seek to make provision for the pressure of bad times. There is increasing interest among business men in the problem of "business forecasting." Every trade has its journals which try to look into the future. Business forecasting is as yet a very imperfect science. Many of the elements with which it deals are highly uncertain. But the mere fact that education in these matters is spreading and that businesses are on the *qui vive* concerning them is itself a factor of safety of the first magnitude. It makes for caution in time of prosperity and it makes for courage in time of crisis and depression.

—B. M. A.

Another distribution station of L'Air Liquide Society has been opened at St. John's, Newfoundland, and customers of this company in Newfoundland will be supplied with Oxygen from there, without the inconvenience and delay necessarily associated with shipping comparatively small consignments from Canada.

Change of Name

Standard Tube Company, Limited, is new name of Standard Tube & Fence Company, Ltd.

The Standard Tube & Fence Company, Limited, has been authorized to change its name to Standard Tube Company Limited. The manufacture of wire fence has been discontinued, and as the future will be devoted to the tubing business, the change in name was desirable. Expansion of the tubing line is now under way, and the new Company expects to be able, shortly, to place on the market a complete range of close joint and gas and electric welded steel tubing. No change has been made in the Company's personnel.

Reducing Labor Turnover by Advertising

(*Continued from page 74*)

spring orders. In the main plant where the main strike was called 1,600 hands were working. The strike, according to the firm, created 400 vacancies, a shortage that would have seriously crippled the plant at any time, but particularly so during the rush season.

Did the Kirschbaum Company resort merely to the usual methods to secure the needed new employees? No. What the company did was to turn to advertising and apply it in an altogether new and interesting way. It had in operation in the plant what was called an "Industrial Democracy." This "Industrial Democracy" plan was made the basis of the advertising campaign. But to it were added other features relating to the conditions under which employees work in the Kirschbaum factory. These include, steady work at good pay, bonuses for loyalty and length of service, and additional bonuses for good work, a forty-four-hour week, sanitary shops, meals served at cost in the firm's own restaurant, flour, potatoes and canned goods, and other necessities bought in cargo lots and sold to workers at cost; free medical attention and sick benefits.

Apart from the "Industrial Democracy," which, by the way, has already been adopted by the Imperial Oil Company in Canada, there is nothing about the employment, work and welfare conditions in the Kirschbaum plant that is new to anyone who is at all familiar with the revolutionary changes that have been made in working conditions and relations between employers and employees in large concerns in recent years, nor yet anything which could not readily be duplicated in numerous large industrial centres of Canada. What was extraordinary was the manner in which the Company took these usual elements and brought them together in advertising.

Conscious as it was of the 400 vacancies caused by the strike, and of the urgent necessity of filling those vacancies at the earliest possible date, the Company looked far beyond the immediate problem facing it. "If we have the kind of plant we have been telling ourselves we have," argued the management, "if ours is the character of institution we have been telling our employees it is, why not tell this story to the one million and a half people in and around Philadelphia, and through them reach and appeal not only to the individuals that we need to fill our present vacancies and carry on our work, but let us also make the presentation so attractive and so generally educational in character that we will interest the very best type of men and women for employees?" The reasoning proved sound and inspired what under the circumstances seemed the most logical course of action.

A new and compelling kind of "help wanted" advertising campaign was planned. Space was taken in the local newspapers and the campaign opened. The advertisements were as far removed from classified help-wanted advertisements as anything could be. They were large display advertisements, simply yet strikingly illustrated, and excellent in typography; while the copy, though practical, was strong and appealing in its human interest. The first of the series carried an impressive line of illustrations of the plant and under that the heading "A Good Place to Work." The copy featured "better pay, shorter hours, steady employment and a trade easier to learn than the average," and was addressed not merely to experienced clothing workers, but "to men and women who have ever handled a needle, or operated a sewing machine." The second advertisement carried as illus-

SPARLING SERVICE
And Your Building Problems

When you place the responsibility for the erection of your building in the hands of Sparling Service, you summon into collaboration a group of highly trained experts.

We retain masters of every phase of Architecture, Engineering and General Contracting, whose designs are executed by skilled workers under the close supervision of competent superintendents.

The concentration of effort of these efficient forces under the individual direction of the organization's founder, results in the speedy and economical completion of buildings which command mutual admiration.

Our advice regarding your building problems places you under no obligation

trations at the top of the space line reproductions of three Kirschbaum pay envelopes showing weekly earnings ranging from $22.60 to $54.00 and the copy emphasized the good money returned from a forty-four-hour-a-week job at Kirschbaum's.

Industrial Democracy

Another advertisement featured and explained briefly the Kirschbaum plan of "Industrial Democracy." At the top was a clean-cut illustration picturing the "Senate" in session, and under the illustration ran the display line, "A Job—And a Say!" The text read as follows:

> "Under the Kirschbaum plan of 'Industrial Democracy' representatives elected by the workers meet every Tuesday to pass upon matters affecting their welfare. One of the important acts was to adopt a resolution extending the forty-four-hour week to clerical workers. This was at once approved by the Cabinet. Employees in the Kirschbaum shops were already working on the forty-four hour basis. Through their representatives, chosen by secret ballot, every Kirschbaum worker has a definite say as to hours, wages, health, safety, education, and all other matters of mutual interest. These—the good wages and the ideal working conditions—make a job well worth while in the Kirschbaum shops. Do you want to be one of us?"

Still another one of the advertisements told of the opportunities offered to workers to rise from the ranks and become executives; the illustrations pictured a worker as elevator boy, next as shipping clerk, next as foreman, and finally as superintendent, and the copy cited more than a score of instances in which Kirschbaum workers had been advanced in positions and salaries. Fully appreciative of the constantly rising cost of living, one of the advertisements told about the co-operative store which enables the Company's employees to buy food supplies at reduced rates. The steadiness and regularity of work were featured in another of the advertisements under the display catchline "52 Pay Days in 1920." Practically all the advertisements carried either a large or small picture of the main plant with the slogan, "A Good Place to Work."

Was the campaign a success? The net results as recorded by the Company say so.

Advertising Breaks Strike.

The strike started early in December. The advertising campaign ran six weeks. All the Philadelphia papers were used. The cost was considerably less than $7,000. New employees to the extent of 750 were secured to fill the 40 vacancies caused by the strike. The plant superintendent declares that every good employee so secured who sticks is worth $100. The campaign secured 750 and cost, as has been said, less than $7,000. Multiply the 750 new employees by $100, compare the result with the cost of the advertising—and bear in mind that these new employees are the best grade of workers that the Company ever had—and it can be readily seen whether the campaign brought the desired result and paid.

From this Kirschbaum campaign there is a profitable lesson to be drawn—a lesson that is applicable in every employing community in the country, especially in larger industrial centres, though it is not at all necessary to have a strike of employees in order to demonstrate the value of the idea back of the campaign. For the chief value of such institutional "help wanted" advertising is not the fact that in the particular instance advertising was used to break a strike but that all that is best in a large industrial concern can profitably be capitalized and used as a basis for an advertising

ing campaign that will draw to the firm the very best grade of workers obtainable, make for the retention of such employees, and go a long way toward reducing greatly the big cost and waste in ordinary labor turnover. Moreover, in a democratic country like this, where almost everyone works for a living, and where everyone, in consequence, has a direct and constant regard for the welfare of the worker, such an influential element toward inducing pleasant trade relations, as between buyer and seller, is not to be discounted. Witness, for example, the general good will and popularity enjoyed by such firms and institutions which are known to be fair to their employees.

How it Works Out

The institutional element in help-wanted advertising is bound to work out favorably and to save money in the end. Its strength comes not only from selling a person on the advisability of starting on a job but of staying with the job. A company naturally is not going to come out in bold print and make statements that are not true; so thus, in setting forth the proposition to prospective employees, it is going to do a great deal toward impressing the same desirable things on the minds of those already on the payroll. This is why some concerns have their so-called welfare work under the general supervision of the advertising department. The truth is if the advertising department knows its business it can use as good psychology and selling talk in selling the company to the employee as it does in selling the company's goods.

What everyone doesn't realize perhaps is that to get employees of the right type, to develop and keep them, is inherently as much a job for the advertising department as is winning and developing trade. Through its advertising department a corporation can definitely go out and sell the conditions which surround its manufacture to the kind of workers it wants, just as it now sells the quality factors of its merchandise to its prospective customers. In this way it assures itself of applicants who will make the kind of workers to stay in one place, and who will start their work with a well-defined picture of the company in their mind. If the job meets expectations, it is safe to argue that labor turnover will be greatly decreased. Thus may the display want advertisement help to solve one of the biggest problems in industrial management to-day.

Co-operative Buying Advocated

H. A. Telfer, of Toronto, Urges Desirability of Getting Together on Buying

Speaking at the annual meeting of the Bakers' and Confectioners' Association, held recently in Montreal, Mr. H. A. Telfer, of Telfer Bros., Limited, Toronto, urged his hearers to take into consideration the desirability of co-operative buying. In introducing the subject, he referred to the way in which scientific management and the employment of men skilled in various branches of administration were revolutionizing modern business and instanced, as a sign of the times, the introduction into the universities of faculties of commerce intended to train specialists in the management of business enterprises. As one phase of this work, the development of co-operative buying was brought forward.

"We co-operate on the question of selling," said Mr. Telfer, "and to balance this up I feel that we should also take a further step and co-operate on the more important question of the selection, transportation and preservation of our raw materials and the development of our executives as buyers. We only have to look back at the way information was compiled by our food boards throughout the war, and

we, as separate industries, should develop our skilled buyers, through some central agency, where the information and statistics can be compiled.

"If this step of co-operative buying is decided upon, I feel that it is only the beginning of an economic and productive effort of our particular industry as a whole and, besides being in our own best interests, it can be viewed from the national standpoint of the country as a whole. The linking up with a central organization having information at first hand of both quantities and quality of our raw material requirements and other manufactured products, is very far-reaching, involving standardization, distribution, etc. The larger the plants and their operations, the greater the benefits in proportion, as against the same ratio of losses in proportion to the present system."

Mr. Telfer's remarks merit careful consideration. They are quite as applicable to other industries as to the one in which he is particularly interested. The initiative is already being taken through the formation of the Purchasing Agents' Association, with branches in various cities, and those manufacturers who have not already associated themselves with this organization should look into its methods and possibilities.

Industrial Democracy

How Co-operation Works Out With the Firm of T. S. Simms & Company, Limited, St. John

T. S. Simms & Company, Limited, who operate one of the largest brush-making businesses in Canada, are to introduce the principles of industrial democracy in their plant at St. John, N.B. Such was the announcement made by L. W. Simms, president of the company, at the annual dinner to the directors and employees held July 19th of this year.

For several years the question of relationship between employer and employed has been studied by this Company, with the result that increased co-operation and increased business have gone almost hand-in-hand. Already some principles of the new relationship have been put into force, notably the establishment of a mutual benefit society, the advantages of which are greatly appreciated. Further developments are to result from a study of industrial democracy made by Mr. Simms and two other directors in New England plants where it is being tried. A committee of employees will make a similar study, and a plan will then be evolved by a joint conference.

The president is confident of the success of the experiment, and his confidence appears justified by the progress already made along co-operative lines in this plant. Both the management and the employees are satisfied with the policies being pursued, a fact which speaks well not only for the system itself, but also for the broad and intelligent vision of the parties concerned.

Canadian Metal Products, Limited, Guelph, have undertaken to manufacture for the Canadian market some of the products of the Federal Sign System, 8700 South State Street, Chicago.

Interests identical with those of the Waltham Grinding Wheel Company, Waltham, Mass., have recently taken control of the Brantford Emery Wheel Company, of Brantford, Ont. Details of the arrangements being made for the operation of the latter industry will be announced later.

It Takes a Workman To Tell a File

After all, it's the man who uses a file day after day who is the best judge.

Ask any workman who uses files constantly in his day's work, and he will tell you that Famous Five Files represent the standard of file quality.

Adherence to the highest standards in manufacture for over fifty years has earned this reputation.

Specially made steel, accurately cut teeth, thorough hardening, are the secrets of their success. They are:

Case Against Governmental Management

By PROF. JAMES MAVOR

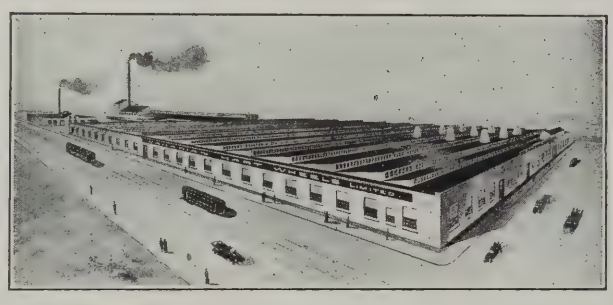
The experience of every Government shows quite conclusively that Governmental management of enterprises of an industrial character is uneconomical. The uneconomical management of such enterprises arises from the following main causes:

1. The absence of incentive economical management;

2. The employment of persons on political rather than on professional or technical grounds, and therefore the employment of a number of persons larger than is necessary;

3. The reluctance with which the Government appoints persons of superior professional qualifications because of the relatively high salaries such employment involves; the employment of the cheap official being regarded as most easily defensible;

4. The sale of service, whatever it may be, at a price determined also rather on political grounds; and



5. The restriction or the absence of competition.

Axioms We Should Remember

E. C. Atkins & Company, saw and knife manufacturers at Hamilton, Ontario, are distributing cards with the following axioms printed on them. In periods of unrest like the present, these points, particularly the fifteenth, are well worth considering:

1. Under any economic or industrial system, men and women must inevitably continue to work for wages.

2. Some workers must always be paid more wages than other workers, either owing to special ability or the class of work performed.

3. No worker can continuously be paid wages that he does not earn.

4. The value of the work must be controlled by the saleable value of the articles produced.

5. The cost of living is governed by the cost of production, both in regard to primary products and secondary manufactures.

6. The community cannot expect cheap bread, meat and other foods at the expense of the farmer and grazier.

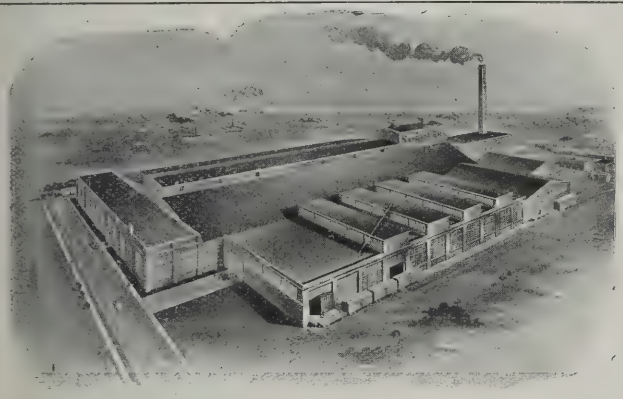
7. Shorter hours of work must increase the cost of all articles, including food and clothing.

8. The maximum output in the hours worked, will result in cheapening the articles produced, as the cost of production inevitably governs the selling price.

9. Men and women in a free country cannot be prevented from saving money and acquiring property.

10. In order to promote industrial development and provide work, the nation must continue to depend upon its intellectual citizens.

11. The community or nation that develops most brain power, and inventive genius will be the most prosperous, and brain must inevitably command more reward than mere manual labor.



12. Capitalism (or the accumulation of wealth) can never be abolished, for some men will always earn, "and save" more money than other men.

13. Without hope of profit there would be less industrial development, less employment, lower wages and higher cost of living.

14. Private enterprise involves not only the control of established businesses, but also the risking of capital and personal effort in the promotion and establishment of new industrial enterprises.

15. The only possible way for workers to secure a substantial increase in wages without a corresponding increase in cost of living is by increasing output.

Commercial Representative for Mexico Comes to Canada

Senor Luis Murua Martinez, who has been appointed by the President of the Republic of Mexico to the office of Commercial Representative of Mexico in Canada, has established his office in the Imperial Life Building, 20 Victoria Street, Toronto. He is prepared to furnish statistics and general information regarding conditions of trade, industry and labor in Mexico.

Senor Martinez says that at present Mexico is exporting a great deal of oil, sugar, cotton, tobacco, coffee, cocoa, fibre, tropical fruits, precious woods, dye-woods, chicle, raw rubber, wild rubber, sarsaparilla, vanilla, vegetable wax and metals. On the other hand, Mexico is at present importing such articles as machinery, hardware, drugs, explosives, dry-goods, shoes rubber goods and aluminum articles; and he states further that he thinks that a considerable number of articles which are manufactured in Canada but are not well known in Mexico could be sold in Mexico.

New Map of the Prairie Provinces

A new edition of a map of Manitoba, Saskatchewan and Alberta giving the number of quarter-sections available for homestead entry in each township with the boundaries and offices of government land agencies has been issued by the Natural Resources Intelligence Branch of the Department of the Interior. This new edition clearly indicates all railways, forest reserves, parks and Indian reserves, also the land which has been reserved for soldier settlement purposes. The size of the map is 24 x 36 inches and the scale 35 miles to one inch.

The importance of the new edition at the present time is apparent to prospective settlers, officials of banks, railway companies and land agencies, in fact everyone interested in the development of land in the Western provinces. A copy of this publication which is known as the "Small Land Map of Manitoba, Saskatchewan and Alberta," may be obtained free of charge by applying to the Superintendent of the Natural Resources Intelligence Branch of the Department of the Interior, at Ottawa.

At the annual meeting of Tooke Brothers, Limited, held in Montreal, July 8, several changes were made in the personnel of the executive and board of directors. Lt.-Col. Charles W. McLean and W. M. Weir were elected as new directors to replace W. Fred Henry of Montreal and Hon. H. Phippin, K.C., of Toronto. Lt.-Col. McLean succeeds W. A. Brophey as vice-president of the firm, but the latter retains the position of managing director.

Carl Riordon, B.A., vice-president and managing director of the Riordon Pulp & Paper Co., Limited, has been elected to the directorate of the Sun Life Assurance Co. of Canada, replacing the late John McKergow.

Book Reviews

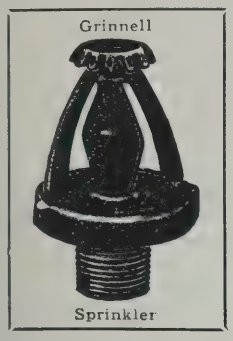
An Artistic Publication

A Great Manufacturing and Engineering Service; Its Development and Possibilities.

Under this title the Dominion Steel Products Company, Limited, of Brantford, Ontario, have published a book descriptive of their plant and methods. To quote from the preface, "It is the purpose of this book to trace in brief the development of Dominion Steel Products Company, Limited, and the ideals that have given it pre-eminence. To suggest its present capacity and possibilities for service." That purpose is carried out on every page of the publication. As for the general appearance of the work, it is as near perfection as one has any right to expect. It is bound in boards and bears on its front cover an embossed reproduction of the entrance to the plant. Printed in clear large type on heavy, coated paper, profusely illustrated in color, it gives one pleasure simply to turn the pages. Altogether the book reflects great credit on the Company, O. W. Jaquish, Jr., the designer, and The Herald Press, Limited, who are responsible for the printing, illustrating and engraving.

For Greater Efficiency

The Paper Box Factory. Efficiency and Production. Compiled by S. J. Frame, Secretary-Treasurer, Canadian Paper Box Manufacturers' Association. Toronto, 1920.



That the Canadian Paper Box Manufacturers' Association is a live organization is evidenced by the publication of this 73-page handbook of advice and instruction. It has been compiled by Mr. Frame under the direction of the Cost and Labor Committee of the Association and, while no names are attached to the various articles, a list of contributors is given at the front which contains the names of such well-known people in the industry as W. P. Bennett, Rudd Paper Box Co., Limited; F. A. Fielder, Fielder Paper Box Co.; George B. Reid, Ontario Paper Box Co.; F. B. Smith, A. D. Shoup Co., Limited; B. Sproule, Collett-Sproule, Limited; J. B. Lawrason, Lawrason-Doughty Co., all of Toronto; Miss Hardcastle, late with the Somerville Paper Box Co., Limited, London; C. T. Reid, Charles Reid & Co., Hamilton. An article on fire prevention is contributed by George F. Lewis, Deputy Fire Marshall of Ontario.

A considerable section of the book is devoted to the subject of the handling of employees and here some sound advice is given. Chapters are given to "The Forewoman," "Selection of Employees," "Proper Instructions to Employees," "Discipline," "Tactfulness" and "Placing of Employees." This is followed by practical instruction on methods of operating a plant, estimating, caring for stock, etc. It is a good sign to see manufacturers banding together for greater efficiency and improved methods, and the publication of this small volume should be a strong incentive to progress.

The Buffalo System

Buffalo Fan System of Heating, Ventilating and Humidifying. Catalogue No. 700 of the Buffalo Forge Company, and the Canadian Blower & Forge Co., Limited, of Kitchener, Ont.

This publication opens with a general statement of the problems encountered in heating, ventilating and humidifying public buildings, and shows how these are solved by the use of the Buffalo Fan System. Part 2 deals in a similar way

with industrial plants, and part 3 is a descriptive list of Buffalo apparatus. The whole is well illustrated with diagrams, graphic charts and halftone cuts, and is of magazine size, bound in red. It should be a valuable work of reference to all interested in the problems discussed.

Another publication of the Canadian Blower & Forge Company, Limited, is their catalogue of Niagara Conoidal Fans. These fans, used in heating and ventilating, derive their name from the prevalence of conical shapes and surfaces in their design. They are of the multiblade type with blades of single curvature, conforming to the surface of a cone. The catalogue contains descriptions and illustrations of a number of types of these fans, and tables of performance for the guidance of engineers and architects. It is a good example of the publications of this Company, printed on good paper, with clear type and illustrations. The size, 8½ x 11 inches, has been adopted as their standard.

Fifty Years a Province

Special Supplement of the Manitoba Free Press; Winnipeg, July 15, 1920.

In commemoration of the Province of Manitoba's fiftieth anniversary, the above supplement to the *Manitoba Free Press* was published. It consists of a number of summaries, interesting and valuable to the student of Canadian history. an outline of Manitoba's story before provincial rights were acquired is brought up to date by a sketch of her political development during the last half-century. These articles are re-inforced by writings of a more specialized nature dealing with agriculture, manufactures, education, culture, etc. This record of steady progress is one of which any province might well be proud, and the *Manitoba Free Press* has done justice to a worthy subject.

An Interesting Record

The Boot and Shoe Industry in Canada. A survey made by the Canadian Reconstruction Association and presented to the Shoe Manufacturers' Association of Canada.

This booklet, compiled by S. Roy Weaver, of the Canadian Reconstruction Association's investigation department, presents a very valuable and interesting account of the development and present condition of the Canadian boot and shoe industry. The introductory part is mainly historical, dealing in outline with the progress made in the Canadian manufacture of footwear from the time when this was almost the only manufacturing industry in Canada down to the present day. It is far from being a record of unbroken success, for large mergers have been the exception rather than the rule, and bad years such as 1878 have been marked by many failures. In addition there have been many difficulties, other than lack of capital, to contend with; in particular, an unreasonable prejudice on the part of the public in favor of imported shoes. The book closes with several valuable suggestions to the shoe manufacturers, and two appendices of statistics and agreements.

Deaths Among Prominent Manufacturers

Reece McKinley

Pioneer Spoke and Wheel Manufacturer Dies at His Home in St. Catharines

On the morning of July 16th, Reece McKinley, aged ninety years, a pioneer in the spoke and wheel industry, died at St. Catharines, Ont. Mr. McKinley for many years had been connected with the Chaplin wheel manufacturing concern and moved to Chatham when they located their plant there. About eight years ago he retired and returned to St. Catharines. One daughter and one son survive. The former is a resident of St. Catharines; the latter, George McKinley, lives in London, England, where he is representative of the Standard Oil Company, and secretary of the American Reception Committee.

Charles Norris

Montreal Manager of Christie, Brown & Company, Limited, for Several Years

Charles Norris, for several years manager of the Montreal branch of the Christie, Brown Company, died recently at his home, 36 St. Clair Avenue, Toronto. Mr. Norris had been connected practically all his life with the Christie, Brown Company, first in Toronto and then in Montreal, where he had a responsible position with the company. On account of failing health he retired from the service of the firm a few years ago, and settled in Toronto. He was born in Millbrook sixty years ago. Besides his wife, he is survived by two sons, J. Hilliard Norris, Montreal, and Charles, who recently returned from overseas, and is a student at the University of Toronto, and two daughters, Mrs. Cummer and Miss Edith, at home.

Sir George Bury, president of the Whalen Pulp & Paper Company, has tendered his resignation for the purpose of associating himself with large interests on the Atlantic seaboard, in an advisory capacity. Sir George has been president and general manager of the Whalen Company for over a year, and under his guidance the company's earnings have passed the four-million-dollar mark.

Whalen Pulp & Paper

Great Improvement Shown in Results for the Company's Last Fiscal Year

For the fiscal year ended February 29, 1920, the Whalen Pulp & Paper Mills, Limited, report net profits of $323,757, as compared with a deficit of $337,729 the preceding year. Gross earnings amounted to $4,619,734, as against $4,065,206 in 1919; expenses were $3,741,185, a decrease of over $200,000 leaving net earnings of $878,549, compared with $112,314 the previous year. Taxes took $56,181 and fixed charges $498,610. Current assets showed an increase from $1,003,080 to $1,655,019 and current liabilities a decrease from $2,184,424 to $1,012,890. There was produced 47,962 tons of pulp, 12,731 million feet of lumber and 61,198 million shingles.

ELDER DEMPSTER LINES

Barrett Roofings, Cements Industrial Paints etc.

BARRETT PRODUCTS are the final result of exhaustive research and manufacturing experience that covers half a century. This is why they are the best—and they have been proven by many thousands of satisfied users in Canada.

Elastigum Plastic Patching Cement

Elastigum is composed of a heavy bituminous base, combined with slow-drying, waterproof oils and a sufficient proportion of mineral fiber to give it consistency and holding power.

Elastigum is remarkably tenacious and retains its toughness and elasticity over long periods, regardless of temperature or weather conditions, expanding and contracting in conformity with any surface to which it is applied, whether metal, stone, concrete, wood or even such highly glazed surfaces as glass, glazed brick or terra-cotta. It is known as the "plastic cement of a thousand uses."

No heating or mixing necessary. Elastigum comes to you all ready for use, in the following sized packages: 1-lb. tins (cases of 24 cans), 5-lb. packages (12 to the case), 25-lb. packages, 100-lb. packages, ½ barrels of about 300 lbs., and barrels of about 600 lbs.

Everjet Industrial Paints

Railroads and manufacturing companies throughout the Dominion find constant use for these "Proven Protective Paints". Exceptionally durable and absolutely waterproof, as well as non-corrosive, they are the most popular of all Barrett products.

Barrett Industrial Paints include—

Everjet Boiler Paint	Everjet Bridge Paint
Everjet Roof Paint	Everjet Penstock Paint
Everjet Smoke-stack Paint	Everjet Machinery Paint

Put up in 1, 5, and 10 gallon cans, half barrels and barrels. Our Service Department, composed of experienced chemists, will be glad to help you solve your paint problems.

Nox-Aer-Leek Boiler-Setting Cement

A leaky boiler-setting is fatal to fuel economy, and *every* brick boiler-setting is more or less leaky.

Barrett Nox-Aer-Leek overcomes this condition. It is a plastic cement of elastic bitumen, fused with non-drying oils and asbestos fiber. Applied to the exterior walls, it renders boiler-settings absolutely air-tight and moisture-proof.

You will find it sound economy to use Nox-Aer-Leek. Its small cost is repaid many times over by the saving in fuel expense.

Put up in ½ barrels (about 300 lbs.) and barrels (about 550 lbs.).

If your dealer cannot supply you with these "Proved Products" write us and we will.

Editorial Comment

Cost of Government in Canada

REPRESENTATIVE Canadian families contribute, directly or indirectly, to the cost of government—municipal, provincial and national—from about $190 to about $450 annually. At $10 per day, this represents from 19 to 45 days' work. Is it not time, therefore, for the citizen to consider seriously what his work buys in governmental service?"

The above extract is taken from a pamphlet entitled "Canadian Citizenship," issued by the Citizens' Research Institute of Canada, Ottawa, on July 14th, 1920. The various sources of Dominion and Provincial revenue are classified and contrasted with corresponding expenditures. The following extracts from a table show the comparison of per capita cost of government for the year 1918:

City.	Dominion.	Provincial.	Municipal.	Total.
Vancouver	$25 14	$16 87	$38 51	$80 52
Edmonton	25 14	12 13*	54 53	91 80
Regina	25 14	10 05	32 52	67 71
Winnipeg	25 14	8 60†	28 70	62 44
Toronto	25 14	6 23	40 53	71 90
Montreal	25 14	5 50	28 61‡	59 25
Halifax	25 14	5 26	18 37	48 77
St. John, N.B.	25 14	6 66	15 82	47 62
Charlottetown	25 14	5 38	8 29	38 81

Taxation in Canada is now threefold. We pay taxes to the Dominion Government, to the Provincial Government and to the municipal government. The most disconcerting feature of the situation revealed by the pamphlet is that the per capita cost of government shows a great increase for 1918 over 1917. In a general summary, the pamphlet concludes as follows:

"Those cities for which comparative figures are available show an average increase in cost of government of $8.15 per capita in 1918, over 1917. A considerable portion of such increase can, of course, be attributed to the per capita rise in the cost of National Government.

"In 1918, every Province in Canada, except Manitoba, showed a per capita increase in the cost of Provincial Government over that for 1917. Prince Edward Island showed the least increase, with 2c. per capita, while British Columbia showed the greatest, with $2.13 per capita.

"All the cities for which the Institute had comparative data, except Winnipeg and London, had an increase in per capita cost of municipal government in 1918, over the previous year. Toronto had the greatest per capita increase, $6.89. Regina was second with $3.36 and Victoria third largest, $3.21."

With the Dominion Government, Provincial Governments and municipal governments extending public ownership enterprises the interest of all tax payers in the cost of government should be quickened. Too many people simply pay their tax bills and grumble. They do not study taxation.

*Excludes expenditures on telephones.
†Excludes expenditures on telegraphs and telephones.
‡Includes water-works expenditure.

Operation of Income War Tax Act

IT is reported that the total revenue for the year will approximate $600,000,000 or an amount almost 100 per cent. in excess of last year's record and that this sum will be sufficient to meet all interest and pension charges, all expenditures under consolidated fund accounts and something on the principal of the Dominion $2,300,000,000 debt.

This highly satisfactory result has been achieved in the main with the general co-operation of the taxpayer, and without dissatisfaction or friction. It has been stated that at first some laxity was manifested on the part of taxpayers not making prompt transmission of Income Tax returns but, considering that this form of tax was practically new to Canada, the result above indicated shows that the business community as a whole has continued to respond as they did during the period of the war—nobly and well.

In this view, there is all the less reason for the present indiscriminate enforcement by the Government of the penalties against firms and corporations who may have

inadvertently failed to comply with the literal demands with regard to the income tax, more especially with respect to returns of persons in their employ. It would be more in line with the harmony hitherto existing between the manufacturers and Government departments if the exaction of such penalties were enforced with reasonable discrimination. The answer from the Finance Department's viewpoint, of course, is that the provisions of the Income War Tax Act are mandatory in this respect and that no power lies in the hands of the administration to grant relief. If this be the true interpretation of this part of the Act, the sooner it is amended the better, no less in the financial interest of the Government itself than for the continuance of cordial relations between the administration and the taxpayer. At any rate, some of our members have already come under the arbitrary demands of the Act and have been officially informed that there is no escape from "a penalty of $10 for each day during which the default continues." Pending necessary amendment of the Act in this respect, our members should make sure, in order to avoid penalties, that all the returns called for under the Income War Tax Act are hereafter lodged with the Finance Department within the statutory time declared for that purpose.

The Need for Economy in Fuel.

CANADA, like the United States, has striven to reduce her fuel consumption, but, being still dependent upon the latter for 22,500,000 net tons—including over 5,000,000 tons of anthracite—out of a total yearly consumption of 34,800,000 net tons of coal, it is clearly incumbent upon Canada to apply every means within her power to utilize coal in the best and most efficient manner. This, besides being an evidence of common-sense, will also result in the saving of a large amount of money now lost in coal wastefully used."

The paragraph quoted is from "Water-Power and Fuel Problems," a reprint of part of the Commission of Conservation's tenth annual report. Every Canadian manufacturer has had to study the coal situation and knows the difficulties that he has to meet. Labor troubles, the adverse rate of exchange, a disrupted car service, and innumerable other factors are combining to restrict the supply of a basic necessity. Two alternatives only are open: to decrease the output of manufactured products, or to economize in fuel without a decrease in output.

While the cry of the times is increased production, the former alternative is undesirable; the question is whether the latter is possible. We believe that it is. Substitutes for coal can be used in some cases, and improvements in factories will also help. The utilization of larger and more efficient lamps, the cleaning of dirty windows, insulation of steam piping and cutting out unnecessary steam lines are a few examples taken from the publication quoted above. The establishment of a central power plant for a number of factories will often effect a considerable general saving. These suggestions and others have been tested by the United States Fuel Administration and found successful.

The problem is national, in that it affects everybody. The solutions must vary with the individuals concerned. It is the duty of every coal-user to discover where he is wasting coal and how he can check the waste. If patriotic motives will not bring this about now, practical considerations of the most urgent kind will enforce it in the near future.

Our Trade With Cuba.

CANADIAN manufacturers are discovering every day new markets and potential profits in the field of export trade, and are anxious to learn more about the possibilities that exist for making Canada a great exporting nation. To supply as much information on this subject as can be secured is our intention; in last month's number of INDUSTRIAL CANADA we published an article by Mr. Beadle on the subject as a whole, and one by Mr. Bryan dealing with Japanese trade in particular; further instalments of both these articles appear in this issue. We have been fortunate in obtaining this month a summary of the trade relations existing between Canada and Cuba, written by Lt.-Col. L. M. Cosgrave, who has spent several months in studying the situation.

As Colonel Cosgrave points out, proper attention has not been paid to this lucrative market. The people in Cuba and the West Indies are anxious to buy Canadian goods; they are good customers, they will give large orders, and they are comparatively close at hand. With these advantages it would seem that no difficulties could be too great to prevent the establishment of an ever-increasing, profitable export trade from Canadian to Cuban ports; and the difficulties are not great. A careful study of the situation will suggest satisfactory solutions for them all.

As an indication of the almost phenomenal increase in Cuban-Canadian trade during recent years the following figures are of value. Exports from this country to Cuba for the year ending October, 1917, were valued at $3,459,329; for the year ending October, 1918, $4,321,161; and for the year ending October, 1919, $6,942,571. On the other hand, our imports from Cuba for the corresponding periods were valued respectively at $1,086,030; $1,699,647; and $6,942,571. This startling reversal of the balance of trade for last year is largely due to the rapid rise in the price of sugar, approximately 80 per cent. by value of the Cuban exports being made up of that commodity.

It is to the advantage of Canada as well as individual manufacturing firms to correct this balance. Machinery, rails, fish, flour, potatoes are in great demand, but almost anything can be sold there. If Canadian manufacturers can fill orders and guarantee prompt delivery they will get the trade. On many counts we have an advantage over our competitors; on all, our chances are equally as good. If immediate action is taken, we can make the most of our opportunities. Colonel Cosgrave's article will suggest the kind of action that is needed.

News and Views of the Association

There will be found each month in this department a record of the various activities of the Canadian Manufacturers Association during the preceding month. The information is supplied to INDUSTRIAL CANADA officially, and all members of the Association are urged to acquire the habit of reading and checking over the contents of the department carefully in order to keep themselves posted on the work of the Association

Additions to Standing Committees

Since the election of officers and committees at the annual meeting of the Association in Vancouver last June, the following committees have elected additional members as indicated in the lists given below:

MEMBERSHIP COMMITTEE

Louis Fine	M. Wittal	Montreal, Que.
Geo. D. MacKinnon	MacKinnon Steel Co., Ltd.	Sherbrooke, Que.
T. D. McFarlane	McFarlane-Douglas Co., Ltd.	Ottawa, Ont.
Geo. Gilchrist	Kops Bros., Ltd.	Toronto.
R. W. Bishop	Bishop & Pringle	Owen Sound, Ont.
G. W. Robinson	P. B. Yates Machine Co., Ltd.	Hamilton, Ont.
J. C. Armer	Dominion Forge & Stamping Co., Ltd.	Toronto.
W. A. McKay	Codville Co., Ltd	Winnipeg, Man.
W. H. Miner	Miner Rubber Co., Ltd.	Granby, Que.
E. G. Rogers	Canadian Sheet Metal & Roofing Co., Ltd.	Winnipeg, Man.
C. Meadows	Geo. B. Meadows Wire, Iron & Brass Works Co., Ltd., The	Toronto.
Wilbur Gordon	Steel Trough & Machine Co., Ltd., The	Tweed, Ont.
James M. Sinclair	Eureka Mineral, Wool & Asbestos Co.	Toronto.
Thos. E. Menzies	Gilbert-Menzies A. C. Co., Ltd.	Toronto.
Geo. Brigden	Brigdens, Ltd.	Toronto.

Ex-Officio Members

J. S. McKinnon	S. F. McKinnon & Co., Ltd.	Toronto.
W. S. Fisher	Emerson & Fisher, Ltd.	St. John, N.B.
John R. Shaw	Canada Furniture Mfrs., Ltd.	Woodstock, Ont.
Thos. Roden	Roden Bros., Ltd.	Toronto.

INDUSTRIAL RELATIONS COMMITTEE

T. R. Deacon	Manitoba Bridge & Iron Works, Ltd.	Winnipeg, Man.
J. B. Thomson	James Thomson & Sons, Ltd.	Vancouver, B.C.
J. J. Coughlan	J. Coughlan & Sons	Vancouver, B.C.
J. S. McLean	Harris Abattoir Co., Ltd.	Toronto.
O. W. Waller	Swift Canadian Co., Ltd.	Toronto.
F. G. Daniels	Dominion Textile Co., Ltd.	Montreal, Que.
Angus McLean	Bathurst Lumber Co., Ltd.	Bathurst, N.B.
W. J. Bulman	Bulman Brothers, Ltd.	Winnipeg, Man.
E. G. Henderson	Canadian Salt Co., Ltd.	Windsor, Ont.
W. T. Gregory	Imperial Tobacco Co.	Leamington, Ont.
Hon. E. J. Davis	Davis Leather Co., Ltd.	Newmarket, Ont.
Col. Thos. Cantley	Nova Scotia Steel & Coal Co., Ltd.	New Glasgow, N.S.
H. H. Champ	Steel Co. of Canada, Ltd.	Hamilton, Ont.
S. R. Parsons	British American Oil Co., Ltd.	Toronto.
A. Melville White	Canadian General Electric Co., Ltd.	Toronto.
G. H. Duggan	Dominion Bridge Co., Ltd.	Montreal, Que.
J. E. Davies	Alberta Foundry & Machine Co., Ltd.	Medicine Hat, Alta
Chas. M. Thompson	Brantford Roofing Co., Ltd.	Brantford, Ont.
W. R. Breyfogle	De Laval Co., Ltd.	Peterborough, Ont.
H. J. Waddie	Canadian Drawn Steel Co., Ltd.	Hamilton, Ont.
Jno. M. Taylor	Taylor-Forbes Co., Ltd.	Guelph, Ont.
Col. W. M. Gartshore	McClary Mfg. Co., The	London, Ont.
Wm. Inglis	The John Inglis Co., Ltd.	Toronto.
F. H. Whitton	Steel Co. of Canada, Ltd.	Hamilton, Ont.
C. H. Waterous	Waterous Engine Works Co., Ltd., The	Brantford, Ont.
R. O. McCulloch	Goldie & McCulloch Co., Ltd., The	Galt, Ont.
Geo. W. Watts	Canadian General Electric Co., Ltd.	Toronto.
Jos. Picard	The Rock City Tobacco Co., Ltd.	Quebec, Que.
F. J. Gernandt	International Harvester Co. of Canada, Ltd.	Hamilton, Ont.
Geo. Wedlake	Cockshutt Plow Co., Ltd.	Brantford, Ont.
A. F. Hatch	Canada Steel Goods Co., Ltd.	Hamilton, Ont.
Archibald McCall	Nova Scotia Steel & Coal Co., Ltd.	New Glasgow, N.S
Robert A. Brown	Canadian Nashua Paper Co., Ltd.	Peterboro, Ont.
Clayton, E. Hurlbut	The Hurlbut Co., Ltd.	Preston, Ont.
D. W. Coe	Canadian Mead-Morrison Co., Ltd.	Montreal, Que.
F. M. Kimbark	Business Systems, Ltd.	Toronto.
R. Thomson	Hawthorn Mills, Ltd.	Carleton Place.
Louis Armstrong	Laurentide Co., Ltd.	Grand Mere, Que.
E. M. Wilcox	York Press	Toronto.
A. E. Rea	Dresses, Ltd.	Toronto.
M. A. Doak	The Eastern Car Co., Ltd.	New Glasgow, N.S.
J. M. Gunn	McClary Mfg. Co.	London, Ont.
J. S. McKinnon	S. F. McKinnon & Co., Ltd.	Toronto.
W. S. Fisher	Emerson & Fisher, Ltd.	St. John, N.B.
J. R. Shaw	Canada Furniture Mfrs., Ltd.	Woodstock, Ont.
Thos. Roden	Roden Bros., Ltd.	Toronto.

INSURANCE COMMITTEE

A. W. Green	The Crethan Co., Ltd.	Montreal, Que.
A. O. Dawson	Canadian Cottons, Ltd.	Montreal, Que.
T. A. Hollinrake	A. R. Williams Machinery Co., Ltd.	Toronto.
Geo. H. Lees	Geo. H. Lees & Co., Ltd.	Hamilton, Ont.
Fred M. Beatty	Midland Woodworkers, Ltd.	Midland, Ont.
Harold E. Goodhue	Eastern Townships Lumber Co., Ltd.	Sherbrooke, Que.
Chas. A. Moore	The Stratford Mfg. Co., Ltd.	Stratford, Ont.
W. B. Tindall	Consumers' Box & Lumber Co., Ltd.	Toronto.
A. T. Enlow	Dominion Sheet Metal Co., Ltd.	Hamilton, Ont.
C. S. Sutherland	Amherst Boot & Shoe Co., Ltd.	Amherst, N.S.
A. H. Whitman	Robin, Jones & Whitman, Ltd.	Halifax, N.S.
L. J. Breithaupt	Breithaupt Leather Co., Ltd., The	Kitchener, Ont.
A. McKinnon	McKinnon Industries, Ltd.	St. Catharines.
Gordon C. Crean	Robt. Crean & Co., Ltd.	Toronto.

George McLaughlin	General Motors, Lt.	Oshawa, Ont.
I. H. Weldon	Provincial Paper Mills Co., Ltd.	Toronto.

Translations Department Report

The quarterly report of the C.M.A. Translations Department gives statistics that point clearly to a continual increase in Canada's foreign trade. The number of translations handled in the year 1917 was 513; in 1918, 758, and in 1919, 1,759. Comparing corresponding periods of the last four years, the report shows that during the first quarter of 1917 113 translations were handled; during the same months of 1918, 1919 and 1920 there were handled 144, 360 and 602 translations respectively, indicating an increase in number alone of over 500 per cent. As far as the work of the department is concerned, these figures indicate a still greater increase, since the general term, "translation," is used to cover all documents from short business letters to long legal contracts, circulars, etc.

Of the six hundred odd translations handled during the first three months of the present year, 501 were French, 71 Spanish, 13 German, 9 Portuguese, 5 Italian, 2 Swedish and 1 Russian. All but 34 of these were personally handled by Miss Williams, who is in charge of the department. During July alone, foreign letters came in from the following coun-

tries: Africa, Austria, Belgium, China, Egypt, France, Germany, Italy, Roumania, Sicily, Spain, Syria, Argentine, Bolivia, Costa Rica, Ecuador, Cuba, Mexico and Venezuela. The enquiries dealt with many diverse articles, such as bicycles, foodstuffs, book-binding, knitting machines, gelatine, wall-paper, motor boats, etc.

The rapid growth of the Translations Department is in itself evidence of its great importance to members of the C.M.A. Canada's trade with foreign countries is undoubtedly growing, and as new markets for some lines of Canadian goods are established, a demand for other lines will be created. As one of the essential factors in building up trade relations with other countries is a knowledge of their language, members of the Association will find that the services rendered in this connection can be profitably utilized.

Postage Stamps in Coils

Stamps of 1, 2, and 3c. denominations are put up in rolls or coils at the present time by the Postal Department at Ottawa. Last year the total amount of stamps put up in this manner amounted to 110,765 rolls, with a total value of $1,132,500.90. If there was a sufficient demand for stamps in rolls of five, seven and ten cent or larger denominations to justify the making of such rolls, the Postal Department would have the work done. If members, who could use stamps in rolls or coils in larger denominations than 3-cent stamps, will notify the Association, their request will be forwarded to the Postal Department.

Ontario Division and Toronto Branch

By H. Macdonald
Secretary, Ontario Division, C. M. A.

The Power Situation

The situation with respect to shortage of power has been aggravated by the official announcement that the Commission have decided not to proceed with the erection of the proposed auxiliary steam plant, and a general circular was issued on 14th August to the members of the Ontario Division asking for suggestions as to further steps to be taken. The Committee in charge are not a little concerned at the prospect of another winter having to be faced without the Provincial body having done anything to improve the supply of power. The whole situation is receiving the serious consideration of the Canadian Manufacturers Association, and suggestions from the manufacturers as to what further steps should be taken will be welcome.

Deepening of Waterways

A meeting of representative civic bodies was held in the City Hall, on 12th August, under the auspices of the Canadian Deep Waterways and Power Association. The Toronto Branch was represented by Mr. T. A. Hollinrake, Chairman, Mr. W. C. Coulter, Vice-Chairman, W. H. Shapley, and H. Macdonald, Secretary. The Chairman of the meeting was Mr. T. A. Hollinrake. Representatives were also present from the City Council, Board of Trade, Toronto District Trades and Labor Council, Retail Merchants' Association and Empire.

After discussion, plans were laid to create an organization to prepare the case on behalf of Toronto for representation to the Internal Joint Commission in October. Toronto is the last of all the large municipalities in Ontario to take up the question, and it is hoped that no time will be lost, from now on, in getting all the necessary information together so that the need of and the benefits to be derived from the deepening of the St. Lawrence waterway will be convincingly presented when the International Joint Commission sits in Toronto in the Fall.

It was moved by Mr. W. H. Shapley, and carried unanimously: "That the City Council be requested to appoint a Committee of three or five representatives of the City and that the several organizations present or interested in the objects of this meeting be requested to each appoint one representative to act, and the Committee so constituted be an Executive Committee charged with the duty of securing data and arranging the necessary evidence in support of the Great Lakes-St. Lawrence waterway, and to have such evidence submitted to the International Joint Commission when that body meets in Toronto."

The evidence which it is necessary to prepare will deal with the exports and imports of Toronto, business carried on in this city as a distributing centre and the manner in which this business would be affected if ocean freighters could land goods from overseas at Toronto wharves and receive exports from Toronto for trans-shipment to overseas points; also the effect which such a business and the expansion which would follow would have on the labor situation, particular attention being paid to the great possibilities for ship-building and dry dock work at Toronto; also evidence of experts regarding the feasibility of the present average type of ocean freighters handling all classes of freight offered on the Great Lakes—with the exception of iron ore and coal, as well as information concerning the economic growth of Ontario and the industrial expansion that would follow the opening of the waterways from the Great Lakes to the sea for all kinds of traffic.

New Customs and Examining Warehouse

The Secretary of Toronto Branch having drawn the attention of the Dominion Government to the discontinuance of operations on the new customs and examining warehouse at the corner of Front and Yonge Streets, the Minister of Public Works explains that the question of proceeding with the erection of this building was carefully considered in connection with the supplementary estimates of his Department at the last session of Parliament, along with a number of the large Government buildings in different parts of Canada, but that the conclusion arrived at was that the financial condition would not justify the Government in putting these works under construction during the present year.

Inspection of Chippawa Canal

A delegation representing the Toronto Engineers' Club and Toronto Manufacturers made a tour of inspection of the Ontario Hydro-Electric Commission's Power Plant at Niagara Falls and of the Chippawa-Queenston development on 27th August, the Toronto Branch representatives being Messrs. W. H. Shapley, R. L. McIntyre, Melville P. White and H. Macdonald, Secretary.

The delegation had the advantage of going through and examining and inspecting the power house and plant at Nagara Falls, comprising turbines, generators, etc. By the courtesy of the Hydro Commission, motors were placed at the service of the delegation to enable them quickly to run over the Chippawa-Queenston canal.

The canal is 12¾ miles long with the intake at Hog Island, Chippewa, about 2 miles from Niagara Falls, and the tailrace on the Niagara river about 1 mile above Queenston. The Power House will be located at the bottom of th Gorge It will have six units of 50,000 H.P. each or a total development of 300,000 H.P. which may be increased to 475,000 H.P. It will use 10,000 cubic ft. of water per second. and is costing

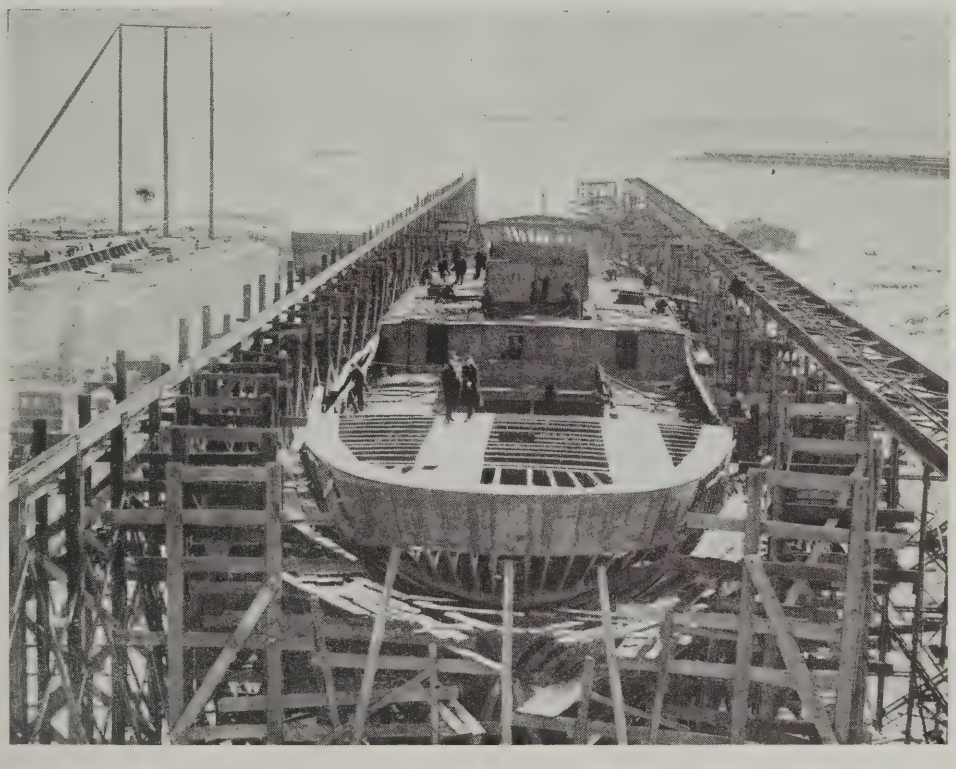
Export Trade from the Viewpoint of the Canadian Manufacturer*

In Two Parts

Part II. PROBLEMS FOR EXECUTIVE CONSIDERATION

By S. A. BEADLE
Beadle, Putland & Co., Victoria, B.C.



NO more important decision can be made by the manufacturing concern than the decision whether or not it will engage in foreign trade. This is a question that far outranks in importance the determination to acquire a rival establishment, to build a new plant, or to enlarge its capitalization. It is of far more significance than to resolve to take up the manufacture of a new line of goods or to put a new product on the market.

The selling of an occasional order in a foreign market does not constitute foreign trading. The real decision to be made is whether to go in permanently or stay out permanently. A determination to engage in foreign trade involves the setting aside of a large amount of capital for the specific purpose of developing an overseas business. It means the inauguration of a new department in the business. It recognizes the need of familiarizing one's self with a vast complexity of laws, regulations, languages, rates, trade customs and conditions that are different from those with which any part of the business has dealt heretofore.

The manufacturer must determine on the basis of careful study whether he wants foreign trade, whether he needs increased output, or whether he can get along equally well to-day without outside markets.

But perhaps even more important than the details that must be considered and the money that must be invested, are the brains that must direct the foreign trade for the export department. A decision that involves so much, that means the investment of such a considerable amount of money, must be made only by the highest directing body in a business concern. It must be made with the full knowledge that, if the business is to be a success, it is the most momentous decision that the manufacturer can make.

Next in importance is the formation of the export policy. Whether the prospective exporter will use this method or that one is a matter to be determined, not on the spur of the moment, but only after the entire subject has been fully investigated and every determining factor fully considered. Then and then only will the highest governing authority in that concern be prepared to arrive at a just conclusion concerning the foreign trade policy needed to accomplish the desired ends. That policy—perhaps even more than the domestic policy—consists of many elements. Let us, therefore, examine some of the important facts with reference to the essential features of a foreign trading policy. After the decision to embark in foreign trade has been made, the next problem presenting itself for solution relates to the executive direction of the export business. This includes the choice of the export manager and the selection of the best possible markets for exploitation.

(Courtesy of Canadian National Railways.)

Port Arthur Shipbuilding Slip

One of the Canadian Government Merchant Marine Steamships Under Construction at Port Arthur

The export department requires executive oversight to a greater degree than any other branch of a business. The manufacturer who resolves to embark in the export trade, and to establish a distinct department for handling this phase of his enterprise, should see to it that the export department is placed in charge of a vice-president. If the size of the manufacturer's business does not warrant the organ-

*Copyright, Canadian, 1920.

ization of a separate department, then the export business should have the personal attention of the executive head of the concern.

The first and perhaps the most important of the executive problems to be met will undoubtedly be the appointment of an export manager. In general, the manufacturer has two possible choices; a man from the inside who knows his particular business, or a man from the outside who knows exporting. Fortunate indeed is the manufacturer who has a man in his establishment with a knowledge of exporting, because the former man in the alternative indicated ordinarily lacks breadth of view and the latter lacks knowledge of the business.

The next problem for executive consideration will be the choice of territory. Such a decision cannot be made intelligently by one who is unfamiliar either with the conditions in the world's markets or with the particular products under consideration. It is not to be expected that flannel underwear can be sold in Egypt or heating stoves in Java, although manufacturers have tried to do both. The nature of the manufacturer's product and the conditions in foreign markets are the two factors that determine the particular fields that may be most desirably and profitably developed.

It is a part of the executive policy to decide how far the manufacturing processes are to be changed in order to meet the differing demands encountered in foreign markets. The directing authority must also determine how far the methods in an establishment are to be re-arranged so as to handle export business more expeditiously. The matter of packing is a case in point. The manufacturer who is unwilling to change his packing and shipping system so as to prepare the goods for shipment in accordance with export requirements had better not engage in foreign trade.

The Question of Policy

The manufacturer who has decided to go into foreign trade, and who has placed his new enterprise in the hands of a competent executive, has at his disposal, as we have shown in the foregoing pages, three essentially different methods of doing business: First, the system of selling direct; second, that of selling through manufacturer's export agents; third, that of selling through export commission houses and to export merchants. Under direct selling is included the direct exploitation of foreign markets through salesmen, branches, exclusive dealers and through the mails. All of these methods have been briefly explained.

It has been our privilege during the past year to meet and correspond with many manufacturers who have entered foreign trade or were seriously contemplating such action. We must confess our surprise at the limited knowledge that many of them possess and the amount of misinformation that most of them have acquired. We cannot hope in the short space at our disposal to cover fully all the factors that must be taken into consideration by the manufacturer in determining his selling policy. We hope, however, that some of the points which follow will lead the reader to consider, in so far as his business is concerned, what policy is best.

Let us first suppose that the manufacturer has decided to go in for direct exporting. He must decide whether he will establish his own agencies, whether he will send out salesmen, or whether he will endeavor to do his business by mail. He must determine where his agencies will be located. He must decide whether he will use a native of the country, or select a Canadian for manager of these agencies. He must decide upon the type of man who is particularly fitted for an agency in any given country he has under consideration. Then he has to decide whether he will back up his agencies with a selling force. In that event he must keep careful watch to see where and how he will secure the most competent salesmen. He must find out where he can most readily obtain salesmen speaking the language of the countries to which they are to be assigned.

Study Local Conditions

For example, the manufacturer who considers China as a market must decide what bearing the compradore system will have upon his choice of sales methods. He must recognize that he can scarcely expect his salesmen to do business with the Chinese retailers, or even with the large native jobbers. These or similar questions must be decided in considering many other markets, especially those in the less developed sections of the world.

The manufacturer must further consider the necessity of making a thorough study of the consular regulations of the different countries. It is not easy to find a man who is familiar with foreign tariff regulations, who can read the languages of the various countries, and who can take the various documents with all their complicated official and technical terminology and translate them into understandable and usable English.

Complete information must be collected regarding shipping routes, rates and documents. Some one must be trained in the operations of financing the export order. The obtaining of credit information requires the best judgment that the manufacturer can command. Added to all these are the mechanical details of office accounting, recording system etc., as they apply to the new business.

The manufacturer must determine what kind of salesman he will send abroad to represent him in foreign countries whether they are to be men with a knowledge of the language of the country, or whether they are to have primarily an intimate acquaintance with the specific business. He will do well to work out in his own plant and in his own business a method of training export salesmen, because ready-made salesmen for foreign trade cannot easily be found. The manufacturer must consider whether his line is a simple one that can be handled readily by unskilled and untechnical salesmen, or whether it is one requiring expert attention. He must decide whether or not he will supply service with his product. If it is a machine or other mechanical product, he must determine whether or not he will send out mechanical experts and attach them to his agencies in foreign markets.

The manufacturer, especially if his products be complicated or technical, must study the patent laws of foreign countries. He must be prepared to go to the trouble of registering his trade-marks abroad. There are many pitfalls in connection with the patent regulations and trade-mark laws of foreign countries which he must be careful to avoid.

We might go on naming points which must be decided by the manufacturer who is planning to do business direct. We think perhaps enough of the necessary factors have been indicated to stress this essential fact; the manufacturer who expects to do business direct must be willing to go to the trouble not only of learning the business himself, but of equipping his organization to do all of the specialized business which in direct exporting would be handled by a professional export house.

Further Problems

The decision of the manufacturer to do business through a commission house leaves him yet many problems to solve. The first is the choosing of the export house. Incidentally he will have to decide whether he will deal through one commission house or several. Some commission houses do a big business in one part of the world and may do no business

in other parts. In South America, for example, one commission house may do a very large business in machinery on the west coast, while another commission house, perhaps just around the corner, may be doing a very large business in machinery on the east coast and no business in machinery on the west coast. The manufacturer therefore must make a careful study of the various houses with a view to determine which of them are prepared to handle his particular products in a given foreign market. The manufacturer must then decide whether he will do business in a given market with one commission house only, or whether he will establish relations with several and let them compete for his business.

Some of the largest exporters in Canada sell through commission houses, and in certain markets maintain offices of their own as well—not so much for the purpose of making sales as for the purpose of helping the commission house to make sales for them. A matter which the manufacturer must carefully consider is the financial strength of the commission house. In some parts of the world these houses finance many enterprises. One house may be backing a railroad and another a sugar plantation. Even in the same market different houses may absolutely hold certain very large and important sections of the trade. This means that the manufacturer who intrusts his business in a certain field to a single house may thereby be effectively closing the door to certain other very rich markets in the same territory.

One of Canada's Commerce Carriers

This is the Canadian Government Merchant Marine S.S. "Canadian Importer," 8390 I.W. tons, built on the Pacific Coast

After the manufacturer has determined upon the particular export method or combination of methods to be adopted, and has selected his representatives, there remain many important problems to decide. One of the most important is whether or not he expects to support the efforts of his representatives. The manufacturer, very much as the manufacturer in Canada who places agencies in various parts of the Dominion, must decide whether or not he will advertise in the export markets with the idea of supporting the commission house.

There is another and important and vital question. The manufacturer should carefully consider whether or not he can get real sales service for a commission of 2½ per cent. or even 5 per cent. It is very doubtful if any organization can give a manufacturer real sales service for that compensation. The average sales expense in Canada, we venture to say is much larger than this. The manufacturer should appreciate the fact that the sales expense in foreign markets is likely to be greater than the expense at home. He can scarcely expect results to be obtained in a foreign market which cannot be obtained by his own organization at home. Backing up the commission house by increased remuneration is but one of the ways of assisting the exploitation of a product. The manufacturer must also decide whether he is willing to advertise in foreign markets, to circularize foreign customers and prospects, or to send his salesmen or demonstrators to the overseas field. All these methods are used by manufacturers in stimulating sales through the export house.

Finally, the manufacturer must endeavor to discover whether or not way in the back of his head or down in his heart he expects to let the professional export concern build up a business for him, to break the ground, to blaze the trail, and then—after a profitable business has been developed—to take it away from the export house. Such a practice, or such an intention, on the part of the manufacturer is manifestly unfair. There is an attitude on the part of some of our manufacturers which refuses to take into consideration the fact that, with the exception of Europe, the major part of our export business has been handled and is likely to be handled by the professional export house. Up to the present time—and perhaps for many years to come—the professional exporter will be one of the most important factors, if not the most important factor, in the development of our foreign trade. The manufacturer who wishes to play fast and loose with the export house would do well to consider these facts. It would be well for him to decide upon his selling policy only after full consideration has been given the facts just stated.

To a considerable extent the questions which have been raised with reference to backing up the export commission house in its efforts to develop a foreign market apply with equal force to the decision which the manufacturer must make in using a manufacturer's export agent. The manufacturer must decide for himself the percentage of commission to be paid—the minimum amount of commission which will purchase for him real selling service in that particular market. He must determine also the amount of appropriation which he can allow the agent for advertising. Such decisions can only be reached after a careful study of the markets.

It is of the utmost importance in determining the selling campaign, for the manufacturer to consider the varying requirements of the foreign markets. The manufacturer who would wisely develop his foreign trade will hardly expect to handle his South American market in exactly the same way in which he would handle his Chinese market, or his Indian market. A particular line of goods may be handled well by a commission house in one part of the world and by direct

(*Continued on page* 126).

SUMMARY OF OFFICIAL STATEMENT

Reasons why Canada should retain the present fiscal policy of adequate protection for Canadian agriculture, industry, labor and business

1. Canada has shown wonderful growth in agriculture, manufacturing, forest production, mineral production, transportation, banking, insurance, and other business since the adoption in 1878 of the National Policy of adequate protection for all classes.

2. Because Canada was strong in all departments of national activity, she made a great record in the war.

3. Since the war practically all civilized countries have retained or increased their protective tariffs.

4. Over 2,000,000 Canadians are supported by wages paid by Canadian factories.

5. Over eighty per cent. of all the produce of Canadian farms is consumed in Canada.

6. The tariff has caused over 600 branches of United States factories to locate in Canada.

7. The tariff provides a great portion of the revenue of the Dominion Government.

8. The present tariff of Canada is very moderate; the average rate of duty on all dutiable importations is 22½ per cent.; the average rate of duty on all importations, free and dutiable, is only 14 2/3 per cent.

9. Canadian products should not be exported in the raw state, but should be manufactured in Canada in order to create business, provide employment and add to the national wealth.

10. Canada has maintained a protective tariff for 42 years. The United States, our greatest competitor, has maintained a protective tariff for 131 years. Their manufacturers have a home market of 105 million people. Our manufacturers have a home market of about 8 million people. Last year each inhabitant of the United States bought, on the average, $4.41 worth of Canadian goods, while each Canadian, on the average, bought $100.26 worth of United States goods. United States' purchases from Canada were largely raw material. Is it surprising that the rate of exchange is against Canada and that our dollar is at a heavy discount in the United States? This is the situation with a Canadian tariff. What would it be if the tariff were removed? Abolish the tariff, and in the words of Ex-President Taft, Canada will become "an adjunct of the United States."

11. The destiny of Canada is a fully developed nation within the British Empire.

Why Canada Needs a Protective Tariff*

Official Statement Submitted by the Canadian Manufacturers Association to the Committee of Cabinet Ministers Who Opened the Inquiry Into the Canadian Customs Tariff in Winnipeg on September 14th

Winnipeg, September 14th, 1920.

IN submitting the following general statement to the Honourable Ministers of the Government who constitute this Committee of Inquiry into the Canadian Customs Tariff, the Canadian Manufacturers Association respectfully begs to emphasize the close relationship existing between the manufacturing industries and all classes of the population. According to the Dominion census, about 700,000 people are employed in the factories of Canada. Including their families, the number of persons who depend for their living on the wage rolls of Canadian factories number over 2,000,000. In addition there are probably half as many more wholesale and retail traders, professional and business men and others who derive the chief part of their incomes indirectly from industrial establishments. Moreover, as about eighty per cent. of the total annual produce of Canadian farms is consumed in Canada, chiefly by the people living in towns and cities, farmers are also vitally concerned with industrial conditions.

Any civilized country that aspires to greatness must be strong in the following departments of national activity: agriculture, manufacturing, transportation and finance. Purely agrarian countries have never reached any degree of greatness; purely industrial countries cannot exist; both manufacturing and agriculture are helpless without the machinery of finance and transportation systems to carry produce.

What part does the factory play? Remove the factories and imagine the effect on the wholesale and retail trade, on the banks, on the financial and brokerage houses, on the real estate agents, on the professional men, on the tax collecting departments? In the majority of Canadian cities and towns the factories are the direct or indirect cause of a very considerable part of business transacted, because the welfare of many allied activities depends on the ebb and flow of the factory output, the buying capacity of the factory purchasing department and the spending of the factory payroll. Strike at the factory and you strike at nearly every one in the city or town. Strike at the city or town and you strike at the agricultural population surrounding the city or town, for cities and towns use the produce of the farms, while the cities and towns in their turn supply the farms with most of those luxuries, comforts and necessities which are part of civilized existence.

Consequently, throughout this statement, the Canadian Manufacturers' Association has tried to keep in mind, in a broad, general way the fact that practically every family in Canada, directly or indirectly, is benefited by industrial prosperity and injured by industrial depression.

The Principle of Protection

As the Canadian Customs Tariff has not been revised since 1907, revision is now overdue. After careful investigation, in may be found that the rates of duty on some articles are too high and will consequently be lowered; or, in certain other cases, that the rates of duty are too low and will consequently be raised; or, in other cases, that the rates of duty will be considered fair and remain unchanged. But all tariff revisions are governed by a guiding principle, and this guiding principle must be either the policy of protection or the policy of free trade. The term "tariff for revenue" is misleading, because a tariff of even ten per cent. on an article produced in Canada yields revenue and also affords a small degree of incidental protection.

In presenting this statement, therefore, the Canadian Manufacturers Association respectfully begs to re-affirm its advocacy and support of the policy of adequate protection for Canadian industry (the policy which has been maintained since 1878 in Canada by all political parties that have held power).

Moreover, the Association pledges its support to any measures which will hasten the adoption throughout the British Empire of substantial customs preferences for Empire products, corresponding to the preferences now provided in the customs tariff of Canada.

Definition of Protection

The objects of the protective system in Canada have been and should continue to be:—

(1) To diminish, as far as possible, the importation of goods from foreign countries which can be produced at home.

(2) To facilitate the importation of raw materials for manufacturing processes, which cannot be produced at home.

(3) To encourage the exportation of Canadian goods as finished products.

(4) To make Canada self-contained by developing and encouraging within her boundaries all legitimate activities that will give occupation to Canadian citizens.

The protective system is, above all things, a national system. The country is the unit. It aims to make the individual country strong in all vital departments of activity. If it were founded on any other basis it could not survive; and the only reason that the protective system has been in operation in practically all civilized countries for several centuries, with a few intermittent excep-

*Reprints of this Official Statement may be had on application to the C.M.A.

tions, is that the system safeguards and develops the resources and prosperity of the great majority of the citizens of each country. A country must guard its interests just as an individual guards his interests. A country should try to develop not only its material resources but also the possibilities contained in the capacities of its respective citizens. It should take stock of all its resources, of its geographical position, the ability and character of its population and try to use all in the best possible manner to build up a strong and secure national existence. It is respectfully submitted, therefore, that the revision of the tariff and the consequent framing of the fiscal system of Canada can only be legitimately approached from the national point of view and without undue regard to the special privileges or demands of any classes of the population or section of the country.

The Tariff

As the protective system is put into operation and maintained largely by means of the machinery known as a customs tariff, or, in other words, schedules of duties imposed by the national Government on goods imported into Canada, it is advisable to examine how a tariff works. In the first place, it protects domestic industry by increasing the difficulty of importing competing products; in the second place, it secures revenue for the Government; and in the third place, it can be used either as a weapon against any foreign country that is using discriminatory methods, or to bargain with a foreign country for tariff concessions that will open desirable markets for Canadian products. Consequently, the tariff, being the chief instrument which maintains the protective system in operation, cannot be suddenly changed or abolished without at the same time changing or abolishing the protective system.

Support of the protective principle should not be confused with advocacy of a high tariff. The Canadian Manufacturers Association has never advocated a high tariff, and does not advocate a high tariff now, but it is a conservative statement of fact to say that the Canadian customs tariff as it stands to-day is not a high tariff, and that in comparison with tariffs of other countries it is very moderate.

The total value of all free importations into Canada during the fiscal year ended March 31st, 1920, was $370,872,966.

The total value of all dutiable importations into Canada during the same period was $693,643,211.

The total amount of duty collected during the said year was $187,520,613.

Included in the foregoing is the customs war tariff duties, which, for the said year, amounted to a total of $31,369,296.

The average rate of duty, including the war tariff, on all dutiable importations was 27.03 per cent. over the same period.

The average rate of duty on all dutiable importations, less the customs war tariff collections, was 22.5 per cent.

The average rate of duty, including the war tariff, on all importations, free and dutiable, for the same period, was 17.61 per cent.

The average rate of duty on all importations, free and dutiable, after deducting the customs war tariff collections, was 14.66 per cent.

On the 18th day of May, 1920, the customs war tariff rates were completely removed by Parliament. Surely it is reasonable to say that the average rate of duty of 22.5 per cent. on all dutiable importations and the average rate of duty of 14.66 per cent. on all importations, dutiable and free, now imposed by the Canadian Customs Tariff, constitute a moderate tariff.

History of Protection

It might be advisable, at this stage, to summarize briefly the growth of the system of protection, which, it should be noted, coincides with the development of modern industry.

England, which, until recently, was held up as the great example of the benefits bestowed on a country by free trade, was one of the first countries in the world to adopt a genuine protective fiscal system. Oliver Cromwell framed the first protective customs tariff for England and also, in 1651, passed the famous Navigation Act, forbidding foreign goods to be brought to England except by English vessels or vessels belonging to the country from which the goods came. With a customs tariff in operation and with the Navigation Act in force, England, at that time, had a great measure of protection.

The protective system continued in England from the middle of the seventeenth century until 1846 or about 200 years. By the latter date, England was, by long odds, the leading industrial country in the world and also the chief maritime nation. English farmers were strong protectionists, and heavy duties were imposed on farm produce entering England from other countries, but the agitation begun in 1838 by the industrial population caused the change, and England, after a period of nearly 200 years under the system of protection, during which she had risen to be the richest and most powerful trading nation in the world, adopted free trade for the following reasons: Being an island with a rapidly increasing population, and limited room for expansion she acquired great overseas possessions. These colonies produced large quantities of raw materials or semi-finished materials. England was the workshop, with the formula of cheap food and low wages. Goods were manufactured cheaply, largely because wages were low and living was cheap. Ships were built cheaply for the same reason, and the sailors who operated these ships to carry raw material to England and finished products from England were paid low wages.

While Great Britain relatively maintained under free trade a considerable part of the industrial supremacy established during two hundred years of protection, there are the strongest reasons for believing that this was done partly at the expense of the working classes, a fact emphasized by the Hon. Arthur Meighen in his speech in the

House of Commons on May 25th, last, when he quoted Sir Henry Campbell-Bannerman's statement that, in 1905, there were 13,000,000 of the population of the United Kingdom who were at or below the poverty line, not having enough to eat.

About the time of Oliver Cromwell, the protective system was introduced in France by the statesman, Colbert, and remained in force until the French Revolution, when it was modified, although France did not adopt a fiscal system approaching free trade until 1860.

After the introduction of free trade into France in 1860, it was quickly discovered that under this system, France could not stand the competition of England and the United States, and in 1872, after the Franco-Prussian War, returned to the protective system. Other European nations had followed the free trade experiment of France in 1860, and they also imitated her later action in reverting to the protectionist policy. In 1879, under the direction of Bismarck, Germany inaugurated a distinctly protective system, and most of the other European nations soon followed the example of Germany and France.

The Protective System in North America

Prior to the Revolution, the industrial development of the thirteen English Colonies on the Eastern Atlantic coast had been very limited. This was due to several reasons. The energies of the northern colonies were confined largely to overcoming the hardships of pioneer existence, while the southern colonies who employed slave labor, devoted themselves to the creation and cultivation of extensive plantations. There were no large cities; New York and Boston were only seaport towns. Raw material was shipped to England, where most of the manufactured goods needed were purchased.

During the Revolution, shipments from England were stopped, and the colonists had to depend for manufactured goods upon what they could secure from France and other European nations. After the Revolution, hostility towards England diminished imports of English goods. Later, came the trade disturbance caused by the Napoleonic wars, when shipments from Europe suffered great interference. Consequently, they were forced to pay more attention to manufacturing at home.

The first tariff measure passed in 1789 by the United States provided for "the encouragement and protection of manufacturers." At first, the protection afforded was slight, the duties ranging from 5 to 15 per cent. ad valorem. When Europe began to recover from the Napoleonic wars, United States manufacturers suffered from European competition, and consequently, a larger measure of protection was afforded. From 1816 onward the character of the United States tariff has been distinctly protective.

After the Civil War the protective tariff was again raised. The McKinley tariff of 1890 increased protective duties on articles which entered into competition with articles produced in the United States. The Dingley tariff of 1897 made general increases, and finally the Payne-Aldrich tariff brought the protective system to the highest point which it had reached since the Revolution.

When the Republicans were defeated and President Wilson and the Democratic party were elected to power, a general reduction of the United States tariff was made on October 3rd, 1913, and direct taxation was increased to provide for the revenue which was lost through the general reduction. It did not follow, however, that the United States departed from the protective system; the United States tariff is still protective in character, and at the present time its average rate on dutiable imports is about the same as that of Canada.

The United States is the great example of how a country can be developed under the protective system. It is now a self-contained country, producing practically everything that is needed by a population of one hundred and five millions.

It is interesting to note that the early manufacturers of the United States encountered the usual difficulties experienced in a pioneer country. They had to combat the lure of the word "imported" because it was difficult for those who had been accustomed to purchasing foreign goods to substitute for them the goods produced in their own country.

The expression "home-made" was a synonym for lack of quality, but with the passage of time, the point of view changed, and it was found that the manufacturers and producers of their own country, if given opportunity and encouragement, could make articles equal or superior to imported articles. Now the tendency in the United States is to ask for "home made" articles instead of "imported" articles.

In surveying the previous history of the United States, it is obvious that those who guided the fiscal policy of that country, seem to have based it on a sure foundation.

In passing, attention is directed to the following clause from the platform of the Republican Party of the United States, adopted by the National Republican Convention at Chicago, June 10th, 1920:—

"The uncertain and unsettled condition of international balances, the abnormal economic and trade situation of the world, and the impossibility of forecasting accurately even the near future, preclude the formulation of a definite programme to meet conditions a year hence. But the Republican party reaffirms its belief in the protective principle and pledges itself to a revision of the tariff as soon as conditions shall make it necessary for the preservation of the home market for American labor, agriculture and industry."

The World Tendency Towards Protection

From this brief history it may be seen that fiscal policies of countries are inter-related and swing together like a pendulum towards protection at one period and towards free trade at another period. This fact is significant, because the present swing of the world pendulum is strongly towards protection.

Following the armistice, industrial countries, especially those that had been engaged in the war, took pre-

cautions to safeguard their home markets against a deluge of foreign goods, in order that their demobilized soldiers and war workers could secure employment in their own countries.

In the United Kingdom import embargoes that had been in effect during the war were continued and increased, with the result that manufactured goods from other countries were practically barred out of the United Kingdom. Later, this system was relaxed in respect to the products of the British Overseas Dominions entering the United Kingdom; and, recently, the majority of the remaining restrictions were removed. The United Kingdom, notwithstanding statements to the contrary, is not a free trade country. She now applies various protective duties, and has a measure before Parliament designed to prevent dumping, arising from exchange depreciation or other causes. During his budget speech in the House of Commons on April 19th, last, the Honorable Austen Chamberlain, Chancellor of the Exchequer, stated that the United Kingdom had raised during the year ending March 31st, 1920, the sum of £149,360,000 from customs duties imposed on goods imported into the United Kingdom. That is, every resident of the United Kingdom paid a customs tariff tax on the average of about $16 last year. In Canada last year the average per capita tariff tax, including the war tariff, now removed, was about $23, or, without the war tariff, about $19.50. Yet, some people describe Great Britain as a free trade country and Canada as a high tariff country.

The business men of Great Britain realized early in the war that steps must be taken upon the cessation of hostilities, to protect British industries. Attention is drawn to a document entitled "Report of a Sub-Committee of the Advisory Committee to the Board of Trade on Commercial Intelligence with Respect to Measures for Securing the Position, after the war, of certain Branches of British Industry."

The Sub-Committee reported on the 11th of January, 1916, and the report was presented to both houses of Parliament:

The following were the branches of industry to which inquiries were directed: paper manufacture, the printing trade (including color printing), the stationery trade, the jewellers' and silversmiths' trade, cutlery, fancy leather goods, glassware, including table glass, laboratory ware and glass bottles, china and earthenware, toys, electrical apparatus, brush trade and hardware.

In Section 48 of the Committee's report, the following statement appears: "Practically all the representative firms and associations consulted by us asked for a measure of protection." The schedules in the report show that the measure of protection requested ranged from 10 to 33 per cent.

Early in 1916, the Government of Great Britain, which was a Liberal Government under the Premiership of Mr. Asquith, appointed, through the Board of Trade, the following Committees:

1. Departmental Committee, to consider the positio of Iron and Steel Trades, after the war;
2. Departmental Committee, to consider the positio of the Electrical Trades, after the war;
3. Departmental Committee, to consider the positio of the Engineering Trades, after the war;
4. Departmental Committee, to consider the positio of the Textile Trades, after the war;

These Committees were non-political and were co posed chiefly of practical business men. The reports all four Committees were presented to the Imperial Pa liament in 1918 and recommend a fair measure of prote tion for all the industries concerned.

In July of this year, the Executive Committee of t Tariff Reform League of Great Britain adopted a defin tariff programme which it is preparing to advocate am the British electors. They propose that Great Brit impose a tariff of 5 per cent. ad valorem on imports i the United Kingdom from countries which are mem of the British Empire; 10 per cent. on imports fr countries which are allies of the British Empire, and per cent. on imports from all other foreign countries wh compete with British products.

In other leading European countries protective ta were considerably increased since the war. France n creased her tariff rates during the past year on l goods by amounts varying from ten to three hundred e cent.; and as late as April 28th, 1920, she announc a new and extensive list of prohibited imports.

Italy, Switzerland, Austria, Spain, Roumania, and th Balkan States, have made general increases in their ar iffs. Recent despatches show that still higher prote ion is being provided in most of these countries, and especi in France, Italy and Spain. Japan has now in operat h high protective tariff.

In South America, all countries have tariffs des ned not only for the purpose of producing revenue but als to provide for a reasonable measure of protection for me industry. The average rate of duty on all importa ons both free and dutiable, for these countries, for 191 th latest year for which statistics are obtainable, follow—

Countries.	Average *ad valorem* duty on Imports, per cent.
Argentina	20.8
Bolivia	17.1
Brazil	35.9
Chile	19.9
Ecuador	36.6
Paraguay	31.1
Peru	21.9
Uruguay (1912)	36.2
Venezuela	46.7

An instance of the trend in these countries appears in the following extract from the report of the Chilean Tariff Commission, viz:—

"The tariff policy of Chile is avowedly protecti In presenting the first draft of the law the tariff com ission

stated that it had rounded out the protective system introduced by the tariff of 1897. 'No one,' the commission declared, 'has advised any deviation from the policy, which has been followed, and is followed, by the majority of the countries of the civilized world, and especially our neighbors with whom we have close commercial relations'."

The most recent example of an increase in tariff protection is afforded by Australia. Previous to the war Australia had a protective tariff of a moderate type, and imported a great deal of manufactured goods in payment for the exportation of her raw materials; consequently, her manufacturing industries did not reach a high stage of development. The result was that Australia suffered severely during the war, because, owing to her isolated position, she could not import from Great Britain and other countries the manufactured goods which she had been in the habit of getting. She is determined that this experience will not be repeated, and that she must build up her own industries. To this end a tariff was introduced in Australia on March 24th, 1920, which is highly protective in character. All British countries outside the United Kingdom, have tariffs that are protective in character, with the exception of certain Eastern countries, such as India and the Straits Settlements, which impose duties on certain imports for revenue.

Official records show that there is not in the world to-day one country making any pretensions to industrial development that is without a protective tariff.

This Dominion's tariff legislation, designed for national development, must be affected by the fact that every great industrial nation to-day throughout the world has erected protective tariff barriers against the exploitation of its markets by other nations. Were our customs tariff removed whilst other countries maintain and strengthen theirs, our markets would be filled with the overflow goods from protected foreign countries, while our goods would be largely shut out of foreign markets. This would so reduce the markets of our factories as to raise Canadian productive costs above a competitive basis; and many of them would be compelled to cease operations.

The reasons that have led other industrial countries enumerated above to maintain or increase the protection afforded by their tariffs are the same reasons that should convince us of the wisdom of maintaining adequate safeguards for Canadian industry, commerce and agriculture.

Growth of Canadian Industry Under Protection

The early fiscal history of Canada corresponds in general outline to the early fiscal history of the United States. France treated Canada in much the same way as England treated her American colonies. She sold them manufactured goods in exchange for raw products, such as lumber, furs, minerals and grain. When the possession of Canada changed hands, the previous policy was continued.

The United States adopted the protective system in 1789, while Canada adopted the protective system in 1878, 89 years later.

In commerce, in finance, in agriculture and in manufacturing, the United States was greatly in advance of Canada by 1878. It is interesting to speculate what the position of Canada would have been to-day if this country had been afforded the advantages of the protective system between 1789 and 1878 to the same extent as they were afforded to the United States.

Canada is the older of the two countries, and yet the population of the United States is twelve times that of Canada, with her wealth greater almost in proportion. Is it partly because the United States adopted the protective system 89 years earlier?

The test of the efficiency of a fiscal system is the country's all-round development. The best way to determine whether or not Canada has flourished under the policy of adequate protection for Canadian industry is to study the statistics, not for one industry, but for all the great basic industries, and see how they have developed since 1878. Consider first the total trade of Canada. The following table shows that since the introduction of the National Policy, our total trade has multiplied by sixteen times:—

Fiscal Year.	Total Trade.
1879	$149,489,188
1889	196,309,107
1899	304,227,339
1909	548,139,881
1919	2,185,194,620
1920 (unrevised)	2,351,174,886

Agricultural production in Canada has flourished as the following statistics indicate:—

Year.	Field Crops.	Other Farm Produce.	Total Production.
1900	$194,953,420	$169,953,446	$364,906,866
1910	383,366,856	279,982,334	663,349,190
1917	1,144,637,000	476,391,000	1,621,028,000
1919	1,452,437,000	523,404,000	1,975,841,000

Average Values per Acre of Occupied Farm Lands in Canada, as estimated by Crop Correspondents, 1910, 1914-1919.

	1910	1914	1915	1916	1917	1918	1919
Canada	$38	$38	$40	$41	$44	$46	$52
Prince Edward Island	31	39	38	39	44	44	51
Nova Scotia	25	28	28	34	34	36	41
New Brunswick	19	26	22	29	29	35	32
Quebec	43	47	51	52	53	57	72
Ontario	48	54	52	53	55	57	66
Manitoba	29	32	30	32	31	32	35
Saskatchewan	22	24	24	23	26	29	32
Alberta	24	21	23	22	27	28	29
British Columbia	74	150	125	119	149	149	174

The national output of wheat has grown as follows:—

Year.	Bushels.
1870	16,732,873
1880	32,350,269
1890	42,232,372
1900	55,572,368
1910	132,077,547
1919	193,260,400

Manufacturing has shown a similar extraordinary advance.

Manufacturing Industries

Year.	Capital Invested.	Employees.	Value of Products.
1881	$165,302,623	254,935	$309,676,068
1891	353,214,300	369,595	469,847,886
1901	446,916,487	308.482	481,053,375
1906	846,585,023	356,034	718,352,603
1911	1,247,583,609	515,203	1,165,975,639
1915	1,994,103,272	515,883	1,407,137,140
1917	2,786,649,727	692,067	3,015,577,940

The products of the forests, of the mines and of the fisheries, and the volume of banking and insurance business have shown the following great increase in values under the National Policy:—

Forest Production

Year.	Log Products & Wood Pulp.
1881	$39,540,570
1891	55,266,368
1901	55,051,865
1906	72,878,051
1911	114,713,655
1915	79,767,938
1919	140,381,584

Mineral Production

Year.	
1889	$14,013,113
1899	49,234,005
1909	91,831,441
1917	189,646,821
1918	211,301,897
1919	*173,075,913

*Subject to revision.

Fishery Production

Fiscal Year.	
1879	$13,529,254
1889	17,655,254
1899	21,891,706
1909	29,629,169
*1917	52,312,044
*1918	60,243,429

*Calendar Year.

Chartered Banks

Year.	Paid-up Capital & Reserve.
1888	79,218,565
1898	91,197,340
1908	170,885,203
1918	225,508,222
1919	243,912,111

Year.	Total Bank Deposits by the Public in Canada.
1878	$71,900,195
1888	128,725,529
1898	248,752,085
1908	639,899,365
1918	1,669,597,617
1919	1,841,478,895

Amount of Life Insurance Policies in Force

Year, Dec. 31st.	Amount.
1878	$84,751,937
1888	211,761,583
1898	368,523,985
1908	719,513,913
1918	1,785,061,273
1919 (unrevised)	2,187,833,396

Amount of Fire Insurance Policies in Force

Year, Dec. 31st.	Amount.
1878	$409,899,701
1888	650,735,059
1889	895,394,107
1908	1,700,708,263
1918	4,523,514,841
1919 (unrevised)	4,904,396,461

Since 1878 the composition of our population has changed. Then the great majority of the people were engaged in farming, lumbering and fishing. There was comparatively little business activity, and those who could not be employed in the above industries were forced to emigrate, with the result that some millions of Canadians are living in the United States to-day who would never have left Canada if opportunities for employment had been available. After 1878 the industrial system of Canada began to develop, until to-day it directly supports 2,000,000 Canadians, and, in addition, yields indirect opportunities to several millions more.

Transportation

In 1879, the year after the adoption of the National Policy, there were only 6,484 miles of steam railways in Canada. A glance at the following table will show a great increase in the mileage, in the amount of freight carried, and gross earnings:—

	1879.	1889.	1899.	1909.	1919.
Miles in operation	6,484	12,628	17,141	24,104	38,896
Tons of freight	8,348,310	17,928,626	31,211,753	66,842,258	116,699,572
Gross earnings	$19,925,066	$42,149,615	$62,243,784	$145,056,336	$382,976,901

As might have been expected, the colonization of Canada moved from east to west, and one of the most active agents of colonization was the railway. The transcontinental roads were the links which connected the various provinces, and has since held them together. Our entire transportation system has been constructed on the east and west principle; first to develop and serve new territories, and second, as a link in the Imperial chain which binds together the various countries of the British Empire.

The railways opposed the reciprocity agreement of 1911 with the United States on the ground that such an agreement would build up north and south traffic at the expense of east and west traffic, and would depreciate the value of the huge investments in our transportation systems.

Some of the greatest men in Canada have been intimately connected with transportation, especially with railway building. If they believed that free trade between the United States and Canada would increase the prosperity of their railways, surely they would advocate it. The fact that they oppose it, shows that they consider that the transportation systems of Canada would suffer accordingly as the Customs Tariff is lowered.

This is even a more important question than it was in 1911, because the Government now owns two out of the three transcontinental railways, and will have to pay deficits out of general taxation.

The organization of the Canadian Government Merchant Marine marks a new period in the history of the country's development. The first vessel was commenced in May, 1919, and by the end of the year, twenty-two ships ordered by the Government were completed. It is expected that by the end of 1920, sixty ships will be in commission. These ships were built in Canadian shipyards, largely from Canadian material, and by Canadian

workmen. The outfitting of these vessels is done in Canadian ports and with Canadian goods. They are manned chiefly by Canadian seamen, and are now carrying Canadian goods abroad.

British and Foreign Capital Invested in Canada.

One of the most remarkable developments attributable directly to the adoption of the protective system in Canada, is the investment of British and foreign capital in this country. At the present time there are over 600 branches of United States' factories in Canada, employing about 87,000 people and representing invested capital of about $400,000,000. While a few of these concerns might have come to Canada if there had been free trade, it is an absolute fact that the great majority came to Canada because the Canadian customs tariff stood as a partial barrier to the importation of products manufactured by the parent concerns in the United States. Although the number of branches of British factories established in Canada is small in comparison with the number of United States' branches, as against this, according to Sir George Paish's estimate in 1911, the sum of $1,860,000,000 of British capital was invested in Canada at that time, a considerable proportion of which was invested in manufacturing enterprises.

Growth of Canadian Agriculture

The Canada Year Book of 1918, published by the Dominion Bureau of Statistics, Trade and Commerce Department, gives interesting statistics in regard to Canadian agriculture. On page 219 of this volume, the following extract appears:—

"If to the estimated value of agricultural production in 1917, viz., $1,621,028,000, be added for land, $2,792,229,000; for buildings, $927,548,000; for implements, $387,079,000; and for live stock, $1,102,261,000, the total estimated agricultural wealth of the Dominion of Canada for 1917 amounts to $6,830,145,000."

That was Canada's agricultural capital in 1917.

While the above statistics give us, as far as statistics are capable of giving, a glowing picture of the prosperity of agriculture in Canada, it is probably safer, for comparative purposes, to rely upon general impressions which a traveller receives in passing through other countries. A traveller visiting the agricultural districts of the United States and Canada would probably conclude that they are fairly equal in prosperity and advancement. Contrasting the agricultural development of Canada and the United States with that of Europe, the balance would lie heavily in favor of this continent. Not only is the average prosperity of each family greater, but the standard of education and of living is very considerably higher.

Realizing the importance of agriculture, the Dominion and Provincial Governments have given special attention to this basic industry.
